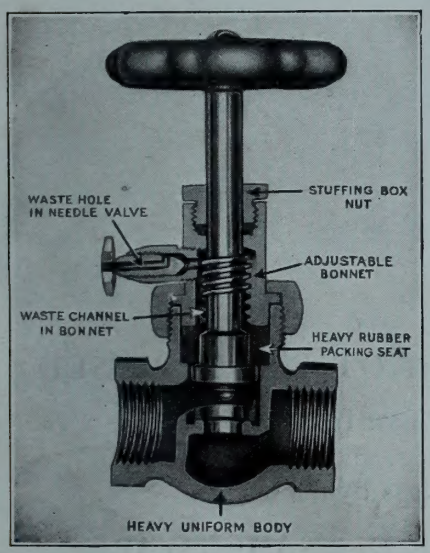
The New "Emco" A332
Stop and Waste Cock

A "Two in one Fitting."

With five points of Superiority——

——five selling points in addition to the prestige that goes with the word "Emco," the trademark of its makers.



Cross Section
"Emco" A 332 Stop and Waste Cock

As a straight Stop-Cock or a Stop and Waste Cock it is equally adaptable.

Study the marked points in the cross sections. Pay particular attention to the arrangements for waste water.

First—the adjustable bonnet which allows the needle waste valve to be placed in proper position for catching waste water.

Second—the needle valve which may be shut off independently to prevent a rush of water out the waste tube, when turning water on and off.

Every "Emco" is thoroughly tested before leaving our factory.

Write for our catalogues.

Order direct.

Jenkins Valves

JENKINS BRASS "WHISTLE" VALVES

STOP WATER WASTE

At bakeries, in the departments where fruits are washed and prepared, Jenkins Brass "Whistle" Valves are installed on hot and cold water supply lines to stop water waste. A pull of the lever instantly permits a free full flow of water which is automatically shut off by means of a spring as soon as the lever is released.

Jenkins Brass "Whistle" Valves are extensively used in bath houses, garages, restaurants and factories, and, doubtless, numerous other uses will occur to you for these substantial, quick opening valves.

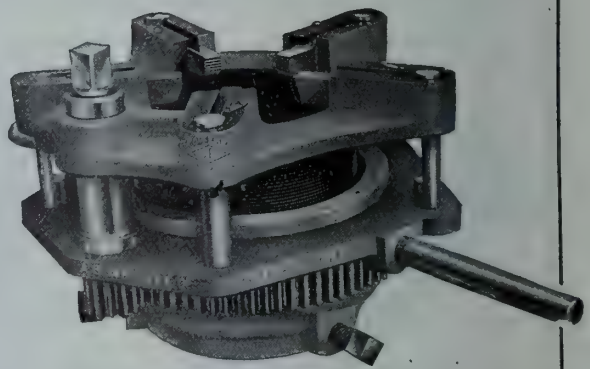
JARDINE and TOLEDO PIPE THREADING TOOLS



"Toledo" Geared Adjustable Threading Tool, No. 2½. Capacity 2" to 6 in. inclusive. Weight 120 lbs.

THE ratchet feature of Jardine and Toledo Tools permits their being used to thread pipe which is already in place, no matter how awkward it may be to reach. The Jardine and Toledo have no cams or jim cracks to get out of order; and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

Cutting Down Coal Costs With a Simple Sauce Pan

WHETHER you have made fudge on the kitchen range, or cooked trout over a brookside camp-fire, you know full well that it's the shallow pan with the broad bottom that heats up quickest.

Such being the case, it occurred to us, why not make a boiler on the same heat-up-quick principle? And so we did. Did it by sort of putting the pan on edge, so that in addition to the heat coming against the bottom and sides, it would also come against the top, so to speak.

In short, the on-edge pan would be practically surrounded by fire. Just naturally, the shallow amount of water heats in a surprisingly short time.

A glance at the interior view of the boiler shows you how these elongated, on-edge pans, with their expanded tops, have been placed across the boiler directly above the fire.

You can well imagine how the hot flames lick around them, quickly sending their heat to the radiators, either in the form of hot water or steam.

All of which means you can burn less coal, because you capture more heat from the coal you burn.

More goes into the radiators, less goes up the chimney. The interesting thing about the Burnham Boiler is, that the way it is made, and the things it will do, actually are **interesting.**

It's why you will find our Happy Solution Book all its name implies. Furthermore, it tells a lot about heat and heating, besides the boiler. Just the kind of things, in fact, that you have wanted to know, but didn't know how or where to find them. You are welcome to a copy of the Happy Solution, along with our hearty wishes for a Happy New Year.

The Land of Promise

A Little "Straight Talk" to the Canadian Plumbing Trade

THE NEW YEAR IS HERE; 1920 stretching out before us like a LAND OF PROMISE, overflowing with wonderful business possibilities. There has never been a better prospect in the world's history, the good things are in view to be taken in our hands if we have the steadfast will to grasp them.

In every part of the world to-day men are trying to make things better. Sick of war and of the things that do not profit, the best elements are reaching out for mastery and the GOLDEN DAYS are certain to come in all their fullness. Here and there the pessimists and the trouble-makers rear their heads, but these must be overcome with all speed and best purposes and highest endeavors must overwhelm all those who cry out against peace, production and prosperity.

Let us all rise now to our great opportunities. Let us seek out diligently the points of weakness in our business methods and see that these are made strong, lay well-considered plans and follow a straight course determined on success. This is no time for hesitation. No idea of "wait and see" can be entertained for a moment. Every thought and every muscle must be strained to the one determination to make 1920 the very best year so far in the world's history — the year which will mean greatest progress and prosperity in Canadian business.

Make good resolutions and keep them. To-day is the best day of all, let us make the greatest use of it. The watchwords "EFFICIENCY" and "SERVICE" will be splendid guides on our road to success and satisfaction .

Freight Rates May Again be Increased

Canadian Railways, it is Stated, Will Shortly Ask For Permission to Advance Present Schedule 20 Per Cent.—Wage Increases to Employees a Big Factor

ACCORDING to information given to SANITARY ENGINEER, application will be made very shortly to the Dominion Railway Commissioners by the railways of Canada to raise their freight rates.

It is stated that the request will be that existing rates be advanced by twenty per cent.

If this request is made and granted it will have a very important bearing on the entire price situation and on all commodities.

PREVIOUS ADVANCES

It will be remembered that in November of 1916, after a very thorough investigation into railway rates in Eastern Canada, the roads were allowed to raise freight rates five per cent. in territory east of Port Arthur.

On March 15, 1918, an increase of fifteen per cent. all over Canada became effective.

On August 1, 1918, another increase of 25 per cent. was allowed in rates.

EASIER FOR THE WEST

This means that while Eastern shippers have, since 1914, had rates advanced about 45 per cent., firms in the West are only hit to the extent of 25 per cent. because in 1914, after an investigation of Western rates, a considerable reduction was made.

NEED THE MONEY

The railways, it is stated, are facing a situation where something must be done and done soon to meet the very greatly increased cost of operation. The recent announcement of President Wilson that the American railways are to be returned to their original owners is of much interest in railway circles, not alone because of the fact that Government administration has proved unsuccessful, but because of the course to be pursued in the future.

As soon as the railways are returned an advance in rates in the States is expected in order that the huge debts incurred may be met and the railways put on a basis where they can "carry on."

WILL AFFECT CANADA

The return of the American railways is to take place shortly and what develops after their former operators are again in charge will have a very important bearing on what is done in Canada. According to a man in very close touch with transportation matters, an advance in rates in the near future is practically inevitable.

While no figures are available showing the proportionate costs of operation of Canadian railways, it may be assumed that they are approximately reasonably close to the American lines.

A report just issued regarding the railway situation across the line shows that as a result of wage increases that have been made labor is now receiving no less than 54.06 per cent. of the total revenue.

What this really means may be understood better, perhaps, when it is stated that the next largest item is for material. This is usually one of the "heavy" costs, as new cars have to be provided for, new bridges, locomotives, road improvements, etc. The figures show that this only takes 14.40 per cent. of the money.

FUEL IS SMALL NOW

In spite of the fact that millions of tons of coal are consumed annually, this expenditure now is only about one-fifth of the amount being paid to labor. The exact figures show that the percentage is figured down to 11.11 per cent. for fuel.

That the Canadian railways are not a great way behind these figures is shown by an instance of how salaries have been increased. Before the war the agent at a point in Ontario was receiving $45 a month. At the present time his income is more than that per week. It is stated that conductors are in some cases drawing $350 a month.

TELEGRAPH RATES, TOO

As stated in previous issues of SANITARY ENGINEER, another request for higher rates that affects business men is that of the telegraph companies for increased rates.

This matter is still under consideration and investigations are being made with a view of arriving at a decision. This, it is understood, will be given early in the New Year.

In case an increase is granted, and there is every reason to believe that it may be, as there has been no great opposition to the request, it would not be as serious or so widely felt as an increase in railway rates. Its effects upon retailers in general would be comparatively light. Some manufacturers have telegraph bills that run into large sums annually, but these are spread over so many commodities, as a rule, that any increase in rates is not expected to be a factor entailing any price advances.

The general effect, however, of an advance in railway rates particularly is the increased amount

(Continued on page 27)

A Very Valuable New Series

ON the opposite page will be found the first of a new series which will contain features of great practical value and general interest to the men in the trade.

Many men have a superficial knowledge of some of the matters about which they should in their own interests know the intimate details. The series of articles will aim to show them just why certain things are done and how they are done.

A Broad Field

This is a broad field and it is to be treated in a way that will make clear everything that should be made clear and it will be done in an interesting way.

You should keep this series for reference. It is valuable.

In order that it may be more readily referred to the articles have been arranged alphabetically. A partial list of the subjects to be taken up includes: Absolute Temperature, Air, Anemometers, Accelerated Systems, Asbestos, Boilers, Belts, Cast Iron, Combination Systems, Combustion, Dimensions (standards), Fans, Fluids (Laws Governing), Formulae, Furnaces, Fuels, Galvanized Iron, Generators, Grates, Gravity Systems, Humidity, Hydrostatics, Joints, Materials, Mixing Dampers, Molecular Theory, Mud, Packing, Pipe Pressure, Radiators, Registers, Regulators, Rules, Steel, Statics, Traps, Tables, Tanks, Tests, Thermometers, Thermostats, Valves, Vapor Systems, Ventilation, Vacuum Systems, Water, Zero.

The list is by no means complete; but should be sufficient to indicate how varied are the subjects to be covered in this series.

Illustrations

The entire series will be illustrated with drawings, or photographs, where such are necessary to clearly convey to the reader the meaning of the text.

Specifications

Under the letter "S," specifications will be analyzed in detail. Clause by clause, different specifications will be examined and we shall point out why certain fittings are used in good work.

Forced Hot Water Systems

These systems are returning to popular favor; so we shall deal at some length with the principles governing, and the details used in, this class of heating work.

Tables will be given under the letter "T," and references will be made to those tables when subjects requiring tables appear under another heading.

Electrical Notes

There are certain terms used in electrical work that the ventilating engineer should be familiar with. The meanings of the terms will be given, together with such other information as may ordinarily be required by the practicing engineer.

All Subjects to be Treated Fully

Beginning with the letter "A" we shall go through the alphabet, touching on, and treating fully, every item from "Absolute Temperature" to "Zero." From time to time we shall furnish an index indicating the dated appearance of certain letters; so that our readers may find at any time articles in which they are interested.

Employees of James Robertson Co., Ltd. at St. John, Guests at Banquet

ST. JOHN, N.B.—An enjoyable time was afforded the staff of the James Robertson Co., Ltd., at a banquet tendered the employees by the firm. E. J. Terry, manager, was chairman. The dinner was marked with much enthusiasm, and with the best of goodwill manifested between the staff and the management. A pleasing incident in connection with it was the presentation by the manager of a cheque equivalent to $1 for each year of service they had seen to each of the staff. The range in amounts of the cheques was from $1 to $35. An attractive toast list was carried out.

The Toast List

"The King" was proposed by Mr. Terry, and responded to in music. George Keeffe proposed "The Firm," and the manager responded, saying that the dinner marked a new departure in the policy of the company, as it was the first they had given their employees since the founding of the firm. It was his greatest hope that the maritime branch should be always in the forefront, and lead all other branches in Canada. The company, he said, was the largest plumbing supply concern in Canada and, with possibly one or two exceptions, in the British Empire.

Mr. Terry paid a warm tribute to C. M. Robertson, the head of the firm, and his personal interest in his employees.

Among the social events planned for the coming summer by the company, he said, was a picnic for the members of the firm and the staffs, with their families, and this gathering, he said, would be typical of the community spirit which he hoped would be soon the prevailing spirit of the day.

"Our Associates"

Mr. Terry then proposed the toast "Our Associates," to which the assistant manager, Charles Ramsay, replied. He referred to the cordial relations existing between the firm and its employees. He made mention of the sterling qualities possessed by the late manager, J. Harry O'Neil, and concluded with a glowing tribute to the worth of the present manager.

"Our Guests" was replied to by R. W. Wigmore, M.P. "The Ladies" was proposed by D. A. Macaulay, and responded to by Mathias Hamm. In an enjoyable musical and literary programme, those taking part included Miss A. Wood, Miss Akerley, H. McGuiggan and Frank Costley, who presided at the piano.

Claim New Fuel is Better Than Gasoline

NEW YORK.—Successful tests of a motor fuel declared to be not only more economical than gasoline, but also easier on motors, are announced by Otto Praeger, Second Assistant Postmaster-General in charge of the Air Mail Service.

The fuel consists of 38 parts of alcohol, 30 of gasoline, 19 of benzote, 13 of ether, and four of toluol. Ingredients making up the one and one-half parts were not given.

Mail-plane No. 35 was used in the tests between New York and Washington. Another plane, using high-test aviation gasoline, was used as a check. A saving of 3.9 gallons an hour in favor of the synthetic fuel was indicated. Economy of lubricating oil also was shown by the tests. After 125 hours in the air, the two motors were torn down, and that in which the new fuel had been used was found in fine condition, with a smaller deposit of carbon.

Absolute Temperatures

First of a New Series of Articles Specially Written for "Sanitary Engineer" — Keep These Articles Where You Can Read Them Over and Refer to Them at Any Time

THE term "absolute temperatures" means temperatures measured from the absolute zero point. Absolute zero is 460 deg. below the zero point on the ordinary Fahrenheit thermometer.

When the reader runs across this term he will understand that all degrees above the ordinary Fahrenheit zero are added to the 460 deg. All degrees below the ordinary Fahrenheit zero are subtracted from the 460 deg. Thus, 470 deg absolute temperature is to be considered as 10 deg. above zero, and 450 deg. absolute temperature is to be considered as 10 deg. below zero.

Air

The air that surrounds the earth as a transparent gas extends to a height that has not been accurately ascertained. Some scientists believe that the atmosphere has a height of 80 to 100 miles; other scientists say that the height is only about 45 miles.

Air Possesses Weight

If a globe full of air be weighed, and then weighed after its air has been extracted, it will be found to weigh a good deal less than it did at the first weighing.

The pressure of the air upon the surface of the earth can be ascertained in this way: Take a small glass tube having one closed end, and fill that tube with mercury. Place a finger over the open end of the tube, and, reversing the tube, thrust the open end down into an open vessel containing a quantity of the same fluid. When the finger is removed from the open end of the tube the mercury will begin to fall, but only for a short distance. A considerable quantity of the mercury will be held in the tube by the weight of air pressing on the surface of the mercury in the open vessel.

Sea Level Pressure

The pressure of air on each square inch at the level of the sea is 14.7 pounds, or a little more than a ton on each square foot. The pressure is not constant and varies with the temperature and with the amount of water-vapor in the atmosphere.

Air is not heated to any extent by the direct action of the sun. The sun heats the earth and the earth heats the air by convection.

Because the air allows heat to pass through it without becoming heated itself it is known as a diathermic body.

Gets Colder

The greater the height of the air from the earth's surface the colder it is. Roughly the decrease in temperature is 1 deg. for every 350 feet.

Air is a mechanical mixture, not a chemical compound. In 100 parts of air the average composition is as follows:

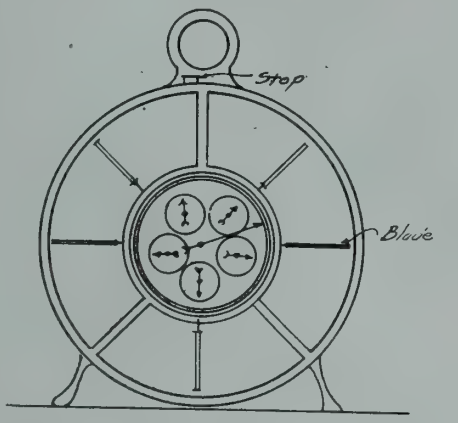
	Per cent.
Nitrogen	77.95
Oxygen	20.61
Carbonic anhydride	0.04
Aqueous vapor	1.40

There are traces also of ozone, ammonia, carburetted hydrogen, and nitric acid. In populated centres there may be traces of sulphuretted hydrogen and sulphurous anhydride.

Nitrogen is a gas of negative properties. It serves to curb the violent properties of the oxygen.

Oxygen is the vital element of the atmosphere. It is this in combination with the carbon of a food whereby the functions of life are performed.

Ozone exists in outdoor air in the proportion of 1 volume to 70,000. Its purpose is to oxidize and render harmless the gases and emanations that come from putrefying vegetable and animal matter. Ozone cannot be detected in any roofed building.



DYNAMIC ANEMOMETER

Carbon Anhydride

Carbon anhydride is a poison produced when carbon is burnt in air or in oxygen. When carbon is burnt in a deficient supply of air the product is carbonic oxide. Carbonic anhydride is the air-food of the vegetable world as oxygen is of the animal. The amount of carbonic anhydride contained in outdoor air varies from 3 to 6 parts in 10,000.

Aqueous vapor is always present in the air. It is by this that a great deal of heat is distributed over the earth. When water is changed into vapor it takes up heat that is liberated when the vapor is changed back into water. The amount of water contained in the air depends upon the temperature of the air, the height from sea level, and the direction of the wind. As the temperature of the air rises, its capacity for retaining water-vapor increases.

Caused by Electricity

The formation of nitric acid in the air is supposed to be caused by electrical discharges. The electric discharge causes a portion of the nitrogen and oxygen to combine; this forms nitric anhydride, which dissolves and forms nitric acid. Certain writers believe that it is formed through the oxidization of ammonia by ozone.

Air is a gas and is therefore subject to the laws governing such bodies. It is well, then, to make some inquiry as to how gases act under certain conditions.

If different gases are turned into a closed room, each gas will expand throughout that space. The mixture of gases will not settle in layers unless the gases are completely saturated. Some of the heavier gases, such as carbon dioxide, may settle to the lower levels for a short period, but will in time mix with the lighter gases above.

If compound gases having different heat capacities are mixed under pressure they will show a tendency to separate while cooling. This is exhibited by the way steam and air contained in pipes tend to separate when the steam falls in temperature.

Anemometers

An anemometer is an instrument used in ascertaining the velocity of air currents. There are two types of this instrument in general use. One type is known as a static anemometer; the other as a dynamic anemometer.

The static anemometer consists of three main parts: a dial, an indicator, and a disc. The vane is connected to the indicator by a lever arm. When the static anemometer is placed in a current of air the disc is driven forward so that it, in lifting the lever arm, swings the indicator around on the dial to a point corresponding to the pressure of the air current. Static anemometers do not make very accurate indications, and for this reason the dynamic anemometer is used when accurate readings are to be made.

Like a Windmill

The dynamic anenometer is an instrument resembling a small windmill, the blades of the main wheel being turned at an angle of about 45 deg. with their housing. The axle of the main wheel is connected to the unit indicator on the dial. This same axle has a gear which, in ten revolutions, turns the axle of the tenth indicator once. Gears are arranged on other indicators up to the point of the limit for anemometer records.

The anemometer is so built that one

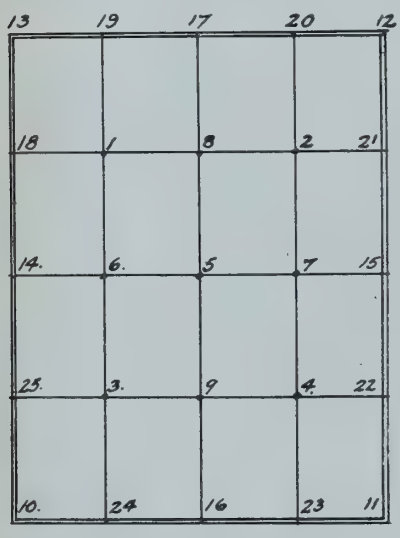
revolution of the main wheel is made by a linear foot of air passing through the housing of the blades.

In making a reading with the anemometer, we first take a note of what figures are already recorded, so that in our final record we may deduct the first record. We then place the anemometer in the path of the air, and, when the vanes have gathered speed, press on the indicator releasing stop. If we are timing the air discharge by the minute, we, after one minute's duration of indication, press again on the releasing stop for the purpose of locking the indicating mechanism. The stop acts similar to the stop on a stop-watch.

Increase the Reading

There is a certain loss of indication while the indicator is "gathering way," so it is, therefore, necessary to increase the reading by a certain constant. The manufacturers of anemometers usually mark on the instrument the constant necessary.

The air that is discharged from a pipe or a face travels much faster through the centre of its path than through the sides, so we must make an average reading for the entire opening. If the readings are made close to the sides of the openings, a much lower reading than the actual discharge will result, and conversely, if the discharge is read at its centre, the reading will be much higher than it should be. Then, again, the discharge through the upper part of the opening is likely to be much more rapid than it is at the lower part. Thus we see why the readings should be made at the twenty-five points indicated on the drawing:



This only applies to large openings of about 12 square feet. Small openings may be safely read at the points marked 1, 2, 3, 4 and 5.

Reduces Discharge

The grille of a register face reduces the discharge, so the anemometer must not be held too close to the face; the velocity through the small openings does not correspond to the average discharge. Now, if the anemometer is held at some distance from the face, a correct reading will not be obtained because the air discharged has time to mix to some extent with the air beyond the borders of the opening. It will not do to remove the register face for the purpose of making the reading because the absence of the register face will result in a greater discharge of air than can possibly occur when the register face is in place. The best thing to do is to make a frame at least one foot deep and then, after placing that frame around the sides of the opening, make our readings at the front line of the frame.

To make accurate readings, the temperature of the air must be taken at all points of the reading.

Be sure and stand clear of the air discharge so that the free-way be not obstructed.

Accelerating Coils

This is the term applied to coils that are placed in flues to accelerate the speed of air currents. These coils are often put in foul-air extracting flues for the purpose of maintaining a temperature high enough to create a positive draft in such flues.

The area of surface required is in proportion to the height of the flue, and to the temperatures required.

Air Discharge

In the SANITARY ENGINEER of May 15, 1919, there appeared a table giving the quantity of air discharge during a minute through one square foot of area in flues of various heights. For the convenience of our readers we are repeating that table here.

Excess of Temperature of Air in Flue Above That of External Air.

Height of flue in feet	10	15	20	25	30	50	100
10 ..	108	133	153	171	188	242	342
15 ..	133	162	188	210	230	297	419
20 ..	153	188	217	242	265	342	484
25 ..	171	210	242	271	297	383	541
30 ..	188	230	265	297	325	419	593
35 ..	203	248	286	320	351	453	640
40 ..	217	265	306	342	375	484	684
45 ..	230	282	325	363	398	514	724
50 ..	242	297	342	383	419	541	765
60 ..	264	325	373	420	461	594	835

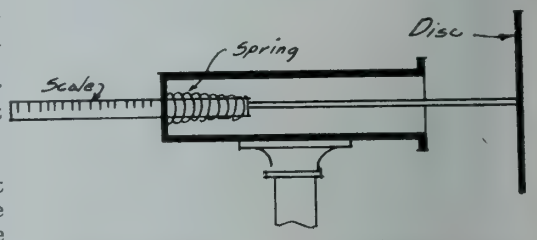
In the making of this table the external air temperature was assumed to be 32 deg. above zero Fahr. An allowance of 50 per cent. was made for friction. The table is not entirely correct for a higher outdoor temperature than 32 deg. above zero, nor is it for galvanized iron ducts, yet it can be used as an approximate standard for average conditions.

To use the table in making an estimate of the area required, we may assume that we wish to have the air travelling in the flue raised to a temperature of 80 deg., and that the outdoor temperature is 50 degrees above zero. The accelerating coils are just 40 feet down from the top of the flue. We refer to the table and note that, when air in a flue of this height is 30 degrees higher than the external temperature the air velocity will be 375 feet in one minute, or 22,500 feet per hour.

Raise Temperature

The air within the room is considered as having a temperature of 65 deg. above zero. So our problem is to provide enough heating surface to raise the temperature of 22,500 cubic feet of air 15 degrees in one hour.

In a later article we intend to give a table showing the efficiency of various types of radiators in various conditions. However, for the purpose of this article we can assume that the accelerating coil is made of pipe. Radiating surface such as pipe coils, set in a current of air moving at a velocity of 375 feet a minute will give up 700 B.t.u. in an hour off



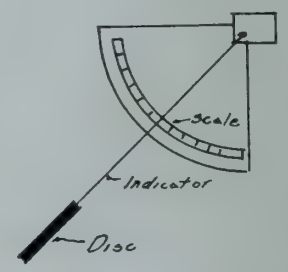
OLD STYLE STATIC ANEMOMETER

one square foot. These figures are for steam at 1 lb. pressure and for a "mean" flue temperature of 62 deg.

It requires 6,135 B.t.u. to raise the temperature of this 22,500 cubic foot of air in one hour. When we divide this 6,135 by 700 we find that for each square foot of a flue 40 feet high we require 8.7 square feet of accelerating coil.

Method of Figuring

The method of figuring for these coils and the table giving the draft efficiency of flues for different heights, should indicate why accelerating coils must be kept well down in the flues. It is no uncommon thing to find accelerating coils placed within 10 feet of the top of the flue. In such cases the draft in the flue is only 180 feet a minute, and the efficiency of the accelerating coil of air efficiency of the accelerating coil 478 B.t.u. per hour. However, the quantity of air travelling through such a flue is less than will be heater to 15 degrees by 8.7 square feet of accelerating coil; about 6 square feet of coil would be sufficient to warm all of the air that would pass up such a flue. If we wished to get exactly the same volume of air discharged from the short flue as from the long one we must arrange to heat the air in the short flue to a temperature



STATIC ANEMOMETER.

of about 105 deg. This would require an accelerating coil of 29 square feet for each square foot of flue area.

(Continued on page 28)

ANOTHER NEW FEATURE

FOR

SANITARY ENGINEER

Plumber and Steamfitter of Canada

We have recently announced in SANITARY ENGINEER, Plumber and Steamfitter of Canada, a number of important new features for 1920. We are glad to advise our subscribers of another new and important feature which will appear in SANITARY ENGINEER, commencing with the February 1st issue.

SANITARY ENGINEER has purchased the exclusive right to publish a series of articles entitled "Sewage Disposal for Small Communities." This series covers a wide range of important subjects. After appearing in SANITARY ENGINEER it is the intention of the author of this series to publish the series in book form. The author, Mr. Bernard E. T. Ellis, describes the book as a practical handbook on the construction of small sewage disposal work suitable for private houses, public institutions, and small country districts. There are 84 illustrations to be used in connection with this series.

The contents may be briefly described under the following headings:

1 Preliminary and general description of sewage.

2 Cesspools and septic tanks.

3 Construction and design of small septic tanks for private houses.

4 Construction and design for larger installations, including sedimentation tanks, septic and two-storey Imhoff tanks suitable for all classes of public buildings and small country towns.

5 General description of private house drainage.

6 Disposal of sludge and design of small pumping installation.

7 Land filtration and artificial bacteria bed.

In view of the increased attention being given to all subjects appertaining to public health the author of the series has compiled the book describing the many successful methods that are being and that have been adopted for treating and disposing of sewage from small communities, thus filling a long-standing want of sanitary engineers, architects, and for a reference explaining the design of small modern sewage installations for the removal of foul water waste on the best sanitary ground with the least nuisance.

Mr. F. R. Maxwell, president of the Canadian Society of Domestic Sanitary and Heating Engineers, was asked to examine this series and he stated in part as follows: "I believe the information contained in the series will be invaluable to the men in the trade. There are many points made clear and many phases of practical work taken up, which would puzzle most men if they were called upon to do the work discussed. I believe that information of this kind is greatly needed and should be read carefully."

This series will be reproduced in SANITARY ENGINEER, Plumber and Steamfitter, at great expense, in a series of splendidly illustrated articles, but we believe our readers will greatly appreciate this new feature. Further details regarding the new series will appear in next issue and the first article of the series will appear in the February 1st issue.

Ontario's Proposed New Regulations

Important Error in Weights of Pipe Found as Result of Publication of Details in Previous Issue of "Sanitary Engineer—The New By-laws Planned in Connection With Gas Fitting

As a result of the publication in the previous issue of SANITARY ENGINEER exclusively, of the proposed new plumbing regulations for the Province of Ontario, an important error was revealed. This was discovered in connection with the specified weights as provided for under the proposed Provincial schedule of both cast iron pipe for underground (heavy) and also of medium cast iron pipes for waste or vents.

This error as soon as discovered was taken up with the Provincial authorities and in this way will be promptly rectified. Had the weights gone through as provided for in the original regulations, it would have been necessary to amend the regulations. This, as every man in the trade knows, would involve annoying and serious delays, besides causing much inconvenience to those trying to secure pipe in the weights specified.

The publication of the proposed regulations has been followed by men in the trade throughout the Dominion with the keenest interest. In presenting to them this important information SANITARY ENGINEER scored what is known in the journalistic world as a "scoop." That is, it was the first journal to secure the information and pass it along to the trade. This is the aim of the paper, to give the men in the trade, all the time, information that bears on the sanitary and heating businesss.

Below will be found the correction made in the weights of pipes and also the remainder of the proposed plumbing regulations and the proposed new gas regulations.

The proposed Ontario regulations are continued herewith from the point where they were left off in the previous issue of SANITARY ENGINEER.

Soil, Waste and Vent Pipes

63. All house drain, soil, waste or vent pipes shall be of cast iron, galvanized wrought iron or brass, except for branch waste and vent pipes which may be constructed of lead.

64. Galvanized wrought iron two inches and less in diameter may be used for branch vent pipes.

65. The diameter of soil and waste pipes shall not be less than those specified in the following tables:

Main soil pipe	4 inches dia.
Main soil pipe (for building six or more floors)	5 inches dia.
Branch soil pipes	4 inches dia.
Main waste pipes	2 inches dia.
Main waste pipes for kitchen sinks on five or more	
Branch waste pipes for floors	3 inches dia.
kitchen sinks, baths, or laundry tubs	1½ ins. dia.
Branch waste pipes for three or more fixtures .	2 inches dia.
Branch waste pipes for lavatory basins	1¼ ins. dia.

66. No branch waste pipes for other fixtures shall be less than one and one-quarter inches in diameter.

67. In large buildings, or when batteries of fixtures are used the size of pipes shall be approved by the Local Board of Health.

68. The arrangement of drain, soil, waste and vent pipes shall be as direct as possible, and all horizontal pipes shall be run on a uniform grade of one-half inch to the foot where possible, but in no case should the grade be less than ¼ inch to the foot. Offsets will only be permitted when unavoidable and shall be made at an angle of not less than 45 degrees.

69. When wrought iron pipes are used for soil waste or vent pipes, it shall be galvanized and free from scale, the burr formed on the inside by cutting shall be carefully reamed out to the full size of the pipe and be threaded with a full tapering thread and brought up butt to the shoulder of recess in the fittings.

70. No waste pipe from any fixture shall be connected to the closet bend, but shall connect directly with the main soil or waste pipe by using a Y-branch fitting.

71. No waste pipe from any refrigerator, ice box, cold storage or other receptacle in which foodstuffs are kept or stored shall be connected direct to any drain, soil or waste pipe, but such waste pipe shall discharge into an open water supply fixture or floor drain properly trapped and vented. Refrigerator wastes shall be separately trapped and so arranged as to permit of frequent flushing and be as short as possible. When two or more refrigerator waste pipes are connected together or to a stack they may be extended through the roof of premises for ventilation.

72. All vertical pipes and stacks shall be properly supported at their base and at intervals of not more than fifteen feet (15 ft.) All horizontal cast iron pipes shall be supported at intervals of not more than five feet (5 ft.) by iron or steel pipe hangers or on brick piers. All horizontal lead pipes shall have continuous supports throughout their entire length.

73. T's may be used on the vent system.

74. No double hub or double TY shall be used on horizontal runs, nor shall double hubs, straight crosses or TY with side branches be used on soil or waste pipes. Double hubs may be used in the main soil or ventilating pipe above the highest fixture or fresh air inlet.

Fixtures

75. All fixtures other than water-closets and urinals shall have strong metallic strainers or bars over the outlets to prevents obstruction of the waste pipes.

76. All fixtures shall be set free and open from all enclosing woodwork.

77. All fixtures must be constructed of satisfactory materials, metal lined wooden fixtures are prohibited.

78. All receptacles used for water-closets, urinals, or slop sinks shall be either vitrified earthenware, enamelled cast iron, or porcelain. If cast iron, they shall also be enamelled or coated on the outside with a non-absorbent and non-corrosive paint.

79. All water-closets and urinals shall be fitted with either siphon discharge, flush, pressure tank, connected by not less than one and one quarter inch diameter pipe, automatic flushing valve or flushometers of approved type, and shall have a flushing capacity of not less than three gallons for water-closets and not less than one gallon for urinals.

80. All water-closets and urinals shall be prvoided with flushing rims so constructed as to flush the entire interior surface of the bowl, and with such force as shall properly cleanse the surface.

81. Pan, valve, plunger, long hopper, washout hopper, or other closet having invisible seals or the walls of which are not thoroughly washed at each discharge of water are prohibited.

82. Frost proof closets may only be installed in compartments which have no direct connection with any building used for human habitation and only with approval of the Provincial Board.

83. No closet or other convenience which allows of the escape of gas or air from any of its parts or from the drain, soil or waste pipe connected with it, or which allows of any accumulation of filth in or about it, shall be fitted up or used.

Fittings

84. All fittings shall corrrespond in weight and quality with the pipes to which they are attached. Special fittings not provided for in these regulations but approved of by the Provincial Board of Health and the Plumbing Inspector may be used in any part of the system.

85. Fittings for wrought iron waste and vent pipes shall be galvanized, cast iron or malleable iron recessed and threaded fittings.

86. Fittings for waste or soil or refrigerator waste pipes for wrought iron or brass pipe shall be galvanized, cast iron, or brass, recessed and threaded drainage fittings, with smooth interior water way and thread tapped so as to give a uniform grade to branches of not less than one-quarter (¼) of an inch per foot.

87. No connection to any cast or wrought iron drain, soil, or waste pipe shall be made by boring or tapping the pipes or by a saddle, and no inverted joint shall be used below any fixture.

88. No pipe hub shall be used as an increaser. Increasing or reducing in size must be made with a proper fitting.

89. All changes in direction of horizontal pipes shall be made with full "Y" branches and one-sixth, one eighth or one-sixteenth bends. "TY" may be used on vertical soil and waste lines when it is im-

possible to use a "Y" branch, but are prohibited on horizontal lines.

90. One quarter bends may be used on the vent system, fresh air inlets, rain-water leaders or floor and yard drains.

91. Water-closets, urinal or slop sink connections betweeen earthenware or cast iron traps and lead bends shall be made by a cast brass flange, not less than 3/16 inches thick, fastened to the floor and soldered to the opening of the lead bend, and the joint made gas and water tight with a gasket or rubber or asbestos.

Traps

92. Every fixture shall be separately and effectually trapped by a self cleansing water sealed trap placed as close to the outlet of the fixture as possible, but in no case shall it be more than 12 inches from such outlet, except with the approval of proval of the Local Board of Health.

93. The size of trap for a given fixture shall never be less than the following inside diameter, and no slip or washer joint shall be placed on the sewer side of any trap or vent pipe:

Water-closet	3 inches
Slop sink	2 inches
Pedestal urinal	2 inches
Urinal	1½ inches
Laundry tub (1 to 3 considered one fixture)	1½ inches
Kitchen sink	1½ inches
Bath tub	1½ inches
Shower bath	2 inches
Sitz bath	1½ inches
Drinking Fountain	1¼ inches
Dental cuspidor	1¼ inches
Wash basin	1¼ inches
Pantry	1½ inches

All 1¼ in. traps shall be of deep seal patterns.

94. Non-siphon traps of patterns approved by Provincial Board of Health may be used without a vent pipe upon the approval of the Local Boart of Health.

95. There shall only be one trap under a water closet and that immediately beneath same, viz., that which constitutes part of the water-closet bowl.

96. No fixture shall drain through more than one trap, main trap on house drain excepted.

97. Traps shall not be less than the size of the waste to which they are attached and equal in quality and thickness.

98. All traps, where practical, shall have water-tight trap screws, except earthenware traps, and be so located as to be easily accessible.

99. Vent horns on earthenware traps are prohibited, except for replacement of old fixture of that type (i.e., repairs).

Vents

100. The trap of every fixture shall be protected from siphonage and back pressure by an anti-siphon or vent pipe which shall, where possible, be constructed on the continuous waste and vent principle; the inlet of such traps shall not be more than 14 inches from such continuous waste and vent, and where such is impracticable, the vent shall be taken off the waste pipe at least 3 inches from the crown of the trap, and shall be connected to branch vent at least 6 inches above high water line of fixture when full.

101. The diameters of vent pipes shall not be less than two inches for main vents through less than seven stories; three inches for water-closets on more than three floors, and for other fixtures in more than seven stories. All vent pipes shall be increased one size (2 inches) in diameter before passing through the roof.

102. All main vents shall connect at their base with the main soil or waste pipe below the lowest fixture in such a manner as to prevent the accumulation of rust scale and shall be extended through the roof and finished as per section, or may reconnect to the main soil pipe at a point at least 6 inches above the highest fixture connected therewith.

103. No vent pipe shall be used as a soil or waste pipe.

104. No vent pipe shall be allowed to connect to another vent pipe below a point at least 6 inches above the fixture for which it is used.

105. Vent pipes may be one size less than the size of the trap which they serve and in no case shall be less than 1¼ inches.

106. Vent pipes for water-closets shall be connected to the highest point of the bend or of the hub to which the bend connects, and must be at least 2 inches in diameter. Closet vents into which other vents are connected shall be 3 inches in diameter.

107. No wrought iron vent pipe will be allowed below the top of cellar floor or to be buried under the earth.

108. All vent pipes shall be run as direct as practicable and be so graded and connected that any condensation will drain back to the waste pipe. All offsets shall, where practicable, be made at an angle of forty-five degrees.

Joints.

109. All joints between lead pipes and between lead and brass pipes, traps, ferrules or solder nipples shall be wiped joints. In no case shall bolt joints be allowed. All joints between iron and lead shall be made with brass wiped to the lead and caulked or screwed into the iron.

110. All joints on cast iron pipes shall be made with picked oakum and molten lead run full, thoroughly caulked, and shall be made gas and water tight. The joint shall have a depth of lead not less than 1½ inches.

111. All joints on wrought iron pipes shall be screwed joints made up with red lead, paint or other suitable substance, and be made gas and water-tight, and any burr formed in cutting shall be carefully reamed out.

112. All connections of lead pipe with cast iron shall be made with brass ferrules having inside diameters not less than the outside diameter of the lead pipe to which they are to be attached.

113. No cement joints nor connections between iron and cement or tile pipe or brick drains shall be made within any building.

Water Supply Pipes, Taps and Cocks

114. All water supply pipe for a plumbing system shall be galvanized wrought iron, lead or brass, with galvanized malleable, or cast iron or brass water fittings.

115. Every tap or cock on a supply pipe shall be capable of resisting a pressure of at least three hundred pounds to the square inch.

116. Every tap or cock shall be made of gun metal or hard brass, or of other not less suitable metal or alloy, and shall be of sufficient strength and weight in every part.

117. In every screw-down tap a cock having a washer of soft material; the valve seating shall be raised.

118. Every ball cock shall be efficient; the value shall be provided with a washer of good rubber or other suitable material; the ball shall be of glass or copper; if of copper it shall be not less than .022 of an inch in thickness when finished bright; the lever shall be of copper or other suitable material or alloy; the size of the orifice, the length and strength of the lever and the size of the ball shall be properly proportioned to one another, and shall be adjusted to the pressure to which the ballcock is liable to be subjected.

119. The name or registered trade mark of the maker shall be stamped in all fittings. The word "Best" is not to be used.

120. There shall be a shut-off and drip on the main supply inside the foundation wall.

Meters.

121. Meters when inserted on water service connections may be installed without check valves.

Hot Water Storage Tanks and Kitchen Boilers.

122. Relief valves shall be inserted on the top of all hot water storage tanks and kitchen boilers in every instance if a check valve has been inserted in the water service connection or supply pipe.

Rain Leaders and Sub-surface Drains.

123. Every building shall be kept provided with proper metallic gutters and rain leaders for conducting water from all roofs in such manner as shall protect the walls and foundations from injury. In no case shall the water from any rain leader be allowed to flow upon the sidewalk or adjoining property. If there be no sewer in the street upon which the building fronts, then the water from said leaders may be conducted by proper pipes laid below the surface of sidewalk to the street gutter, or may be conducted by cast iron pipe to a leaching cesspool located at least 26 feet from any building. No plumbing fixtures shall discharge into the said leaching cesspool.

124. Inside leaders must be made of cast iron or wrought iron with roof connections made gas and water tight by means of a heavy lead or copper-drawn tubing to a brass ferrule or nipple caulked or screwed into the pipe.

125. Outside leaders may be made of sheet metal. Connections with the house drain shall be by means of a cast iron pipe extending vertically not less than two feet above the grade level.

126. Rain water leaders must not be used as soil, waste or vent pipes, nor shall any such pipe be used as a leader.

127. Roof leaders and surface and ground water drains shall not be connected to house sewers which discharge into public sewers intended for the carriage of sanitary sewage only, except when special application, made in advance, is approved by the Local Board of Health; a sub-surface drain for ground water only built around or immediately adjacent to building foundation walls, may be connected direct to any public sewer, or to the house connection at such point, and in such manner as the Local Board of Health may designate.

Leaders and Cellar Drains

128. Rain water leaders when connected with house drains shall be suitably trapped. Whenever a surface drain is installed in a cellar or basement, it shall be provided with a deep seal trap. Drain pipes from cellars and basements, liable to back-flow from the sewer, shall be supplied with back-water valves. No back-water valve shall be so placed as to interfere with the ventilation, the plumbing or drainage system.

Drinking Fountains

129. Drinking fountains manufactured for this purpose only, placed on walls and pedestals may be directly connected to a rain water leader on the building side of a trap without requiring a separate trap or vent. But if connected to a house drain or soil pipe, they shall be considered a plumbing fixture and shall be properly trapped and vented.

Watering Troughs

130. Watering troughs may be provided with float valves to prevent overflowing, and all troughs shall be kept in good working order.

Chemical Laboratories

131. Fixtures and waste pipes in chemical and other special laboratories shall be installed in accordance with plans approvby the Local Board of Health.

Steam Exhaust, Etc.

132. No steam or vapour or water of a temperature of over one hundred and thirty degrees Fahrenheit shall be discharged from any premises into a sewer, drain, or catch basin, nor shall any matter or thing be discharged into any sewer which may tend to cause an obstruction of the public sewer, or a nuisance or a deposit therein or an injury thereto.

133. Boiler installations up to and less than one hundred horse-power shall be con-

nected to blow-off tanks not less than 24 inches x 30 inches, installation between one hundred and three hundred horse-power not less than 30 inches x 36 inches, and larger installations not less than 48 inches x 60 inches. The location of and the connections to said blow-off tank shall be subject to the approval of the Local Board of Health.

134. No steam exhaust or steam drip, unless it be provided with a cooling tank of a capacity approved by the Local Board of Health, or unless it be connected with a blow-off tank, shall connect with any drain leading to the sewer. Every blow-off tank shall be supplied with a vapour pipe not less than two inches in diameter, which shall be carried above the roof and above the highest windows of the building.

135. The Local Board of Health may require such additional means of cooling the blow-off tanks by the injection of cold water passing from the blow-off tank so that it shall not exceed one hundred and thirty degrees Fahrenheit.

Grease and Other Special Traps

136. Every building from which, in the opinion of either the Local Board of Health grease may be discharged in such quantities as to clog or injure the sewer, shall be provided with a satisfactory grease trap.

137. Every building in which gasoline, naphtha, or other inflammable compounds are used for business purposes, shall be provided with a special trapped receiver, satisfactory to the Local Board of Health, so designed as to prevent the passage of such material into the sewer, and ventilated with the rain water pipe from the roof.

138. The waste pipe of every wash rack for vehicles shall be provided with a sand box of sufficient capacity.

139. The drainage of stable fixtures shall, as far as practical, be constructed according to the plans attached as Schedule "A" and shall be subject to the approval of the Local Board of Health.

Water-Closet and Usual Compartments

140. No water-closet or urinal shall be placed in any cellar or basement unless such cellar or basement has a cement floor or other material impervious to moisture, and is well lighted with natural and artificial light, and has easy means of access, and all such closets or urinals shall be of the flush drive and non-soil type.

141. The floors of all water-closets and urinals in office buildings, railway stations, public buildings, hotels and schools shall be constructed of materials impervious to moisture, and laid with a grade not less than one in fifty to central floor drains, conveniently located.

142. All water-closets, urinals, urinals and slop sinks when in a separate compartment must be supplied with a local ventilation pipe having an area equal to a pipe three inches in diameter and connected to a heated flue. The area of main or common flues shall be increased proportionately when a number of local vent pipes combine.

Septic Tanks

143. Every septic tank in connection with a building shall be constructed of good brick and cement or of concrete, and be of a capacity of not less than fifty cubic feet. The walls of septic tanks when constructed of bricks must be not less than nine inches thick, and if of 1, 2, 4, concrete not less than six inches thick. The bottom of septic tanks shall be of concrete not less than six inches thick. The interior surface of brick septic tanks shall be finished with a coating of Portland cement mortar.

144. Septic tanks shall be properly covered over and provided with adequate means of access and of ventilation.

145. The ventilation may be means of a connection to the distributing tile and to the main vent pipe.

146. The overflow from septic tanks shall be disposed of through field tile not less than three (3) inches in diameter. The number of lineal feet of tile to be laid shall not be less than twenty-five (25) feet per person in the family or less than one hundred and thirty (130) feet per house. In light sandy soils the overflow may be led to a leaching cesspool not less than ten (10) feet in diameter, lined with dry brick or stone and not less than ten feet deep.

147. No tile disposal system or leaching cesspool shall be placed within one hundred and fifty (150) feet of the source of any water supply, whether the same be on the same or adjoining property.

Inspection and Tests

148. Pipes or other fixtures shall not be covered or concealed from view until approved by the Inspector, who shall cause the same to be examined or reported upon within two working days after notice that they are ready for inspection.

149. Plumbing shall not be used unless, when roughed in, the wastes, vents, and back air pipes and traps are tested in the presence of an inspector.

150. The material and labor for the tests shall be furnished by the plumber.

151. The tests may be made separately as follows:

(a) the house drain, including all piping to the height of five (5) feet above the highest point on the house drain, except the exposed connnections to fixtures,

(b) the soil, waste, vent, inside rain leader, and drainage pipes which would be covered up before building is enclosed or ready for completion,

(c) all other work known as rough work between house drain connection to points above the finished floors and beyond the finished faces of walls and partitions.

and the tests required for (a) and (b) or (b) and (c) or (a), (b) and (c) may be combined.

152. When the drain or any part of the plumbing system is to be tested separately there shall be a head of water at five (5) feet above all parts of the work so tested, and special provision must be made for including all points and connections in at least one test.

153. The use of wooden plugs in making tests is prohibited.

154. The Inspector of plumbing may require either a water or smoke test, which shall be made by the master plumber. In all cases the Inspector shall designate the points at which pressure is to be relieved or drawn off.

155. The results of every inspection shall be recorded in the office of the Local Board of Health.

156. The water test shall be applied by closing the opening at the outlet end of the house drain and all other openings in the piping with proper testing plugs to the highest opening, and completely filling the system with water; the water column to be left standing at least three hours.

157. A final smoke test shall be made to determine the sanitary condition of the drainage or plumbing system of all buildings, and where there is reason to believe that the plumbing system has become dangerous or defective on account of settlement of the building or by explosion, accident or any other cause.

158. Smoke test: The smoke machine shall be connected to any suitable opening or outlet and when the system is completely filled with dense pungent smoke; and the openings emit smoke, they shall be closed and an air pressure equivalent to one and one-half inch (1½") water column shall be applied and left standing at least ten (10) minutes. If there is no leakage or forcing of trap seals, indicated by the fluctuation of the drumfloat, the system shall be deemed air or gas tight. But nothing in this section shall be so construed as to prevent the removal of any clean-out or unsealing of trap, to ascertain if the smoke has reached all parts of the system.

159. If test shows defects the plumber shall be given two days notice to make good the defects. Failure on the part of the plumber to make good all defects shall make him liable to the penalties prescribed by this by-law.

160. Tests shall not be required after the repairing or replacing of any old fixture, tap or cock by a new one (to be used for the same purpose), forcing out stoppages, repairing leaks, or relieving frozen pipes and fittings; but such repairs or alterations shall not be construed to include cases where new vertical or horizontal lines of soil, waste, vent or interior rain leaders are used or their relative locations changed. Provided, in a building condemned by the Health Officer because of unsanitary conditions of the house drainage or plumbing, no such drainage or plumbing shall be considered as coming under the head of repairs, but all such house drainage or plumbing shall be tested as in the case of new buildings.

Maintenance

161. The plumbing and drainage system of all premises shall be maintained by the owner at all times in good working order in conformity with these regulations and to the satisfaction of the Local Board of Health.

Future Connections

162. Where soil or waste pipes are placed in any premises for future use, the necessary ventilation pipes shall also be put in at the same time and connected to wastes leaving no dead ends. The whole shall be tested and inspected as if the same were for immediate use, and all openings not in use shall be effectively plugged.

Material Other Than Specified

163. The use of any other material in, or method of assembling, or installation of any part of a drainage or plumbing system shall not be precluded or prohibited which has the approval of the Provincial Board of Health, the trade and other controlling body.

Application For Service Connections to Water Department

164. Every application for connection with the system of mains, or service pipes attached thereto, or to repair a service pipe, must state upon the blank form furnished for the purpose (similar to schedule "A") the number and exact location of the building, premises, or establishment, the number of the block and plan, the number of stories and length of frontage, the purpose for which the water is to be used and the time at which the tap will be required to be made by the Water Department.

The application must be signed by the owner of the property or his duly authorized agent.

Temporary Connections Before Laying of Water Mains

165. No permit shall be issued to a registered plumber to lay a temporary water service-pipe to supply a building, lot, premises, or establishment on any street in which there was no water main, until the owner or lawful agent shall sign an agreement that, immediately after a main has been laid, temporary service-pipe shall be promptly disconnected and connected directly on the main, in accordance with the requirements of the plumbing regulations in force at the time of connecting with the water main. In case of any failure or delay on the part of the owner or lawful agent, after due notice has been given by the Municipality to fully and promptly comply with the agreement on which a permit was issued for laying a temporary water service-pipe, the Municipality may order the supply of water to be cut off from the building, lot, premises, or establishment, and it shall not be turned on until the regulation herein prescribed has been complied with.

166. All service connections and service-pipes from the mains to building line, including the stop-cock or valve and box for same, shall be put in only by properly authorized employees of the water department, acting under the direction of the superintendent of said department.

Tapping Water Mains

167. No water mains shall be tapped un-

der any circumstances except by the regular tapper of the Water Department.

168. Hereafter, under no circumstances, shall any water main larger than 12 inches in diameter be permitted to be tapped except by special written permission of the engineer. No tap shall be nearer than 6 inches to a bell of the water main, and no two taps shall be nearer together than two feet.

169. In no case may a water service-pipe from the tap in the main to the building line be of less dimension than three-fourths of an inch, nor shall the stop-cock or the service-pipe be of less dimension than the supply pipe.

170. A water service-pipe shall not be laid directly above a house sewer or within eighteen inches thereof, measured horizontally.

171. Two service-pipes shall be permitted in one trench only when a sheet asphalt block pavement or macadam roadway must be cut: otherwise, a separate trench shall be dug for each pipe. In no case shall more than two service-pipes be placed in one trench.

172. No water service-pipe shall be laid, unless the same be provided with a stop-cock or gate valve of material and construction approved by the engineer and each valve shall be provided with an extension stop-cock of an approved pattern with a non-detachable cover. Every stop-cock box provided for a above shall have cast upon its cover the word "WATER."

173. All stop-cocks for water service-pipes shall be furnished by the Water Department.

174. The stop-cock box shall be placed not less than one (1) foot nor more than two (2) feet inside the sidewalk; the stop-cock box shall be placed in such location as may be readily located. In every case a stop-cock box shall be placed in front of and opposite the premises being served, and in alleys the stop-cock box shall be placed outside of and as near as posssible to the wall of the building served; Provided, that if the building sets back from the alley line the stop-cock shall be placed where directed between the wall of the building and the alley line.

175. When any portion of the service-pipe located in the public footway and including the stop-cock and box requires repairs, these appurtenances shall be removed to the location prescribed.

176. Every water service-pipe shall be laid at least five feet below the surface of the ground and must have a slack of six inches at the main to prevent undue strain or injury to the tap by settling of the trench.

178. If it is desired to pass a service-pipe from one point to another without excavating a trench, it shall be allowed to be done only when a channel is made by a separate instrument, through which the service-pipe can be passed without strain, or when a large pipe is driven and left in place, and through this the service pipe is passed.

179. Neither of the methods proposed above shall be applied in any street in which an underground conduit exists, nor shall these methods be employed in any street provided with a granite curb of permanent roadway surface except upon written approval of the Engineer.

Independent Service

180. The water service-pipe for any building, lot, premises, or establishment shall not be made over or through any building, lot, premises, or establishment; Provided, that this regulation shall not prevent a dwelling and a stable upon the same lot from being supplied by the same service-pipe: but if the stable be converted wholly or partially into a dwelling or place of business, a separate service-pipe, with independent stop-cock and box, must be made to supply it.

181. It shall not be lawful to connect a power pump high pressure boiler or other apparatus subject to considerable back pressure directly within a service-pipe or street main for supply water to a steam boiler, tank or receptacle in a building, premises or establishment, or to maintain such connection and all such apparatus shall be fed from a tank or receptacle.

*Material of Service Pipes

*Lead pipe is the most satisfactory material for service pipe and should be used as much as possible. Settling of the main has less effect on lead pipe than any other. The rigid connections commonly used with galvanized wrought iron pipe are the cause of a great deal of water waste. Lead pipe should be used on the streets liable to be cut up for conduits or underground structures.

182. The service-pipe between the ferrule or corporation cock at the main, and the building, shall be of lead or galvanized wrought iron free from scale, in the case of all pipe having one inch water way or less; where the pipe is over one inch and not exceeding two and a half inch water way, it shall be of lead or galvanized wrought iron free from scale; all pipe over two and a half inches water way shall be of cast iron.

183. In the building lead, galvanized wrought iron, or brass pipe of standard wrought iron pipe sizes shall be used.

184. On all lead pipe wipe joints or couplings approved by the Water Departent shall be used, but no couplings shall be service pipe.

Standard Weights of Lead Pipe

185. The following weights per lineal foot shall be the standard for lead service pipe, to wit:

Lead pipe ½ inch bore, 6 lbs. per lineal yd.
Lead pipe ⅝ inch bore, 8 lbs. per lineal yd.
Lead pipe ¾ inch bore, 10 lbs. per lineal yd.
Lead pipe 1 inch bore, 13 lbs. per lineal yd.

186. All water supply pipe shall be laid with due regard to danger from freezing and must not be placed back of plaster on outside walls of building, and shall be properly laid and graded with a fall to a stop and waste cock placed under floor in the cellar or other convenient place, where they can be entirely drained off.

Permits

187. Permits may be issued without charge for alterations and repairs of water service-pipes inside the building line. Any plumber who shall take advantage of a permit of this class to do unauthorized work shall have his license revoked and shall be prosecuted for violation of these regulations.

Penalties

188. Any person or persons who shall fail to comply with any of the provisions of this Act regarding the procuring of a license or certificate to engage in or work at business of plumbing or house drainage, shall be liable to a fine of not less than $10.00 (ten dollars) nor exceeding $50.00 (fifty dollars) for each and every day he or they may engage in such work without first having obtained said certificate or license, any any person or persons who shall violate any of the rules or requirements set forth in these regulations regarding the construction or alteration of any plumbing or house drainage, shall be liable for every such offence to a fine of not less than $10.00 (ten dollars) or more than $100.00 (one hundred dollars) or to imprisonment for thirty days, and on conviction, if a master plumber, in addition to the penalties herein described he may forfeit any certificate or registration he may hold with the Board of Health.

GAS FITTING REGULATIONS

Gas Fitting

189. Under these regulations gas fitting shall be construed to be as follows: The erection or construction of a piping system through which is conveyed or intended to be conveyed, gas for power, heating or illuminating purposes, including the connection therewith of gas fixtures, ranges, stoves, water heaters, and gas engines and all their attachments and appurtenances, and the maintenance in good and safe condition of said system and the making of the necessary repairs and changes.

Outside Stop-Cocks

190. Outside stop-cocks shall be full way brass cocks, of a pattern approved by the County, Town or City Engineer of the municipality concerned, and shall be located as prescribed for water stop-cocks. Every outside stop-cock shall be provided with an extension stop-cock box similar to the water stop-cock boxes, with the word "GAS" cast upon the cover. If stop-cocks are located otherwise than prescribed above, or the boxes need adjustment to grade, such moving and adjustment shall be at the expense of the gas light company responsible for their maintenance.

191. Outside stop-cocks shall be required for all stores with cellars, for all large buildings of a public character, and for other buildings having a frontage of fifty (50) feet or more on one or more streets.

Inside Stop-Cocks

192. There shall be a heavy, main, full weight cock on every service pipe close to the inside of the foundation wall, and in case of two or more meters supplied from the one service pipe, there shall be an additional straightway cock at the inlet side of each meter. When service pipes are over two inches, brass seated valves shall be used. Brass soldered nipples shall be used on all lead meter connections.

Separate Gas Service Pipe

193. Every building must have an independent gas service of size prescribed. The service pipe shall be run, and both connections with the meter made, by the gas company. Where a main runs through a masonry foundation wall a sleeve must be provided, the gas pipe resting on the bottom of the sleeve, with a clearance of one half-inch on top.

Location of Meters

194. Meters placed in cellars shall be set on the front wall whenever practicable, four (4) feet from the cellar floor. In no case shall be the meter be set in a vestibule or above the door of same, nor in any cellar, hallway or room closer to any furnace, open grate or range, than six (6) feet, nor within six (6) feet of any electric switchboard or other electrical appliance; nor in any closed closet, under stairways, in any stationary box, nor under any show window of a store, or in a coal vault or ash vault.

Service Pipe Extensions

195. All extensions of service pipes inside of building shall be exposed from the outside walls of the buildings to the meters.

Material of Gas Pipe

196. The pipe shall be of the best quality wrought iron or steel pipe, with malleable iron fittings, and joints shall be made with white lead, preferably applied to the male threads. No gas fitter's cement shall be used except at fixture joints.

Old Gas Pipe, When Allowed

197. No second-hand pipe shall be used, except, that when a building is undergoing reconstruction or repairs, such old gas pipe as is taken out and found to be in good condition may re re-run in that building.

Fittings

198. All fittings (except stop-cock and valves) shall be of malleable iron. All bends or angles in piping must be made with fittings. The bending of gas pipe will not be permitted.

Table of Sizes For Gas Pipe

199. The size of gas pipe shall not be less, nor the length greater, for the number of burners stated, than enumerated in the following table, except, that if the number

EDITORIAL COMMENT

OUTLOOK IS BRIGHT

AFTER having come through twelve of the most trying months, in many respects, in the history of the Dominion, the people of Canada are commencing a New Year of exceptional promise. When one contrasts the busy, prosperous, happy Canadian public, and conditions that exist in Canada, with the people of many other lands, one realizes to a small extent just what Canada has missed in the way of real troubles. With resources that are, perhaps, richer than those of any country on the globe, with a sturdy and hard-working population, and with ample money to finance development projects, Canada seems to be merely at the commencement of a period of prosperity that may extend over many years. Leading financiers, not only of this country, but of others also, see for Canada in the coming years, development that will mean much. The merchants of the Dominion will, of course, share in this and everywhere one sees evidences that they are preparing for larger business. No business men are looking forward with more optimism than the men in the plumbing trade. In 1919 they enjoyed a full measure of prosperity. Many of them have just ended the most prosperous year in their history, and but for the fact that they could not get the merchandise they needed it would have been even more so. All out through the country districts, and it should be remembered that Canada is essentially a farming country, one hears the same story: "We need more room. We know we can do more business if we add this line and that line. We hope shortly to build a larger store." This has been repeated so often to the writer in the past few months that there is only one conclusion and that is that 1920 is going to see sanitary engineers expanding their trade in all directions.

A COMPLICATED SITUATION

"THE business world at the beginning of 1920 finds itself confronted with fifty new political divisions with newly defined areas, new ethnic groupings of population, and therefore with new industrial and commercial activities, new forms of Government, new political managers and law makers, new forms of currency, and new relations to world commerce, industry and finance.

"Thirty of these new political divisions have declared themselves as republics; certain others as kingdoms or under the direct control of local rulers; others, classified as 'colonies, protectorates, and dependencies,' have passed under new political control; and still others are awaiting anxiously the determination as to the political power which is to exercise the 'mandate' under which their political and industrial future is to be developed.

"Of these fifty new divisions, thirty occupy that formerly great industrial and commercial area, Central Europe, and the remainder are scattered over Africa, Asia and the islands of the Pacific. They aggregate one-fifth of the land area and have one-fifth of the population of the globe, and their imports and exports formed one-fifth of the total international trade immediately preceding the war.

"Twenty of these new republics have been established upon a territory formerly that of a single empire, Russia; a dozen others have been created from sections of three other empires, Germany, Austria-Hungary and Turkey; and the remainder, which is practically a score in number, represents pre-war colonies, protectorates or dependencies of Germany and Turkey respectively.

"Most of these new political divisions lie within the interior of Europe, separated by long distances from the ocean; their railroads disorganized; their currency in a state of extreme disorder; their population unaccustomed to the new form of Government; their legislators inexperienced in national and international affairs of Government.

"What will the world, the industrial, the financial, and the commercial world, do with them and for them?

"It is easier to ask this question than to answer it. It cannot now be answered, in fact, with anything like accuracy or even a safe prediction."

MAY MAKE IRON AT THE COAST

CONSIDERABLE interest is being shown at the present time in the possibility of iron and steel industry being developed in British Columbia. At the recent meeting of the Canadian Mining Institute the question was discussed at length and particular attention was given to remarks of Dean Roberts, of the University of Washington, who gave it as his opinion that it is only a question of a very short time before iron will be produced on the coast. No less than one-third of the exports of British Columbia this year, he pointed out, are minerals.

He strongly urged merchants and business men to co-operate in every way in the development of the Province's resources, as it has an abundance of fuel, a large amount of potential cheap hydro-electric power and inexhaustible supplies of minerals. Lead and copper, he stated, are being produced in ever-increasing quantities and conditions are fast developing which point to iron smelting being engaged in. In connection with Dean Roberts' remarks, it is interesting to note that a representative of one of the largest British firms has been on the coast for some weeks and is reported to be investigating closely ore supplies and conditions generally.

A WORD OF ENCOURAGEMENT

DISCUSSING the problem of apprentices in the hardware business a writer in a contemporary says: "My work invariably drew a comment from my employer which was a stimulant for me to try and do better all the time. To all employers I would say: 'Don't forget the word of encouragement.'" There is a great deal of truth in this. Very often the busy merchant immersed in the thousand and one details of carrying on his business loses sight altogether of the juniors of the firm and the work they are doing. If a boy or young man is trying his best to make good, a word of appreciation, even if it only comes occasionally, is a tremendous incentive. He not only knows that what he has done has been noted and appreciated, but it will spur him on to do better work. The few seconds that it will take to make a kindly comment on the young man's work and to say a few words of commendation are, if the head only realized it, worth more to him than any other time in his whole busy day.

BIG DEVELOPMENTS COMING

IT is said that straws show which way the wind blows and an indication of what business men are looking for in regard to the future of Canadian trade may be seen in the unusually large lists of incorporations of new companies which have been issued with great regularity of late. In addition to the new companies there is a long list of old-established firms who are asking permission to double or treble their capital in order to provide for plant extensions, installation of additional machinery or something else designed to take care of more business. All these are certainly very, very healthy signs. There is another one also and that is the great number of American firms who are locating branches at various points in Canada. Some of these firms are capitalized at many millions. It may be accepted as a fact that Canadian business men do not put their money into new companies and new factories just for the fun of investing. They see business ahead and they are preparing for it. The same is true of the American firms coming to this country. It seems to be the general opinion in the commercial world that Canada is just commencing a period of development and industrial expansion that will easily eclipse anything that has occurred in the past. No country in the world is richer in natural resources and in undeveloped farming territory and the eyes of hundreds of thousands of people all over the United States, England and the continent of Europe are on Canada. Sooner or later immigration is bound to be resumed and every new comer will be a customer for goods of one kind or another. In addition to what has been mentioned is the steadily growing export trade which Canada is building up. All of these things are factors in and account in one way or another for the new factories, the extensions and so on.

MEANS MILLIONS FOR FARMERS

THE action of the United States Grain Corporation in lifting the important embargo on wheat means millions of dollars for Canadian farmers. While the States is only after No. 1 and No. 2 Northern hard wheat the lifting of the embargo will create a much wider field for the Ontario and Quebec product, and naturally higher prices. It is estimated that at least 5,000,000 bushels of wheat could be exported to the States, and as the prices over there are anywhere from 30 to 70 cents per bushel higher than in Canada, despite the fact that there is a fixed price, it means that the Canadians will benefit to an enormous amount. It also means that less wheat and more of the other grains will be used as feed. This will likely create firmer markets for oats and barley.

Consumers will have to pay a considerable sum more for bread. Already there has been a feeling created amongst city folk that an export embargo should be put on wheat, but as the Canada Wheat Board, through which all grain is sold, was brought into existence for the sole purpose of "getting the best world prices for the farmers" it is hardly likely that there will be any attempt on the part of the Government to make a change in the present programme.

—it's leap-year, but

Three hundred and sixty-six days

in 1920 makes it leap year—a year, so they say, when it is the privilege of the maiden fair to ask for the heart and hand of her choice from among her male friends.

At one time

this may have been the custom in some countries, who knows, it may be the custom here to-day, but the victims being game enough to keep their mouths shut, do not let the rest of us know what really did happen.

To get down to brass tacks

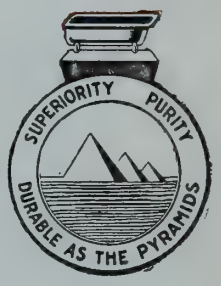
Do you realize how many of the plumbers are playing at leap year all the time? Do you ever stop to think how often you *wait to be asked* before you rise to the occasion and go after the business which is going right by your door?

THE "ST. LAWRENCE" COMBINATION

don't wait to be asked

This is not leap-year in the plumbing business

it's the year of "Get-up-and-go-after-it." Don't wait until Madame Housewife calls or rings up to have you estimate on the plumbing in her new home. Dig around and find out those who have the "new home" bug (it's an epidemic), and get on the job early with your



Port Hope Sanitary Plumbing Ware

"For the Home" Catalog

This attractive catalog is fully illustrated with half-tone plates of our leading domestic lines, full descriptions, etc.

If you desire you can practically make this 69-page booklet along with our "For the Factory" Catalog your entire show room. You will find it just as easy to sell from—five complete bathrooms nicely illustrated, plates galore of baths in every known style, lavatories, fountains, sinks, laundry trays, sink and tray combinations, closet combinations, etc., etc. Everything needed in the home and factory.

Your whole show room may be carried in your pocket, ready at all times to take an order from.

Don't wait to be asked, but go and get your share of the big plumbing business which is in prospect for the New Year.

Here's luck to the man who is a "go-getter."

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

Business Changes

Toronto.—F. M. Cronkwright, plumber, has sold out to A. Litchman.

Blyth, Ont.—The tinsmithing and plumbing business conducted by J. H. Leith in connection with the hardware store of Moore & Son, who were burned out recently, has been purchased by J. G. McLaughlin.

Trade Notes

Lapointe & Cote, Ltd., Quebec, have gone into liquidation.

The plumbing firm of A. Small, Montreal, has been dissolved and is being continued by Arthur Small.

Frank O. Wells, president of the Greenfield Tap and Die Corporation, and one of the prominent figures in the screw thread industry in the United States, has sold his entire holdings to Frederick H. Payne, vice-president. Mr. Wells retires as president and member of the board of directors, and Mr. Payne has been elected president in his place. F. G. Echols, vice-president and general manager, has been elected a director of the corporation to fill the vacancy caused by the resignation of Mr. Wells, but Mr. Wells will remain with the corporation in an advisory capacity.

Personal

Joseph Bell, traveller for Warden King, Limited, was re-elected as school trustee for Ward 5 in the municipal elections on Monday.

David Eggett, of Eggett & Co., sanitary and heating engineers, London, Ont., was elected as a member of the Board of Education in the municipal elections on Monday.

Incorporations

The Wilkins Automatic Regulator Co., Ltd., capital $100,000, head office Toronto, plans to manufacture and deal in automatic pressure and water regulators.

Hamilton Plumbers Elect New Officers

Hamilton, Ont.—At the annual meeting of the Plumbers' and Steamfitters' Union, the following officers were elected for the coming year: President, A. Packer; vice-president, H. Fischer; recording secretary, G. A. Smith; financial secretary and business agent, Alex. Bonner; treasurer, A. L. Smith. Delegates to the Hamilton Building Trades Council will be elected at the next meeting.

Frank R. Maxwell Elected Alderman

It's Alderman Frank R. Maxwell now. In Thursday's elections in Toronto, the President of the Dominion Association of Domestic Sanitary and Heating Engineers was honored by being returned as representative for Ward 8.

It was Ald. Maxwell's first attempt in a civic campaign, and he went at it with the energy that is characteristic of him. His efforts were not only successful, but he finished in second place, and was less than 100 votes behind the man who headed the poll.

IT'S ALD. MAXWELL NOW

The popular president of the Dominion Association made a great run in the race for aldermanic honors in Toronto.

Ald. Maxwell, in running for public office, is simply following out what he has repeatedly maintained at gatherings of sanitary and heating engineers, that is, that it is the duty of every man in the trade to take his part in civic life and do what he can, and also do all that he can, all the time, in the interests of the trade in which he is engaged. The men in the trade in Toronto are looking for Ald. Maxwell to stir things up in civic life, just as he has in organization work in the sanitary and heating trade.

Officers Installed By the "Ender" Clubs

The installation of the officers recently elected by the Ender Clubs of Toronto was held in the rooms of the Canadian Order of Foresters' Hall on Monday evening and was in charge of President George Clapperton. The officers installed are:

West Enders—President, R. A. Pratt; vice-president, Samuel Adamson; secretary-treasurer, D. E. Norwich; executive committee, W. F. Clinton, C. F. Kelly, Gordon Lynch; auditors, Walter Hill, Addis Byrne; consideration board, Harry Griffiths, Thos. E. Ryan, and President R. A. Pratt.

North Enders.—The North Enders' officers were all returned by acclamation and are as follows: President, Roy E. Belyea; vice-president, W. J. Hall; secretary-treasurer, Wm. G. Carroll; auditors, Theo. Prince, Joseph McCann; executive committee, E. B. Smyth, C. H. Chapman, and W. G. Cameron; consideration board, Roy E. Belyea, H. B. Waterman, and Theo. Prince.

East Enders.—President, Harry Weinraub (re-elected by acclamation); vice-president, Wm. Adams; secretary-treasurer, John Preston; assistant secretary, H. J. Hillier; executive committee, Jas. R. Brown, Jos. Foster, and Thos. Rodwell; auditors, W. A. Lord, Harry Winkle; consideration board, Fred H. Gentle and Thos. Swanston, and President Harry Weinraub.

Ball and "At Home" To Be Held January 30

The first Ball and "At-Home" to be held since the war by the members of the Toronto Society of Domestic Sanitary and Heating Engineers is scheduled for January 30. It will be held in the Foresters' Hall, and arrangements are being made to make the event a most enjoyable affair.

TENDERS

H. F. McNaughten, secretary of the Public Works, Dept., Toronto, will receive tenders until January 6 for heating, plumbing and electric wiring of addition to Nurses' Home at the Ontario Hospital at Kingston.

Plans are being prepared at Lucknow, Ont., for the erection of a municipal rest room to cost $10,000.

Tenders will be called shortly for the erection of a school at Mallorytown for the Consolidated School Board.

Prices on plumbing and heating are wanted in connection with the erection of a new church at Holdfast, Sask., for the Catholic congregation. Father B. Ueberberg, chairman of Building Committee.

Plans are being prepared at Ottawa for new collegiate to cost $40,000, for the Collegiate Institute Board.

Plumbing and heating tenders are open for $10,000 addition to the Tillsonburg Baptist Church. W. H. Jackson, chairman of committee.

Plans are to be prepared for a large new warehouse at Montreal for the McClary Mfg. Co. of London, Ont.

Plumbing and heating to be let in connection with new $25,000 church at Walkerville, Ont., for St. Mary's Anglican Church.

Henry Birks & Sons, of Montreal, are having plans prepared for a new building to cost $250,000.

Plans are being prepared by the Burroughs Adding Machine Co., of Detroit, for a new Canadian factory to be erected at Windsor at a cost of $250,000.

Heating and plumbing to be let in connection with new $300,000 theatre at Vancouver, B.C., for Allen's Theatres, Toronto.

Plans are to be prepared for new bank at Westmount, Quebec, for the Merchants' Bank of Canada.

CONTRACTS AWARDED

Massicotte et Freres have plumbing contract for new store for Joseph Lord of Cap de la Madeleine, Quebec.

Hickey & Aubut, Montreal, have plumbing contract for new store and apartment costing $10,000, for A. M. Webb, Toronto.

W. J. McGuire, 91 Jarvis St., Toronto, and Dominion Radiator Co., Toronto, have heating contract in connection with new $200,000 theatre at Ottawa, for Loew's.

Alex. Joss has plumbing and heating for portable schoool, costing $6,500, for the School Board at Sarnia, Ont.

Hickey & Aubut have plumbing and heating for $150,000, addition to the plant of the Steel Company of Canada.

Bennett & Wright, Toronto, have heating contract for new $75,000 factory at Thorold, Ont., for the Beaver Board Company.

W. G. Edge Co., 47 Richmond St. E., Toronto, have plumbing and heating for bank, costing $180,000, for Merchants' Bank of Canada in Toronto.

John Colford has plumbing contract for factory, costing $50,000, at Montreal, for the Anglo-Canadian Wire Works, Limited.

The Garth Co. has plumbing and heating for extension to the plant of the National Acme Co., Montreal.

Belyea Bros. have plumbing for stores costing $45,000, for Grimshaw Bros., Toronto.

Purdy-Mansell, Ltd., have plumbing and heating for alterations, costing $150,000, to restaurant for Prince's, Ltd., Toronto.

H. MUELLER MFG. CO., LTD.

The H. Mueller Mfg. Co., Ltd., of Sarnia, Ont., is sending out a very attractive calendar for 1920. Above is shown a reproduction of the company's plant, and the calendar is below. Readers of SANITARY ENGINEER may secure calendars upon request.

New Indenture System Aims to Turn Out Perfect Mechanics

Important Step is Taken by Toronto Master Plumbers in Providing Every Facility for Technical Education of the Young Men Learning the Business

A NEW indenture system, which has for its aim the turning out of mechanics as nearly perfect as possible, has been inaugurated by the Toronto Society of Domestic Sanitary and Heating Engineers.

An apprentice endowment fund has been created by the Society, and will provide for scholarships for the apprentices. The whole system is based on efficiency, and it is up to the boys. They have the opportunity to get all the training they require, if they will avail themselves of it.

Weekly Classes

It is aimed, also, to get the parents of the boys interested, so that they will see that the boys attend the classes and avail themselves of the technical instruction which will fit them for a high place in the trade.

GEORGE CLAPPERTON

Who, as stated in the last issue of Sanitary Engineer, was elected President of the Toronto Society of Domestic Sanitary and Heating Engineers.

Two classes are to be held weekly, and an arrangement has been made with the educational authorities by which the best instructors in the city will be in charge. The classes commence this week. From the standpoint of the master-plumber, a very satisfactory feature of the arrangement made is that, if the apprentices for which he pays attend 85 per cent. of the classes, the fee is refunded.

There will be annual examinations, and marks awarded for proficiency. These will also form the basis of the scholarship awards. The master-plumbers take their apprentices on six months' probation. This is deemed fair to both parties, as many boys, after they have been at the work for a short time, want to go into some other trade. There have been many cases, also, of youths who simply took a job to tide them over until they got something else.

At the present time, there are more than 100 plumbers' apprentices in Toronto, and, so far, they are showing keen interest in the plan.

Will Start on 50 New Houses At Once

WINNIPEG.—As the first definite step toward relieving the housing shortage, the Winnipeg Housing Commmission will call for tenders, within ten days, for the construction of fifty residences in Fort Rouge and west-end districts. These houses, to be erected at a cost of about $185,000, are to be the first block of about 300 that the Commission proposes to build before next autumn.

FREIGHT RATES MAY AGAIN BE INCREASED

Continued from page 13

to 20 per cent., in conjunction with conditions such as retailers have been face to face with for some weeks, shortage of goods, delays in deliveries, and so on, might be to further unsettle the public as higher prices would result. This is not what merchants want, as it is generally recognized that the sooner business gets back to somewhat normal conditions the better it will be for everyone.

J. H. WILLIAMS & CO.

J. H. Williams & Co., makers of Superior drop-forgings and drop-forged tools, with works at Brooklyn and Buffalo, N.Y., have just issued a catalogue, 4 by 6 in., 160 pages, fully illustrating and describing their standard stock specialties. These include several new lines of goods, viz., "Agrippa" turning-tool holders, set-screw pattern, "Agrippa" boring tool posts, "Vulcan" forged cutter tool holders, and several new assortments or sets of drop-forged wrenches. The book contains, also, a description of the drop-forging process, in very simple, non-technical style for the benefit of those not conversant with its details. Readers of SANITARY ENGINEER who desire copies of the catalogue may obtain same upon request.

First Christmas Tree of Toronto Society Was a Splendid Success

More Than 350 Young People and Their Parents in Attendance —Will Likely be Made an Annual Event

THE members of the Toronto Society of Domestic Sanitary and Heating Engineers sprung a delightful surprise on their children on the evening of December 29, when the young people were invited to a gathering in Foresters' Hall. On arrival, they found Santa Claus there, with a tree loaded with presents. As quickly as possible, these were distributed, there being something for each young person.

Then followed a program which was splendidly varied, and included a movie show, a ventriloquist, instrumental and vocal selections. The singing of three-year-old William Clifton, son of Wm. Clifton, was especially enjoyed and heartily encored.

The affair was so thoroughly enjoyed that the Toronto men plan to make it an annual affair. There was, at a conservative estimate, 350 present.

Harry Farthing was chairman, and with him on the platform was Frank R. Maxwell and Louis LeGrow. The committee in charge of the arrangements was John Cracknell, Norman Swanston, Gordon Lynch, James Brown and David Norwich.

Among the visitors was Nicholas Kennedy, of Detroit, president of the Detroit Association of Master Plumbers.

Revised Shipping Rates Will Affect Many Sanitary Lines

AN important revision of shipping rates of particular interest to the plumbing trade has just been announced by the United States Shipping Board. New rates authorized on miscellaneous cargoes from North Atlantic ports to the United Kingdom, which will affect Canadian shippers. Cement, hemp, iron and steel, leather, wire and other goods, are contained in the list of revisions, as shown in the following table. Rates are per 100 pounds, except where otherwise stated:

Cement, in bags and barrels, 2,240 pounds, $15.00; cereals and all other breakfast foods, in bags or cases, $1.00; flour (except ground Tripoli), $1.00; hemp, up to 100 cu. ft. per ton, $1.50; hemp, over 100 cu. ft. per ton, $2.00. Iron and steel articles, viz.: Rates per ton of 2,240 pounds: Billets, iron or steel, $10.00; blooms, iron or steel, $10.00; brass bars and sheets, $15.00; car wheels, $11.00; copper ingots, pigs and bars, $13.00; hoops, iron or steel, $12.00; copper wire, rods and coils, $15.00; iron, pig, $10.00; lead, pig, $12.00; nails, wire, $11.00; pig iron, $10.00; pig lead, $12.00; piling, $11.00; pipe, cast, up to 4 in. outside measurement, $11.00; pipe fittings, $11.00. Pipe, nested, to take rate of smallest diameter of pipe in nesting: Pipe, wrought, up to 4 in. outside measurement, $11.00; plate, tin, $12.00; plates, iron or steel, not over 30 feet, $10.00; rails, up to 33 feet, $10.00; rivets, $12.00; scrap iron, $11.00; shafting, unfinished, $12.00; steel, cold rolled, in boxes, $13.00; steel, tool, $13.00; structural material, up to 30 ft. in length and 2 tons in weight, including angles, beams, channels, girders and T's, not fabricated, $11.00; tin plate, $12.00; tires, steel, $12.00; wheels, car, $11.00; wire, barbed, $14.00; wire, galvanized, $12.00; wire, plain, in coils, $12.00; zinc, $13.00; wire netting, per 100 pounds, $1.00; wire, piano, per 100 pounds, $1.00; leather, in rolls, bales, bags, bundles and counters and rands, per 100 pounds, $2.50; leather, in cases or barrels, except counters and rands, per cu. ft., $1.00; leather belting, $1.00; oakub, up to 100 cu. ft. per ton, per 100 pounds, $1.50; oakum, over 100 cu. ft. per ton, per 100 pounds, $2.00; rice, in bags, per 100 pounds, $1.00.

Little Chance of Important Tariff Changes in Near Future

OTTAWA.—That there is very little real danger of the tariff being seriously interfered with just now is plainly intimated in Sir Henry Drayton's recent statement on the subject of revision. To assure the public that the work of inquiry would be started by inviting it to send in written opinions as to what should be done certainly did not indicate that strenuous action was in prospect.

Sir Henry's statement shows that he sees just as many obstacles in the way of reduction as Sir Thomas White did last June. Indeed, as far as the exchange situation goes, matters are much worse than they then were. In addition the Minister of Finance has been in office long enough to realize that the problem of raising the necessary revenue is becoming more difficult. It is so if for no other reason than that expenditure took quite a leap after Sir Thomas White delivered his budget speech.

In the meantime the much-assailed tariff is gathering in revenue at a much more rapid rate than it did last year, and that, in spite of the fact that considerable reductions were made in the duties last session. During the first eight months of the present fiscal year $7,000,000 more were collected in customs' duties than was the case during the same period last year.

Being comparatively prosperous, people are buying far more heavily of dutiable goods than they were a year ago. During the last eight months the importations of free goods have fallen $57,000,000 below those for the same period last year, while the importations of dutiable goods have gone up nearly $60,000,000. Sir Thomas White estimated that this year's customs revenue would come in at the rate of $12,000,000 a month, but, so far the receipts have been at the rate of over $14,000,000 monthly. Such a showing is unlikely to make the tariff unpopular with a Finance Minister hard pressed for revenue.

ABSOLUTE TEMPERATURES

(Continued from page 15)

No matter at what level the accelerating coil is placed it must in all cases be above the foul air exhaust from the room.

In setting the accelerating coil in the flue it must not reduce the area of the flue. It is well to increase the size of the flue at the location of the accelerating coil.

The coils should be set in the path of the air and not against the walls of the flues.

Do you know this kind of service?

UNEVEN CIRCULATION IN FORCED HOT WATER SYSTEM

WILL you please tell me why the heating system described here is not giving satisfaction? This system is installed in a building that is partly used for offices and partly for manufacturing, and is a system of forced hot water circulation. The building is not wide but is very long, its greatest exposures being to the north and south. Two steam boilers are used, but the boilers are not connected to the circulating system. They are connected to re-heaters, where the water is heated by the steam passing through tubes in the re-heaters.

Two main risers go from the re-heaters right up to the ceiling of the top floor, where they branch to mains connecting with drop-pipes which feed the radiators on that floor and on all the floors below. The sketch which I am enclosing will show how this is accomplished. You will note from this that the drop-pipes feeding hot water to the radiators also return the cold water from the same.

Have Both Connections

In one part of the building the radiators have both feed and return connections at the same end. In the other part of the building the radiators are connected at opposite ends. I am showing two drawings to illustrate this.

Each radiator has a valve. In some cases it is on the return and in some cases on the feed. The valves are not quick opening.

I forgot to say that the drop-pipes have shut-off valves both at their top and lower ends.

Now my problem is this: Why is there not a uniform heating all over this plant? How can I make this plant work evently?

From First Principle

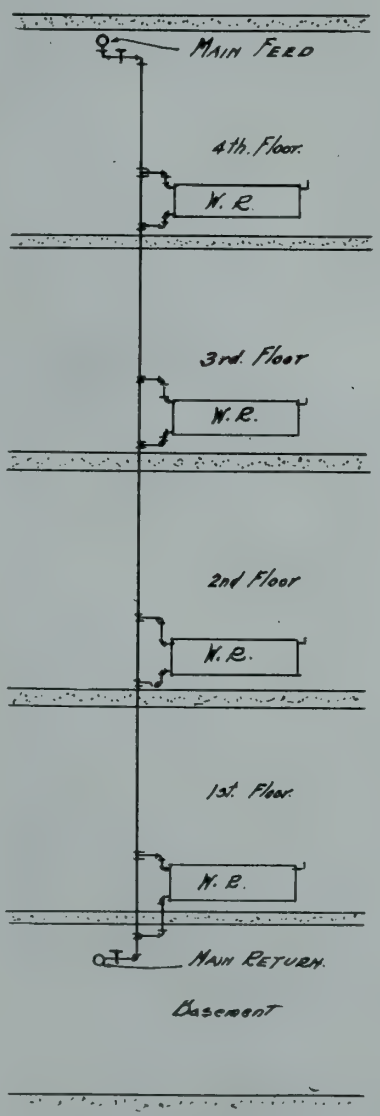
Answer:—To point out a few possible reasons why the plant is not giving satisfaction it will be necessary to reason from the first principle of water circulation.

We must first assume that the body of water within the entire plant is in perfect balance; so that it is devoid of movement. Now to effect a movement we must apply some force to offset that perfect balance. This force may be exerted by means of a pump, or by a change in the temperature of the water. No matter which force we apply an equal circulation of water will not be obtained unless we arrange the details of the entire plant in such a way that a uniform resistance is offered to the flow of water at ALL points. It will not do to have the radiators close to the point of application of the force offering less resistance to that force than those that are set at some remote point.

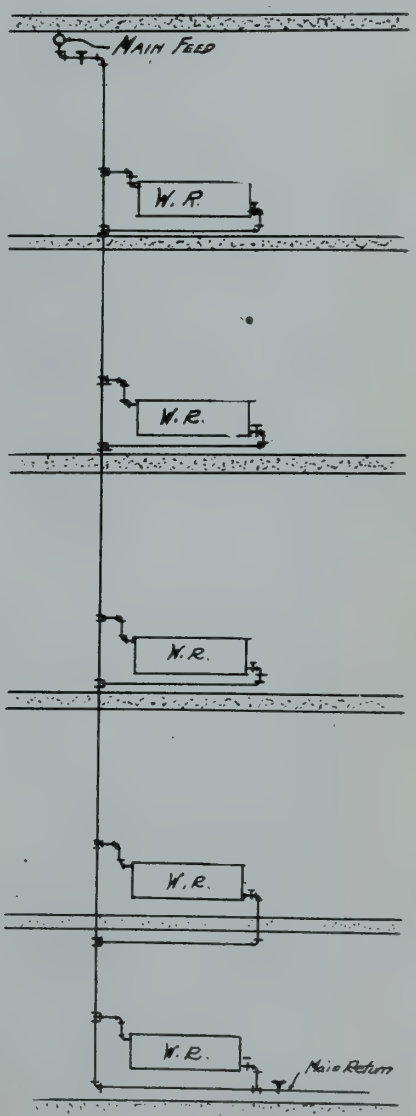
Sluggish Circulation

In making a design for a heating plant where the circulation is caused entirely by temperature conditions, we arrange the details of that system with regard to a comparatively sluggish circulation. We know that when there is no counteracting force, the water will tend to become uniform in temperature. But when we lay out a system where a rapid circulation is caused by some mechanical device we immediately see how "temperature-circulation" will not go very far in preventing the flow of water holding to a direct course. Thus we see that to establish an equal circulation through every part of the system, we must divert the flow of the water from the pipes of easy flow to those pipes not so favorably situated.

We now refer to the two drawings and we see that the feed risers run right past the radiators; the feed branches to the rads, being in the nature of a "shunt." If



HALF OF BUILDING PIPED LIKE THIS.



HALF OF BUILDING PIPED LIKE THIS.

this happened to be a gravity circulating plant, the temperature of the water in the riser would be the same as the temperature of the rads. The temperature of the top rad., of course, would be something lower than the temperature of the lower rad.; but as the "temperature-levels" would be uniform throughout, a uniform downward flow of the water would take place through these radiators and pipes. But just so soon as the pulling force of a pump is applied to the returns, the water is apt to take a direct course from the main feed down to the main return. The circulation through the radiators is still affected only by temperature-head; and the pump is in no way directly accelerating the flow of water through these most vital parts of the heating apparatus.

It would have been far better had the drop-pipe been reduced in size as branches to the radiators were taken off, and a separate pipe installed as a return.

Setting the Valves

But even as the system stands, a measure of uniformity of circulation may be obtained by properly setting the valves on the piping. To do this properly it willl be necessary to procure several thermometers (without metal guards) to take the temperature of the piping at various points. The bulbs of the thermometers can be held in contact with the pipes by means of soft putty balls, covered with cotton waste. In this connection it is well to note how the radiation has been figured for the building. If it has been figured on the basis of a temperature drop of 30 degrees, you should find that the returns, where they enter the re-heater, are at a temperature of 30 degrees lower than the feed pipes where they leave the re-heater.

After all of the valves on the feed and return pipes are set, a fairly uniform circulation of water will result. But we are then not through with our work; we must turn our attention to the radiators. It is quite possible to fire a boiler, in a residence, so that the heating is controlled entirely by the attention the boiler receives; but it is not possible to control the heating of a large building without manipulating the valves on the radiators. Now the opening and closing of these valves must not, in any way, interfere with the arrangement made to choke the area of the feed or return piping of a too rapidly working radiator. In providing a "choker" some engineers make use of a lock shield valve on the radiator return; other engineers use a feed valve with an adjustable valve sheath; and others use a reducing fitting such as a perforated metal disc, or an ordinary reduced fitting.

Need Re-adjustment

No matter how well a forced system of hot water circulation may be installled, there is likely to be need for certain adjustment of pipe areas at the time the circulation is tested out. It is for this reason that valves should be set, so that the necessary closing and opening of heat controlling valves will not affect the areas as fixed by the testing engineer.

If the radiators are set so that their high ends are next to a rising line of pipe, there will be no necessity of fitting air valves to the radiators.

We wish to call this reader's attention to the new series of articles on heating which will appear in the SANITARY ENGINEER. The information that will be then given will point out why systems of piping for forced circulation should be designed, laid out with as much regard to the laws of hydrostatics as of thermo-dynamics.

Perth, Ont.

Editor Sanitary Engineer:

We have a boiler problem here that has us guessing. It's a steam horizontal sectional boiler and when the pressure gets to above five pounds the water leaves the boiler. The boiler has been installed about fifteen years and never gave such trouble before. The water has a tendency to leave it several times a day and apparently does not return. The only change that has ben made is that two extra radiators were added this season. We cannot understand why this should make any difference. Can you suggest a remedy? If so, we will be greatly obliged.——Yours truly, Hope & Son.

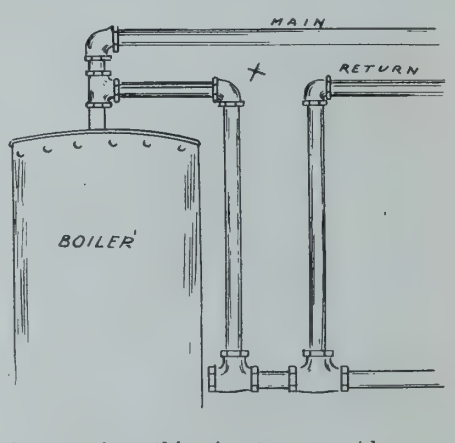
P.S.—Would the pipe X remedy it by equalizing the steam pressure? Or would checks on the returns be the correct remedy?

Must be Obstructed

Answer.—If the water slowly leaves the boiler and does not return when pressure drops, there is some obstruction in the main return. You may find that the boiler has been cleaned out at some time with washing soda, and that the oil and soda in the system has combined to form "hard soap." This "soap" will lie in the return and prevent the return of water to the boiler.

If the water in the boiler is dirty, it will be necessary to flush the dirt out in this way:

First: Remove the safety valve from the boiler tapping, and connect a valved pipe to



that opening; this pipe to run outdoors or to some other convenient drain.

Second: Close off all valves on pipes or radiator.

Third: Build hard fire in boiler until the gauge registers 10 lbs. pressure.

Fourth: Open valve in pipe connected with safety-valve opening.

Fifth: Turn cold water feed on, so that feed water will run into boiler slowly, and displace the dirty water running out of the pipe at safety-valve opening.

Keep the fire burning brightly and the pressure up while running the water through the boiler. This flushing should be carrried steadily through three hours' time.

Sixth: Draw fire, disconnect pipe from safety valve opening, replace safety valve, draw water from boiler, feed clean water to boiler, open radiator valves. The boiler is then ready for regular service.

If dirt in the boiler or in the piping is not causing the water to leave the boiler, there may be something in the piping arrangement of the two new radiators that is causing the trouble.

An equalizing pipe such as you show will assist the boiler in holding a steady water line.

With regard to the use of checks on the return, we may say that in an ordinary gravity system of steam circulation, the use of checks is not recommended.

PROPOSED NEW REGULATIONS

Continued from page 21

of burners is not more than half the stated maximum, the length of run may be increased one-half.

	Greatest length allowed in ft.	Greatest No. of burners.
⅜ inch	20	2
½ inch	30	5
¾ inch	60	20
1 inch	20	35
1¼ inches	120	60
1½ inches	160	100
2 inches	200	200
2½ inches	300	300
3 inches	450	450
3½ inches	600	600
4 inches	800	1,000

200. In applying the above table the number of burners per outlet in various locations shall be estimated as follows:

Parlor ceiling outlet	4 burners
Dining-room ceiling outlet ...	4 burners
Bedroom ceiling outlet	3 burners
Reception hall ceiling outlet ..	2 burners
Hall, pantry, wash-room and bath or toilet room ceiling outlet	1 burner
All brackets	1 burner

201. An outlet for a gas range or small water heater shall be counted as equivalent to five (5) burners, and a gas log or grate as equivalent to three (3) burners. Smaller pipe than half (½) inch shall not be used for kitchen ceiling outlets, except when a separate gas range outlet is provided near the floor, in which case three-eighths (⅜) inch pipe may be used.

Automatic Instantaneous Gas Water Heaters

202. All instantaneous gas water heaters, automatically controlled by pressure valve and thermostat shall conform to the general requirements of section 238, except that they may have pilot lights located entirely within the casing and arrange for continuous burning, and that they may be set with top of burners not less than eight (8) inches above floor; provided that every such heater shall be set on a sheet metal mat or pan and that the walls behind shall be protected by a sheet metal covering to the height of the heater.

203. Heaters of this type shall be provided with separate meter and supply runs not less in size than the following table, except that in case where the building is not piped or provided with any outlet for illuminating gas, not to exceed one gas range and one heater may be placed upon the same meter and the same supply run, the supply run to be increased one size over that shown in the following table, and not less than ¾ inch to the gas range:

Rated capacity:	
2 gallons per minute	¾-inch pipe.
3 gallons per minute	1 -inch pipe.
4 gallons per minute	1¼-inch pipe.
5 to 6 gallons per minute ..	1½-inch pipe.
7 to 10 gallons per minute .	2 -inch pipe.

204. Supply runs exceeding one hundred feet in length to be increased to the next larger size, and further increased one size for each additional 100 feet. Special permission required for capacities over 10 gallons per minute.

205. Gas fired steam power and house heating boilers may be installed provided that the said boiler be located in a separate fireproof room devoted exclusively to the purpose of housing boilers; that connection is made to an independent chimney or flue pipe without dampers or checks; that the room in which the boilers are located be open to the atmosphere; that the pressure boilers shall be under the care of a licensed engineer, and further, that no such gas fired steam power boiler or gas fired house heating boiler shall be installed without the previous written permission of the Local Board of Health.

Gas Engines

206. Gas engines must be connected to

separate service pipes from which no gas for illuminating or heating purposes is used.

207. Exhaust pipes shall be run to roof when possible and must not come in contact with the woodwork unless the same be properly protected.

208. Each diaphragm and bay must be on the same floor with engine and have a valve governing same.

209. The size of pipes used for supplying gas engines will be as follows:

Horse-power	Feet per hour.	Size in ins.	Length in. ft.
1	40	¾	50
2	80	¾	50
3	120	1	70
4 to 4	160 to 240	1	70
7 to 10	280 to 400	1½	150
11 to 20	440 to 800	2	200
21 to 27	840 to 1,080	2½	300

Location, Support, and Grade of Pipe

210. Each rising main shall be run in an inside partition and to a point not less than three (3) feet from the location of the gas meter when practicable; Provided, that in houses where meters are to be placed upon the floor, the outlet shall be left thirty (30) inches above the floor.

211. No pipe shall be laid so as to support any weight (except fixture) or be subjected to any strain whatever. All pipes shall be properly laid and fastened to prevent its becoming trapped, and shall be laid, when practicable, above timbers or beams instead of beneath them. When running lines or branches across beams they must be laid within three (3) feet of the ends of the beams, and in no case are the said pipes to be let into the beams more than (2) inches in depth.

212. No drop shall be taken from an ell; it must be taken from a T-fitting and a pipe must be run not less than four (4) inches longer to a bearing and be capped and securely fastened on both sides of the tee so as to prevent movement when the fixture is attached.

213. All pipes must be properly graded, and, if practicable, sloped toward the risers and meter. A bracket outlet shall be run as a riser rather than as a drop. No split pipe or defective fittings shall be used, and, if installed, they shall be removed whereever discovered. Any repair with cement or lead is prohibited.

214. Any gas pipe laid in damp or cold place shall be properly graded and dripped and covered with approved felt pipe covering. No gas pipes shall be laid in cement or concrete, unless the pipe or channel in which it is placed is well covered with tar, and all pipes shall comply with any regulation with respect to electric wiring whether the same be ground wires for bells, telephone, or electric gas lighting, or where the electric wire is in an insulated conduit.

Length of Outlets and Location of Burners

215. All outlets must be set plumb and securely fastened, each one having at least two straps, and they shall be left capped until fixtures are connected; they must not project more than (2) inches below plaster ceiling, centre-piece or wall.

216. Outlets for gas stoves, heaters or gas logs must not be less than three (3) inches above the floor and two (2) inches in the clear from the base board.

217. No bracket or burner shall be located under or near any tank containing inflammable oils, or behind any door, or within six (6) feet of any gas meter. No swinging or folding gas bracket shall be placed against any wood work, but a stiff bracket can be used if the length is not less than five (5) inches measured from the burner to the woodwork.

218. No gas hot water heater, gas range, gas radiator, gas light or other gas appliance shall be placed in any location where the location of meters is prohibited; nor in any garage or other place where inflammable oils are kept stored or used; nor in any moving picture theatre or place of public assembly, except that emergency gas lights may be used only on direction of the Inspector.

219. No gas log or open flame radiator shall be placed in any fire place which is not provided with a flue to the outer air and which is not thoroughly fire-proofed.

220. Gas brackets placed near window curtains or similar combustible material shall be protected by proper shields. All gas burners less than two (2) feet from a plastered ceiling or less than five (5) feet from overhead woodwork shall be protected by shields of approved material.

221. No independent gas cock or connection for a hose outlet shall be placed above the stiff joint on any chandelier or pendant, but such connection shall be brought down to an accessible point. Nor shall any independent gas cock for a hose connection be placed within three (3) inches of the key of a gas bracket.

222. Outlets for vestibules, public halls, basement or other public rooms in apartments, flats or tenements buildings, where the different suites of apartments ments or rooms are separately metered, shall be taken from a meter arranged to supply such outlets independently from the meters for the various apartments.

Fixtures and Tubing Construction

223. When brass pipe is used on the outside of plastering or woodwork it shall be classed as fixture tubing.

224. All brass tubing used for arms and stems of fixtures shall be at least No. 18 standard gauge and full size outside, so as to cut full thread. All threads on brass pipe shall screw in at least five-sixteenth (5-16) of an inch. All rope or square tubing shall be brazed or soldered into fitting and distributors, or have a nipple brazed into the tubing.

225. All cast fitting, such as cocks, swing joints, double centres, nozzles, etc., shall be extra heavy brass. The plugs of all cocks must be ground to a smooth and true surface for their entire length, be free from sand-holes, have not less than three-quarter (¾) inch bearing (except in cases of special design), have two flat sides on the end of the washer, **and have two nuts instead of a trail screw. All stop pins to keys or cocks shall be screwed into place.**

Weight of Gas Pipe and Tubing

226. Gas pipe, arms and stems of fixtures shall be of the kind classed as standard pipe and shall weigh according to the following table:

Size of pipe.	Pounds per foot.
¼ inch	.42
⅜ inch	.56
½ inch	.85
¾ inch	1.12
1 inch	1.67
1¼ inches	2.24
1½ inches	2.68
2 inches	3.61
2½ inches	5.75
3 inches	7.54
3½ inches	9.00
4 inches	10.66

Alterations or Extensions of Gas Pipe

227. When, for any reason, in remodelling old buildings, it is impracticable to comply strictly with these regulations, the Inspector of Plumbing shall have power to modify their provision so that the spirit and substance thereof shall be complied with.

228. Nothing in these rules shall prohibit the extension of a gas pipe from a building located on the front portion of a lot, to a stable, garage, workshop or building of a similar character, located on the same lot and owned, occupied or used by the same owner.

229. No extension or alteration of any existing system of gas piping in a building in excess of fifteen (15) feet in length, and unless the same is entirely exposed shall be made without reporting the work to the office of the Inspector of Plumbing for inspection and approval. Extensions shall conform in size to the table of section 199, and in no case shall extensions be made from smaller pipe.

230. When necessary to cut out pipe for extensions or repairs, pipe shall be again put together with right and left couplings or unions, and in no case shall running threads be permitted.

231. Rubber or other hose shall not be used to connect permanent fixtures with another fixture having an independent cock.

Gas Connections to Gas Stoves and Heaters by Stove Dealers

232. Any dealer in gas stoves, gas ranges and gas radiators or other gas appliances, maintaining an established place of business in any Municipality in Ontario may set such gas stoves, gas ranges, gas radiators and gas appliances other than lighting fixtures on the gas pipe system, or with an outlet fitting especially inserted by a licensed master plumber and may run the necessary pipe: Provided, that the individual, firm or corporation shall first declare their intention in writing to the Local Board of Health, and upon approval thereof, he or they shall register the name and address in a special registry book to be kept for that purpose, and they shall notify the office of the Inspector of Plumbing in writing, of the location and extent of the proposed work and the probable date of completion, so that proper inspection may be made.

233. Any work done by any person, firm or corporation registered as above provided, or by any employee of such a person, firm or corporation, without the said previous written notice, shall subject the responsible person, or the employee to arrest and prosecution the same as if no such registry had been made.

234. The privileges attending the above mentioned registry and the right to do work thereunder may be withdrawn by the Local Board of Health at any time or failure to report work for inspection or other sufficient reason.

235. Any electrician maintaining an established place of business in the Province of Ontario may remove and replace existing straight electric or combination gas and electric lighting fixtures connected to a gas outlet for the purpose of making necessary repairs to the electric equipment of the fixtures, or may hang new straight electric lighting fixtures to an existing gas outlet subject to such Regulations as to Electric Wiring as may be in force; Provided, that the individual, firm or corporation shall first declare their intention in writing to the Local Board of Health, and upon approval thereof, he or they shall register the name and address in a special registry book to be kept for that purpose; Provided Further, that prior to the commencement of any work he or they shall notify the office of the Inspector of Plumbing, in writing of the location and extent of the proposed work and the probable date of completion, so that proper inspection may be made.

236. Any work done by any person, firm or corporation, registered as above provided, or by any employee of such a person, firm or corporation, without the said previous written notice, shall subject the responsible person or the employe to arrest and prosecution, the same as if no such registry had been made.

237. The privileges attending the above-mentioned registry and the right to do work thereunder may be withdrawn by the Local Board of Health at any time or failure to report work for inspection or other sufficient reason.

238. Each gas water heater shall be provided with a door through which the gas burner and all of the heating surface shall be exposed for lighting and cleaning, and the outer casing or door of the heater shall not be provided with touch holes, ventilation holes or other apertures through which the burner can be lighted in any manner without opening the door for that purpose. The said heater shall be provided with a flue pipe and approved cowl or other approved ventilating device to carry off the noxious odors emanating therefrom to the outer

air at a point above the roof of the building in which the heater is installed; Provided, that connection may be made to a chimney flue, but the connection must in every case be made above the entering smoke pipe of the stove or furnace and no damper shall be placed in any such ventilating flue.

239. The use of pilot lights on water heaters is prohibited, except for large water heaters automatically operated by thermostat. (See section 202.)

240. The shutter on the mixing valve shall be so constructed as to prevent the possibility of disarrangement due to carelessness or expansion or contraction, yet it must be accessible and easily controlled.

241. No heater shall be set closer to the floor than two (2) feet, measuring from the top of the burner.

242. When complaint is made of existing gas water heaters they shall be made to conform to the above requirements or be replaced with heaters of approved type.

243. Any defective gas stove or range complained of shall be properly repaired or replaced with one of approved type.

244. The Inspector of Plumbing shall promptly condemn and order the removal, reconstruction or repair of any system of gas piping, or portion thereof, which does not conform to these regulations. He shall order the necessary repairs to be made when defects are found in any old system of gas piping, fixture or appliance connected therewith, and such repairs shall be promptly made by the responsible party upon the service of order or notice.

Inspection and Test

245. Upon the completion of any system of gas piping in a building it shall be promptly reported to the Inspector of Plumbing for inspection. The outlets shall be suitable capped and the system tested with air to a pressure equal to a column of mercury six (6) inches high in mercury gauge, and in the case of natural or acetylene gas a pressure equal to ten times the operating pressure. This pressure must be maintained for five minutes or for such additional length of time as will satisfy the Inspector of Plumbing, or his assistants, that the work is sound and tight. No pipe or fitting shall be covered or concealed from view until approved by the Inspector of Plumbing.

246. Extensions of gas-piping, the introduction of new outlets, and the connection of gas water heaters, gas logs, gas ranges, gas stoves, and radiators, lighting fixtures and engines, and appliances shall be reported and may be subjected to a visual inspection.

Use of Water Prohibited

247. In no case shall gas pipe be filled with water, acid or other liquids to test or tighten leaks, but the pipes shall be tested with air pressure only, and if it is found that water has been used in the pipe it shall be sufficient cause for the Inspector of Plumbing to condemn the whole line of pipe.

248. When water or other liquid is found in a gas piping system the plumber responsible for the work will remove the fluid in the presence of the Inspector by such method as may be determined upon by the Inspector of Plumbing in each particular case.

249. No gas fixture shall be hung until the Inspector shall be satisfied that the piping system has been freed of any liquids that may have been used to tighten same.

250. When the individual hanging the gas fixture learns of a violation of this section he shall immediately notify the Inspector of Plumbing.

Following is the corrected weights of the pipes referred to in section 33 of the proposed new regulations for Ontario:

Weights of Extra Heavy Cast Iron Pipe for Underground

Diameter of Pipe	Weight per Length of Five Feet.
2 inches	27½ lbs.
3 inches	45 lbs.
4 inches	65 lbs.
5 inches	85 lbs.
6 inches	100 lbs.
8 inches	165 lbs.

Weights of Medium Cast Iron Pipes, Waste or Vent

2 in. inside diameter	20 lbs.
3 in. " "	30 lbs.
4 in. " "	45 lbs.
5 in. " "	65 lbs.
6 in. " "	75 lbs.

No 8 in. in this weight.

Equalization of Imports and Exports Only Way to Restore Exchange Rates, He Says

FOREIGN exchange is a commodity and present demoralized depreciation in rates for sterling and other European exchanges is a normal expression of the law of supply and demand, declares James S. Alexander, president of the National Bank of Commerce, New York. Restoration of an approximate equilibrium of the imports and exports between the United States and Europe and a return of the currencies of Europe to a gold basis are the fundamental factors which will restore the normal demand for foreign exchange and bring it back to normal levels,

Mr. Alexander has taken a leading part in considering the foreign trade situation, having been chairman of the Committee on Credit and Finance at the Atlantic City International Trade Conference, held with unofficial representatives from Europe, under the auspices of the Chamber of Commerce of the United States, and being now chairman of the Executive Committee of the National Committee on European Finance. He is chairman of the Board of Directors of the French-American Banking Corporation and a director of the Foreign Finance Corporation. His statement in part is as follows:

"Depreciation of the foreign exchanges is primarily only a reflection of deeper problems in the relation of exports and imports between America and Europe. The problem may be simply stated as follows:

"When exporters sell to foreign buyers, they draw checks, drafts, etc., on those foreign consignees or their banks for the amounts due. These bills are drawn in foreign money, preponderantly pounds sterling, that is, on houses in London, long the world's international clearing house. Americans drawing these bills sell them in the foreign exchange market for what they will bring, which under normal conditions fluctuates within narrow limits of face value. The total volume of such checks and drafts coming into the foreign exchange market constitutes the supply of foreign exchange in existence at that time. The foreign exchange market consists of foreign exchange houses whose function is to buy exchange, say in New York, on London, and send it there for collection or the establishment of balances.

"The question as to what will correct the situation can be answered on general principles without any attempt to prophesy. Foreign exchange cannot come back to parity until the restoration of the gold standard in Europe corrects the depreciation of European currencies and until the restoration of approximate equilibrium between exports and imports in respect to Europe again makes the demand for foreign exchange approximate the supply."

Only a question of method

Now for the Annual Reckoning

Inventory Season is the Time to be Honest With Yourself—It is Vital That You Should Know Just Where You Stand—Points to Watch in Pricing Your Stock—Taking the Inventory

THE time for inventory taking is at hand and rapid changes in prices, and a record demand for merchandise and general business conditions make it imperative that hardware merchants should give special attention to this matter. It is of vital importance for merchants to know just where they stand, what merchandise is making profits, and what is "warming shelves." It is obvious that shelf warmers do not make money, and if any are in stock they should be gotten rid of and replaced with goods that will bring in money.

While stock taking is not an easy job, it is essential that it should be done with accuracy and thoroughness. From a business standpoint, 1919 has been one of the best years on record, especially for hardware merchants. Unless the ppredictions of some of the best men in the commercial world are very far astray 1920 will be even better. It is then up to every merchant to get away to a good start and to know just exactly what he has on hand, what his requirements are going to be, and what is equally important perhaps, what he is not going to need.

Planning Ahead

"In my own case," said one merchant to SANITARY ENGINEER, "I always fix the actual date on which the inventory is to be written up. I begin by marking out the work fully a month before hand, and we make a start by grouping everything together in our cellar and store-room, keeping a sharp eye on the actual conditions of the various goods, so that if it should happen that anything is out of order when the day of writing up the stock arrives, the real value of the goods will be noted. In this way one is in a position of knowing clearly and correctly the actual value of the stock.

At this time, or rather just before it, I take care to buy as little as possible from the wholesaler, so that it makes it easier for my assistants to carry out their part of the work properly.

All containers should have a label placed on them showing the contents of the receptacle in each case, and marginal space left, so that in the interval, if anything is taken from stock, it may be noted accordingly. Thus, by the time stock-taking day arrives, everything outside and within the store is in good shape in the writing up of stock.

Exercising Care

In the evening, after the store is closed we proceed in earnest at writing down everything in the store, great care and system being taken so that no small corners are being missed. This might mean quite a considerable loss in the final total, if not carefully checked up.

I always begin right in one corner of the store, close to the front, and go over the stock shelf by shelf, beginning at the top shelf and coming right down to the floor.

Slip in Each Drawer

It is very necessary to have a slip in each drawer with a sufficient margin to mark off any goods sold in the interval. In the case of shelving, where there are no boxes, it is well to decide on either the left or right hand end of the shelf, for placing the sheet containing the list and carry out this system throughout the store and thus eliminate counting some stock twice and in other cases missing it entirely.

It often happens that several cases of the same article have been opened and some of the goods removed. It is well to go over all such cases and fill as many as possible to standard count, leaving as few as possible to count at the last minute.

Stock taking is almost invariably done during the quiet seasons, and it should be a house cleaning time as well. A good suggestion is to house clean first, starting a few weeks in advance, to clean out shelves, bins and drawers, etc., laying aside any articles that are slow sellers, shop-worn, or the tail end of a line of goods, etc.

May Be Surprised

If this policy is adopted the merchant will often be surprised at the amount of cash he has tied up in dead stock. A very successful idea has been to put this line of accumulated stock out on display and advertise it, either in the local paper or by table or window display, using cards with attractive slogans, advising the public of the chance to buy these goods. It will be found that it is not always necessary to greatly reduce the price, especially at the present time, when goods are so scarce. It is stated by some of the most experienced merchants, that if this plan is carried out before starting to count the stock that the clerks and even the "boss" himself will take more interest in trying to push the sales of these odd lines, with the final result that the new fiscal year will be started off on a paying basis with all clean and up-to-date stock.

Making the Entries

In entering goods in the stock book, it is a good idea to have sections of each portion of the store recorded separately, for the convenience of reference later, or, in case of fire or burglary. It might be necessary to check up for any one of the foregoing reasons at any time, and this separate recording of various parts of the stock would thus be of value.

The work of actual stocktaking does not mean, by any means, that the work is over. There remains much office work to be done, and this should be tackled right away. Of course, it is always assumed that books are posted right up to date, or as nearly as possible. All work of finding the amount of ledger accounts will have been done and these recorded.

Great care ought to be taken with regard to the exact amount of cash on hand and in the bank, it being fully verified right away, so as to avoid any error.

Once all the data of the wholesale and retail ledgers is ascertained, the work of making extensions of the stock can be proceeded with, a little more leisurely, and all the work leading up to your final balance is done at one's own convenience. Naturally, one wishes to get through with the various work as rapidly as possible, as there is a natural anxiety to ascertain the result.

The aim is, of course, that every article should be priced at the amount it would cost to purchase at time of stock-taking, and always allowing for discounts where they are allowed.

How to Take the Inventory

Accuracy always is the keynote of inventorying. The object is to ascertain,

beyond the slightest doubt or reasonable question, just what merchandise and other things you have. The count must be right. Nothing else will do. Where it is necessary to estimate, like when we have a barrel of oil partly used, the estimate must be conservative. If it looks like somewhere between 15 and 20 gallons, put it down at 15. Get on the inside always where there is doubt. Otherwise, where it is possible to weigh or count, get down the exact amount of saleable goods. If there are damaged items, put them in below the sound ones, indicating, as nearly as you can, what they are worth.

These are rules always to be observed; but if ever there was a time when one should be extra conservative, that time is right now. Things have been advancing rather steadily for a long time. Men have become a little liberal, sometime reckless, about ordering. They have felt that everything was "a safe buy" until some are loaded up heavily. Nothing is "good property" which does not turn normally. Some lines have the disadvantage that they deteriorate steadily.

Now, I am not going to prophesy that things are due for a slump. It is always foolish to prophesy and right now it is absolutely superfluous, for one mighty cogent reason—this:

Loss and Shrinkage There Already !

That on such goods as you have in excess of normal current requirements, you have sustained the loss already, regardless of the market! Get that? Every day you keep goods on hand costs money. Therefore, any goods you hold beyond the normal time of turnover have piled up against them an abnormal expense. When this extends beyond a certain very narrow limit, your loss is just bound to exceed any advantage that can possibly accrue from what you like to call "good buying."

There is, as a matter of fact, just ONE kind of good buying. That is underbuying. That makes for the quick turn, and the quick turn is the whole law and profits in retailing.

So there is no use trying to sidestep the fact that excess stocks stand you a loss; that the loss is there now, whether you admit it or not. So we need not speculate on what the market is going to do in that connection.

How Shall We Price Our Stocks

All these factors influence the value of your stock on hand. If you have goods enough to cover your normal sales for five months ahead, that stock should be taken in at not more than 80 per cent. of its replacement value, and 75 per cent. would be better. Such facing of plain facts may cause you to slow up on liberal buying for a long time. If you slow up as a permanent habit you will make more real money out of your business!

These are hints at how to price your goods. How far you will go on other lines depends on your own circumstances and environment; but a hint or two from some very successful people always must be of value.

Here's One Plan

In one big jobbing house the practice is this way: In case of goods which have advanced since they were purchased, the value is put in on original cost. Where goods have declined since they were bought they are priced on the basis of replacement costs. This, you see, is working against the stock with a vengeance, but this is done by a very successful concern.

Remember, too, that whatever value you put into your inventory you will not change the actual value of the merchandise. If, therefore, you value it too high, the stock will not pan out and you will be badly fooled. If you undervalue it the stock will come up better than you calculated. That is the only kind of self-fooling that you can afford to have around your shop.

What will you do when you have the lists completed? Obviously, you yourself must work nights and at every odd moment pricing and totalling the sheets so you can balance your books. This work always is most valuable to every thoughtful merchant, for it will show him precisely where he has too much stock—and practically all of us are subject to this weakness.

This is the finest time of the year to see just how much more than you should have is in stock. As a preliminary, you might figure out what you should have, based on your sales.

Keep It Normal

Having set down that kind of figure for your own business, you will be astonished to find how much you have in excess of what you should have. Then, when you have found this out you will begin to reduce stocks. It is not so desirable that you make cut price sale, though you may have to reduce some items to clean them out, as it is that you stop buying. Cut every order down to just what you must have. When you have reduced stock to normal, keep it there. That is perhaps as valuable a result as you can expect to get out of the habit of taking an inventory.

But take the inventory anyway. Know where you stand at least once annually.

Judge Rules That Charges Must Be Paid

An important point was decided in Montreal by Mr. Justice McLennan of the Superior Court, regarding the entering by a clerk of a charge for freight.

This case was one of an action by Lee, Kee, Yick and Company, trading in Montreal as Yick, Ling & Co. against the Canadian Pacific Ocean Services, Limited. It appears that ocean transportation had been taken on a quantity of goods for the complainant and the charge made for these was $55.60; on the other hand the amount should have been $551.60, but a clerical error explained the deficiency between the proper amount and the amount charged.

The parties to the action claimed that the goods were sold much cheaper than they would have sold them, had the freight been charged the full amount. The Judge, in considering the whole matter, however, found that owing to the fact that the plaintiffs were accustomed to importing goods from the Orient and also had a good idea of freight values, that the company must pay to the carrier, the C.P.O.S. Company, the difference in freight charges due to the clerical error and also the cost of the suit.

Misuse of "Profiteer" Hurts All Business

Business men of many cities have, no doubt, many times had the feeling which recently found expression in a bulletin of the Better Business Bureau of Los Angeles, California, relative to the loose employment of the word "profiteer," both in advertisements and in editorial columns, says a bulletin from the Associated Advertising Clubs. Just such action might be taken by other advertising clubs, as well as other local bodies of business men, the National Vigilance Committee suggests. The statement, signed by A. H. Wilkins, secretary of the Bureau, is as follows:

"For a considerable time past, a vast amount of publicity has been attached to the term 'profiteering.' A careful study of this publicity has, in the opinion of well-informed business men, failed to show facts that would give reason for the claims and arguments that have been used in connection with this work.

"The effect of this publicity, without question, has been very broad, and it is hard at this moment to determine just what per cent. of this effect has been good and what per cent. has been bad.

"Believing that publicity surrounding this word, which is not based upon absolute fact, reflects unjustly on the reputable and honorable business houses of this city, and has a great influence in creating a lack of confidence in all business and advertising, the Better Business Bureau, at this time, respectfully suggests to the publishers and publicity agents that all such publicity should be discouraged, except in cases where evidence and facts are actually in hand, and that in its place every effort be made, through the editorial and publicity channels, to stimulate production, the shortage of which has been proven as the real fundamental cause of the high cost of living."

100 per cent. Increase in Building

Figures for 1919 Are Remarkable When Labor Troubles, Difficulty in Obtaining Materials and Other Troubles Are Considered—Indications Are That 1920 Will Smash All Previous Records

THERE is little doubt that when the building figures for 1919 are in that the total will exceed $75,000,000. This will be an increase of more than 100 per cent. over the totals for 1918, when the figures were approximately $34,944,212.

November, owing to weather conditions, is usually an unfavorable month for building, but this year the total was $6,889,000, an increase of no less than $4,690,000 over the same period a year ago.

Making New Records

All this activity means just one thing in the opinion of those who are in touch with the situation and that is that 1920 is going to see all previous construction records shattered.

This means opportunity for the sanitary engineers, not only in the sale of tools and materials required for the new homes and other structures, but in supplying the needs of those who are going to occupy the homes.

Architects have never been busier and plans now being prepared run into many millions. A feature of the work in hand is the large number of residences that are planned. Hundreds of these are for people who are tired of paying excessive rents. They would rather put up with the high cost of building and have a home out of which they cannot be ordered by landlords, than to continue paying huge rents and at the end of a few years have nothing to show for their expenditure.

Many Small Homes

The coming year will see the erection of a large number of homes of the smaller type also, especially those suitable to the requirements of the workingman. This is one of the big problems in connection with the whole acute housing situation. Scores of manufacturers are at their wits' end to find accommodation for their employees. Some firms are erecting dwellings for their employees. Others are working through the municipal councils and the Housing Commission and, in many cases, the workers themselves are planning to build.

Many Private Garages

A feature of this year's building that has exceptional interest for hardware merchants in the large number of private garages being built. In the city of Toronto alone more than $1,000,000 has been spent in eleven months for garages alone. To the hardware merchant who is handling auto accessories this means only one thing, more and still more business, as every auto which is sold requires supplies and accessories. What has happened in Toronto in regard to the building of private garages is happening in proportion all over the country and even greater expenditures are expected in 1920.

Activity Is General

The building activity and prospective building activity for 1920 is not confined to any particular areas. It is general and from all parts of Canada is reported a demand for more homes and more factory accommodation.

In view of the fact that Canadian builders have had exceptional problems to face this year in the way of labor troubles, difficulty in obtaining materials and similar conditions, this year's showing is a remarkable one.

With many of these matters adjusted and conditions improved, there seems little to prevent 1920 far outstripping this season.

Are Working Together

The fact that the various organizations in connection with the building trades are working together to facilitate construction work is a most encouraging feature. During the past season in many cases the men in one trade made demands which resulted in large amounts of work being held up because people who planned to build were not sure where they were going to finish in case they started. This also affected men in other trades. It is realized apparently that this is a situation that is not conducive to good business generally, and with a view of eliminating any such troubles discussions have taken place recently which are expected to result in a working agreement that will not hold up construction.

Says "The Golden Rule" is the Real Solution of Capital and Labor Problems

Hamilton Manufacturer Tells of Remarkable Results That Are Being Obtained—Plan Has Been Followed Out Now for Five Years With Great Success

AT the present time when troubles due to differences between employers and employees are more numerous and more acute than at any time in the history of the world, it is interesting to note the results that the application of the "Golden Rule" have had in a Hamilton, Ont., factory.

At the annual dinner of the employees of the Dominion Sheet Metal Corporation, President A. T. Enlow stated that for the past five years the firm has been applying the Golden Rule in all dealings with employees, and in that time they had never been asked by any employee for an increase in wages, that no employee had ever stated that he was dissatisfied, and in no way had any complaint regarding shop conditions ever been brought to his attention.

In New Warehouse.

The dinner was held in the large new warehouse recently erected by the company. A unique touch was given to the gathering when as the toast to the King was being honored, the lights were suddenly turned out, and left those present standing with glasses uplifted, singing "God Save The King." A spotlight was turned on, showing Union Jacks and Canadian emblems. These were fastened directly in front of the president's place of honor. The effect was not only striking but impressive.

J. M. Paterson, of the shipping department, was chairman for the evening. The new building consists of a two-storey steel and brick structure, 50 x 140 feet. It was profusely and very attractively decorated for the occasion. Conspicuous among the flags were two showing that in both 1918 and in 1919 100 per cent. subscriptions had been obtained for the Victory Loan.

A Fine Program.

The program included choruses by all present, songs by W. A. McCutcheon, of Hamilton; Scotch songs by Miss Grace Miller, and a number of speeches. The toast to Canada was responded to by Mr. W. H. Cooper, the contractor, who built the new plant.

Russel T. Kelly replied to the toast, "Co-operation," in a manner which left no room for criticism. He made a hit with his finale, a recitation entitled, "Lifters and Leaners."

Teachers' Salaries.

The reply to the toast to the ladies could not have been handled more gracefully than by Mr. Geo. A. Simpson, of the Steel Co. of Canada. During his address, he brought out a point which should receive the attention of every sanitary engineer in Canada who has anything to say in municipal affairs, and that is the paying of better salaries to the women who are responsible for training of Canada's children—the school teachers.

President's Address.

President A. T. Enlow, in responding to the toast to "Our Company," made

A. T. ENLOW
President of the Dominion Sheet Metal Corporation, Hamilton, Ont.

some decidedly interesting comments in regard to the firm's policies and especially in reference to its profit-sharing plans. He announced that every employee who has been with the firm six months was to receive an Insurance Policy for $1,000, which will increase at the rate of $100 a year until a maximum of $1,500 is reached, the benefit payable on death or total disability to his family.

The Premier Benefit Club is kept up by employees paying 50c each a month. This last year they paid in about $360, paid out $900, and have in the treasury at the present time $2,500, and the fund has only been running a year and a half.

Other Payments Too.

He explained that sometimes it is possible to make other payments also. For instance, if the firm is able to make a good deal, such as in the Salvage of Damaged Stock, Big Product Sales and Sales Effected, or through Shop Economies, ten per cent. of the amount was turned over to the Benefit Club.

In regard to the profit-sharing or stock proposition, he stated that the employees pay in 2% or $2 a month on each $100 share, and they get the benefit of the regular 8% dividend without any carrying charge for interest, and in addition they also are credited with all dividends paid on the common stock, so that up to date for the last half of 1919 they have paid in $12 per share and have received additional benefits of $9, a total of $21.

J. C. Edwards, Hamilton representative of SANITARY ENGINEER, was introduced, and stated that he had found much pleasure in his two years of contact with the manufacturers of Hamilton and particularly drew attention to the pronounced "get-together" spirit which was in evidence in Hamilton. This spirit, he said, when carried out between employer and employee, as seen in the splendid banquet given by the Dominion Sheet Metal Corporation, must result in mutual benefit.

In winding up the programme, a vote of thanks was given the entertainers, speakers and the men who so successfully carried out the programme.

Tells How to Avoid Colds and Influenza

REPORTS from Australia indicate that a recrudescence of the influenza epidemic occurred during the recent winter (which synchronizes with our summer). There were from 1,200 to 1,500 cases as a daily hospital average in Victoria. The mortality in Melbourne was from 10 to 12 deaths daily. In Sydney, a severe outbreak occurred in June, the mortality assuming serious proportions for one or two weeks. With milder weather in mid-July, the outbreak rapidly subsided.

We, in Canada, will soon be sustaining a prolonged cold spell, hence the necessity for the public to bear in mind that there is the danger of a recurrence of the disease in Canada. Every individual should take precautions against infection. Keep the body warm and guard against sudden changes of temperature. Guard also against fetid air. The more the bodily heat can be kept up by natural and the less by artificial means, the better. As 'natural means' we include heavy clothing, nourishing food, air well supplied with oxygen and physical exercise. Artificial heat is secured by fire through the various heating systems.

A person who is well fed and well clothed and who moves briskly can easily support prolonged exposure to the severest cold. The greatest danger in Canada is the shock to the system produced by getting over-heated indoors and then going outside in zero weather. This is also a prolific cause of colds.

Most Canadian houses are overheated in winter. Their average temperature is often higher than during the summer months and certainly higher than in spring and autumn. This is unnecessary, it wastes fuel and it endangers health. Women are prone to wear too light clothing in winter. It would be much safer for them to dress more warmly and have their houses ten degrees cooler.—C. A. Hodgetts.

Montreal Court Explains Term F.O.B.

AN important ruling was made in Montreal last week which is of much interest to the trade. This refers to the commercial expression "f.o.b." and makes a ruling as to the significance of this term.

The seller at his expense under this term "Free on board" means that the seller at his own expense places the goods on the car or vessel which is to carry them from the point specified and that the buyer takes the risk onwards; at the same time the goods must, at destination, be in conformity with the conditions of sale or they may legally be rejected.

The matter developed out of an action of a Montreal and Quebec City firm. Masson Sons, Ltd., of Montreal, sued E. Coulombe, of Quebec, for the sum of $1,460, being the value of a carload of tomatoes shipped to Quebec to the order of the defendant. The shipment was f.o.b. Montreal, and when the tomatoes reached Quebec defendant complained they were not in the condition he stipulated in his orders. He advised the plaintiff by telegram accordingly, but they persisted that he was responsible to them for the price agreed upon. Defendant, knowing that tomatoes would be a complete loss if shipped back to Montreal, sold them at once in Quebec for the best price he could obtain, deducted 5 per cent. of his commission on the sales, and forwarded the balance, $868.07 to plaintiff, who however refused to accept the cheque and sued the defendant for the price agreed upon when the order was given by defendant, namely, $1,460.

Plaintiffs based their claim on the fact that the tomatoes were in good condition when they delivered them "f.o.b. Montreal," and that from this point defendant was liable. On his side the defendant submitted that the "good condition" mentioned in his order referred to the state the tomatoes were to be in at Quebec.

There was no delay in transportation, and the main question for adjudication turned on what interpretation was to be given, in the circumstances, to the expression, "f.o.b. Montreal."

The Court's Ruling

Mr. Justice Panneton said there was a divergence of opinion on the meaning to be given to the commercial expression, "f.o.b." In England, the weight of jurisprudence was to the effect that the object sold was at the risk of the purchaser from the moment it reached the point of delivery "free on board." A decision was reported, however, which gave to these letters a limited sense—that was to say, the vendor put the merchandise sold at the place indicated "free of all such costs as cartage, wharfage," etc., and it was the latter sense that had been adopted by the jurisprudence of the courts in the United States. In the case of the Dominion Lumber Company vs. Auger, confirmed by the Court of Appeal, the following definition was given to the letters, f.o.b.; "They mean that the seller, at his own expense, shall place the goods on the car or vessel which is to carry them on account of the buyer, at whose risk they are from that time."

"It is necessary," said Judge Panneton, "to distinguish delivery from acceptation of the thing sold. The carrier is the agent of the purchaser, but his mandate is limited to the transportation of the goods. The question to decide is whether it was the thing sold which was delivered at Montreal. According to the proof, the tomatoes were to be of first quality (No. 1), and in good condition. They were neither the one nor the other. If. in the case of the sale of goods by correspondence, as in this instance (the order was given over the telephone), the rule was adopted that inspection had to be made at the place of delivery when that place was not the destination, it would be necessary that the buyer, who resides in another city or country, should have an agent to make an inspection of the merchandise at the place where the goods were placed on the car or vessel. This would be impracticable.

Understanding Not Vague

"When a merchant in Montreal sells goods to a merchant in Quebec he knows and understands very well that the buyer can only know the condition of the goods when they have reached their destination. If the vendor has correctly delivered the thing sold, the buyer becomes the proprietor immediately. If he delivers something else—for instance if he has sold goods of first quality and delivers goods of second quality, there is no delivery of the things sold. The buyer can refuse them only when they arrive at their destination.

In this case the court concluded that the attitude of the defendant was correct, and that, although the tomatoes were sold f.o.b. Montreal, the defendant could not refuse them until they reached Quebec, and that his refusal was proper under the contract, inasmuch as the tomatoes were not in the good condition that the contract specified. For this reason the judgment of first instance was reversed, and it was held that the defendant's offier of $868.07 was sufficient in the circumstance.

There was a slight variation of the order as to costs, part of which were against defendant because he did not pay into court the amount he admitted he had in hand in payment for the tomatoes.

MARKET CONDITIONS

(Continued from page 40)

Owing to the scarcity and unsettled conditions of the markets locally it is almost impossible to quote accurate prices, as nearly all who have stocks have procured them under unusual conditions, and sheets, galvanized, 10 oz., for instance, are quoted anywhere from $9.25 to $10 per 100 lbs.

The following are the prices:

BLACK SHEETS—

14 gauge	5 45	6 50
16 gauge	5 90	6 95
18-20 gauge	5 45	6 85
22-24 gauge	6 50	6 90
26 gauge	6 60	6 95
28 gauge	6 75	7 05
3-16 inch plate	5 20	5 55
¼-inch boiler plate	4 80	6 10

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

GALVANIZED SHEETS—

	Premier		Apollo	
10¾ oz.	$9 20	$9 80	$8 55	$9 55
U.S. 28	8 60	10 20	8 15	8 85
U.S. 26	8 20	8 80	7 85	8 50
22 and 24	8 00	8 20	7 70	7 30
18 and 20	7 80	8 00	7 55	8 10
16	7 55	7 80	7 40	7 90
12 and 14	7 35	7 55	7 25	7 65

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga. when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

Copper, Lead, Spelter ½c Higher; Tin Advanced

INGOT METALS have shown higher upward movements during the past week, and still higher prices are predicted. Copper is again in good demand and has advanced ½ cent per pound. Tin is 2½ cents per pound higher. Lead is up ½ cent per pound. Spelter has also advanced ½ cent per pound, while antimony and aluminum remain unchanged.

TIN.—An advance of 2½ cents per pound has been reported on tin, and the new price is now being quoted at 63 cents per pound.

COPPER shows an advance of ½ cent per pound, and is again in good demand, some large quantities having been purchased on the primary market, where an advance is also reported of 2 cents per pound. The present quotation is 24½ cents per pound.

LEAD is ½ cent per pound higher, and is showing increasing demands.

SPELTER is showing better demand, having recovered from its weakness, and an advance is reported of ½ cent per pound. The quotation now going is 11½ cents per pound.

ANTIMONY is showing considerably heavier demand, although the price has remained unchanged at 12 cents per pound.

ALUMINUM is unchanged. The present quotation being 34 cents per pound.

Market Conditions and Tendencies

Statements Regarding Supplies and Trend of Prices

THE MARKETS AT A GLANCE

THE advances reported in plumbers' and sanitary goods are of importance. Among these important changes are noted: Cistern pumps, showing 5 to 10 per cent. higher prices. Range boilers advanced 7½ per cent. Solder is 2c a pound higher. Boiler tubes are expected to advance 1 to 3c per foot after January 1, 1920.

Porcelain prices are still withdrawn, but it is expected that new higher prices will soon be issued. Conductor pipe, also soil pipe may soon advance.

Lower prices, according to present indications, seem out of the question. Considerable effort is required to procure goods, it is stated. This may be due to lack of production, which more and more has become the dominating factor of the situation. Manufacturers and mills are preparing to give this problem their special attention immediately. They advise all to bear in mind the difficulty in getting supplies and while it is not always good policy to stock heavily, especially at this time of year, it is well not to be caught with too little stock during the middle portion of 1920, it is stated.

TORONTO, Dec. 31.—Very important changes have taken effect in plumbing and sanitary goods. Some of the goods showing high prices are: Cistern pumps, 5 to 10 per cent. higher; range boilers, which have been firm for some time back, have advanced approximately 7½ per cent.; solder is up 2 cents per pound. An advance is expected in boiler tubes, of from 1 to 6 cents per foot. Oakum, conductor and soil pipe may soon advance.

The outlook for 1920 is unusually bright, and from the manufacturers all down the line, one of the best years in their history is expected. Whether this will be realized depends entirely on conditions. The one thing to assure the filling of any large demands will be the settling down of labor, it is stated. Many report depleted stocks throughout the trade, and are speeding production through the slacker season, in order to catch up with delayed orders.

Cistern, Well and Cylinder Pumps Advance 5 to 10%

PUMPS.—Cistern, well and cylinder pumps have advanced approximately from 5 to 10 per cent. and new prices are now in effect. This is not unexpected, as pumps have been showing firm tendencies for some time, and it is stated the new prices are reasonable in accordance with present costs.

Oakum Prices Firm; May Soon be Advanced

OAKUM is reported at a very firm figure and every indication points to higher prices at a very near date. The following are the present quotations:

	Per 100 lbs.	
Best American	$21 00	$22 00
Clipper, spun	.....	21 00
Do., unspun	....	19 50
Plumbers' spun	10 00	10 75

Porcelain Ware Prices Have Not Yet Been Issued

PORCELAIN WARE.—The prices of this commodity are still withdrawn and present prices are on application. It is expected, however, that the new prices will soon be available.

Range Boilers Advance 7½%; Prices Herewith

RANGE BOILERS.—As predicted in last issue of SANITARY ENGINEER, range boilers have advanced. The high rate of exchange is still a feature, and orders are, to a large extent, contingent with these rates. It is stated the demand for range boilers is a strong one. One of the causes for the heavy demand is attributed to the large amount of dwellings that were started late in the season and managed to get the outside coverings completed before the cold weather set in, allowing the trade to install the plumbing through the cold weather.

The following are the new higher price quotations:

Range Boilers—	Standard	Ex. Heavy
30-gallon	$12 00	$14 00
35-gallon	14 00	16 00
40-gallon	16 00	18 00
52-gallon	22 00	25 00
66-gallon	35 00	38 00
82-gallon	40 00	47 00
100-gallon	50 00	58 00
120-gallon	60 00	67 00

Solder Advanced 2c Lb.; Other Products Firm

LEAD AND ZINC PRODUCTS are holding at firm prices. Although the basic metals are of a fluctuating nature, new and higher prices in the products would not be surprising. Solder is already quoted at higher prices, which it is expected will hold for some time to come. The following are the present quotations:

Lead pipe, list, per lb.	....	0 13½
Lead waste pipe, list, per lb.	....	0 14½
Do., over 8 inches, list, per lb.	....	0 15½
Above subject to discount of 10%.		
Lead traps and bends	....	5%
Lead wool, lb.	....	0 16
Lead sheets, 4 to 8 lbs., sq. ft., in rolls, lb.	....	0 10½
Cut sheets ½c to ¾c lb. extra, and cut sheets to size, 1c lb. extra.		
Solder, guaranteed	0 35½	0 36
Solder, strictly, lb.	0 34½	0 35
Solder, commercial, lb.	0 32½	0 33
Solder, wiping, lb.	0 31½	0 32
Solder, wire, lb.	....	0 42¼
Zinc sheets, per lb.	....	....

Boiler Tubes May Advance 1 to 3c First of New Year

BOILER TUBES are very firm. It is stated that an advance of from 1 to 3 cents per foot may take effect the first of the new year. This advance, if effective, would, no doubt, be a reaction from the great scarcity of raw materials. The congestion at the mills is said to be causing great inconvenience. Delayed shipments, due to the previous coal strike, also the high rate of exchange, are all factors towards higher prices and shortages of materials.

The following are the price quotations:

	Per 100 feet	
BOILER TUBES—	Seamless	Lapweld
1 inch	$27 00	$.....
1¼ inch	29 00	.....
1½ inch	29 50	.....
1¾ inch	32 00	27 00
2 inch	31 00	26 00
2¼ inch	35 00	28 00
2½ inch	43 00	32 00
3 inch	48 00	40 00
3¼ inch	.....	47 00
3½ inch	60 00	44 00
4 inch	75 00	56 00

Waste Materials Remain Unchanged; Unsettled

WASTE MATERIALS at present are rather quiet and not much business is offering. The holiday season and

MUELLER

Self-Closing Basin Cocks

(Patented)

EXTRA PATTERN

MUELLER self-closing work requires but little more effort to operate than ordinary compression work and on this account its use is not objectionable even in private homes.

Individual inspection of every cock insures a standard of excellence embodied in all lines of MUELLER manufacture.

A1508
Code—*Arbutus*

The closing is actuated by a phosphor bronze spring, which has permanent elasticity. The tension of this spring will close against 175 pounds water pressure, yet it is easily operated on account of its roller bearing construction.

Just a few points of this service plus Basin Cock are:—

Seat washer can be replaced in but a moment's time. Unscrewing body cap, releases all working parts in one assembled unit.

Malleable Iron Locking Washer locks cock immovably on the lavatory in any position desired.

Made of high-grade red brass with careful attention to coring, machining, polishing and nickel-plating.

WE MAKE MUELLER

Basin and Bath Trimmings, Bibbs, Sill Cocks, Ferrules, Curb or Service Cocks, Corporation Cocks, Tapping Machines for Water and Gas, Service Clamps; Regulators and Reducing Valves for Water, Air, Steam and Oil; Bubbling Fountains, Gas Cocks, Globe, Angle and Check Valves, Etc. Forgings in Brass; Castings in Brass, Bronze and Aluminum; Specialties for Automobile Companies, including Bronze Bushings, Gasoline Cocks, Etc.

H. MUELLER MFG. CO., LTD.
SARNIA -- -- CANADA

yearly stock-taking period are said to be the chief causes. The price tendencies, however, nearly throughout the list are of a firm nature. In the opinion of some of the best informed, the future conditions are rather unsettled. Some look for almost anything to develop after the new year is properly ushered in. The following are the present price quotations:

DEALERS' BUYING PRICES

Pipe scrap	10 00
Stove plate, per ton	17 50
No. 2 busheling	11 00
Yellow brass	0 10
Red brass	0 15¾

Bicycle tires	0 01½
Automobile tires	0 03
Tea lead	0 03½
Heavy lead pipe	0 05¾

Wrought Iron and Steel Pipe Remains Unchanged

PIPE STEEL AND WROUGHT IRON is holding at a firm price, with no immediate higher prices expected for some little time at least. Pipe generally is scarce and manufacturers believe a shortage throughout the entire year of 1920 will be experienced. At the present time, skelp is very hard to procure. Export business is being offered in considerable volume. Manufacturers and jobbers are of the opinion that all should bear in mind the difficulty of procuring supplies, and while it may not be the best of policy to carry heavy stocks, it is necessary not to be caught with too little stock. The following are the present quotations:

WROUGHT PIPE

Conductor Pipe Firm; Advance Expected

CONDUCTOR PIPE.—In spite of the great scarcity of galvanized sheets, conductor pipe and eavetrough remains unchanged. Manufacturers claim they were fortunate in having large quantities made up before the sheet situation developed to such an extent, as at present reported. However, these stocks are nearly exhausted and higher prices are looked for in the near future, it is stated. The following are the quotations:

PIPE (Conductor)
Plain

2 in., in 10-ft. lengths, list	8 00
3 in., in 10- ft. lengths, list	9 70
4 in., in 10-ft. lengths, list	12 80

Enamelware Prices Are Unchanged; Scarce

ENAMELWARE.—The huge demand recorded for 1919, according to present indications, may look small, compared to that of the expected one for 1920, it is stated. It is believed that the present scarcity will automatically relieve itself and that by spring manufacturers will again be able to give fair delivery. The following are the present quotations:

Bath tubs, roll rim, 4. 4½, 5 feet, 24 to 30 in. wide	$37 05
Bath tubs, 5½ ft.	41 20
Lavatories—	
17x10" Apron F139 or P4045	11 05
18x24" Apron F154 or P3845 or P3847.	17 00
18x21" Apron F169 or P4205	12 70
18x21" Roll rim F197, F199 or P4655-6	11 10
17x19" Roll rim F241 or P4345	9.05
Sinks, roll rim, 18 x 30 in.	16 60

Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$5 40	$5 35	$5 30
18 x 30	6 20	6 50	6 10
20 x 30	7 10	7 05	7 00

Plumbers' Compression and Brass Work Unchanged

COMPRESSION WORK.—Plumbers' compression and brass work is holding at an unchanged figure. The copper market seems more or less unsettled and conditions vary to such an extent that it is hard to say, even from day to day, just what will take place. A change in price would not be out of line, owing to the general conditions of all manufacturing plants using the basic metals. The following are the present quotations:

Compression work, standard	28%
Fuller work, standard	34%
Bath cocks, compression	30%
Bath cocks, Fuller	34%
Flatway stop and waste cocks, standard	32%
Roundway stop and waste cocks, standard	32%
Brass steam cocks, standard	Net List
Globe, angle and check vales, standard	5-9%
Do., removable disc	7-10%
Radiator valves, standard	15%-23%
Do., removable disc	40-46%
Basin Cocks	
No. 0 and 1, Fuller pattern	34%
Compression	23%
Quick opening	34%

Sheets and Plates Firm; Present Prices Holding

SHEETS AND PLATES.—The serious shortage of this commodity continues to be keenly felt, although some state that sheets are coming in better and that the size of shipments are stated to be even larger than was hoped for. Booked orders and future business seem out of the running. At least none of the mills are encouraging this class of business, it is stated, owing to the enormous booking still on hand of the 1919 variety. However, the demand for 1920 is expected to be of such a persistent nature, that manufacturers will find some way of catching up with their orders, it is stated, and all concerned are hoping the new year will be one of industrial harmony and peace.

(Continued on page 37)

TRADE MARK J.M.T. REGISTERED A GUARANTEE OF QUALITY

An Injector with a Splendid Reputation for Efficiency

Morrison

Injectors that offer 40 pounds more field. A reliable, trustworthy injector that sells as well as it operates. Morrison High Pressure Injectors operate successfully on 20 lbs. low to 220 lbs. high steam pressure, from 4 to 300 horse-power, and are made in sizes from 3/8 inch to 2 inch.

For you it offers one of a line of products that are supreme in the mechanical field and sell without time-consuming argument.

The James Morrison Brass Mfg. Co.
Limited
93-97 Adelaide St. West, Toronto, Ontario

Mark of Proof Is Proof of Quality

There's proved and certified strength in every

WILLIAMS' IMPROVED "VULCAN" CHAIN PIPE WRENCH

Each and every Flat Link Chain is "proof-tested" to two-thirds of its listed catalog strength in a standard tension machine. To each chain so tested is attached the Gray Leaden Seal, illustrated above, and every Flat Link Chain leaving our works *must* bear this seal—the Proof of Quality—as evidence that it has passed our standardized "proof-tests."

Look for this Mark of Proof for it is Proof of Quality—it guarantees uninterrupted, severe service as well as safety to the operator. Williams' "Vulcan" Chain Pipe Wrenches are the *only* Wrenches which offer this certified assurance.

May we send you a copy of our descriptive booklet?

A Mistake in Cost and Selling:

Allpriser Service Prevents It

Don't risk losses, unnecessary overhead and confusion of cost data—Allpriser Service prevents it and results in a direct saving of money that pays for itself. Did you ever sell an article costing 12c for 10c?

Allpriser Service consists of a flexible leather bound book 7 x 9, of 150 loose-leaf pages. The service includes a list of net prices of all staple articles and a regular service of new sheets revised to the latest changes. Allpriser Service is only $25.00 annually.

KENNETH B. ALLISON, 668 Yonge Street, Toronto

More-Profit Pumps ---Real Profit

No use to sell a pump that makes trouble for a dealer with his customer.

The trouble is remembered. The cost of repairs is dead loss of time and temper. The dealer suffers.

"Aremacdee" hand and motor metal pumps for force or lift use, every kind, are shown in the big catalogue.

Dealers, ask for prices and terms. Get real profits on your metal pump sales.

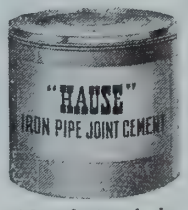
"HAUSE" PIPE JOINT CEMENT

For steam, water, air, oil, gas, gaskets, etc. The cement that cements. Sets like gum. Allows no leaks.

The Great Value of "HAUSE PIPE JOINT CEMENT" lies in its peculiar chemical properties which permits of its hardening and expanding after the joints are made up. In making up joints it has the same effect as a lubricant on the best graphite, and while the joints may be made and broken readily, a perfectly tight joint is maintained at all times. Comes in 1-lb., 5-lb., 15-lb., 25-lb., 50-lb. cans, 100-lb. barrels. Manufactured in ready mixed and powder form. Ask your jobber for prices, or write us direct.

Made in Omaha, Neb., U.S.A.



Manufactured in Ready Mixed and Powder Form.

Sanitary Engineer

Plumber and Steamfitter of Canada

VOL. XIV. PUBLICATION OFFICE, TORONTO, JANUARY 15, 1920 No. 2

Indifference to the Stop Cock!

You know what that means.

Ruin to the whole Steam System.

The loss of money and time to the client.

And the loss of the client's confidence in the sanitary engineer who installed the system.

It is worse than folly to pass on inferior stop cocks when Empire Steam Stop Cocks are available — and Empire Steam Stop Cocks always are available.

The factory test of the Empire Manufacturing Co., and our guarantee is behind the engineer who installs our stop cocks. Remember our guarantee has never failed.

A square client deserves Empire Steam Stop Cocks— they are the quality of stop cocks he expects from a reliable sanitary engineer.

TINKER TOM'S TALKS.

No. 241

In the line of exportable assets we have, first, our agricultural products. Then our lumber business has been given a tremendous impetus. Our pulp and paper business is expanding enormously, being worth $100,000,000 this year. Our fisheries have remained stationary for many years, but they can be tremendously developed. Of our manufactured products we exported in 1913 to the value of $57,000,000; in 1918 we exported $636,000,000. This huge figure is largely due, it is true, to the great quantities of war supplies, but it showed us that we are a great industrial country, and we have it in us to produce manufactured goods. Given the proper Government and the right kind of leadership, we may look forward to the greatest development that ever took place in any country in the world. We have enormous undeveloped natural resources. We have known water-power equal to 357,000,000 tons of coal-power; Britain's highest coal output is 250,000,000 tons. We have a class of men in this country more resourceful than any I know of. We have labor which is intelligent and which can produce if labor and capital can get together on a basis satisfactory to both. But we must not allow things to drift. In the first place we must have a United Canada. We have got to get rid of sectionalism of all kinds. We must study each other's problems more. For our country will never be bigger than the people themselves.

From an address before Canadian Club of Hamilton, by Lloyd Harris, Canadian Trade Commissioner, London.

Look out for Talk No. 242 next issue.

Entered as second-class matter July 1st, 1912, at the Post Office at Buffalo under the Act of March 3rd, 1879.

Doing Things

A Little "Straight Talk" to the Canadian Plumbing Trade

"DO IT NOW" has for some years appeared as a printed injunction in offices and stores until there is a danger that the good advice of the little cards — many of them now very soiled — has become a forgotten, matter of fact, affair more observed in the breach than in observance. "DO IT NOW" should be revived at this moment for the Canadian Plumbing Trade.

The plumber who is in business should be a salesman. If he has not cultivated, in the past, the art of selling, he should now begin to train himself; he must become more and more keenly alive to the opportunities for development which surround him. Many cases are found where the plumber is "too busy" doing small, unprofitable jobs, while with some study of local conditions he might easily secure large and paying contracts.

There is always a danger that if the business man does not take advantage of his local possibilities some larger or more enterprising concern from outside may step in and secure the contracts. It behooves each man to be up and doing, and particularly at this season of the year to anticipate the opening of spring activity, and plan well his season's campaign. *Do it now*—Quality—Efficiency—Service.

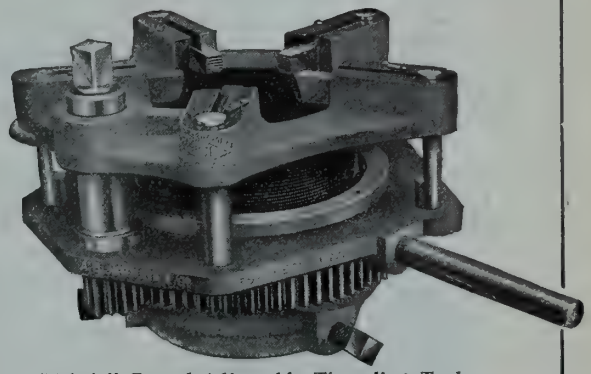
JARDINE and TOLEDO PIPE THREADING TOOLS



"Toledo" Geared Adjustable Threading Tool, No. 2½. Capacity 2⅜ to 6 in. inclusive. Weight 120 lbs.

THE ratchet feature of Jardine and Toledo Tools permits their being used to thread pipe which is already in place, no matter how awkward it may be to reach. The Jardine and Toledo have no cams or jim cracks to get out of order; and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

Board's Order is Indefinite

Probe is to be Made Into Prices of Builders' Hardware and Plumbing Goods —Returns Must be Made by March 31st—Cost and Selling Price Must be Given

OTTAWA—The Board of Commerce, in a judgment issued and signed by Judge Robson, chairman, and Commissioners O'Connor and Murdock, declares that building materials of all kinds, plumbing fixtures and building hardware are necessaries of life under part two of the Combines and Fair Prices Act.

Prior to March 31, 1920, all dealers within Canada in such materials must deliver to the secretary of the board a statement of cost and selling price of all such articles and the date as of which such prices are reported. Any dealer or dealers holding or offering for sale within Canada such building materials will be deemed to have committed an offence under the Combines and Fair Prices Act if an unfair profit is made by him or them.

The Order

The order reads:

"It is hereby declared that building materials of all kinds ordinarily or necessarily used in the construction or sanitary completion of houses for homes, including plumbing fixtures and building hardware, are necessaries of life under part two of the Combines and Fair Prices Act, 1919. This special regulation is made pursuant to section 16 of said Act.

Report Before March 31

"It is further ordered that prior to the 31st day of March, 1920, all dealers within Canada in such building materials to deliver to the secretary of the Board of Commerce of Canada at Ottawa a statement showing the cost price to them of each article or class of building material being sold or offered for sale, with their selling price thereof to a contractor or other individual for use in the building of houses, and stating the dates as of which such cost and selling price is represented. And it is declared that any dealer or dealers holding or offering for sale within Canada such building material will hereafter be deemed to have committed an offence under the Combines and Fair Prices Act, 1919, if an unfair profit is made by him or them."

THE latest order of the Canadian Board of Commerce is directed at the hardware, plumbing and building trades, and, if carried out definitely, is bound to cause no little trouble, and considerable dissatisfaction. It would appear that the information asked for in the order is of such a nature as to make it practically impossible for the plumber to furnish the data called for. Only a sanitary engineer, jobber, or manufacturer, for instance, is capable of comprehending the comprehensiveness of a plumbing stock, made up of its thousands of distinct items, and broken up again into an almost infinite variety of sizes, patterns, shapes.

Vagueness of Order

At the same time the order is not at all clear, and a general enquiry by SANITARY ENGINEER of hardware manufacturers, jobbers, retailers, and plumbers, reveals the fact that few comprehend the meaning of the order, and are paying little or no attention to it. Therefore, and until the order is explained in detail, interviewed parties, in most cases, decline to make comment.

Up to the present time the Board of Commerce has not directly notified hardware merchants or plumbers of the order and many of them are rather in the dark as to what is expected of them. Just what is to be done in this respect does not yet seem clear.

Has Not Been Advised Yet

"I have not yet been advised that there is to be any public hearing in Toronto," said Maj. Duncan, who is in charge of the Ontario office of the Board of Commerce. "One thing the men in the trade may be satisfied about is that it is not the intention of the board in any way to interfere with legitimate business. It is the board's desire to obtain facts and if any of the hardware merchants or men in the plumbing business have information that will bear on the investigation we want it. If there is any profiteering the board wants to find it out and will deal with the matter."

How It Reads

An official copy of the order as received by SANITARY ENGINEER from the Board of Commerce headquarters at Ottawa and reproduced above indicates that the investigation will concern the prices of building materials alone.

Whether the Board of Commerce will notify hardware merchants and sanitary engineers regarding the statement required by March 31 was not stated.

Plumbers' President Says

Captain D. A. Bethune, president of the Montreal Master Plumbers' Association, stated that he was perfectly willing, at any time, to impart information as to the cost and selling prices of their goods. The cost of doing business, he states, has become so high that, even though much higher prices have to be charged, the net profit will not amount, in the long run, to more than three to five per cent.

Cannot Be Bought

"There is little or no material in the market at present to be bought," said Capt. Bethune. "All stocks are going

down, and nothing, of some lines, is being manufactured. It is very difficult to get radiators, for instance, where we used to be able, always, to have access to big stocks. Why, scrap iron is now selling at $30 per ton, a very high price. Prices are made higher through increased freights, wages, etc. And, as far as I am concerned, I would be glad, and perfectly willing, to give all the information I have."

Many expressed their entire ignorance of such an order, and could, therefore, not speak on the merits, or otherwise, of the case.

"It so happens," said E. H. Russell, of London, Ont., one of the directors of the Ontario Society of Domestic, Sanitary and Heating Engineers, "that I know nothing about the Board or its work, and I am unashamed in the admission. In my light and airy way I sometimes think it would be an excellent thing for the country if the Premier would prevail upon the rest of the Government to join him in his projected joy ride, I would add officials, also, only I am mindful of a shortage in ships (and we could not bribe the captains to lose them all), in order that you may not feel that Ottawa is first prize man in knowing how not to do it. Since I have succeeded so well in not answering your query, perhaps you will accept a query from me. Having read that sugar was abundant, I directed the joy of my life (my wife) to purchase a bag forthwith, at the price of $12.75. We have been in possession of all this sweetness two weeks; the price per bag is now $17.00 to $18.00; will you tell me what occurred to cause this gentle aviation? Would you advise me to become a sugar broker and abandon the study of pipes, or, seeing that I did not purchase a ton, would you advise me to examine my ears?

"I regret being unable to make any statement regarding the Board of Commerce, but I think, on general principles, they would achieve great merit, if they would considerately get lost, abandon Canada to its fate, as it were, and leave us our moderate prices."

"The Board of Commerce has apparently accomplished some good work already and is an institution which can prove of great benefit to Canada if good judgment is used," said Thomas A. Jones, of London, Ont., vice-president of the Cowan Hardware, Limited. "The members of this board must, however, remember that they are not appointed to restrain legitimate trade but only to put the check on profiteers.

Are Not Highwaymen

"The business men of Canada are not highwaymen and are only in business for a fair and legitimate profit and nothing should be done at the present time to hamper anyone who is willing to work whether it be behind the counter or anywhere else.

"As to the recent ruling about hardware, it is so indefinite as far as newspaper reports go that I am unable to express an intelligent opinion until further information is vouchsafed by the board. This, however, I know and can vouch for and that is that every hardwareman in London will be only too glad to furnish all information in his possession without fear or favor and that it will undoubtedly be found that their profits are very fair and reasonable."

Difficult to Get At

There is this to be said regarding the various lines of hardware making up what is styled "Builders' Hardware," and that is, that the variety is so extensive, the patterns so numerous, and the supplies of many goods so short, as to make an order such as this seems to be, under present conditions, somewhat inoperative.

For instance, a jobber may place an order for a gross of a given style of lock, and three, four, or six months later receive anywhere from a dozen to three or four dozen of the item, and at a price ruling at date of shipment. The maker has probably shipped another dozen or two out a week later, and at a new high price, and the jobber distributes to the retailer, and the retailer to the contractor, and all these items are priced, it may be, at different costs. As before stated, it is only a man who has spent a large portion of his lifetime in the hardware business who can comprehend the impossibility of meeting the requirements of an order such as has been filed, and which, it is almost safe to assert, will never become workable.

Will Not Work

There is no class of business which suffered more, on the average, during the period of the war, than that of the builders' and hardware trade. Building was at a standstill for four years. Retail, as well as wholesale hardware merchants, were stocked with hardware of this nature, for which there was no demand, or little, at any rate. And, in any case, as is well recognized, the average builders' hardware dealer has had to figure his costs pretty close, for the simple reason that competition has governed, for very many years, the return the dealer can get on, or over his landed cost.

One Retailer's View

"We usually have to name a bulk price on the hardware which we supply, giving the contractor a price of so much for the hardware required in a given building. We do not know what he is getting, and our experience has been that we have to always figure very close, and then, oftentimes, we cannot get the business."

This is an expression from one of the largest retailers of builders' hardware in Canada, a firm which represents some of the better or high-grade lines of hardware manufactured in Canada and the United States. And, it is almost safe to add that this experience is that of many of the retail firms doing business throughout the country. This informant feels, as will many others, that the proposal will not, and cannot be made to work.

Ending of the Steel Strike Will Not Affect Conditions

Telegram From the National Committee Did Not Come as a Surprise—Only a Small Percentage of the Workers Were Out at the Last

THOSE who are in closest touch with the trade state that the ending of the big steel strike will not in any way materially affect conditions at the present time.

The ending of the strike occasioned no surprise. As a matter of fact, as far as the Steel Corporation was concerned it was over weeks ago. While 367,000 men were affected when the walkout took place on September 22, the number who stayed out was comparatively small and of these a large percentage were of the foreign element which was blamed for the trouble, and which it is doubtful if the company wanted back at any price.

Committee's Statement

After an all-day session in Pittsburgh the National Committee sent the following telegram to the headquarters of the American Federation of Labor in Washington, to the heads of all international unions interested and to the organizers and field men in all strike districts.

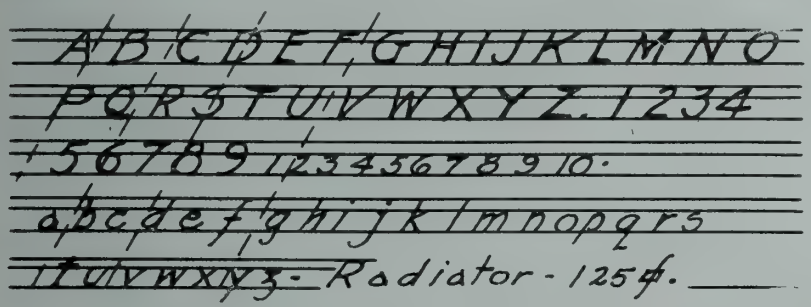
"The Steel Corporation," the telegram said, "with the active assistance of the press, the courts, Federal troops, State police and many public officials, has denied steel workers their rights of free speech, free assemblage and the right to organize, and by this arbitrary and ruthless misuse of power has brought about a condition which has compelled the national committee for organizing iron and steel workers to vote today that the active strike phase of the steel campaign is now at an end. A vigorous campaign of education and reorganization will be immediately begun, and will not cease until industrial justice in the steel industry has been achieved. All steel workers now are at liberty to return to work, pending preparation for the next big organization movement."

Drafting for the Sanitary Engineer

Practical Instruction in How to Make Neat Drawings—First of a Series of Specially Prepared Articles for "Sanitary Engineer" by Andrew Loucks—Keep This Whole Series—It is Valuable

ONE of the first things that the student of a drafting course should learn is that it is not necessary to have a great many tools to start in the practice work on a course of this kind. Even though he has nothing but a common writing pen and pencil he may start in by copying the alphabet that is given in this article.

If it is the student's desire to acquire such ability as will assure him of paid



employment in a drafting office, it is well that he devote considerable time in the practice of lettering and of tracing. If he is able to make a neat tracing he will have no difficulty in finding work in an office where he will have the advantage of seeing how experienced draftsmen do their work.

Lettering is Important

If the reader wishes to gain only sufficient knowledge of draftsmanship to enable him to make working drawings for his own assistance, he will find that even then, the time spent in the practice of lettering and of tracing has not been wasted; for he will find that the practice has developed neatness of rendering; the neatness begets accuracy, and the accuracy makes for speed.

Neat appearing drawings are never the result of time-destroying and finger-cramping labor; but rather the result of the draftsman's early training in exactness.

A poor drawing may be improved in appearance by neat lettering; the appearance of a good drawing is always destroyed by poor lettering. Thus of all the things necessary to perfect draftsmanship that of continual practice in the making of letters is to be recommended.

Has Been Simplified

At one time it was the custom of draftsmen to spend a great deal of time in the elaboration of the lettering of their plans. The old time draftsman did not consider his training complete until he was able to draw the letters of the many different styles. In recent years the mechanical draftsman has come to realize that ornamental letters have no place on a working drawing; so now he makes letters absolutely devoid of unnecessary lines.

Ordinary handwriting never looks well on a drawing. The letters that are shown in the accompanying alphabet can be drawn with a fair degree of speed.

Some draftsmen prefer to use vertical letters instead of those that are inclined, even though the vertical letters can not be drawn so rapidly as those having a decided pitch.

Will Be Developed

The student will find that in time certain characteristics will develop in his style of lettering. These can no more be avoided than can the individual character of the ordinary handwriting; and, in fact, are the very things that will increase his dexterity with the pen. All that we can do is to place an alphabet before the student and leave him to the development of his own style of lettering.

Lettering

The letters used on most one-eight scale drawings are 3/32 in. high for the capitals, and 1/16 in. for the "lower case" letters. A plan that is drawn to a larger scale should have correspondingly larger letters.

After the horizontal lines, which define the height of the letters, are drawn, guiding lines for the pitch of the letters should be made with the assistance of the 60 degree set-square.

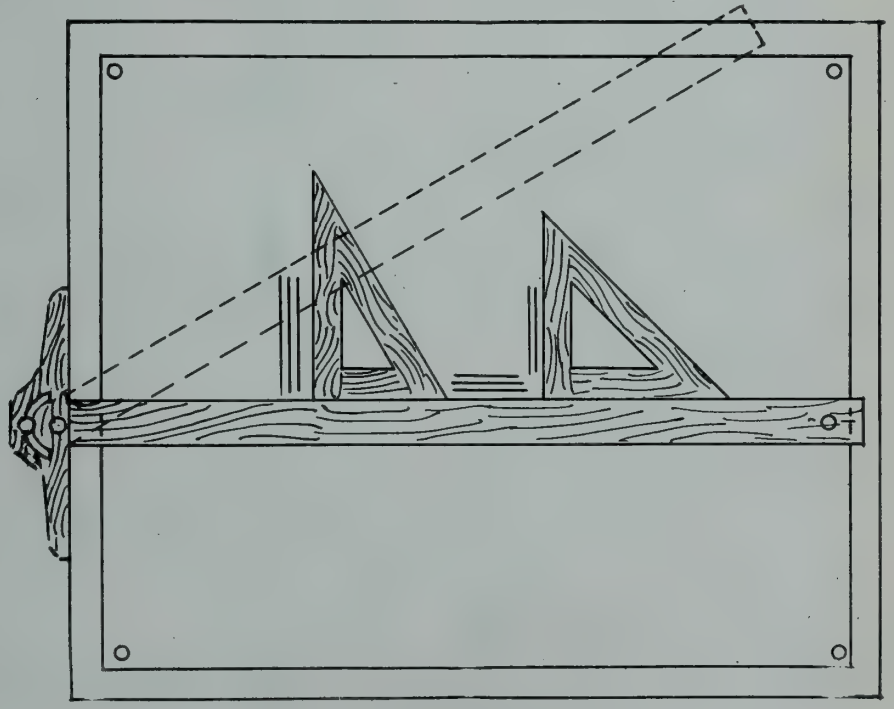
In the making of the letters, care should be exercised to see that both points of the pen are kept in contact with the paper. The more upright the holder is held, the finer will be the lines of the letters. When it is the draftsman's desire to make letters with a coarse line he should allow the holder to drop down until it is resting only slightly above the point of the thumb and palm. The student should try out the pen in different ways; but always keeping both points of the nib in contact with the drawing.

The Drafting Board

It is good policy not to buy a drafting board that is too small for general work. A board 30 in. wide by 36 in. long is the size recommended.

Drafting boards may be obtained having edges and reinforcing cleats of hardwood.

A cheap board is likely to twist; so it



THE DRAFTING BOARD.

is advisable that the student pay as much for a good drafting board as he can afford.

A board as large as we have here specified can be placed on trestles, or over the backs of kitchen chairs, so as to form a convenient table.

T Squares

We here show a T square set on the drafting board, with two squares resting against the upper edge of its blade.

The head of the T square is to be kept in contact with the left-hand edge of the drawing board (we are assuming that the draftsman is right-handed), and slid up and down. The blade of the T square is used for the ruling edge of parallel horizontal lines.

T squares are often fitted with a moveable head, so that parallel lines that are not at right angles with the edge of the board may be ruled. The dotted line on the drawing indicates how the blade may be swung when attached to a moveable head. It is well to have one of the heads of the square fixed, and generally the side with the fixed head should be used.

T squares are often edged with ebony or celluloid.

Set Squares

Set-squares, also called triangles, are used in the ruling of vertical and of oblique lines. The squares commonly used are such as those shown on the drawing. They may be of wood, steel, or celluloid. Squares made of wood are not so likely to smudge the drawing as are those made of celluloid or steel. Parallel lines may be ruled with the aid of two set-squares; one set-square is held stationary and the other set-square slid against the edge of the stationary square.

Compasses

Compasses are the instruments used in the drawing of circles, or of the segments of circles. One leg of the instrument is slotted so that a pen or pencil point may be attached to that leg. The other leg is fitted with a needle point. An extension bar is provided, so that circles having long radiuses may be drawn.

Each leg of the instrument is jointed, so that the pencil or pen point may be held perpendicular to the drawing.

Compasses usually have a tension adjusting screw, set at the junction of the legs, and which can be adjusted to suit the convenience of the draftsman.

Compasses should be operated with one hand only; using the thumb and index finger to close the instrument; and the back of the second finger, together with the fronts of the third and fourth, to open it.

Dividers

Dividers are used for spacing off distances upon a drawing. They are sometimes provided with pen and pencil ponts, so that they may be used as compasses; but as a greater rigidity is convenient in the joints of dividers than in the joints of compasses, it is not good practice to use the same instrument as a divider and as compasses.

The sharper the points of a divider, the more accurate will be the work; but, at the same time, care should be taken to see that the sharp points do not cut into the paper.

Bow-Pens and Bow-Pencils

These instruments are used when small circles are to be drawn. The legs of the instrument are opened or closed by the turning of a small screw.

Pens

The pen used in lettering should have a perfectly straight and plain holder.

RULING PEN

A holder 5/16 in. in diameter will be found a convenient size.

The pen point, or nib, should be equivalent to a Gillott No. 303. A point that is convenient for use in making large letters is a No. 40 Gage—"Silver series."

Pencils

Mechanical draftsmen generally use pencils ranging in the degree of hardness from one H to four H. Very accurate work may be done with the four H pencil; but the student will find that a drawing made with so hard a pencil will be "wiry" in appearance. He will also find that it much more pleasant to work with a soft pencil; and if he keeps turning the pencil so that the lead is worn down evenly he will find that quite as accurate work may be done with a soft pencil as with one that is hard.

Some draftsmen prefer to use two pencils: One sharpened to a point, and used for the purpose of marking points on the drawing; and the other sharpened with a chisel edge, and used in the ruling of lines.

The pencils should be kept well sharpened; but it is not necessary that the draftsman be continually sharpening the lead. If the pencil is turned so that the lead is uniformly worn, it can be used until the lead is almost down to the wood.

Papers

Until the student becomes familiar with the drawing instruments, ordinary Manila wrapping paper will be good enough for pencilled work. Later on, when the drawings are to be inked, a cartridge paper should be used. Manila paper has a surface too soft to resist the cutting action of steel pens. An ordinary pen will cut into it in such a way that the ink will spread. A bond paper, such as that used for business letter paper, has a fairly good surface for inked drawings.

Thumb Tacks

Thumb-tacks, sometimes called drawing pins or push pins, are used for pinning the paper to the drawing board.

These tacks should have heads with a diameter of, at least, 7/16 in., and points rather short. The reader should note that it is not the point of the tack that holds the paper in place, so much as it is the head; so when pressing a tack down, be sure to see that the head bears evenly on the paper. The head of the tack should not be very thick, especially if the tacks are placed where the blade of the T square must pass over them.

Ink

Prepared black India ink may be obtained in small bottles. The cork of the bottle is fitted with a quill for use in the filling of the ruling pen.

Inks of various colors may be procured in the same type of bottle.

Cut of Ruling Pen

The ruling pen is used for the inking in of straight lines.

When this pen is being used, both points must be held in contact with the paper. The pen is held lightly against, and run along, the straight-edge of the T or set square. It should be very slightly inclined toward the direction in which it is being drawn.

All horizontal lines should be ruled first; then the vertical lines; and last of all the oblique lines.

(Continued on page 32)

Test Yourself With These Questions

Answer Each One of Them and Then Check Up the Results—You May be Surprised to Find That There Are Weak Points in Your Business That You Have Never Considered—Stop All Leaks and Conserve Your Profits

(All rights reserved. Wm. A. Hersey, Robt. H. Ingersoll & Bro.)

PERHAPS *there isn't a single screw loose in your business.*

The question is—are you sure there isn't? Your position toward your business should be the same as that of a doctor towards his patient. A doctor examines his patient and finds out what is wrong and then prescribes a remedy. You, on the other hand, should examine your business—every so often—from an impartial viewpoint. Try to find your weak points and when you find there is anything wrong, or that there is anything that you are not doing that you should do—then do all you can to remedy it.

The following list of questions was made up after a long and careful study of the failings of many merchants. Ask yourself each one of these questions. Check those to which you cannot answer "yes." After you have completed the list, begin immediately to remedy the points on which you are lacking. Remember, by ignoring your weak points you are not harming anyone but yourself. It is just the same as if you would go to a doctor and then ignore the remedy he prescribes.

BUYING AND SELLING

1 Do you allow your personal tastes to influence you too much in your buying? .....

You should analyze your customers' wants and not your own preferences. People in each community have certain likes and dislikes which must be taken into consideration if you wish to secure all their patronage.

* * *

2 Do you overcome sales resistance by pushing nationally advertised goods? .....

Advertised lines are easier to sell than non-advertised lines. And it is the easier selling lines which help you to turn your stock oftener.

* * *

3 Have you studied all the goods you handle to know the selling points of them? .....

To secure selling points of the lines you handle, it is a good idea to read the manufacturers' literature on them—trade newspapers—newspaper articles, etc. These are but a few of the sources of information.

* * *

4 Have you carefully planned the interior arrangement of your store, that is, the arrangement of your different departments? .....

Quite often you can get good ideas for the arrangement of your store by studying the arrangement of other stores, especially the large and successful stores.

* * *

5 Have you a good lighting system to show your goods to the best advantage? .....

* * *

6 Is your stock clean and well arranged? Does it invite inspection? .....

* * *

7 Do you ever look at your store from the viewpoint of a customer? .....

If you will look at your store as a customer does, that is, casually pass your windows—go into your store as if you did not know anything about it, it will often help you make it more attractive.

* * *

8 Have you tried changing around the arrangements of your departments, to see which is the most profitable? .....

Quite often, by changing the departments from one part of the store to another, you will find it will enable you to sell more goods. The same is true of all other departments, and also all lines.

* * *

9 Do you clerks render prompt and courteous service? .....

* * *

10 Do you keep a record of your sales by departments, so that you can tell which departments are falling behind? .....

* * *

10a Do your records show you which articles and lines are not selling as quickly as they should, and have you a system of watching your records so that the slow sellers will not be in stock too long? .....

* * *

11 Can you tell each day the cost of the goods that you sell each day, so that you will know whether or not you are making a profit on the goods that you sell? .....

* * *

12 Do you keep a record of your sales by clerks, so that you know which clerks are earning a profit and which are not?

* * *

13 Are all of your goods marked in plain figures, so as to impress upon your customers that you do business on a one-price basis? .....

* * *

14 Do you put special efforts on certain departments because that department appeals to you more than others do? .....

* * *

15 Have you a system for securing names and addresses of new prospective customers, and facts pertaining to them? And do you also keep a record for securing of information that will help you make more sales among your customers, such as keeping a record of wedding anniversaries, birthdays, etc?

* * *

16 Have you tried to enlarge your selling territory in outlying districts, either through solicitation—or advertising?

* * *

17 Do you advertise through your local paper? .....

* * *

18 When you do get up advertisements, do you get them up because it is a job that must be done, or do you make them carefully? .....

* * *

19 Do you advertise seasonable goods? .....

* * *

20 Do you make a study of the advertisements used by other merchants, that is, not only those used by other stores in your line, but of other kinds of stores as well? .....

* * *

21 Do you make a study of manufacturers' advertisements of lines that you handle to get ideas for your own advertisements? .....

* * *

22 Do you use the cut service and other advertising helps supplied by manufacturers? .....

* * *

23 Have you a mailing list? .....

* * *

24 Do you keep your mailing list up to date? .....

* * *

25 Do you use your mailing list? .....

* * *

26 Are you able to tell from your records whether your advertising does actually increase your sales for the articles or lines advertised? .....

Some advertisements, such as advertising special sales, should bring immediate results, but unless you have the right sort of records, you cannot tell just how much good your advertising does.

* * *

27 Do you set aside an appropriation at the beginning of each year for advertising for the coming year? .....

That is, do you set aside a certain amount of money for the ensuing year, based on your expectation of the volume of business you expect during that year?

* * *

28 Do your records show what percentage you spend for advertising, that is, the amount you spend for advertising compared to your gross sales, and also, the amount you spend for advertising compared with your total overhead expenses? .....

* * *

WINDOW DISPLAY

29 Do you carefully plan your window displays, or do you just use your windows as show windows, and not as sales windows? .....

* * *

30 Do you display seasonable goods? .....

* * *

31 Do you keep your windows clean? .....

* * *

32 Do you try to have your windows better looking than the windows of your competitors? .....

* * *

33 Do you use manufacturers' display material? .....

* * *

34 Do you watch for manufacturers' advertising campaigns and plan window displays to connect up with those campaigns? .....

* * *

35 Do you have price tickets on most of the goods displayed? .....

* * *

36 Can you tell from your records whether your displays actually increase the sales of articles that you display? .....

Unless you keep a record of your sales by lines and departments, you cannot tell which displays pay the best.

* * *

GENERAL MANAGEMENT

37 Have you a good system of records that enables you to manage your business on facts, or do you manage it on guesswork? .....

* * *

38 Do you know how often you turn your stock in each department? .....

* * *

39 Do you know, beyond the possibility of a doubt, that the selling prices on everything that you handle are based on the proper mark-up? .....

* * *

40 Do you know exactly what your expenses are and whether or not they could be trimmed in any way? .....

If you merely keep a record of your expenses as money paid out, you cannot tell whether they are high or low, but you should keep them on an account basis, enabling you to know just what you are spending your money for. In every well-organized business, the manager should be able to tell at a glance what his expenses were for any particular time, for any particular class of expense.

* * *

41 Do you know how much you have to sell at the beginning of each month to meet your expenses for the coming month, and to make a profit? .....

* * *

42 Do you know what your net profit and expenses are for each month? .....

* * *

43 Do you know exactly how much money you have tied up in stock by departments? .....

* * *

44 Do you know how your expenses for any given month compare with those of a month, six months previous, or a year previous? .....

* * *

45 Do you know how large an investment your fixtures and your store represent, and do you charge off 10 per cent. for depreciation each year? .....

* * *

46 Do you have considerable trouble in making out your Income Tax Report, or are your records in such shape that you can make it out in a comparatively short time? .....

* * *

47 Do you charge off the right amount each year for loss through theft, or other reasons, that is, do you base your charges on facts, instead of guesswork? .....

* * *

48 Do you know whether you have any lines that are eating up the profits you make on other lines? .....

* * *

49 Do you keep an accounts receivable ledger? That is—a record of all goods sold on credit, so that you know exactly who owes you and how much? .....

* * *

50 Do you use every effort possible to keep accounts receivable down to a minimum? .....

* * *

51 Are you careful in extending credit? .....

* * *

52 Do you know exactly how much money you owe to manufacturers, jobbers and others? .....

* * *

53 Do your clerks like their boss? .....

* * *

54 Do you try to educate your clerks to get the most out of them, or do you let them shift for themselves? .....

* * *

55 Does your treatment of employees inspire respect, loyalty and energy? .....

* * *

56 Do you pay your clerks on a salary and bonus basis, making it worth their while to increase their sales? .....

* * *

57 Do you discount your bills? .....

* * *

58 Do you belong to a local, provincial or national association, and do you attend their meetings? .....

* * *

59 Do you read trade newspapers? .....

* * *

60 Do you use your own and your clerks' time according to relative value, that is, do you reserve your time for executive work and plan to let your minor help take care of your minor work? .....

* * *

61 Are you open to suggestions, or are you set in your ways? .....

* * *

62 Do you like your work? .....

* * *

63 Do you take a vacation every year? .....

* * *

64 Do you take an annual inventory?—do you compare it with your permanent stock record to see whether or not you are short any goods? .....

* * *

65 Do you make immediate and satisfactory adjustments of all complaints, so that your customers are satisfied? .....

Asbestos and Its Many Uses

Second of a Special Series of Articles on Practical Topics of Interest to Men in the Trade—Keep These Where You Can Refer to Them at Any Time

COMMERCIAL asbestos is made from a fibrous chrysolite, a variety of serpentine; and from tremolite and actinolite. These are all fibrous minerals, which are separable into pliant filaments, and which have the property of being incombustible.

The asbestos which comes from the Province of Quebec is the base of practically all of the manufactured asbestos in America.

The crude asbestos is first crushed between rollers, when the fibres are divided. It is then screened and graded. The long fibres are used for woven asbestos goods. The ground asbestos is not wasted, but is used as a base for many different insulating materials.

This article deals with pipe and boiler coverings, and it is not our intention to touch only on those coverings made of asbestos, but also on coverings made of other materials.

A Non-Conductor

Before we attempt to point to the merits of various materials we wish to direct the reader's attention to the value of perfectly still air as a non-conductor of heat.

The value of heat-insulating materials lies in their ability to hold minute quantities of confined air. Therefore, it can be said, generally, that coverings of light weight are of greater value than those that are heavy.

In the accompanying chart we are showing, approximately, the quantity of heat transmitted through various substances. This chart is based on figures obtained through tests made at Cornell University, and indicates the value of the materials specified. The ratio given for stagnant air is not taken from the university test, and is shown only for the purpose of again directing the reader's attention to the worth of the coverings, which have the quality of holding air.

Provide Air Spaces

A material that is not a non-conductor of heat is not increased much in heat retaining efficiency by any addition to its thickness. Any increase of thickness that is made for the purpose of retarding the flow of heat should be made by the provision of additional air spaces. Air spaces must not be made so large that heat can be carried from the covering on one side of the air space to the other by convection currents.

The chart indicates that asbestos, magnesia and mineral wool are the coverings most valuable on steam pipes. Wool and hair are also good non-conductors of heat, but their effective lives are very short when compared with the greater durability of the three first-mentioned coverings.

Some of the best insulating materials have the objectionable feature of becoming brittle when kept at a temperature exceeding 140 degrees. Some insulating materials can not be used, because not fire-proof.

Boiler Coverings

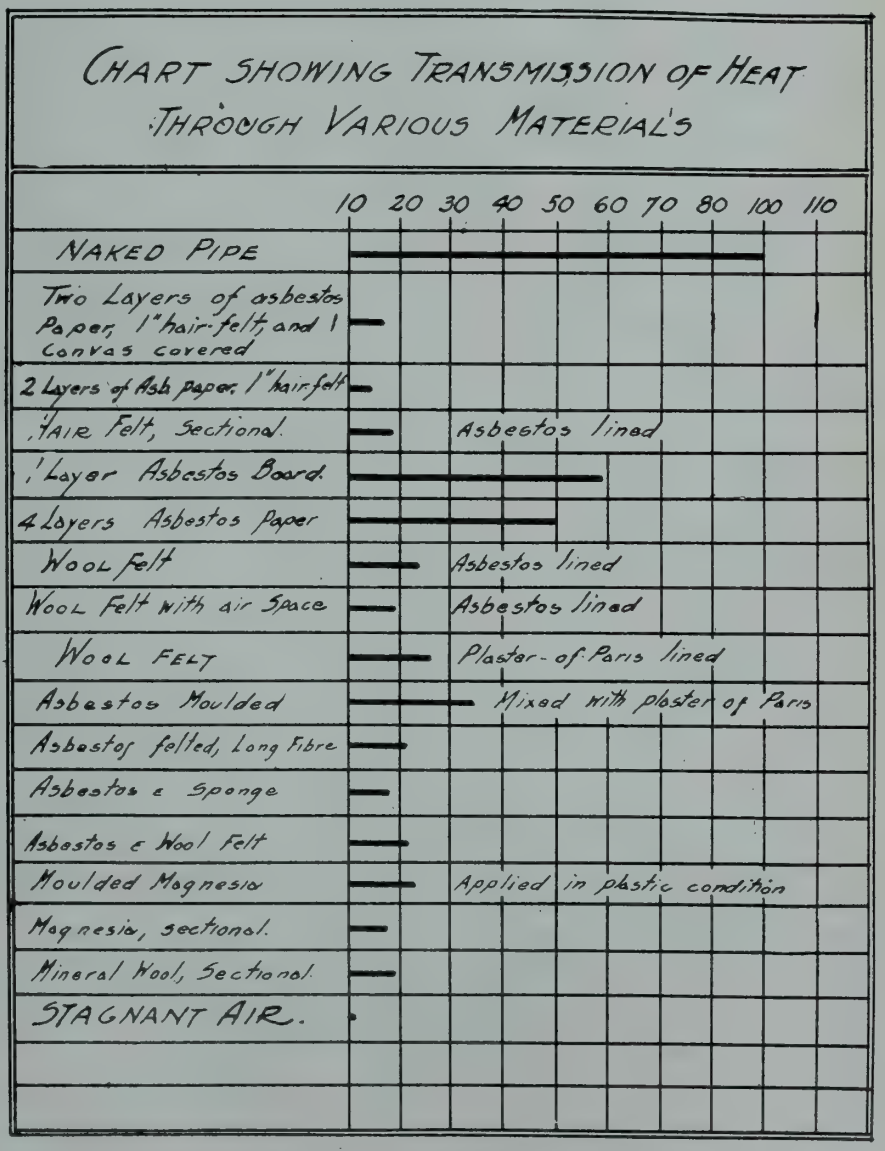
It is usually the custom to cover portable boilers with plastic asbestos cement, or to cover them with blocks of magnesia or of mineral wool.

When covering a boiler with plastic asbestos, the dry asbestos is mixed with water until it is of the consistency of mortar. After it has been allowed to stand for a few hours, it is applied to the hot surfaces of the boiler. Some fitters put the first coat on by hand; others use a plastering trowel. The first coat should be about ½-inch thick, and should be left rough, as a base for the second coat. Sometimes three coats of asbestos are applied; at other times only one. In any case, the final coat should be finished with asbestos and Portland cement, in the proportion of one to one, and trowelled to a hard finish. Each coat should be thoroughly set before a following coat is applied.

Plastic Asbestos

When steam boilers are to be covered with plastic asbestos, it is a good practice to provide an air space; following the method of construction illustrated by the drawing herewith shown.

The first coat of asbestos should be applied directly to the hot surfaces of the boiler and allowed to set. Over the first coat an air space should be formed by metal studs and wire lath. The wire lath is to be covered with a ¾-inch coat

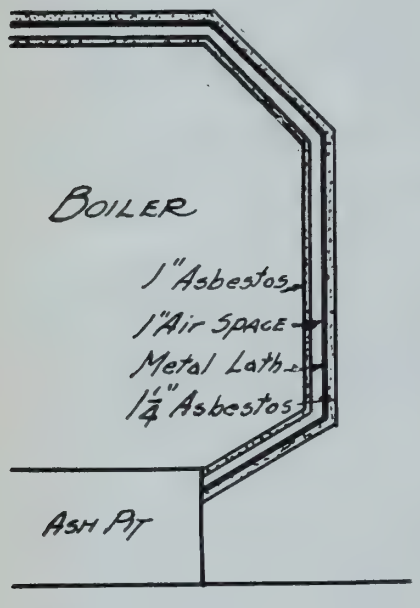


of plastic asbestos, left with a rough surface ready for the final coat. The final coat is to be ½-inch thick, and made of Portland cement and asbestos in equal proportions.

Block Coverings for Boilers

When block coverings are properly fastened to the boiler they make an excellent heat insulating jacket. A great deal of care is required when applying a block covering; so that the efficiency of the jacket will not be destroyed through the shifting of the blocks. The blocks should be temporarily held to their positions by ropes with slip knots. The use of the slip knot permits of tightly drawing into place the blocks prior to the time that the final wiring is undertaken. The blocks should not be wired until the whole boiler is covered, and every block should have two strands of wiring holding it to its place.

The blocks should be finally covered with a ½-inch coat of plastic asbestos



BOILER COVERING OF PLASTIC ASBESTOS WITH AIR SPACE.

and a canvas jacket. The canvas jacket must have its edges kept far enough back from the fire-doors, so that the edges will not be destroyed by heat.

Pipe Covering

Asbestos air-cell covering is made of thick asbestos paper, corrugated with longitudinal grooves, placed in layers so as to form air-cells. The layers are secured to one another by silicate of soda, and then covered with a canvas jacket. The value of this covering is in direct ratio to the number of layers of corrugated paper.

Asbestocel covering is made similar to the air-cell, but has its air spaces running in parallel rings around the pipe.

There are some sectional coverings of asbestos with air spaces arranged different from those already described; but as the air-cell and asbestocel coverings illustrate fairly well the principle of confining minute sections of air within a shell of incombustible material, they can be taken as standards of satisfactory pipe coverings of that type.

85 Per Cent. of Magnesia

Magnesia sectional covering is composed of about 85 per cent. of magnesia mixed with long fibre asbestos and carbonate of lime. This covering has a canvas jacket.

Fire-felt is made of long-fibre asbestos. It contains a great number of minute air spaces, except toward the outer shell, where air circulation is prevented by a filling of fine asbestos. Where the covering comes in contact with the pipe, its surface is corrugated. This covering also has a canvas jacket.

High-pressure steam pipes are often covered with a composition of earth, having a wool sheath and a canvas jacket.

Turn Back Fasteners

Pipe coverings are usually held in place by brass lacquered bands, spaced at regular intervals. In placing such bands care should be taken to see that the fasteners are turned from the line of vision, and with the loose ends tied back or clipped off; otherwise, the ragged appearance of the loose ends will spoil the finished appearance of the work.

No matter how effective a covering may be when it is first installed, it can not be considered to be of much value if it is made of anything but durable material, or if it is not protected from the damage of faulty installation. Some cheap grades of covering contain sulphate of lime and a very small proportion of carbonate of magnesia, with a bonding material composed of sawdust, excelsior, hair, etc.

All sectional coverings have standard moulded fittings for the covering of tees, ells, valves, etc. But frequently the fittings are covered on the work with plastic asbestos, moulded by hand, and covered with canvas or cotton.

Sheet Coverings

Large surfaces, such as shells of boilers, tanks, smoke pipes, etc., are usually covered with cork fire-board, magnesia sectional blocks, asbestos, asbestos and magnesia, asbestos air-cell covering, etc.

Cork fire-board is an excellent covering; but not so fire-resisting as an asbestos or a magnesia covering. Cork fire-board may be cut with a saw. The joints should be filled with asbestos and cork.

Magnesia sectional blocks should be secured in place with wire bands, as described elsewhere in this article. This is a very good covering, and is entirely fire-proof.

The asbestos air-cell covering is formed in sheets, built similar to pipe covering. It can be cut with a saw. It should be fastened in place with metal clips, metal studs, or wire, as circumstances may require.

Mineral wool is made from iron furnace slag and limestone, or from slag blown from granite.

Coverings Underground

It is sometimes necessary to place pipes underground. When so placed, they should be run in a conduit and not allowed to come in contact with wet earth or with cinder concrete.

Conduits when made of wood should be lined with tin or some other incombustible material; otherwise, the wood may soon be reduced to a soft pulp, by reason of the action of the heat of the pipes. With high pressure steam, the heat soon chars the wood to a degree where spontaneous combustion may take place.

A box made of wood, and filled with a packing of loose asbestos or mineral wool, makes a serviceable conduit where the ground is dry. It is well to make the box water-tight, and to coat it on the outside with tar.

Should Have Covers

Pipe conduits should always be fitted with moveable covers, or some other means of access to the pipes contained therein. If suitable chambers can be located where the pipes may be withdrawn from the conduit, it is not necessary that the moveable covers be run the full length of the pipe tunnel.

There are several forms of covering made with a ready-built wood conduit for work that is to be run underground.

Flexible Covering

Where conditions are such that a pliant covering is required, asbestos paper, fire-felt, or hair-felt may be used.

Asbestos paper is made just as the pipe covering is made; but not so stiffly cemented.

Fire-felt is made of long-fibre asbestos worked into a pliant sheet. After being placed in position, it is covered with a canvas jacket. This is a very good covering for irregular surfaces.

Where the conservation of heat is of greater moment than is the length of service, hair felt in various thicknesses may be used. It is usually made two yards wide and is packed in bales. This covering should be placed on the pipes in the following manner:

First the pipes should be covered with two ply of asbestos paper. Over the paper there should be placed one inch of hair-felt, with a cover of building paper and a canvas jacket. The twine used in the sewing of the jacket should be well bees-waxed.

A Good Insulator

A covering of hair-felt, while it is a good insulator, is unsatisfactory, because it disintegrates very rapidly on account of the ease with which it absorbs moisture. It also forms a first-class lodging house for vermin.

ANOTHER NEW FEATURE

FOR

SANITARY ENGINEER

Plumber and Steamfitter of Canada

We have recently announced in SANITARY ENGINEER, Plumber and Steamfitter of Canada, a number of important new features for 1920. We are glad to advise our subscribers of another new and important feature which will appear in SANITARY ENGINEER, commencing with the February 1st issue.

SANITARY ENGINEER has purchased the exclusive right to publish a series of articles entitled "Sewage Disposal for Small Communities." This series covers a wide range of important subjects. After appearing in SANITARY ENGINEER it is the intention of the author of this series to publish the series in book form. The author, Mr. Bernard E. T. Ellis, describes the book as a practical handbook on the construction of small sewage disposal work suitable for private houses, public institutions, and small country districts. There are 84 illustrations to be used in connection with this series.

The contents may be briefly described under the following headings:

1 Preliminary and general description of sewage.

2 Cesspools and septic tanks.

3 Construction and design of small septic tanks for private houses.

4 Construction and design for larger installations, including sedimentation tanks, septic and two-storey Imhoff tanks suitable for all classes of public buildings and small country towns.

5 General description of private house drainage.

6 Disposal of sludge and design of small pumping installation.

7 Land filtration and artificial bacteria bed.

In view of the increased attention being given to all subjects appertaining to public health the author of the series has compiled the book describing the many successful methods that are being and that have been adopted for treating and disposing of sewage from small communities, thus filling a long-standing want of sanitary engineers, architects, and for a reference explaining the design of small modern sewage installations for the removal of foul water waste on the best sanitary ground with the least nuisance.

Mr. F. R. Maxwell, president of the Canadian Society of Domestic Sanitary and Heating Engineers, was asked to examine this series and he stated in part as follows: "I believe the information contained in the series will be invaluable to the men in the trade. There are many points made clear and many phases of practical work taken up, which would puzzle most men if they were called upon to do the work discussed. I believe that information of this kind is greatly needed and should be read carefully."

This series will be reproduced in SANITARY ENGINEER, Plumber and Steamfitter, at great expense, in a series of splendidly illustrated articles, but we believe our readers will greatly appreciate this new feature. Further details regarding the new series will appear in next issue and the first article of the series will appear in the February 1st issue.

EDITORIAL COMMENT

THE PLUMBERS' DEMANDS

JOURNEYMEN plumbers at Hamilton, Ont., presented an ultimatum to their employers on Saturday, that commencing immediately a forty-hour week would go into effect and that commencing at once all work must be paid for at the rate of time and a half. Notice was also given that, beginning March 1, the wage schedule will be ninety cents an hour. Hamilton plumbers up to the present have been working forty-four hours a week and drawing seventy cents an hour. According to press reports some of the Master Plumbers are of the opinion that the action of the journeymen is uncalled for. Just what the developments will be, it is impossible at present to state, but the matter may be taken up at Ottawa and an investigation asked for, especially as it is stated that the journeymen in other places are planning to demand higher wages. One of the great complaints that are being made by prospective builders all over the country, it is stated, is in connection with the cost of plumbing. The Master Plumbers state now, as they have stated before, that their books are wide open for the Board of Commerce or any other body to investigate. They state emphatically that they are not making any unreasonable profits and that in many cases they are not making even a reasonable profit.

IS READJUSTMENT AT HAND?

WARNINGS concerning the money situation which were conveyed to bankers following a financial conference at Washington on Tuesday, in some quarters are taken to indicate that credit contraction is coming and that an era of tighter money is at hand. No less an authority than Professor Adam Shortt, discussing the situation as far as Canada is concerned, writes under the heading: "Critical Time to Come," as follows: "Among the normal symptoms of costs overtaking prices and leading to the stifling of industry, are greatly increased bank deposits, both time and demand. To fully realize this trend one must eliminate Government transactions, as none of these are financed on the basis of meeting expenditure out of earnings and may therefore ignore the normal relations of costs and prices. In every financial form, extravagant expenditure, and especially after great wars, the depreciation in industrial and the appreciation in Government securities have been symptomatic factors. Contrary to popular expectation, however, the critical financial period never follows immediately on the close of a war; but only after such a period as permits of a great outburst of lavish expenditure and speculation, proportioned to the amount of inflation of credits and disbursements of Governments." Not only Canada, but the whole world has been pursuing an extravagant course. Bankers everywhere have been pointing it out for some time and business men have been wondering when the condition was going to be forced to stop.

The big thing for Canadian business men to remember, however, is that Canada is absolutely sound. A readjustment from present conditions will make for better business all round and no one realizes better than the merchants that a return to normal conditions is desirable. No country in the world is better able to stand such a temporary period than Canada. With this country's resources and the markets of the world bare, if Canadians go right along producing, the readjustment period should be short and cause no serious disturbance.

WESTERN CO-OPERATION

THE formation of a Western Executive Council of the merchants of Manitoba, Saskatchewan, Alberta, and British Columbia at a very largely attended meeting in Regina, shows the manner in which Western retailers are co-operating. This is merely a preliminary move in view of some of the important developments that may take place not only in trade matters but in legislation. The success of the Grain Growers' and other co-operative organizations of farmers has demonstrated the possibilities that follow united action and the Western merchants are preparing to adopt the same methods that have won success in other cases. With a tariff battle in the offing the whole situation is one that is filled with interest for every business man.

PARLIAMENT TO MEET

PARLIAMENT has been called to meet on February 26. Indications are that little legislation that will affect merchants and business interests generally will come up. As stated in a previous issue of SANITARY ENGINEER, there is little likelihood of any important changes being made in the tariff just now. The announcement that an inquiry into tariff matters is to take place after the

session and that arrangements for it are already under way indicates that any discussion regarding readjustments will be purely informal. Legislation dealing with labor questions and also with shipbuilding may affect retail business. The demands of organized labor for a 44-hour week in Canada with the establishment of a minimum wage adequate to insure a fair standard of living will have an important bearing not only on future production and future prices, but on trade itself. The hundreds of thousands of workers in Canada constitute an enormous buying power. Every merchant knows what increased wages has meant from a trade standpoint in the past five years. Business has never been better and there never was so much money in circulation. On the other hand, what has come to be known as "the vicious circle," in regard to high prices, has resulted and despite all efforts to check it has increased until everyone is affected. Just how the Government will deal with the demands of labor is a matter that will be watched with keen interest by merchants and manufacturers all over the country.

SAYS RAISE IS NECESSARY

IN connection with the announcement in SANITARY ENGINEER two weeks ago that the Canadian railways are preparing to ask for power to increase freight rates, D. B. Hanna, of the Canadian National Railways, has since dealt publicly with the situation in discussing freight matters at London, Ont., before the business men. He declared that an increase in freight rates is positively necessary if the railways are to stay in business. He further declared that Canada is enjoying the lowest freight rates in the world and quoted figures showing that in England the tariffs are much higher than here. In speaking of the future, Mr. Hanna made some remarks that are of distinct interest to merchants all over the country. He gave it as his opinion that the Dominion is merely at the commencement period of a development that will be remarkable and predicted enormous immigration to Canada in the next few years. No country in the world, he declared, has a brighter future than Canada.

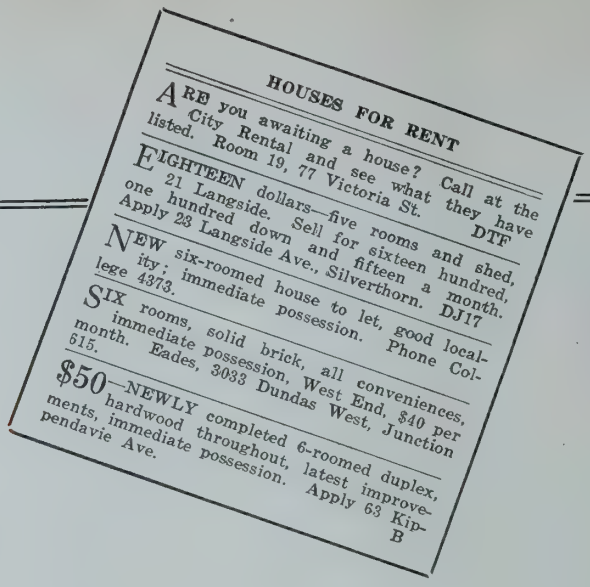
THE METAL WORKERS

THE statement of R. C. Brown, president of the Metal Trades Council in Toronto, that the demands of the unions this year, which are now being prepared, will not be excessive, is of importance to the retailers of Canada. The mere fact that there are to be demands in itself indicates possible advances in prices and at the present time this is a condition which business men all over the country are trying their hardest to combat. It will not be forgotten that last spring the men in the metal trades made demands and that when they were not met they called a strike. One result of this walkout was a shortage of goods which has not even yet been made up. Many of the men lost several months' time, and this at a period when merchants all over the country were crying for more goods. The walkout had a particularly serious effect on the building trades as for a time some of the lines required were practically off the market and many people who had planned to build could not go ahead, because they could not get the materials. Mr. Brown, in his remarks about the demands to be made, said: "We are not looking for a strike and we hope the employers understand the necessity for co-operation." This is a little different attitude from that taken a year ago, and it may be that some of those who spent several months doing nothing have learned a lesson.

VERY MUCH IN THE GAME

BRITISH trade figures for the year which were published during the week show that British manufacturers are very, very much alive. The fact that both imports and exports reached new high levels show unmistakably that Britishers have been quick to take advantage of the new markets that are open. They are not only doing this, but they are going after more trade all the time and the prediction is freely made that 1920 figures will far exceed anything that has even been handled in the past. Even allowing for higher prices the huge figures of last year's import and export business show that Britain has not been letting any grass grow and also that British firms got back from a war basis to an exporting basis in remarkably short time. So much is this the case that some nations which were dreaming of world markets are awakening to find out that the markets they expected to get after the war are already supplied, and supplied by British goods.

"HOW AM I GOING TO SHOOT THE ONE WITHOUT HURTING THE OTHER!"



HOUSES FOR RENT

ARE you awaiting a house? Call at the City Rental and see what they have listed. Room 19, 77 Victoria St. DTF

EIGHTEEN dollars—five rooms and shed, 21 Langside. Sell for sixteen hundred, one hundred down and fifteen a month. Apply 23 Langside Ave., Silverthorn. DJ17

NEW six-roomed house to let, good locality; immediate possession. Phone College 4373.

SIX rooms, solid brick, all conveniences, immediate possession, West End, $40 per month. Eades, 3033 Dundas West, Junction 515.

$50—NEWLY completed 6-roomed duplex, hardwood throughout, latest improvements, immediate possession. Apply 63 Kippendavie Ave. B

One day's "Houses for Rent" ads. taken from leading daily paper published in Canadian city of half a million population.

GLANCE over the "houses for rent" column of the daily papers and you will realize why Canadians have the building fever which will result in more homes being erected in 1920 than Canada has known in many a year. **More building will mean more plumbing.**

Port Hope Sanitary

Factory:
PORT HOPE, ONTARIO

TORONTO SHOW ROOMS:
119 King St. East

HALIFAX OFFICE:
McCurdy Building, Hollis Street

Are You Planning

on "Nineteen-twenty" business and can we help you?

Port Hope Sanitary

Plumbing Ware

and Port Hope Sanitary Service have been the source of a great deal of satisfaction to the retail plumbing trade of Canada. We aim to not only give you dependable goods, but to give you every assistance in our power to make business as easy and as pleasant as possible.

When you instal Port Hope Sanitary fixtures you are at least sure of giving satisfaction to your patrons.

To assist the trade and to eliminate the necessity of carrying an overload of stock in their show rooms, we publish three booklets: "For the Home" and "For the Factory" catalogs, as well as a "Roughing-in" booklet which gives complete measurements of all fixtures.

These booklets are yours for the asking.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

Personals

E. H. Russell, of London, Ont., has again been appointed a member of the Board of Health.

Trade Notes

Dodd Heating Systems, Ltd., Toronto, have moved to new and larger quarters at 504 Spadina Avenue.

New Firms

U. Suguoin, sanitary engineer, has been registered at Montreal.

Obituary

Taken ill on the train while she was on her way to visit with a daughter in Kentucky, Mrs. Margaret Smith, wife of William Smith, sanitary engineer, of London, Ont., was forced to return, and died shortly afterwards in St. Joseph's hospital. She was 63 years old and was a native of Toronto.

Incorporations

Glasscoat Sewerpipe & Conduits, Ltd., head office Toronto, capital $250,000, plans to manufacture and deal in tile, sewer and conduit pipes and similar lines.

Health Departments Are Amalgamated

OTTAWA.—The Department of Public Health, which has been conducted in connection with the committee of conservation, has been amalgamated with the Federal Health Department under Dr. Amoyt; and Dr. C. A. Hodgett, who was medical adviser to the conservation commission, is now in charge of the division of sanitary statistics, and also the information, publication library and circulation branch of the Federal Health Department.

Winnipeg Plumbers Threaten to Join O.B.U.

WINNIPEG, Jan. 15.—Members of the Plumbers' Union, at a meeting today, threatened to leave the International Union and join the O. B. U. unless the International reinstated expelled members. H. Roberts, vice-president of the International, announced that the whole union might be expelled if it persisted in its attitude.

Ball and "At Home" To Be Held January 30

The Ball and "At-Home" which is to be held on the evening of January 30, by the members of the Toronto Society of Domestic Sanitary and Heating Engineers, promises to be a most enjoyable affair. It is the first gathering of the kind that has been held since the war started, and the committee in charge of the arrangements is hoping to pack into the evening all the enjoyment that might have been had if the war conditions had not necessitated a suspension of the "At-Homes." It will be held in Foresters' Hall, at 22 College Street, and a big turnout of the Toronto members is expected.

Painting Presented To Joseph Wright

Joseph Wright, of the firm of Bennett & Wright, Toronto, was presented with a life-sized oil painting of himself by the employees of the company at a banquet held on Saturday evening at the Carls Rite Hotel to commemorate the forty-fifth anniversary of the founding of the firm.

The presentation was made by Daniel McRae, the firm's oldest employee, who has been with them for forty-three years.

Gold "Legion of Honor" decorations were presented by the company to all employees who had been with them 20 years or more; gold buttons to those employed for fifteen years, and silver buttons to all who had been with the company for more than five years. E. F. Wright, secretary-treasurer of the firm, announced that the group system of insurance was being adopted by the firm. Policies ranging from $500 to $1,000, according to the length of service, would be presented to all employees who had worked for them at least six months, he said.

Hamilton Journeymen Demand 40-Hour Week

Journeymen plumbers at Hamilton, Ont., served notice on the master plumbers of the city that, commencing January 10 a forty-hour week was going into effect, and that any work done after that date must be paid for at time and a half. The masters were also notified that, beginning with March, 90 cents an hour will be the wage schedule. Up to January 10 journeymen plumbers have been working forty-four hours a week and receiving 70 cents an hour.

Western Executive Council of Merchants is Formed at Big Meeting in Regina

By Close Co-operation Retailers of Manitoba, Alberta, Saskatchewan and British Columbia Hope to Achieve Solution of Mutual Problems—J. A. Banfield is Chosen President

REGINA, Sask.—At a meeting of retail merchants held in the City Hall here representatives from all parts of the Western Provinces were in attendance and appointed a Western Executive Council of Merchants.

The principal objects of the council will be to consolidate efforts of retailers in four Western Provinces and to deal with Western matters as a whole.

J. A. Banfield, representing Manitoba, president of the Dominion Retail Merchants' Association, was chosen as president of the council. Other officers are: W. McRobie, representing British Columbia; T. G. Gaetz, representing Alberta, honorary secretary; F. E. Raymond, of Saskatoon, secretary; W. P. Ball, of Assiniboia, representing Saskatchewan, treasurer.

It is felt that there are many problems which while affecting either Manitoba, Alberta, Saskatchewan and British Columbia individually also have a wide general bearing. By working together the merchants estimate that their efforts in the solution of these various matters will have many times the weight that can be obtained either by the work of individual associations or even a provincial association.

Contracts Awarded

Gervin and Hodgins have the plumbing and the Capital Hardware Co. the heating for two residences costing $9,000, for W. H. Lee, 57 Glen Avenue, Ottawa.

W. M. Adams has the plumbing and W. J. Merrill the heating contracts for store and apartments costing $6,000 for J. J. Lucas, 1035 Gerrard Street, E. Toronto.

Brampton Hardware Co., Brampton, Ont., has plumbing and heating contract for new $25,000 factory for Universal Batteries, Limited.

T. Latourelle & Son have plumbing and heating contract for new $15,000 warehouse and offices for the De Laval Co., Montreal.

Charles Taylor & Co., have heating and plumbing work for new $8,000 residence for John McGraw, 5 King St., Brantford, Ont.

W. S. Fraser has plumbing and A. W. McGilvary the heating for new $5,000 residence for C. H. Bentley, 38 Corbett Avenue, Toronto.

Kelly and Cracknell have heating and plumbing for four bungalows costing $24,000 for W. T. Graham, Indian Grove, Toronto.

A. T. Stevens has plumbing and Roy Lapier the heating for 13 new residences costing $50,000 for Cairns Bros., 12 Donlands Avenue, Toronto.

John W. Draper has heating and plumbing for alterations to Club house costing $10,000 for W. W. Scane, Chatham, Ont.

F. S. Walker has heating and plumbing for new diet kitchen for the General Hospital at St. John, N.B., costing $10,000.

Tenders

Tenders will probably be called early in February for all work in connection with the erection of a $2,000,000 addition to the King Edward Hotel, Toronto.

Murray Tyhurst, Leamington, Ont., is preparing plans for a new three-storey business block to cost $35,000, and wants prices on plumbing and heating equipment.

Tenders are being received for a new seven-storey Nurses' Home and new operating rooms to cost $400,000 in connection with St. Michael's Hospital, Toronto.

Plans are being prepared by the Merchants Bank of Canada for a new office building at Galt, Ont.

Tenders are called for the erection of two additional wings to the Earl Grey school in Toronto.

Plans are to be prepared at London, Ont., for a new Collegiate Institute to cost $90,000.

By-laws carried at Brantford, Ont., for construction of isolation hospital and nurses' home to cost $87,000, extension to general hospital to cost $78,000 and residence for staff of Sanatorium to cost $20,000. Plans are being prepared. H. F. Leonard, City Clerk, will call for tenders.

Plans are being prepared at London, Ont., for new buildings in connection with the Western University, to cost $1,000,000. Dr. Louis Wood, Western University, London, is in charge of the work.

The Royal Bank is having plans prepared for the erection of a new building at Lambeth, Ont., to cost $10,000.

The school board at Prince Rupert, B.C., Dr. W. Kerign chairman, is having plans prepared for a new school.

By-law authorizing construction of a new hospital to cost $55,000 was passed at Hanna, Alberta.

The Shoepack Co., Midland, Ont., is preparing plans for a new factory to cost $15,000.

Tenders will be called about February 1 by O. I. Baragar, Elm Creek, Manitoba, for new school to cost $20,000.

Tenders are open for all trades in connection with the erection at Montreal of a new $30,000 church for the Methodist congregation. J. L. Waldie, 4169 Dorchester St., W., chairman.

Continued on page 28.

New Indenture System for Apprentices May be Made Dominion-Wide in Application

Plan Adopted by the Toronto Society Offers Many Features That May Help in Solving the Apprenticeship Problem All Over Canada

IN connection with the new indenture system inaugurated by the Toronto Society of Domestic Sanitary and Heating Engineers, as outlined in the previous issue of SANITARY ENGINEER, an effort will be made, it is stated, to have this plan made Dominion-wide.

The apprentice problem is one of the most important questions which the master plumbers have to face at the present time, as the whole future of the trade depends upon it. Owing to conditions which have existed during the past five years, the situation has been more than ever complicated, as a result of the high wages offered in other lines of employment.

Is Working Well

While the plan adopted by the Toronto Society has only been in operation a very short time, it is stated that it is working out well. Every effort is being made to interest the parents of the boys in the work, and the more of this that can be done the better the results will be. There is a good attendance at the classes, and the educational authorities have signified their willingness to provide for as many classes as are necessary to accommodate the boys who are learning the plumbing trade.

Take Federal Action

If Federal action is taken to provide means for apprentices in the plumbing and heating business all over the Dominion learning important technical details, there is no doubt that a long step will have been taken in solving what at the present time is causing many of the master plumbers no small anxiety. One of the difficulties has been to secure the necessary instruction, especially in the smaller and also in the isolated centres. If arrangements can be made for securing instruction, it is felt that one of the great difficulties many sanitary engineers have in securing apprentices would be overcome.

Make It Attractive

There are also those in the trade who feel that something should be done to present the attractive side of the sanitary and heating business to young men, with a view to encourage them to learn a trade rather than to accept temporarily higher wages at some line where they will never have any opportunities for advancement.

Minister of Labor Favors the Proposed New Plumbing Regulations

Government Has So Many Letters to Arrange Before It Gets Down to Business That Signing of the By-laws Has Been Delayed

DISCUSSING with SANITARY ENGINEER the proposed new plumbing regulations for the Province of Ontario, Hon. Walter Rollo, Minister of Labor and Director of Public Health, stated that, owing to the large amount of work involved in forming the government, it has been impossible, up to the present, to put the new regulations through and have the signature of the Lieutenant-Governor attached.

"Personally, I think that the proposed regulations are excellent," he said. "They are, no doubt, very much needed, and will be of great benefit to the people of the Province. Public health is a matter of the greatest importance, and should be given the attention it deserves. As far as the new government is concerned, we have been so busy trying to get things in running order, and there has been so much to see to, that it has been absolutely necessary to hold the regulations over. No doubt there are many of the new members who will want to go into this matter carefully. At the present time, it is impossible to say just when the regulations will come up."

Aroused Keen Interest

The publication, in SANITARY ENGINEER, of the proposed new regulations for the Province has aroused keen interest in the trade. It is generally felt that they will make for better conditions all round, and especially in the very important matter of protecting public health. There is little doubt that, once the provisions are effected in Ontario, that a move will be made to secure the passage of similar by-laws in other provinces. With such measures in force, and actively operating all across Canada, the benefits would be inestimable.

Builders of Houses Will Suffer Loss

In connection with the recent assignment of one of the contractors who had done considerable work for the Housing Commission at Hamilton, Ont., Secretary Wm. Campbell, of the Commission, states that until applicants file agreements to have the Commission finish the houses, no work will be done. Several have signified a determination not to sign the agreements, and if they persist in refusing it seems that the only solution is to let the house stand in its unfinished state.

In connection with the suggestion that the commission will save the applicants the profit on the houses, and so meet the additional cost of materials, it was declared by one contractor that there could be no profit at the prices that were quoted.

Several contractors believe that the applicants will find that their houses will cost them a little more than they expected by the time the commission finishes them.

Will Continue to Use Filtered River Water

Discussing editorially the failure of the ratepayers at Chatham, Ont., to ratify a by-law to secure a new water supply from Lake Erie, the "Planet" says:

"The one great feature which undoubtedly was the greatest agency in leading people to choose Thames river water, was the financial consideration. A filtration plant in Chatham will cost approximately $300,000. There is a great difference between this and $600,000, which is the engineer's estimate on the Lake Erie scheme. On top of this the impression gained rapidly that in the end the Lake Erie scheme would cost much more than the estimate. People have their doubts about wood stave piping in spite of the evidence brought forward to prove its durability, and if iron piping had to be substituted this would bring the cost nearer a million dollars than the present estimate. Altogether, the doubts of the people were aroused, and they were rather dubious about undertaking such an expensive scheme, especially when they were assured that through using the Thames River as a source of supply they would get just as pure a water. People have been drinking Thames water for years and are evidently satisfied with the taste. Typhoid was unknown until raw water found its way into the city mains from sources other than the waterworks plant, and with the latest system of rapid sand filtration and an improved distributing system, there will be no danger of a return of the epidemic caused by the water supply. Whether or not, as Mr. Westman thinks, future conditions will eventually cause the city to go to Lake Erie for a civic supply of water, it is safe to say that for the present at least the people of Chatham will content themselves with filtered Thames River water, and the commissioners elected to look after the city's business in this regard will devote their energies towards perfecting a scheme which will guarantee Chatham a safe, pure and wholesome supply from this source.

Montreal Learns What Water Shortage Means

Montreal.—There is an old saying that "You never miss the water until the well runs dry." This was reversed a little in this city, but the scarcity of water was felt acutely. Citizens experienced rather a trying time through the strike of the waterworks' employees. These men struck at midnight on December 31, and it left the city in a very precarious condition with regard to water supply, and particularly on the high levels of the city.

As a result of the strike much inconvenience was suffered, not only by private homes, but also in some of the public institutions, while one or two of the hospitals and childrens' homes were very awkwardly situated.

While some of the manufacturing plants found it difficult to operate at full time, the difficulties were soon overcome. As a result of the strike and the lack of water much anxiety was experienced, and several fires broke out, which fortunately were controlled before they became serious.

Sanitary Conveniences Not Yet Installed

According to Inspector W. H. Elliot of the Board of Education, Toronto, the sewer connections for the sanitary conveniences at Kitchener School will not be completed until the latter end of March owing to the severe weather. The building is now without drinking water, and an application for Jarvis water bottles on stands for each room has been applied for by Principal W. N. Colvin. A temporary line of water-pipe to within 100 feet of the building has been laid, to which a line of rubber hose has to connected by the caretaker to fill the boilers for heating purposes each day. It is expected work of excavation will commence in the early spring. The school has at the present time the capacity number of pupils.

Danger Lurks in Cheap Gas Tubing

If those in the trade would condemn every attempt to connect gas appliances by means of cheap rubber tubings, there would be less news of deaths from asphyxiation.

Nearly all gas appliances should be connected directly to the supply by means of iron piping. Accidents are almost sure to happen if the use of cheap gas tubing is persisted in. Cheap gas tubing often sold by irresponsible agents and dealers, hardens and cracks in a very short time, and is liable to become a source of danger. It is best to insist on consumers having their appliances directly connected to the piping, but if this is impracticable because of the need to move appliances from place to place, then advocate the use of tubing of known strength and quality only.

Catalogues and Booklets

Wade Iron Sanitary Manufacturing Co.

Catalogue "B," just issued by the Wade Iron Sanitary Manufacturing Co., of 551-553 W. Fulton St., Chicago, contains one hundred pages, and is attractively and profusely illustrated. Among the lines listed are Wade Accessible flushing clean out house drainage fittings, Accessible flushing clean out sewage lock out and tidal back water gate valve appliances, Accessible flushing clean out fresh air inlet back water gate valve trap combinations, Iron accessible flushing clean out catch basins for grease, gravel roof, steam blow off and bilge pump purposes, drum trap water jacket grease basins, floor drains, garage, gasoline and oil separating catch basins, iron man hole covers for iron and brick catch basins, and special drainage fittings. Readers of SANITARY ENGINEER who wish copies of the catalogue may obtain same upon request.

Gas Plant May Be Operated At Brantford

Brantford.—The city council will have a special committee to enquire into the gas situation, and the Dominion Gas Company, it is stated, will either have to supplement the supply of natural gas with artificial gas or the city will undertake to take over the plant. The committee is taking this course on account of dissatisfaction in some quarters with the present service.

TENDERS

(Continued from page 27)

George B. Frank, Midland, Ont., will call for tenders in connection with an addition to the General Hospital, to cost $30,000.

Inspector J. A. Taylor, St. Thomas, Ont., will look after the preparation of plans for new school costing $10,000, that is contemplated at Crinan, Ont.

Taylor & Lackey, 90 Powell Ave., Ottawa, are calling for tenders on heating, plumbing and electrical work in connection with new $30,000 building for the Dept. of Public Works.

The Place Viger Cold Storage Co., Granby, Quebec, is having plans prepared for the erection of a plant to cost $500,000.

Murray Tyhurst, Leamington, Ont., is preparing plans for business block to cost $50,000.

Jeremiah Bell, Acton, Ont., is preparing plans for several residences and wants prices on plumbing and heating materials.

H. Grange, 121 Margueretta St., Toronto, wants prices on plumbing and heating equipment for two residences costing $9,000.

Heating System in a Montreal Church

A Description of the Design and Operation of a New Type of Heating System. Rapid Circulation and Low Volume of Water Result in Economical Operation

By J. H. RODGERS

THE Montreal General Tool Company, of Montreal, has secured the contract for the heating of the new church of St. Augustine, at Notre Dame de Grace. As this is the first installation, on a large scale, of this particular method of heating, a brief description of its design and operation may be of interest.

Owing to the severe climate conditions in this section of the country, during the winter months, the heating of houses, offices, factories and other buildings, is very often a problem of no mean magnitude. Hot water and steam heating are the systems most generally adopted, but despite the recognized efficiency of these two methods, there are still many weak points that engineers are continually striving to overcome.

Some sixty years ago the first installation of a modern hot water heating system was installed, and since that time little change has been effected in the general fundamental principles of hot water heating. With the possible exception of the Honeywell method, which utilizes mercury as a medium for increasing the water circulation, no adequate system has been devised to add materially to the efficiency of existing systems. The elementary essential of successful hot water heating is to minimize the quantity of water passing through the system, and by so doing, reduce the consumption of coal, or other fuel, and thereby increase the boiler efficiency and economy. In many so-called modern systems the movement of th water through the pipes and radiators, is very sluggish, owing to the large body of water contained in the system, and it is generally understood that water at rest is a poor absorber of heat, but when in motion has a large capacity for carrying heat.

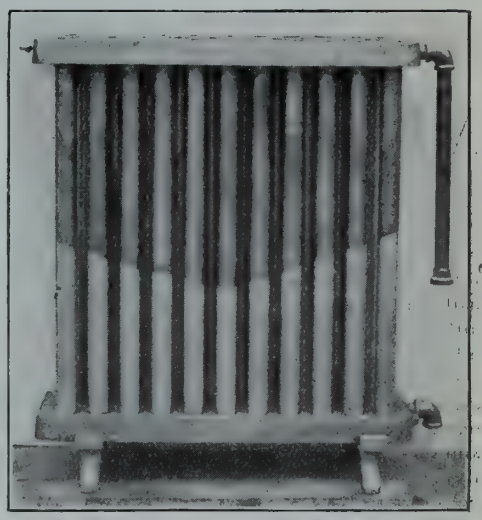
SMALL RADIATOR OF THE NEW TYPE

Working on the assumption that a water heating apparatus containing a small quantity of water, circulating rapidly, would be the most effective and economical, J. E. M. Brissette, of Montreal, has developed a type of radiator that reduces the volume of water therein to about one-quarter of that contained in the ordinary system, and at the same time adds about 75 per cent. to the radiating surface. This system is known as the "Victory" Water Heating System, and the ratio of the circulation to that of the ordinary system is practically 8 to 1, in other words the water in the Victory system circulates eight times through the system while the water in another system is passing once through the piping and radiators. By increasing the velocity of the water through the system it is changed much oftener over the heated surfaces of the boiler plates or tubes; therefore, the B.t.u. contained in the coal, or other fuel, is transmitted through the metal and more rapidly absorbed by the moving water, thus minimizing the loss of heat by excess gases passing up the stack.

The inventor of the "Victory" system of hot water heating, claims to have hit upon the most effective means of utilizing the heat units in the hot water for general heating purposes. The principle of the radiator design is to reduce the volume of water passing through the system and at the same time increase the heating surface exposed to the atmosphere. The heat distributed by the outside pipes is similar to that of the ordinary method, but the additional heating surface obtained by the use of the inner tubes, adds considerably to the effective distribution of the heat. Unlike the piping used in the ordinary systems, the seamless steel tubing used in the Victory radiators is very thin, reducing the amount of metal to be heated, thus developing heat more rapidly and more intense. Owing to the small water space between the inner and the outer tubes, the volume of the water in the system is considerably less than in many others, so that the more rapid transfer of heat, from the water to the atmosphere, causes a corresponding increase in the water circulation.

The efficiency of any radiator is its ability to waste heat; in other words, the more rapidly the temperature of the water in the system is reduced, the more effective the radiator will be, and consequently more economical.

The construction of the radiator is shown in the line drawing herewith. The size of the unit will vary to suit the conditions under which it is installed, but the general design is similar in every case. The cast iron heads are so proportioned that circulation is uniformly maintained in each and every vertical radiating pipe, and owing to the small space between the inner and the outer tubes, the film of water is very easily heated, and the movement of the water, due to the temperature change, is much more rapid than in the ordinary system. The cast iron headers (top and bottom), are made to conform to specific conditions, but the tubes are of uniform size, 1 inch and 1¼ inches, for inner and outer respectively, the lengths being made to suit the different heights required. These tubes are expanded in holes in the headers, which are previously drilled and reamed to the size desired.

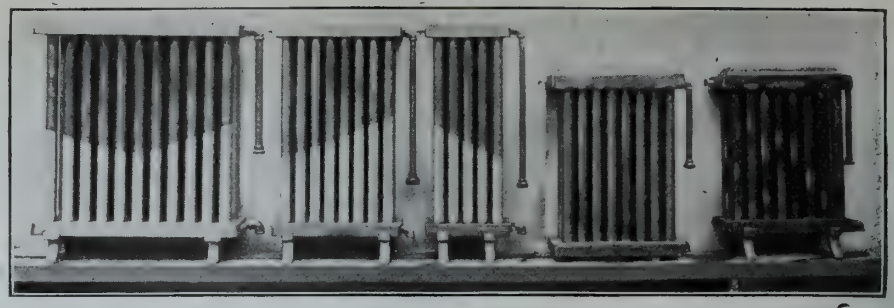


LARGE RADIATOR

The heating of the St. Augustine Church calls for 20,000 feet of radiation, and the volume of water in the entire system will be 180 gallons. For a similar radiation on other systems, the approximate quantity of water would be close to 1,800 gallons. The water in the system will circulate completely through the system, at normal heating temperature, every 15 minutes, while the larger body of water in the ordinary way would require about two hours.

Another interesting feature in connection with this particular installation will be the use of a 50 h.p. Talbot boiler, oil fired, and adapted for gravity circula-

tion. Under ordinary conditions this type of boiler operates on the contra-flow principle, but owing to the absence of forced circulation, the change to the natural method was found advisable. The Montreal General Tool Co. do not propose engaging in the heating business, their intention being to manufacture these radiators for the trade. This initial installation is solely for practical demonstration of the system on a large scale.



A GROUP OF VICTORY RADIATORS

SOME ELEMENTS OF ECONOMY IN THE BOILER ROOM

By F. A. McLean

MANY a boiler is condemned and thrown out of service long before its useful life would have been ended had it been properly cared for and a few simple steps taken to keep it in good condition. Too often the fires are pulled and the water blown out of the boiler while the brick work is still hot, with the almost inevitable result that the tubes are soon buckled or split.

In many plants it is customary to scale the boilers at stated intervals of every six months or more, and while in some cases this may be all right, in the majority of instances it is not, and it would therefore be better to inspect the boilers frequently and have them cleaned as often as it seems necessary, whether it be three days or three months, instead of waiting until it is an absolute necessity. Many men do not realize the importance of keeping the tubes free from scale, but when one stops to consider that a layer of scale 1/64 of an inch thick will reduce the efficiency of the boiler 5%, while if this allowed to reach a thicknes of 1/4 of an inch, the reduction in efficiency will reach as much as 86% or more, it is readily apparent that the prevention and removal of this scale is a subject worthy of very careful attention.

There are on the market at present a number of chemical compounds which are of considerable value in preventing the formation of scale, as well as several sizes and types of scaling equipment designed for operation on steam or compressed air, the respective merits of which are well worth looking into. Sometimes a boiler is thrown into the discard or sold at a sacrifice, on the ground that it has not sufficient capacity to do the work required of it, when if it was thoroughly cleaned it would be plenty large enough for the work in hand.

With the high cost of fuel which prevails at the present time, it seems well to remember that the output of the boilers will be reduced about 9½% by a layer of soot on the heating surfaces 1/32 of an inch thick and where this is allowed to gather until it reaches a thickness of 1/4 of an inch, the reduction in efficiency will amount to 80% or more.

In most plants steam is used for blowing out the boilers, and the water of condensation makes this a nasty job, and at the same time the heat of the steam makes the hose hard to hold, which probably accounts for the fact that the men in charge of the boilers do not feel inclined to clean the boilers as often as they should. Where compressed air at a pressure of 80 to 100 pounds per square inch is available, it will be found of particular value for this class of work and, at the same time, it provides a ready source of power for the operation of mechanical tube scaling equipment.

Where automatic stokers are installed, it sometimes happens that they are not in as close harmony with the rest of the plant as they should be, due to the installation of a type of stoker which is either too large or too small for the boilers in use, or one which is not adapted to handling the kind of fuel available. When properly installed, the automatic stoker is a very useful piece of power plant equipment, but it is well to remember that a style which works very well with a certain type of boiler and fuel, may be a failure when used on another type of boiler, or with a different grade of fuel, and care should be taken to see that the stoker is not like the whistle on Mark Twain's steamboat, which caused the boat to stop every time it was blown.

In some plants a considerable amount of heat is lost through cracks in the brick work of the boiler setting, and it is therefore a good plan to see that this is as tight as possible. When properly fitted, dampers will often save as much as 25% of the heat which would otherwise be wasted. Some husky firemen pride themselves on the amount of coal they can shovel per hour, rather than on the amount of steam they can produce per ton of coal consumed per hour. Generally speaking, it is better

CONSTRUCTION OF NEW TYPE OF RADIATOR

Challenging Board of Commerce

Delegation Asks Government to Reconstruct the Organization—Board Wants Supreme Court to Define Its Status and Presents a Stated Case—Interesting Developments Are Expected Shortly

OTTAWA, January 14.—Various important business organizations, representative of both retail and manufacturing interests, are making it unmistakably plain to the Government that the workings of the Board of Commerce are meeting with anything but their approval. Important developments which may result in the Board as at present constituted being considerably altered and its powers more definitely defined, are expected.

Those interested in challenging the activities of the Board of Commerce, it is stated, include such organizations as the Canadian Manufacturers' Association, the Retail Merchants' Association, the Canadian Credit Men's Association, and other organizations.

Will Find Out

In the meantime the Board of Commerce, on its own behalf, has submitted to the Supreme Court of Canada a stated case and asks that the tribunal establish the Board's jurisdiction.

At the meeting to-day a delegation from the Dominion Board of the Retail Merchants' Association of Canada, which is holding its annual meeting here, presented a resolution which had been adopted and which included the following:—

First—That the Board of Commerce be reorganized and that its personnel consist of a consumer, a producer, a manufacturer, a retailer and a chairman with judicial experience. They recommended that Judge Robson retain the latter position. By implication it would appear that they desire the removal of W. F. O'Connor.

Second—That the board be reconstructed to take the nature of an Inland Trade Commission, one of whose duties it would be to regulate the operations of wholesalers who refuse to sell to certain retailers and to supervise all agreemade by th delegation. These were, The recommendations of the delegation in this regard were somewhat vague.

Third—That the price-fixing functions of the Board be abolished on the ground that the exercise of them constitutes a restriction on trade and production.

Have Found No Combines

The resolution claims that the investigations of the Board in regard to retail merchants have not disclosed any combines or excessive profits; that the element of competition among retail merchants prevents undue profit making; that conditions of merchandising in the various parts of Canada are so varied that no general regulations as to margins of profit can be made which will be fair to the merchants and the consumers; that the orders of the Board of Commerce have resulted in a great deal of disturbance in retail trade circles and that the uncertainty as to what further orders will be made from time to time is still more disturbing not only to retail merchants, but to manufacturers, wholesalers, bankers, the laboring classes and consumers.

They Have Suggestions

A series of further suggestions as to "How the Board of Commerce would be of greater service to Canada," were made by the delegation. These were, mainly:—

The Board of Commerce should meet properly appointed committees from the Canadian Manufacturers' Association, the Wholesale Merchants' Association, the Retail Merchants' Association, the United Farmers and other organized commercial bodies to secure proposals how trades could be improved by proper regulations.

Instead of the court attempting to dictate to the commercial classes how they should conduct their affairs, they should become a useful court to decide on the evidence laid before them on any commercial matter.

Should Give Reasons

All agreements made either by manufacturers among themselves, between the manufacturers, wholesalers or retailers, etc., should be laid before the Board of Commerce, and, if necessary, parties should appear to give reasons why the agreements were made.

All price-contract agreements regarding trade-marked goods should be laid before the Board for final ratification.

That charges could be made to the Board by any person subjected to unfair and unethical methods of trading, and those engaged in unfair practices dealt with.

Further suggestions made were that the Board should be given authority to make recommendations to the Government if any commercial legislation is found to be operating unfairly; that all agents or subsidiary agents in connection with the Board should be abolished; that all classes of the community buying or selling merchandise should come under the operations of the Board; that the Board should devote their time to seeing that the proper channels of trade are not interfered with, and that all statistical reports in connection with commerce should come under the direction of the Board.

No Excess Profits

Joseph Banfield, of Winnipeg, who presented the case, declared that the Board had found no excess profits or unfair dealing among the retailers. It was useless to seek to redress a wrong which did not exist. "It is not so much," he said, "what the Board does as what it threatens to do which injures us and that injury affects the wholesaler, the manufacturers, the banks and everybody else."

Sir Henry Drayton asked what was meant by threats.

"We hear of a man being threatened for selling sugar at a cent or so over the fixed price," said Mr. Banfield. "The Board appears to go after us retailers because we are closest to the consumers."

Asks Court Questions

In the meantime the Board is submitting the following questions to the Supreme Court of Canada:

1. Whether or not Section 17 of the Combines and Fair Prices Act is intra vires of the Parliament of Canada. This section deals with the undue accumulation of necessaries of life.

2. Whether or not the Parliament of Canada has power to establish a court of record or any other hearing or determining body.

Question of Penalties

3. Whether or not the Parliament of Canada has power: (a) to impose penalties for the acts or omissions which are declared to be offences; (b) to authorize and require the superior courts of a Province to record and enforce the orders of the Board.

4. Whether or not the Board has jurisdiction to decide as to what shall be deemed an unfair profit upon transactions of sale of necessaries of life which transactions are originated and completed within a Province.

5. Whether the Board has power to decide what shall be an unfair profit in transactions of sale of an interprovincial character.

6. Whether or not the Board may restrain or prohibit persons from exporting commodities being necessaries of life from Canada, or from one Province to another in cases where the practice of so exporting is in the opinion of the Board designed or calculated to unfairly enhance the cost on price of such commodities.

At the annual meeting of the Retail Merchants' Association, attended by more than 600 delegates, among other subjects discussed was that of the co-operative stores, and a resolution was passed voicing the strong opposition of the Association to any legislation which would give these stores any special advantages which would be detrimental to the retail trade of the country. The delegates took this stand on the ground that the operations of co-operative

stores, after due investigation by competent authorities, have not been found to be according to legitimate methods of merchandising.

The mail order houses were also under fire, and the opinion of the delegates was unanimously to the effect, with regard to the parcel post service, that all parcels by mail should cover the cost of carrying them; that no portion of the cost of operating the parcel post system should be applied to the cost of carrying letters in the mail.

The Government will also be requested to provide that there shall be no increase to the "limit size" of the parcels to be carried by the system.

Against Eight-hour Day

The convention went on record as being unanimously in favor of daylight saving for towns and cities, and opposed to a legislated 8-hour day. In this respect it was claimed that the legislation enjoyed now, which gives to each Province the power to regulate the hours at which shops may open and close, according to the desire expressed by the majority of the merchants concerned, is sufficient, without the necessity for a flat 8-hour day, which, it was declared, would be unworkable for the retail trades.

Clothing Profits

The board went into the question of the order of the Board of Commerce, relating to the limitation of profits on ready-made clothing. The order of the Board provides that the profit upon suits sold at $25 shall not be more than 26 per cent., while the limit on suits of a higher value is placed at thirty-three and one-third per cent.

It was decided to ask the Government to change the order to read that a flat margin of thirty-three and one-third per cent. shall be permitted retailers upon all suits, with the exception of extreme styles.

Would Bar Orientals

Retail merchants from the West voiced objection to Oriental immigration and it was moved by Mr. J. H. McRobbie, of Vancouver, that the Government be memorialized that all Oriental immigration to Canada be prohibited.

Western delegates stated that the Chinese were embarking in the clothing and grocery trades to the dissatisfaction of the retail merchants.

The clothiers' section of the Association suggested that the Board of Commerce order should be altered to allow retail clothiers to add $2 to the price of each suit, to take care of the cost of alterations and fitting.

Weather Conditions Affected Business

Regina, Sask.—The very important part that weather conditions play in connection with business activity is emphasized in returns which have just been completed and show that business failures for 1919 totalled 91, with a liability of $816,898.52, as compared with 75 in 1918, with a liability of $593,930.54.

In the western part of the province, in both the northern and southern sections, the grain yield was practically a failure. In many other sections, while there was an average crop, it was considerably spotted. The destruction by hail was much greater than in 1918.

Wholesalers and jobbers in practically all lines of staples report a considerably greater volume of business compared with 1918, but the higher cost of goods acted as a deterrent to some extent in paying for same. Many merchants ordered greater amounts of stock than were really necessary, thinking that part would be back ordered, consequently most of the orders were practically filled and the merchants were overstocked.

DRAFTING COURSE

(Continued from page 16)

If the draftsman is careful to rule every line as it comes along the line of the straight edge, he will be able to do his work more rapidly than if he rules only a small section of the sheet at a time.

The blade of the T square should be carried to the top of the drafting board, and the ruling commenced there.

Will be Difficult

If the pen is laid aside for a few minutes, some difficulty will be experienced in getting the ink to run unless the pen is cleaned and refilled. Sometimes the flow of ink may be started by touching the point of the pen to the hand.

If the reader does not make the mistake of the beginner in trying to rule very thin lines, and if he will keep the pen moving, he will not find it necessary to be continually wiping the ink from the pen.

After the pen has been used for some time it will become so dull that it must be re-sharpened; but it is not likely that the reader will require to sharpen the pen until after a great many of the exercises of this course have been drawn. Instructions regarding the sharpening of the pen will be given in a later article.

The Protractor

The protractor is an instrument used for the purpose of measuring the degrees of an angle. When its use is required in some of the later exercises a detailed description of the instrument will then be given.

Tracing

The draftsman will find that he saves time and saves his eyes if he makes the penciled drawings directly on the tracing cloth or paper.

Unless the tracing cloth or tracing paper is very transparent, and the pencil lines under the cloth distinct the strain on the eyes will be considerable.

Do not try to trace under a very bright light; the tracing cloth reflects so much of the light that, at times, the eyes sense nothing but a nerve-wracking glare.

After the inking in is finished, the pencil marks may be removed from the tracing linen by the use of gasoline or an art-gum eraser.

Duster With Chalk

Before attempting to apply ink to tracing cloth, the cloth should be dusted with powdered chalk; afterward the chalk should be rubbed over the surfaces where the inking is to be done, and then, finally, the cloth should be dusted with a soft cloth or a piece of chamois skin.

Some draftsmen prefer to work on the glazed side of the cloth; but we recommend the student to use the dull side, as he can there easily do pencil work.

Some Don'ts

1. Do not leave ink drying in the ruling pen; it will corrode the pen.

2. Do not leave the set-squares lying on an uneven surface.

3. Do not leave the ink bottle uncorked.

4. Do not use a blotter on a drawing.

5. Do not try to scratch out inked lines with a knife—use the rubber eraser.

6. After starting to rub a line do not change the angle of the pen or pencil. One of the ear-marks of the amateur draftsman is the way he wobbles his pencil around when ruling a line along the straight edge.

7. Do not try to make letters without first ruling guide lines.

8. Do not hold the pen, the pencil or any of the tools so tightly that the fingers are cramped. Try and see how lightly, and yet firmly, you can hold the tools.

9. Do not moisten the lead of the pencil on the lips or tongue. A person might naturally suppose that a warning like this is unnecessary, in the majority of cases it is; yet it is a fact that some men do not think that a pencil can be properly used until it has explored the user's mouth.

10. Do not use the scale as a straight edge when ruling lines. The man that uses a scale for such a purpose is almost sure to belong also to the pencil moisteners' association.

11. Do not hold the pencil or pen between the first and second fingers.

SEPTIC TANK PLANS

The Editor, SANITARY ENGINEER:

We are enclosing herewith tracing of the plan of a septic tank for a new eight-room school, which the architects wish us to put in. There is 100 feet of field tile nine feet below the surface.

We are dubious of the tank giving satisfaction if constructed as shown in the plan, and we are anxious to have your opinion regarding the same, with any alternative suggestion you might care to make.

Yours truly,
JAMES YATES & CO.,
Brandon, Man.

The Answer

The general design and layout of the tank is quite correct and should work out satisfactorily, but would suggest that the pipe connection between the two tanks terminate at the water level as the sludge in the digestion chamber should under no circumstances have possible connection with the oxidation compartment; the screen will not prevent this unless extremely fine mesh is used and then there is every possibility of same choking up and throwing the tank out of operation.

As no particulars are given with regard to the number of gallons of sewage to be treated daily, the size of the tank cannot be correctly stated, but sufficient the total flow should be allowed so that theh total flow can remain in the tank for 18 hours.

Amount of Tiles

The amount of land tiles required depends upon the nature of the soil; in sandy or open soils about one foot of 4 inch tile for each gallon of liquid discharged, and in heavy clay soils two feet of 4 inch tile is required per gallon.

The depth of the tank from the grade protects same from freezing, but it would be advisable to keep the drainage tiles as near as possible to the surface because the purification of the tank effluent depends upon aerobic bacteria which live and thrive only in air and sunshine, and the tiles should be laid with little fall and ample opportunity for circulation of air both through and around the pipes.

The accompanying illustration shows a tank designed on similar lines, and we would suggest the baffle wall in preference to the pipe.

Stoves and Ranges Advance 10 to 20%

Increases Made All Along the Line for Stoves and Special Ranges — The Result of Advancing Costs for Raw Materials, Labor and Freight Charges

DURING the last day or two important advances for stoves and ranges have gone into effect, the increases varying, and ranging from 10 per cent. to 20 per cent. The actual increases effective are given as follows by one of the Canadian stove makers—Standard stoves and ranges, 20 per cent. advance; lighter grades, 15 per cent.; gas and electric stoves and ranges, 10 per cent. It will be readily understood that the heavier types of better ranges containing much more, and very often, superior metal, are naturally subject to the greater advance.

Is No Surprise

SANITARY ENGINEER has predicted the tendencies of the stove market for several weeks past and outlined that advances were not only likely, but bound to come, and that these would be the result of conditions that developed, largely, outside of Canada. These forecasts have been made, not only in the market reports, but several special articles have been published on the trend of the market, all indicating the upward tendencies. Therefore, the advances were to be anticipated.

In the first place, pig iron is now advanced to a price that is from $5 to $7 per ton higher than the market for a few weeks ago. This is one of the very first and most important contributory causes of the advance.

Moulders have, of late, been asking for, and insisting upon a greater return for their labor. They have been getting these increases from time to time, and as they are a class of labor which command a considerable return for the work they perform, the second of the important considerations is that embodied in these facts.

Freight and cartage costs, the third assigned reason of the above manufacturer, have so materially advanced as to make higher prices for stoves and ranges necessary.

Future Delivery and Prices

Asked as to the probability of the new schedules, now effective, (and which apply as from January 8th) holding for some time, one manufacturer said, "The new prices will probably apply for the next five or six months."

Another informant would not make a definite forecast, but stated that the probabilities were that there will be no early increases over the new schedules just made effective.

Next, then, a consideration of the delivery problem was introduced, and SANITARY ENGINEER was informed that, for the time being, manufacturers will be able to make fairly prompt deliveries, but for how long, is uncertain. "Bookings will be taken care of," was the comment from one source. "Very uncertain," was the reply of a second manufacturer. It would, therefore, appear that with production calling for raw material in immensely large quantities for so many diverse lines of goods, stove makers will have their hands full in taking care of trade requirements. They, in common with manufacturers of many lines of goods, simply will not attempt to forecast the future.

One of the essentials in displaying stoves is to keep the stock looking its best. Stoves, if given a little attention, will make an attractive showing grouped in the store. It is always easier to sell merchandise that looks new and bright and it is a good ad. for the store.

ASBESTOS AND ITS MANY USES

(Continued from page 20)

Plastic Cements

Plastic cements are made of the same combinations of materials used for pipe coverings.

Loose Fibre

Loose asbestos, mineral wool, etc., is used for filling in around pipes where it is difficult to apply ordinary forms of pipe covering.

Air Valves

The valves used in freeing a heating system from air are of types varying from the simplicity of the hand-operated pet-cock to that of the intricate mechanism of the automatic air vent and vacuum valve.

Practically all automatic air vents used in steam systems consist of an outer casing containing an expansion member of metal or of vulcanite.

Sometimes, in addition to the expansion member, there is a float placed in these valves, set so that a sudden rush of water will lift the float and close the vent opening.

Liquid Is Vaporized

In certain valves, the expansion member is in the form of a thin brass cylinder, partly filled with a volatile liquid and hermetically sealed. When steam strikes the cylinder, the liquid is vaporized and expands the cylinder so that it closes the vent opening.

Air valves are sometimes fitted with drip connections, for the purpose of carrying away the water that may escape from the best of air valves. The provision of a drip connection prevents the soiling of floors and furniture from escaping steam and water, and also carries away the objectionable odor that at times comes from air vents on steam-heating apparatus.

The air line may be vented to the atmosphere by way of the chimney, and dripped to the wet return at the boiler.

Vapor System Air-Valves

In a later article, we intend to describe the air valves used in vacuum and vapor-vacuum work; but, because it is often the custom of fitters to use a valve having neither expansion nor flotation members for such work, it is now our purpose to describe such a system.

The air valve resembles an ordinary "street" elbow, with the male end of the valve entering the radiator. The male end of the valve is closed by a small plug with a hole drilled through its centre. The other end of the valve is fitted with a union that connects the drip pipe and the valve.

Principle of System

The principle of this system is based on the assumption that steam entering the radiator will be pretty well condensed before it reaches the vent opening; and it is a fact that where a very sensitive damper control is connected to the boiler, that the steam pressure will never be great enough to cause any appreciable loss of vapour by way of the air line.

If the plug in the vent should be made of some corroding material, it is a certainty that the small needle-like hole will be entirely closed within a very short time; so it is well that the fitter make sure of the non-corrosive properties of the plugs that he is to use.

In a system of this kind the air line is vented to the chimney and dripped to a small tank, connected to the boiler.

The Air Line

In an ordinary residence the air line need not be greater than ½ in. in diameter.

The air line for forty to fifty radiators should be ¾ in. in diameter.

The air line risers should be ⅜ in. diameter, reducing to ¼ in. at the air vents.

The tank may be proportioned as follows: For ten radiators, a four gallon tank; for forty radiators, a six gallon tank; adding to the tanks capacity at the rate of two gallons for every twenty-eight additional radiators.

Air Valves for Hot-Water Radiators

About the safest air valve for hot water radiators is the ordinary pet-cock.

Where automatic air valves must be used in hot water systems, a float valve similar in construction to a steam trap may be used. In a valve of this kind the float drops as the air collects and as the water level is lowered in the valve. The dropping of the float releases the check in the vent opening so that the air may escape. As the air escapes and as the water rises it lifts the float high enough to close the vent.

SOME ELEMENTS OF ECONOMY IN THE BOILER ROOM

(Continued from page 30)

to fire a little at a time instead of by fits and starts. It is interesting to note that one of the large automatic stoker manufactures in the United States estimates that fully 80% of the boiler plants of the country are overloaded, either through ignorance, or by the addition of equipment which was not thought of at the time the installation was made. This is false economy, and is not fair to the builder of the boiler. When the boilers are purchased, it is well to provide a little leeway to take care of any additions to the plant which may seem necessary at some time in the future.

BOY, PAGE SIR ISAAC NEWTON!

Manitoba "Free Press."

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

THE MARKETS AT A GLANCE

ADVANCED prices and firm, higher price tendencies continue to be a feature in the sanitary, plumbing and heating market and many important advances have taken place. Among these advances are: Solder, which jumped about 4 cents per pound. Lead and waste pipe also advanced. Lead traps and bends, lead sheets, oakum, wool and cotton waste are all quoted at higher prices. Stoves have advanced, some lines as much as 15 per cent.

This season of the year is usually quiet and given over to stock-taking, housecleaning, rearranging campaigns, etc. This unseasonable activity, then, is very significant of the general conditions of the market, which, it is stated, will prevail during the present year.

The plate situation has as yet not been relieved and many stocks are reported to be exhausted with little hope of any large quantities coming immediately to relieve the situation.

Enamelware is said to be coming better, but it is believed that if the future demand turns out anything like what is anticipated, that manufacturers will not be able to supply the demand. Pipe skelp is a factor in the pipe situation and may cause further shortages unless manufacturers are able to procure larger supplies. The high rate of exchange still continues to be a factor for higher prices.

TORONTO, Jan. 15. — Many important price changes are again noted in the sanitary, plumbing and heating lines. Among the most important changes are: Solder has advanced approximately 4 cents per lb. Lead pipe and lead waste are up 1½ cents per lb. Lead traps have advanced about 15 per cent. Oakum is quoted higher; also cotton and wool waste. Stoves have advanced in some lines about 15 per cent.

The enamelware situation is somewhat relieved, and manufacturers state they are well up with present orders. Eavetroughing is quiet, but may advance. Waste materials are also quiet, but the situation may change any time, as, it is believed, many are holding back, waiting for developments.

However, many are looking forward to one of the greatest years of expansion and are looking for one of the largest turnovers in their history, regardless of high prices, it is stated.

Waste Materials Firm; May Soon Show Activity

WASTE MATERIALS.—The market for scrap and waste materials is quiet and very firm. It is stated that many are holding back in order to get a better view of the situation as regards future demands, prices, etc. The following are the present quotations:

DEALERS' BUYING PRICES

Pipe scrap	....	10 00
Stove plate, per ton	....	17 50
No. 2 busheling	....	11 00

Wrought Iron and Steel Pipe Unchanged; Firm

PIPE, WROUGHT IRON AND STEEL.—The skelp situation has shown little improvement, and the scarcity is still very pronounced. Jobbers and manufacturers are looking for a big demand this year and state that whether they are able to supply this depends greatly on their ability to secure the raw materials, and also on the labor situation, which has proven such a problem during recent years.

The following are the present quotations:

WROUGHT PIPE

Price List No. 42, Dec. 9, 1919.

Wool Waste Advanced; New Prices Now in Effect

WOOL WASTE.—New prices have been announced on wool waste. This commodity has been selling at a firm price for some time, although, owing to the quiet season of the year, some had expected it to hold till the big de-

MUELLER

Self-Closing Basin Cocks

(Patented)

EXTRA PATTERN

MUELLER self-closing work requires but little more effort to operate than ordinary compression work and on this account its use is not objectionable even in private homes.

Individual inspection of every cock insures a standard of excellence embodied in all lines of MUELLER manufacture.

A1508
Code—*Arbutus*

The closing is actuated by a phosphor bronze spring, which has permanent elasticity. The tension of this spring will close against 175 pounds water pressure, yet it is easily operated on account of its roller bearing construction.

Just a few points of this service plus Basin Cock are:—

Seat washer can be replaced in but a moment's time. Unscrewing body cap, releases all working parts in one assembled unit.

Malleable Iron Locking Washer locks cock immovably on the lavatory in any position desired.

Made of high-grade red brass with careful attention to coring, machining, polishing and nickel-plating.

H. MUELLER MFG. CO., LTD.
SARNIA -- -- CANADA

WE MAKE MUELLER

Basin and Bath Trimmings, Bibbs, Sill Cocks, Ferrules, Curb or Service Cocks, Corporation Cocks, Tapping Machines for Water and Gas, Service Clamps; Regulators and Reducing Valves for Water, Air, Steam and Oil; Bubbling Fountains, Gas Cocks, Globe, Angle and Check Valves, Etc. Forgings in Brass; Castings in Brass, Bronze and Aluminum; Specialties for Automobile Companies, including Bronze Bushings, Gasoline Cocks, Etc.

mand started. However, this was not the case, and new prices have taken effect, which are as follows:

Wood Waste	Per lb.
Arrow	0 35
Axle	0 28
Anvil	0 22
Anchor	0 20

Conductor Pipe Holds Firm; May Advance

CONDUCTOR PIPE is selling on a very firm basis and an advance may take place in the near future. Manufacturers claim they have been able to sell at the old base prices, owing to the large amount of stock they were able to procure before the acute shortage effected the sheet market.

PIPE (Conductor) Plain	
2 in., in 10-ft. lengths, list	8 00
3 in., in 10- ft. lengths, list	9 70
4 in., in 10-ft. lengths, list	12 80
5 in., in 10-ft. lengths, list	17 60
6 in., in 10-ft. lengths, list	21 30

F.o.b. Toronto, Ottawa, Oshawa.
List less 10%.

Lead and Zinc Products Again Show Advances

LEAD AND ZINC PRODUCTS.—An advance throughout the products of lead and zinc has occurred and higher prices are now effective. Lead pipe has jumped 2 cents per lb. and lead traps and bends about 15 per cent. This is, no doubt, due to the soaring prices of the basic ingot metals, which have been very active of late, and the demand is said to be enormous.

The following are the new quotations:

Lead pipe, list, per lb.	0 15
Lead waste pipe, list, per lb.	0 16
Do., over 8 inches, list, per lb.	0 17
Above subject to discount of 10%	
Lead traps and bends	add 10%
Lead wool, lb.	0 16
Lead sheets, 4 to 8 lbs., sq. ft., in rolls, lb.	0 12½
Zinc sheets	0 19

Cut sheets ½c to ¾c extra, and cut sheets to size, 1c lb. extra.

Solder Has Advanced Approximately 4c lb.

SOLDER.—An important advance has occurred in solder, and new and higher prices are now being quoted. The basic metals have shown great activity of late, which seems very significant of the coming season.

The following are the new quotations:

Solder	Per lb.
Guaranteed	0 42
Strictly	0 40
Commercial	0 37
Wiping	0 36¾
Wire	0 44¼

Boiler Tubes Firm; Prices Holding Steady

BOILER TUBES are holding firm at the new prices. No change in price is immediately expected, although this price is firm and other commodities whose basic metal is iron or steel are generally showing higher prices. While the boiler tube situation is not so serious as the wrought pipe, there is a noticeable scarcity. Jobbers, however, state that tubes are coming in from the States in normal quantities and no business is being turned down. The prices are quoting as follows:

	Per 100 feet	
BOILER TUBES—	Seamless	Lapweld
1 inch	$27 00	$.....
1¼ inch	29 00	.....
1½ inch	29 50	.....
1¾ inch	32 00	27 00
2 inch	31 00	26 00
2¼ inch	35 00	28 00
2½ inch	43 00	32 00
3 inch	48 00	40 00
3¼ inch	.....	47 00
3½ inch	60 00	44 00
4 inch	75 00	56 00

Range Boilers Firm; May Be Advanced

RANGE BOILERS are holding firm at the new price previously quoted. The range boiler situation is a very firm one and difficulty is experienced in getting supplies, and, notwithstanding the quiet season of the year, the demand continues very heavy, it is stated.

Some have it that a further advance would not be surprising, and attribute it to the great scarcity of raw material, high cost of labor, with the result of lower production.

The following are the present quotations:

Range Boilers—	Standard	Ex. Heavy
30-gallon	$12 00	$14 00
35-gallon	14 00	16 00
40-gallon	16 00	18 00
52-gallon	22 00	25 00
66-gallon	35 00	38 00
82-gallon	40 00	47 00
100-gallon	50 00	58 00
120-gallon	60 00	67 00

Oakum Prices Have Advanced as Predicted

OAKUM.—As predicted in last issue of SANITARY ENGINEER, oakum has advanced. Although present business is rather quiet, many are expecting one of the greatest years in their history. Like many other lines, waste is hard to procure.

The new prices may be significant of the coming season and are quoted as follows:

	Per 100 lbs.
Best American	$22 00
Clipper, spun	22 00
Do., unspun	20 50
Plumbers' spun	10 50

Sheets and Plates Firm; Scarcity Pronounced

SHEETS AND PLATES.—The sheet iron and steel situation continues to be in a serious condition, and it is believed that even those in control of the mills are unable to predict six months ahead. However, all are looking ahead to one of the greatest years of expansion, and the belief is that mills come through with better production this year than that of the previous, as the labor unrest is settling down and all are trying to co-operate for increased production, it is stated.

Owing to the scarcity and unsettled conditions of the markets locally it is almost impossible to quote accurate prices, as nearly all who have stocks have procured them under unusual conditions, and sheets, galvanized, 10 oz., for instance, are quoted anywhere from $9.25 to $10.50 per 100 pounds.

The following are the present quotations:

BLACK SHEETS—		
14 gauge	6 30	6 50
16 gauge	6 65	6 95
18-20 gauge	6 30	6 85
22-24 gauge	7 25	6 90
26 gauge	7 35	6 95
28 gauge	7 50	7 05
3-16 inch plate	5 95	5 55
¼-inch boiler plate	5 45	6 10

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

GALVANIZED SHEETS—	Premier		Apollo	
10 ¾oz.	$9 20	$9 80	$9 25	$10 45
U.S. 28	8 60	10 20	8 85	9 75
U.S. 2 6	8 20	8 80	8 55	9 40
22 and 24	8 00	8 20	8 40	8 20
18 and 20	7 80	8 00	8 25	9 00
16	7 55	7 80	8 10	8 80
12 and 14	7 35	7 55	7 95	8 55

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga. when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

Enamelware Prices Firm; Unchanged

ENAMELWARE remains scarce, although manufacturers claim they are making more progress at supplying the heavy demand, which still continues heavy, for this season of the year. Owing to the uncertainty in the manufacture of this commodity, it is stated that it is hard to know what output to continually depend on, as in the manufacture so many factors enter into the operation that may spoil the article being made, so that it will have to be scrapped, and thus the piece is a total loss. Especially is this true of baths, and when it is known that a small portion of sulphur in the metal may spoil the piece, it will be better understood how uncertain it is to depend on a stipulated output.

Manufacturers so far seem to be fairly well up with the demand, but state that it is almost impossible to know so far in advance, whether a shortage, as prevailed the latter half of last year, will occur again, or whether all demands will be satisfied as formerly.

The following are prices on some of the better known lines:

Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide			$37 05
Bath tubs, 5½ ft.			41 20
Lavatories—			
17x10" Apron F139 or P4045			11 05
18x24" Apron F154 or P3845 or P3847			17 00
18x21" Apron F169 or P4205			12 70
18x21" Roll rim F197, F199 or P4655-6			11 10
17x19" Roll rim F241 or P4345			9 05
Sinks, roll rim, 18 x 30 in.			16 60
Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$5 40	$5 35	$5 30
18 x 30	6 20	6 50	6 10
20 x 30	7 10	7 05	7 00

Stoves and Ranges Have Advanced About 15%

STOVES AND RANGES. — Some manufacturers have advanced some of their lines of stoves as much as 15 per

These are absolutely new and guaranteed perfect. Wholesale price laid down in Canada, $9.50. **Must be cleared at once. Write and make an offer.**

Salisbury Electric Co., Limited

615 Yonge St., Toronto

cent. This, it is stated, is due to the scarcity and high cost of raw material and labor. An important agreement has recently been made between the stove plate moulders and manufacturers, whereby the moulders secure an 8-hour day, as well as an increase in wages. This is also a factor in the higher price of stoves, it is stated.

Soil Pipe Firm, Scarce; May Soon Be Advanced

SOIL PIPE is still reported as none too plentiful, although there seems enough to cover present demands. The situation is also a firm one, and higher prices would not be unexpected, owing to the greatly increased cost of raw material, labor, and other factors, it is stated. All indications point to one of the best years noted for some time, and many are making preparations for handling, it is stated. The following are the present quotations:

Medium and extra heavy soil pipe, 2, 3 5 and 6 in.	10%
Medium and extra heavy soil pipe, 4 in.	15%
Medium and extra heavy soil pipe fittings, 2 in. to 6 in.	25%

Plumbers' Compression and Brass Work Firm

COMPRESSION WORK. — Plumbers' brass and compression work is maintaining a steady, but firm, price. Owing to the unsettled condition of the markets generally, it is hard to state just what the near future will bring. Although no lower prices are lookd for, some state that the peak has not been reached as yet, and owing to the advancing prices of ingot, metals are looking for higher prices, although their basic metals are of a fluctuating nature. The following are the present quotations:

Compression work, standard	28%
Fuller work, standard	34%
Bath cocks, compression	30%
Bath cocks, Fuller	34%
Flatway stop and waste cocks, standard	32%

Compression	23%
Quick opening	34%

Tin Up 3c Lb. Lead, 1c; Other Ingots Advanced

INGOT METALS.—Almost the complete list shown herewith are quoted at new and higher prices.

It is stated that there is now every reason to believe that the copper situation has changed definitely for the better. Foreign consumers are buying quite freely, notwithstanding the difficult exchange situation, and domestic consumers are making substantial purchases for delivery during the second quarter of this year. The general industrial outlook is believed to be greatly improved and constructive operations are to be carried forward on a considerable scale irrespective of the prevailing costs, it is stated.

SPELTER continues to show advances. The price is ¾ cent per pound higher, making the new quotation 12 cents per pound.

COPPER is rapidly recovering from any previous weakness and has changed definitely for the better, it is stated. This records a further advance of ½ cent per pound, the new quotation being 25 cents per pound.

LEAD is again reported at a higher figure, having advanced 1 cent per pound. The new quotation is now 10½ cents per pound.

TIN.—A further advance is again reported in tin. This advance is 3 cents per pound and makes the new price 73 cents per pound.

ALUMINUM is still quoted at 34 cents per pound. This is a firm price, it is stated.

ANTIMONY shows no change, although the price is a firm one with little stocks on hand. The present quotation is 12½ cents per pound.

Williams' Improved "Vulcan" Drop-Forged Chain Pipe Wrench

FEW tools are called upon to stand greater strain and harder wear than the pipe wrench. Because Williams' "Vulcan" Chain Pipe Wrenches have withstood every test during years of hard, continuous service under all conditions, they have earned a well-deserved reputation for dependability, and are favorably known the world over. They embody every good feature for which Williams' *Superior* quality stands.

Made in 8 sizes for ⅛ to 18 inch pipe. All Flat Link Chains are "proof-tested" on a standard tension machine and "certified." Every wrench is unconditionally guaranteed.

GET IN THE BIG MONEY CLASS NOW

SANITARY HEATING AND VENTILATING ENGINEERING

SANITARY Heating and Ventilating Engineering offers wonderful opportunities for advancement and money making right now. Modern methods and appliances are fast replacing the old ones, and the men who are up-to-date — the trained men — the men who know — are going to reap the benefit.

Get your share of the big money now. Here is the first thing for you to do — tear the coupon off this page and mail it to us today. It won't obligate you in any way and you don't have to send a penny, but it will bring you these four big volumes — just off the press — packed full of the very things you need to train yourself — all worked out for you in clear, understandable English by eighteen of the most successful men in these professions today.

No matter what your job is or how much you earn, you need these books — and you need them now. If you are in business for yourself, they will make your business bigger and better — the volume on business management, estimating and contracts and specifications alone will do it.

4 big volumes, size 5½ x 8¼ ins., bound in flexible American Morocco and trimmed in gold: 1454 pages: over 1100 pictures, diagrams and plates.

Here's what the Books Contain Thousands of problems under the following headlines are all worked out and made as simple as A-B-C.

Sanitary Science and Materials.
Water Supply. Hydraulics.
Sewers and Drains.
Drainage and Venting.
Sanitary Appliances.
Sewage Disposal.
Bacteriology and Sanitation.
Infectious Diseases.
Steam and Hot Water Fitting.
Domestic Hot Water Supply.
Heating and Ventilating Engineering.
Sheet Metal Work.
Business Management.
Estimating.
Contracts. Specifications.
Mechanical Drawing.
General Index and Review Questions and Index to Each Volume.

Free Consulting Service With these books goes free a year's consulting service in the American Technical Society, worth $12.00. This enables you to consult our engineers and experts for one year without charge. Ask as many questions within the scope of the book as you want for one year.

SHIPPED FREE

Examine the books and see for yourself just how valuable they are, but don't send us any money. The little coupon is all you need. Fill out all three lines and mail it NOW. It will bring you the whole set of books by express collect, and you can keep them seven days to use as you please—study them at home—take them to your shop—try to find some problem they won't answer, and ship them back at our expense if you think you can get along without them. If you want to keep the books after seven days' use, send us only $2.80. The balance can be sent in monthly payments of $2.00 each until the special introductory price of $14.80 is paid.

It will take years of hit-or-miss experience to gain what these books will give you in a short time; so don't pass up this opportunity—ACT NOW. We may never be able to offer this low price and these special terms again—only 7c a day. Tear off coupon before you lay this down and mail *today*.

SPECIALS

Range Boiler Stands are adjustable to 30-35-40 gallon boilers, and you can connect directly under the boiler. Inexpensive but flawless.

Your jobber can supply our goods--if you ask for them

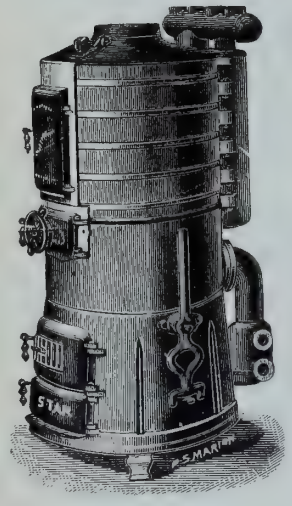
Pays Its Own Way

Allpriser Service

A handy annual service that keeps you always informed by means of easily understood cost figures. It eliminates loss, reduces overhead and gives a new feeling of security from mistakes in prices.
Allpriser Service consists of a flexible, leather bound book 7 x 9, of 150 loose leaf pages. The service includes a list of net prices of all staple articles and a regular service of new sheets revised to the latest changes. Allpriser Service is only $25.00 annually.

Kenneth B. Allison, 668 Yonge St., Toronto

Thousands of Star Boilers in Use requiring repair Parts



It will be a long time before folks forget the coal troubles of the last few seasons.
The principal feature of the Star Boiler is that no other round hot water boiler has any coal-saving improvement not embodied in the "Star."

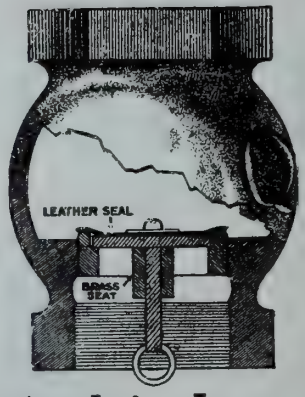
Then, too, while boiler installation and repair time is here, why not stock up with Star parts, for which O. Belanger has taken over the rights and is now making?

Many thousands of Star Boilers are in use requiring these repair parts hitherto unobtainable.

Write to us at once in time to catch the season's business.

We guarantee prompt deliveries.

O. BELANGER, REG'D.
Amherst Street
MONTREAL



This is a "Q" Foot Valve

And it Just *CAN'T* Leak

There are more pump troubles caused by "leaky" valves than from all the wear and tear which occurs in the average life of a pump.
The "Q" valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.
If you want the pumps you instal to give maximum, you will require to use the only valve on the market that JUST CAN'T LEAK.

Made in sizes from 1 to 8-inch.

X Laboratories 47

It's a mistake to send a *cheap* man on a *good* man's job!

MANY a profit has been thrown away because the man sent on a job couldn't do the work **right.**

The same is true of a product.

"X" Boiler Liquid, for instance, has proved its usefulness in every case. Its ability to do the job it is made for, is admitted by everybody.

Isn't it a mistake, then, for anybody to substitute a cheap, inferior imitation that costs less—in the hopes that it will do as well?

Don't let anyone steer you into parting with good money for what in a fair test couldn't compare with the genuine "X" Boiler Liquid.

Any imitation of "X" that sells for less is worth less.

In fact, if a man must use an imitation of "X" Liquid that simply claims to plug leaks, why should he pay comparatively high prices for it?

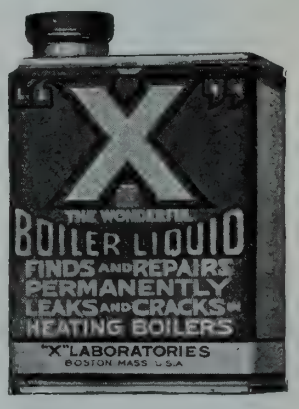
Any solid matter thrown into the boiler will choke a leak for a while. Flaxseed meal will do it; so will corn meal, or glue, or shellac, or iron filings. These are a lot cheaper than any imitation—and will do just as much.

Now, "X" Liquid is a combination of chemicals. The formula is patented in every civilized country.

In four years "X" has become standard in the trade. It is a necessary staple—like pipes, valves, fittings, etc.

Not only does "X" make a scientific, permanent REPAIR in leaky or cracked boilers—but it loosens all Rust and Scale and keeps the boiler RUST-PROOF and SCALE-PROOF.

"X" Boiler Liquid is used by the United States Government. It is recommended by 99 out of every 100 manufacturers of boilers and radiators. And over 28,000 plumbers and fitters use it regularly.



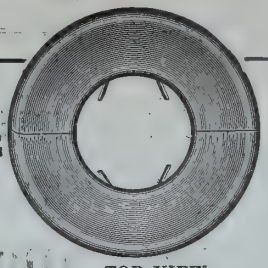
Put in Your Season's Supply—NOW!

"X" LABORATORIES

25 W. 45th St., New York City

OPEN VIEW NO. 10-A

The CEILING PLATE that's better



TOP VIEW NO. 10-A

THE NO. 10—A NARROW FLANGE PLATE—IS A STEEL HINGED PLATE. FLANGES ¾" WIDE. HIGHLY FINISHED. ESPECIALLY DESIGNED FOR TWIN CONNECTION "NARROW."

Gem No. 4.

The split ceiling plate is coming more and more into use than ever and ALWAYS GIVES A NICE FINISH, because it can be attached to mains and risers at the very last, and is not exposed during completion of a building on the floors.

High quality at the right price.

Gem No. 4 Automatic Air Valve

Made from the best brass obtainable. Pressed shell and pressed brass base which eliminate danger from blowholes, which is a fault with cast bases.

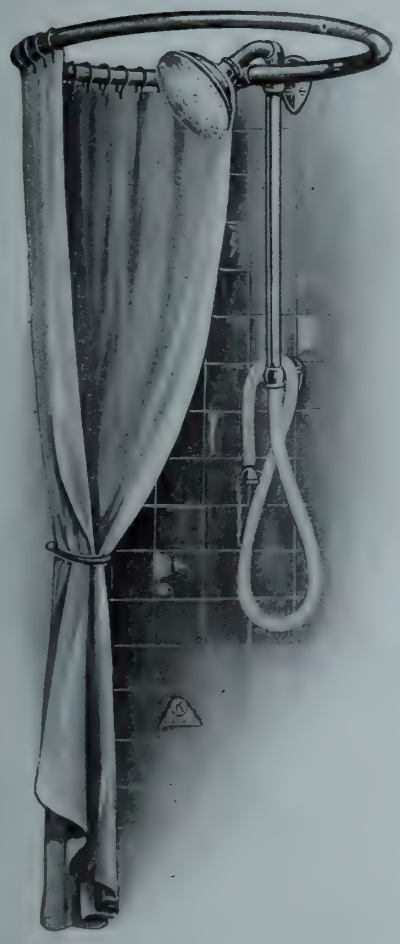
They Are Not Going To Be Denied The Shower Now



A 932—Nickel plated Shower with rain shower head, rubber tubing faucet connection and round curtain ring, with white duck curtain and wall hook.

THEY met it first in the training camps—it was part of their treatment in the convalescent hospital—it was included in the routine of the demobilization camps.

So the best of Canada's young men have become educated to the Shower—they know what it means to their health.

It is up to you to see that they get a Shower in their homes—the kind of shower that will give satisfaction—an EMPIRE SHOWER.

Let them know that you can supply the Portable Shower illustrated here.

It is specially adapted for use when a permanent shower is not practicable in a rented house, an apartment, or other places where space is limited. It is all that a shower should be.

Empire Permanent Showers in the latest and improved designs will be in demand as well.

You are going to be called on for Shower estimates.

Write for our catalogue and order direct from us.

TINKER TOM'S TALKS.

244

Among the many standard uses for **Galvanized Sheets** none is so familiar in the building line as—

VALLEYS—Nothing else will answer.

FLASHING—Universally used.

PORCH DECKS—Where there is a combination of resistance to weather and to wear and tear due to walking on roofs, Galvanized Sheets are alone suitable for permanent wear.

RIDGE CAPPING—Galvanized Sheets have replaced the use of wood for ridge combs and hips, being better in every respect.

Premier Galvanized Sheets are the favorites in Canada among the building trade.

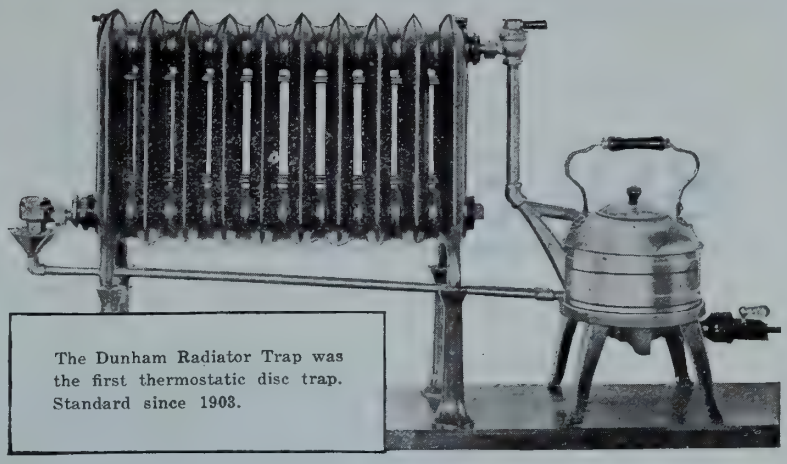
Yours for Co-operation,
FRANK R. MAXWELL,
President

Heating a radiator with a teakettle

It was done at the Ottawa Technical School before a group of engineers who were amazed at the demonstration. It proved beyond question that low pressure steam will quickly heat a radiator to 100% efficiency if the trap is right. It undisputably proved that the Dunham Radiator Trap functions perfectly.

Since 1903, the Dunham Radiator Trap has been eliminating any chance of trap trouble in thousands of installations. It was the first thermostatic disc trap. Think of this when you think of traps, and remember that the Dunham Trap is only one element in Dunham Heating Service. The entire service offers much to the man who plans, sells and installs the heating system—and more to him who pays the bills.

If you welcome suggestions that do not obligate you, get in touch with our nearest office. For authoritative information, write for booklet, "Data on Dunham Heating."



The Dunham Radiator Trap was the first thermostatic disc trap. Standard since 1903.

BOLSHEVIKI

A Little "Straight Talk" to the Canadian Plumbing Trade

Just now there is a fashion of attaching this name to every person and every element of the community opposed to fair play and fair dealing, to every force which stands for the cut-throat, knife-in-the-back principle. Recently a man was heard expressing his opinion regarding "Business Bolsheviki."

The persons thus mentioned were of the type who are not content to "live and let live." Their line of action is to get the other man's price or figure and cut under it, even at a loss. This results in disruption of the very best principles of business and hurts trade in any line, spreading bad feeling among the business fraternity and removing the trust and respect of the buying public.

Great pride has been felt during recent years in the advancement in business methods made by the plumbing trade,— hope is expressed that all may now earnestly assist in the suppression of Business Bolsheviki. Much blood has been shed in the last few years for the principle of the FAIR DEAL, and high quality should be encouraged in Canadian business. In every community there must be plenty of room, under modern conditions, for tradesmen to employ their time and efforts to the fullest extent without attempting to cut under opponents' fair prices. Too often a policy of price-cutting results in loss of quality, efficiency and service to the client.

To-day Canada needs business men of fair mind and high ideals. The practice of best methods and fair principles return in blessing on the heads of the men upholding them. Let us believe in permitting "the other fellow" to have his share in the distribution of the good things of business.

May we all stand for QUALITY, EFFICIENCY and SERVICE.

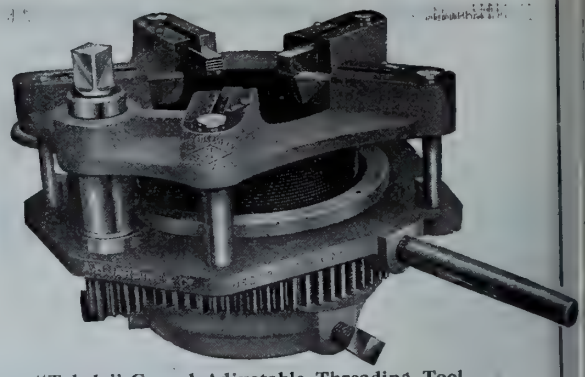
JARDINE and TOLEDO PIPE THREADING TOOLS



"Toledo" Geared Adjustable Threading Tool, No. 2½. Capacity 2 to 6 in. inclusive. Weight 120 lbs.

THE ratchet feature of Jardine and Toledo Tools permits their being used to thread pipe which is already in place, no matter how awkward it may be to reach. The Jardine and Toledo have no cams or jim cracks to get out of order; and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

Jenkins Valves

JENKINS BRASS "WHISTLE" VALVES

STOP WATER WASTE

At bakeries, in the departments where fruits are washed and prepared, Jenkins Brass "Whistle" Valves are installed on hot and cold water supply lines to stop water waste. A pull of the lever instantly permits a free full flow of water which is automatically shut off by means of a spring as soon as the lever is released.

Jenkins Brass "Whistle" Valves are extensively used in bath houses, garages, restaurants and factories, and, doubtless, numerous other uses will occur to you for these substantial, quick opening valves.

WILLIAMS' SUPERIOR DROP-FORGED CLAMPS

THERE'S a Williams' Clamp for every purpose.

If it's extreme strength and heavy service — Williams' "Vulcan" line provides both.

11 sizes, ¾ to 12½ inches capacities.

If it's general utility—without need for maximum strength — Williams' "Light Service" line will fit the case, 8 sizes, 2 to 12 inches capacities.

If it's stability and utility—medium service—Williams' "Agrippa" line offers the solution. 7 sizes, 4 to 18 inches capacities.

If it's tool room work requiring comparatively small openings of jaws—Williams' "Vulcan" Tool Makers' line should be chosen. 4 sizes, 1 to 4 inches capacities.

All are made of a special, high-grade steel. After forging they are submitted to a refining process, or "heat treatment," which increases their stiffness and strength and reduces the liability of springing.

The Trade Journal

Its place in the Business of

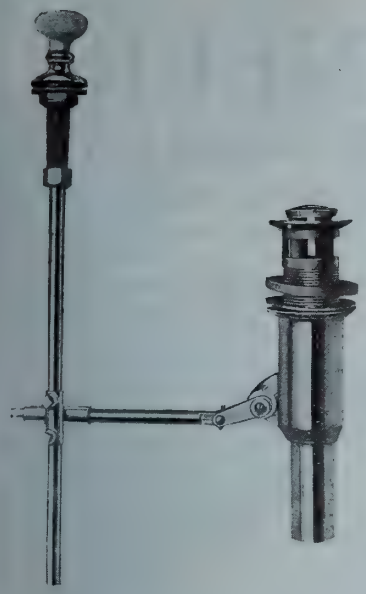
THE SUBSCRIBER

The retailer must keep in touch with what other merchants in his line of business are doing to capture trade and to conduct their stores intelligibly, and the only way of doing so, is to read the trade papers specially devoted to his line of endeavor. That is why practically all merchants make a close study of the trade press.

THE ADVERTISER

A subscriber to a trade paper naturally expects to find therein the advertisements of houses which cater to such business as the subscriber represents. In fact the trade journal is the one medium, manufacturers cannot afford to omit, because it precedes the salesmen and makes national distribution easier.

—From "Publicity."



ALLINGHAM POP-UP WASTE

DESCRIPTION

Allingham Pop Up Waste (Patented), Nickel-Plated, with China Waste Knob, indirect action (raising knob closes plug, lowering knob opens plug).

MEASUREMENTS

Diameter of flange under waste knob 1¾ inches. Diameter of flange inside hole 2⅛ inches. Diameter of flange below bowl 2⅜ inches. Outside diameter of outlet tube 1¼ inches.

The Allingham Waste is sanitary. The Waste Plug can be removed and cleaned without touching other parts. It is simple and mechanically correct. It is easily adjusted for friction or lift rod. It is reversible and can be easily changed from indirect to direct action if desired.

Can You Guarantee *All* Leak Repair Jobs?

Plumbers who repair heating system leaks with **Boiler Se-Ment-Ol** can guarantee every job because they **know** that this liquid leak-repairer seals every leak **permanently.**

No need to draw the fire, tear down the boiler and hunt for the leaks. That's the old way—the expensive, time-wasting way. The modern method is the **Boiler Se-Ment-Ol** way—the fastest, surest and most economical way.

Just pour **Boiler Se-Ment-Ol** into the leaky heating system. In a few minutes your job is done—**all** the leaks permanently repaired. Then charge for the service rendered and everybody is satisfied.

Boiler Se-Ment-Ol will not cause foaming. Has no disagreeable odor. It is sold everywhere—ask your jobber. List prices, United States and Canada: Quarts, $4.00; Gallons, $14.00.

The handy, cone-topped **Boiler Se-Ment-Ol** can reaches the most out-of-the-way place without the use of a funnel. Thus, there is no danger of spilling or wastage.

Proper Form of Contract is Important

This is Especially the Case Just Now When so Much Speculative Building is Going On —Specimen of Contract in Use by the Men in the Trade in Toronto—Be Careful and Avoid Trouble and Losses

Written for Sanitary Engineer by C. E. PARSONS

IF the experience of many of the men in the trade is any guide, sanitary and heating engineers cannot be too careful regarding any contracts they enter into with speculative builders. An enormous amount of speculative building is likely for the spring and so unsatisfactory has been the experience of some firms during the present season that they are laying down a rule that they will have nothing more to do with the speculators.

"We can get plenty of work without touching that offered by speculative builders," said Walter Britton of Bloom and Britton, Hamilton, Ont., in discussing the matter with SANITARY ENGINEER, "and we do not want to figure on any of their jobs. To start with they generally want something cheap. Sooner or later any cheap installations will cause trouble. Usually it is sooner. Suppose we put in the work in a new house of the kind the speculative builder puts up and inside of a year the plumbing and heating gives trouble. What happens? We get the blame not only from the buyer but from the builder and everybody in the neighborhood would hear about it. We do not want that kind of advertisement and so we are keeping away from that class of work."

NEED PROPER CONTRACT

There is another and a very imoprtant aspect to the matter also. That is the question of a proper form of contract between any sanitary engineer who should undertake work for speculative builders and the builders. A number of the men in the trade state that they have burned their fingers because of little technicalities of which they were ignorant.

One of the simplest of these seems to be the details of specifications. One man stated that when he had a job partly under way the owner came to one of the journeymen on the work and said he wanted a certain thing done a different way from what the plans called for. The man would not make the change without an order from the architect and as it turned out later this was an important matter. Had the change been made at the owner's suggestion the builder could have refused to pay for the whole work, because it was not done according to specification.

FORM OF CONTRACT USED IN TORONTO

..... (Contractor)
agree with .....(Owner)
to do the following work .....
according to drawings and specifications of .....
..... (Architects)
providing all materials and labor for said work, for the sum of ..... Dollars

The Owner is to pay the Contractor the said contract price as follows: 80 per cent. on account of said contract and extra work, if any, as the work progresses on value of work done in proportion to the whole amount of contract and the balance to be paid within twenty days of the completion of the work.

If any of the said payments of 80 per cent. are not made within ten days after same become due, the contractor shall not be bound to do anything further under this contract and shall be entitled to payment for all work done at once on the basis of the contract price, and extras for work done and material supplied at date of stopping work.

BE CAREFUL OF THIS

The exact wording of any contract that may be entered into should be very carefully noted. Do not sign contracts that contain any wording that will leave the speculative builder a loophole to refuse payment or to put you to a lot of bother, inconvenience and extra work in removing parts that have been installed. This may very easily happen if the sanitary engineer signs a contract specifying "first-class work," or any similar term.

There is an extremely wide interpretation of what first-class work may mean, especially in the eyes of the judge on the bench. Not a few men in the trade have been caught just on this phrase "first-class work." They signed the contract willingly enough and did what they conscientously believed to an A1 job. But that phrase "first-class work" left the speculative builder a wide open opportunity of which on several occasions he has taken advantage.

Easy Trap to Fall Into

This is a very easy trap for any sanitary engineer to fall into, especially if he has not had any experience with men of the type that some speculative builders have turned out to be. The unfortunate part of it from the standpoint of the man in the trade is, that in the eyes of the law a contract is a contract, and a tremendous lot very often depends upon what at first seems like very simple and harmless wording.

"Don't sign up for any 'first-class work' is my advice," said a Toronto sanitary engineer. "It is all right to do a good job and one that will be satisfactory in every way, but as a result of my experiences all contracts now read: 'To be finished in a neat and workmanlike manner.'" This will amply cover all reasonable requirements of any builder, and at the same time does not leave the plumber open to extravagant claims which might be made by unscrupulous men.

An Important Matter

This question of a proper form of contract is a very important matter. It means the saving to the plumber of a large amount of money. While it is stated that there has seldom been a contract devised that cannot be broken, the one produced above is in general use by the men in Toronto, and is working satisfactorily.

Plan to Allow Six Months in Which to Make Adjustments

OF interest to every business man is the fate of the Moratorium Act, technically known as "The Mortgagors' and Purchasers' Relief Act. The Attorney-General's department of the Ontario Government is now considering what action is wisest and will cause the least disturbance in business circles in dealing with this act. SANITARY ENGINEER interviewed Edward Bayly, Deputy Attorney-General, and Mr. Dymond, Chief Law Clerk, regarding the question, and was informed that no definite decision had yet been arrived at with regard to the action that would be taken. They both assured SANITARY ENGINEER, however, that it was the desire of the Government to take whatever action would least disturb business. "It is the disposition of the Government to disturb business as little as possible," said Mr. Dymond.

Three Suggestions Considered

Three suggestions have been made and are being considered by the members of the Government and officials of the several departments. One is that the moratorium be allowed to lapse automatically. That would simply mean that thirty days after the official closing of the forthcoming session of the Ontario Legislature, the Act would cease to be effective and all transactions affected by the passing of the Act would automatically be closed. There is reason to believe that precaution has not been taken by many affected by the Act to prepare for its annulment; and this is, apparently, weighing considerably with the Government. Officials with whom SANITARY ENGINEER talked did not particularly favor this method.

The second suggestion is that it be continued for another year. But this method either did not meet with much favor, because, as it was pointed out by officials, conditions would practically be the same one year hence as now, and those affected by the Act would again forget all about it. At the last session of the House it was "kicked on" for another year, and there does not seem to be much to be gained by giving it another year's hoist.

Most Favored Plan

The third suggestion, and the one that, at present, meets with the approval of members of the Government is that legislation be passed which will put things as they were before the Act was passed. In other words, if a mortgage fell due six months after the Act was passed, it will now fall due six months after it is allowed to elapse. This would give a period of six months, during which adjustments could be made and those affected by the Act could have a chance to discharge their liabilities. This would mean that it would come to an end seven months after the end of the next session of the House.

Members of the Government have expressed a desire to hear an expression of view from business men as to the wisest course they think should be taken in the interests of all concerned.

Saskatchewan Moratorium is Extended by Legislature Until January 10 of 1921

REGINA, Sask.—A bill giving the Government power to extend moratorium provisions in this Province for another six months, or for one year after the termination of the war, has been given its second reading in the Legislature.

As the Peace Treaty was signed on January 10, protection will be extended until January 10, 1921. A Moratorium Act was passed by the Saskatchewan Legislature at an emergency session in 1914, but the Government did not put into effect an absolute moratorium, as was done in some of the other Provinces and in other countries. The existence of the act, however, enabled the Government to relieve conditions in certain sections of the Province where there was a crop failure by negotiations with mortgage companies.

Steel Sheets Are $10 Above Normal Price

PITTSBURGH, Jan. 29.—Sheet manufacturers are only able to offer latter end of second quarter and third quarter deliveries of sheets at this time. In quoting so far ahead either prices are left open for further consideration later or are fixed at from $10 to $12 a ton above the nominal market. As to the latter, the March 21 price basis, only the leading interest seems to make any attempt to follow that policy, and some members of the trade predict that the March 21 scale on all finished prices will be abandoned as soon as actual booking of business can be proceeded with intelligently and with a fair knowledge of what mill costs will be for the material being sold.

Galvanized sheet demand is very heavy and the prices quoted for base gauge vary from 6.50 cents to 7.50 cents, while blue annealed sheet quotations are not below 4.50 cents for prompt shipment of material.

High Cost of Material Is Causing Concern

WINNIPEG.—According to representations made at the city finance committee meeting, construction of houses under the Federal housing scheme may have to be discontinued in this city, owing to the greatly increased cost of materials and to the new restrictions placed on applicants. The latter preclude the working man from participation, by reason of the heavy cash payments imposed.

Warmly Praised For His Good Work

In a recent issue of the "Literary Digest," appears an article on the progress of the Island of Haiti under the direction of the United States, which quotes from a recent letter written by Marine Corps Commander N. T. McLean, of Chatham, Ont., now acting as sanitary engineer of Haiti, as follows: "Within the past year, it has been my privilege to entertain and show to such an eminent public health official as Major-General W. C. Gorgas (retired), United States Navy, the city of Port Au Prince, as well as to a number of other officials of the Army, the Navy, and to others in civil life who are conversant with public health matter.

The consensus of opinion expressed by these gentlemen to me has been that the streets of Port Au Prince proper were in better condition than those of the majority of American cities, in so far as their cleanliness is concerned."

Dr. N. T. McLean is an old Chatham boy. He has been engaged by the United States Government for the past four years in the sanitation of the Island of Haiti, and it is expected that his work will be completed by spring, when he hopes to come north and pay a visit to his home town.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

BELOW will be found details regarding the important new series, "Sewage Disposal For Small Communities," which is to appear in coming issues of SANITARY ENGINEER.

These articles are to be published in book form and SANITARY ENGINEER has purchased the exclusive rights for their publication.

The matter contained in the series will be of the greatest practical value to the men in the trade as it will discuss problems which are continually being met with and deal with them in simple language. One of the greatest faults with many of the books now available is that the language used is highly technical and very hard to comprehend.

This cannot be said of the coming series. The problems will be thoroughly dealt with and their solution will be told in words that anyone can understand. At considerable cost a large number of special illustrations have been prepared to go with the subject matter and make clear many important features.

The series will be one that is worthy of the most careful perusal and should be kept where the articles may readily be referred to and studied from time to time. A list of the group headings and of the illustrations is as follows:

I. Preliminary and General Description of Sewage.
II. Cesspools and Septic Tank.
III. Construction and Design of Small Septic Tanks for Private Houses and Mansions.
IV. Construction and Designs for Larger Installations, including Sedimentation Tanks, Septic and two-storey Imhoff Tank suitable for all classes of Public Buildings and small Country Towns.
V. General Description of Private House Drainage.
VI. Disposal of Sludge and Design of Small Pumping Installations.
VII. Land Filtration and Artificial Bacteria Beds.

Manitoba Grain Growers Asking That Board of Commerce be Abolished

Delegates Are Also Against Tariff Commission — Resolution Passed Asking the Union Government to Resign

BRANDON, Man.—Important resolutions, which will affect business interests, are being considered at the annual convention of the Manitoba Grain Growers now in session here, and attended by more than 600 delegates. Premier Norris reiterated the stand he has taken at various meetings throughout the province in reference to the tariff.

Among the resolutions being considered are the following: "Whereas the Union Government holds the reins of power and has lost the confidence of the people, therefore be it resolved that we ask it to resign.

"That the Federal Government renounce its intention of appointing a permanent tariff commission."

Want Lumber Probe

"That the Board of Commerce investigate the prices being charged for lumber."

"That the Dominion Government be urged to expend each year on educational improvement as much as is spent on military and naval preparations."

"Whereas the actions of the Board of Commerce, ever since its appointment, have assumed the form of superficial and fallacious regulations directed against the interests of the farmers and retail distributors in cities and towns, while manufacturers of textiles, flour, meats, boots and shoes and other necessaries of life, whose evidence before the special committee of the House of Commons invited immediate investigation, have been completely ignored;

Disturb Production

"And whereas the net effect of the work of the Board of Commerce to date has been to disturb seriously the vital sources of production, to discourage rather than encourage an increased supply of foodstuffs from Canadian farms, to increase rather than decrease the cost of living, and generally to weaken the economic position of the Dominion as a whole;

"Therefore, be it resolved, that the Manitoba Grain Growers' Association urge upon the Dominion Government the immediate abolition of the Board of Commerce as a menace to the welfare of the Canadian people."

J. C. Brown, who succeeded Mr. Henders as president, in his report spoke of "the people's movement rather than the Farmers' movement." He urged that "Canada at once stop temporizing, discard all methods of war expediency and adopt a national policy based on sound and righteous principles. He attacked the customs tariff, declaring that by it privileged interests may extort blood money from those less privileged.

Winnipeg Strike

Referring to the Winnipeg strike he said:

"The lesson that we have been most emphatically taught, if we have the wisdom to learn it, is that no section of the community can suffer without all suffering together."

The report of the directors quoted a resolution adopted on July 23 accepting the resignation of R. C. Henders, former president of the association. "After careful consideration," it says, "we cannot in any degree accept his attitude on the tariff in the recent Budget and vote, and therefore we repudiate his stand, accept his resignation and reaffirm our adherence to the principles of the Farmers' platform."

Says Railway's Action Would Make Rubber Stamp Out of Board

Chairman of Dominion Railway Commissioners is Outspoken Regarding Refusal of Lines to Obey Order Issued re Publishing of Joint Rates

OTTAWA.—A case which will affect business men all over Canada was heard before the Dominion Railway Commissioners, on Tuesday afternoon, when the Canadian Railways were asked to show cause why they had not obeyed the order issued some time ago re the publishing of joint rates.

The railways came back rather unexpectedly, by basing practically their whole defence around the point that the Railway Board had no authority to issue any such order.

A peculiar situation arises in this connection, in that the Railway Board has the right to interpret the Act governing the case. If this interpretation is not acceptable to the railways, an appeal can be made to the Supreme Court. This may be done if the Board interprets the act and gives a decision against the railways.

This Point Offset

The railways attempted to make another point by declaring that only one complaint had been made in connection with their failure to publish joint rates as ordered. This, however, was offset by complaints which were in the hands of the Commissioners in addition to that mentioned by the railways, and also by the statement that the Canadian Manufacturers' Association has a number of complaints from business men who are interested in the matter.

Chairman Carvell of the Board was rather outspoken in regard to what he thought of the railways' action in ignoring the Board's orders.

"It would mean making the Railway Board merely a rubber stamp," he declared. "Just because some persons do not like the order we issued is no reason at all why it should be disobeyed."

Made Investigation

He also commented on the fact that the Commissioners, before issuing the order, made a very complete investigation into the matter, and did not arrive at their decision hastily.

The question is one which interests all merchants and manufacturers who have to ship goods to points necessitating their carriage over two lines of railways.

How To Make Belt Connections

When Installing Fans or Pumps the Information Given Here Will Prove Most Useful—Third of the Series Specially Written for "Sanitary Engineer"—Keep These Articles Where You Can Refer to Them Easily

WHEN a heating engineer has occasion to make an installation of fans or pumps, he requires some knowledge of the advantages and disadvantages of belt connections.

The material preferred by engineers for belts is that made from back strips of all oak-tanned leather, and cured with tallow and fish oil. Some engineers prefer the fabric belts manufactured by several of the rubber companies. Belts of rawhide are sometimes used because of their strength and proof against hardening of fibre.

The type of belt to be used is frequently controlled by the circumstances of speed and of the arc of contact. When high speeds are required, or when the arc of contact is limited, some form of link-belt should be used.

Sagging of Belts

A leather belt should be so installed that the upper—or slack—side of the belt sags enough to effect a good arc of contact with the pulleys.

The driving force of a belt lies in the difference of tension between the slack and tight side of the belt; therefore, the greater the sag, the more effective the driving power of the belt. Of course, the belt should not be slack enough to permit slipping.

The driving side of the belt should be underneath.

If the belt is too tight it will exert considerable strain on the pulleys and bearings.

Which Side of the Belt?

Engineers are by no means of one mind regarding which side of the belt should be in contact with the pulley. However, the majority of engineers claim that the grain side should be used, as its smoothness makes it cling tightly to the pulleys. It is also less subject to wear than is the rougher side.

Strength of Belts

The weakest part of a belt is in the jointing. A belt may have a body strength of from 1,800 to 5,500 lbs. per sq. inch. A laced connection has a strength of from 800 to 1,800 lbs. per sq. inch. A riveted joint has a strength of from 1,000 to 2,700 lbs. The safe working load on a belt should not exceed one-third of the strength of the joint.

Jointing of Belts

When it is not possible to use an endless belt, the necessary jointing of ends should be made with leather lacings, because of their great flexibility when compared with metal fasteners.

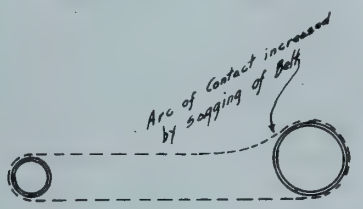
Before lacing, the belt should have its ends carefully trimmed, so that they will come properly together.

The holes should be made something smaller than the lacing, so that the lacing may hold on itself in the holes. The holes must not be too large, nor too close to the ends of the belt.

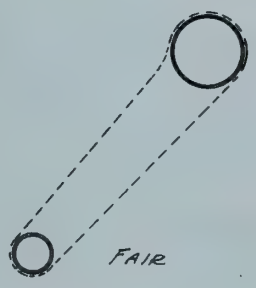
The holes that are in one belt end should be directly opposite the corresponding holes in the other belt end.

Time spent in squaring the ends of the belts, and in marking off exact spacing for the lacing holes will not be wasted. The time will be saved later, when the belt is being laced; and in addition a strong, as well as a neat, job will be the result of the first care.

We show here two methods of lacing, either of which we recommend.



Good



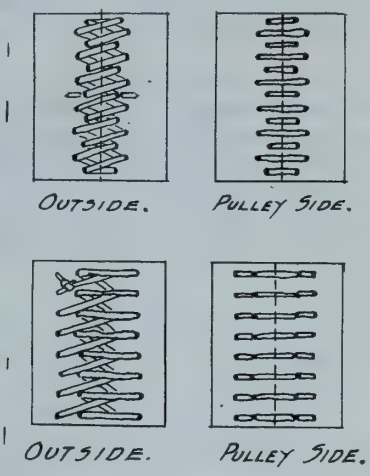
Fair

Poor.

Distance Between Pulleys

Now we come to something that should be of interest to the engineer, who is often forced to instal motors and fans so close together that the effective driving power of the belt is much reduced.

The ratios of driving to driven pulleys



control the distances that these pulleys should be apart.

When the pulleys are in the ratio 2:1, they should be placed eight feet apart. From this on, every ratio should be multiplied by 3 feet, thus:—Ratio of 4:1 = 4 × 3 feet = 12 feet; ratio of 5:1 = 5 × 3 feet = 15 feet.

The reader will understand from this that when the driven pulley is 5 times as large as the driving pulley, that there should be 15 feet allowed between centres of pulleys.

Speed of Belts

The efficiency of a leather belt increases as the speed runs up to 3,900 feet a minute; above that speed, the efficiency diminishes.

The speed of the belt per minute may be found by multiplying the circumference of the pulley, in feet, by the number of revolutions per minute.

The revolutions of the pulleys are in proportion inverse to their diameters, thus:

$$r:R::P:p$$

In this formula r represents the revolutions of p, R represents the revolutions of P.

Best Arrangement

The best way to instal belts is horizontally. When pulleys are connected with vertical belts there can be no increase in the arc of contact effected by a slack side on the belt.

Oblique connections are better than those that are vertical, but not so good as if horizontal.

Boiling Temperatures

The rate of conversion of water to vapor as effected by the application of heat is proportional to the pressure to which the water is subjected. The greater the pressure, the more heat required to effect vaporization.

The heat that is taken up by the process of vaporization is released when the vapor changes back to water.

In an open vessel, at sea level, it will take 966 B.t.u. to convert one pound of water, at a temperature of 212 deg. Fahr., to steam of the same temperature.

The boiling temperature of a liquid is that temperature of the liquid where it gives off bubbles of its own vapor.

In a former article we pointed to the atmospheric weight on the earth's surface; now we wish to draw the attention of the reader to how that weight affects the boiling temperature of liquids.

Bubbles of vapor will only form in the liquid when the force of vapor counter-balances the atmospheric pressure on the liquid. If a quantity of heat be applied to the liquid so that the energy of the heat be great enough to offset the weight resting on the liquid, the liquid will be completely boiled out of the vessel.

To increase the boiling temperature of the liquid more weight should be applied to its surface; to decrease the boiling temperature, the weight should be removed.

Temperature of Vapor

The temperature of the vapor is the same as the liquid with which it is in contact, e.g., steam coming from water at 190 deg. Fahr., will have a temperature of 190 deg. Fahr.

If 1 pound of water, at a temperature of 212 deg. Fahr., be placed in a closed vessel and heated to a higher temperature, the water will not boil, i.e., no vaporization will take place. The pressure may increase sufficient to burst the vessel, but no steam will be generated until the weight is removed from the water, or, in other words, until the expansive force of the vapor bubbles is no longer confined. This is not always understood; and frequently the error is made of assuming that because water is at a temperature of 233 deg. the liquid contains heat equivalent to a steam heat of 7 lbs. above gauge pressure. A pound of water at 233 deg. Fahr. contains about 201 B.t.u. A pound of water converted to steam at this temperature contains 1,154 B.t.u.

Less Heat Required

It takes less heat to raise the temperature of a liquid to a boiling point under vacuum than under pressure, but it takes more heat to entirely vaporize the liquid boiling under vacuum than it does under pressure.

The total heat required is, of course, greater when the steam is generated under pressure than when it is generated under vacuum. At one pound above vacuum water boils at about 102 deg. Fahr., but it takes 1,043 B.t.u. to vaporize one pound of water under this condition. The temperature of the water and of the vapor will be 102 deg. Fahr., and the total heat above 32 deg. Fahr. will be 1,113 B.t.u.

Water under a gauge pressure of about 14⅛ lbs. has a temperature of 219 deg. Fahr. It takes 939 B.t.u. to vaporize one pound of water at that temperature. The total heat above 32 deg. Fahr. will be 1,158 B.t.u.

Now we see that while a greater number of heat units is contained in "vacuum vapor" than in "pressure steam," the total heat of the "pressure steam" is the greater of the two.

Volume Increases

As the pressure of steam increases its volume decreases.

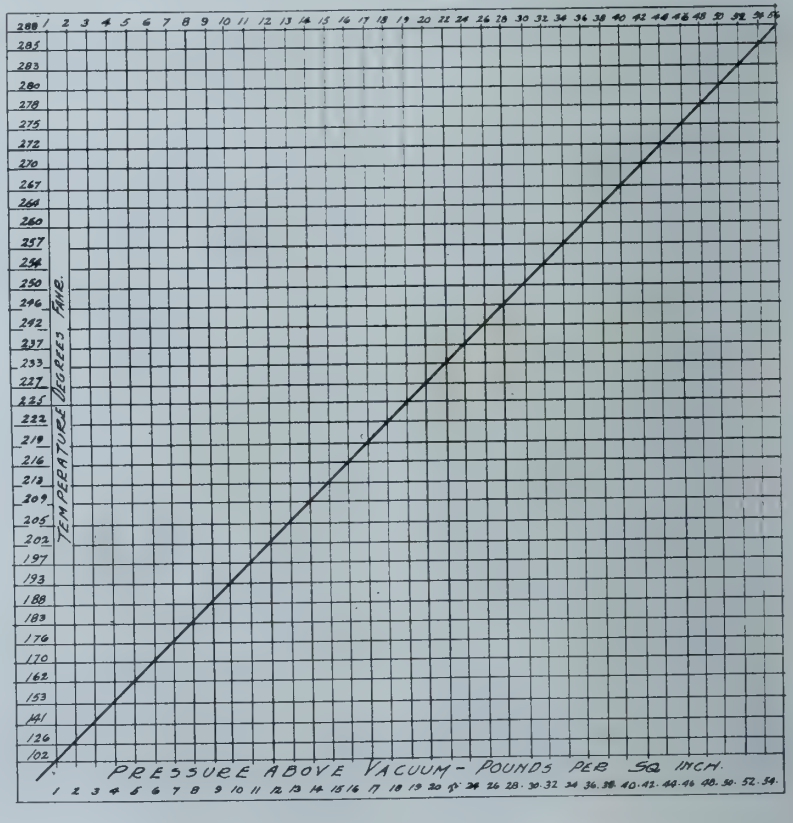
One pound of water converted to steam at 1 lb. above vacuum will fill a volume of 330 cubic ft.

One pound of water converted into steam at 14½ pounds gauge pressure will fill a volume of 13½ cubic ft.

Boiling Under Vacuum

A radiator may be filled with steam at a pressure of ½ pounds, gauge pressure, i.e., 213 deg. Fahr. Now, if that radiator be tightly closed, so that neither steam nor air may enter it, the radiator may cool down to the temperature of the room before the confined steam will be entirely condensed. After the radiator has been allowed to stand for some time, or until it is almost as cold as the surrounding atmosphere, an interesting experiment may be made in this way: Take a sounding tube, such as a physician's stethoscope, and listen to the surging of the vapor bubbles when the radiator is suddenly drenched with cold water. The reason that the liquid continues to give off vapor at the low temperature is because there is no weight of atmosphere, within the rod, to counter the buoyant force of the vapor bubbles.

We show a graphic chart of the relation between boiling temperature and weights in pounds above vacuum.



PLANNING INCREASE

Natural gas consumers, through faulty appliances, obtain only 13 per cent. efficiency from a gas cook stove, 25 per cent. from a house heating furnace and 10 per cent. from a hot-water heater, according to figures which come from the U. S. Department of the Interior. It is believed that in good practice this efficiency can be trebled. Secretary Lane has called a conference of governors, public utility commissioners, state geologists, home economic experts, owners of natural gas companies and appliance manufacturers, which will meet on Jan. 15 to discuss means of giving the consumers greater value for what gas they can get. It is unfortunate that this was not discovered and remedies found a number of years ago. With the natural gas fields apparently nearly exhausted the knowledge now will not be of great cheer to the consumer.

R. E. Callahan, Ltd., capital $350,000, head office Toronto, plans to manufacture household electrical appliances and wooden metal toys.

An Allegation That Is Unjustified

IT has been brought to the attention of SANITARY ENGINEER in connection with the recent exclusive publication in this journal of the proposed new Plumbing Regulations for the Province of Ontario, that a few men in the trade stated that this was deliberately done under pressure from manufacturers, in the hope that the passage of the regulations would be prevented.

Any statement of this kind is absolutely without foundation. Not a manufacturer in the Dominion knew that the information published was in the hands of the Editor of SANITARY ENGINEER. No one but the Editor of the paper knew what was coming, and in securing this information for its readers and publishing it before any other journals, SANITARY ENGINEER not only scored what is known in the journalistic world as a "scoop," but one of the most important in the history of the trade in the whole Dominion.

The proposed new plumbing by-laws have been read by the men in the trade from coast to coast with the keenest interest, and it is likely that they will be used as a basis for the establishment of similar regulations in other provinces. Undoubtedly this will work for good, and be one of the greatest steps forward that has ever been taken.

While there has been opposition in the past to the proposals there is little doubt that the proposed Ontario regulations will shortly become law. As far as the manufacturers are concerned, not one has in any way, at any time, made any endeavor to influence SANITARY ENGINEER in regard to the matter.

SANITARY ENGINEER is glad that it was able to give this important piece of news to its readers so far in advance of every other paper in Canada. It will be the aim of this journal to give the men in the trade all the real news all the time.

The Good Work Has Already Begun

New Plumbing By-laws at Dundas, Ont., Will be Based on the Proposed New Regulations for the Province of Ontario—Passed by Committee and Sent to Council

DUNDAS, Ont.—Members of the sewers committee at their regular meeting went thoroughly into the newly drafted by-law concerning house connections. It was approved of and will be presented at the February meeting of the council for first, second and third readings.

The work of preparing a by-law dealing with plumbing, etc., is to be commenced soon by Engineer Murdock.

Both of these by-laws will conform to the new regulations covering sewers and plumbing throughout Ontario, which are regarded as being far in advance of any regulations heretofore compiled. The proposed by-laws are based on practical and not theoretical ideas, and means the complete standardizing of methods throughout Ontario, especially in the matter of plumbing. All that is required to make the new proposals law is the signature of the Lieutenant-Governor of the province.

As a good part of the regulations concerns city waterworks plants and sewage systems, a great deal of the mandatory clauses will not be applicable to towns such as Dundas. These parts of the regulations are being eliminated by the sewer engineer.

When completed, it will be a most comprehensive piece of legislation, all angles of the subject being carefully covered from the construction of cellars, regulating the manner of drainage and the kinds of materials to be used. Even weights of lead pipe, etc., have been standardized. Even a farmer who wishes to instal plumbing must put it in with the same thought and care as is bestowed on the work in the residences of well-governed cities.

Responsibility for conformance with the regulations will rest with the plumber, who will have to stand the risk of work not done in accordance.

Sanitary Plumbing Co., Ltd., capital $50,000, head office Ottawa, Ont., plans to manufacture and deal in plumbers' supplies.

Asking $100,000 For Alleged Infringement of Patents and Trade Lost

Many Technical Points Involved in Action Between Manufacturers of Electrical Washing Machines—Canadian Dealers Interested in Outcome of Suit.

Two patent infringement suits, involving the recovery of $100,000 for trade lost, the securing of federal injunctions against further violations and the procuring of royalties alleged to be due for the sale of many machines bearing the infringement of the patents in question have been brought by the 1900 Washer Company, of Binghamton, N. Y. One suit has been filed in St. Louis against the Blue Bird Appliance Company, and the Blue Bird Manufacturing Company, the first the selling company, and the second the manufacturing company, and another against the jobbing company, the Elliott-Lewis Electrical Company, of Philadelphia.

Technical Points

The case, it is stated, is filled with technicalties but centres around certain patents in reference to design of the tank.

The Blue Bird Company made munitions during the war and with the coming of peace commenced the manufacture of washing machines.

The Canadian headquarters of the 1900 Washer Co. is in Toronto. The Blue Bird Company, it is stated, had been considering Brantford as a location for its Canadian branch.

They Sell Because They Make Good

Labor-Saving Devices Offer Magnificent Opportunities for More Sales — Very Often They Bring Other Sales Because Satisfied Customers Never Tire Talking About Them

WHEN one considers that during the past twelve months washing machines valued at twenty-five million dollars, more than half a million vacuum cleaners, and more than a million electric irons have been sold in Canada and the United States, some idea may be gained of the demand for modern labor-saving equipment.

Modernization of the home, which is really the basic idea behind all this demand, is as yet merely in its infancy. The time is coming, and is coming very, very rapidly when every home will have its washing machine, just as every home to-day has its sewing machine.

Merchants Can Help

The sanitary engineer who realizes that every clothesline he sees in his territory offers a prospect for the sale of a washer; that every time he sees a carpet being beaten he has an opportunity to sell a cleaner, and that opportunities exist on all sides for selling labor-saving devices and equipment that will make the home better, more comfortable or more easily looked after, is going to get the business.

The business is there and the way to get it is to show the people in your territory just what you have and what it will do. No woman who can get a machine to do her washing will ever go back to the old way. It is because women are realizing this more and more every day that washing machine manufacturers are unable to keep up with orders. And the women are realizing it because the manufacturers and the distributors are advertising their products, putting on demonstrations and keeping their goods before the public as never before.

Will Grow Steadily

This is the way to get results. Labor-saving equipment will go a long way toward selling itself if it is given any sort of a chance, but the merchant who gets in a washing machine, or a cleaner, or any other goods, and hides it away at the back of the store and waits for somebody to come in and ask if he handles washers is not going to sell anything like the quantity of them that the man will who pushes them aggressively and keeps pushing them all the time.

The gospel of labor-saving equipment, better utensils, sanitary equipment, is one that will appeal to practically one hundred per cent. of the women of Canada. Every woman is interested in knowing how she can keep her home better. If you can show her how she can do more work and do it easier and at a reasonable cost you have got a real prospect that will take only ordinary salesmanship to convert into a customer.

A Continual Advertisement

There is another feature that has interest of an exceptional nature for the merchant, and that is that a very large percentage of the buyers of labor-saving equipment become so well "sold" on their purchase that they never tire of telling their friends about the prize they have obtained. Merchants all over the country are finding that every piece of equipment they sell means sooner or later additional customers secured directly as a result of the advertising they have received in this way.

Not only this, but a customer who has purchased, say a washer, is often so well satisfied that a cleaner, and then some other device, and othen another one, is bought in order that labor may be lightened.

In thus helping people who are often at their wits' end to secure help, to do more work and do it better and easier than they have ever done it before, the merchant is rendering a real service. At the same time he is securing for himself and his store the most valuable kind of advertising at no cost whatever.

There is no doubt whatever that this is a mechanical age and that each year is seeing more and more of the drudgery, especially in the housework, transferred to machinery. This is a tendency that is bound to increase and is gathering momentum all the time. It offers endless opportunities for sales to the merchant.

In the past thirty months displays of washing machines have come to have a new interest to women all over the Dominion owing to the difficulty in securing dependable help. This situation is offering splendid opportunities for more and more sales.

Trowern's Answer to Beckett Charges

Former Says Retailers Across Canada Are Up in Arms Against Rulings of Board of Commerce—Claim Wholesalers Have Benefited From Regulations—Wholesale Trade Going Out of Its Way

H. C. BECKETT, of W. H. Gillard & Co., wholesale grocers, Hamilton, Ont., has sent a letter to Hon. Sir Geo. E. Foster and other members of the Cabinet condemning the action of those who are criticizing the rulings of the Board of Commerce and who are urging a change in the personnel of it.

In this letter he says:

"The recent agitation and action of Mr. Trowern and others at Ottawa has not escaped the attention of the great majority of business men and consumers throughout Canada. Hundreds of thoughtful business men and consumers are amazed at such action. Hundreds of business men at subsequent largely-attended meetings have expressed surprise, amazement and strong disapproval of such unwarranted action in trying to stir up a feeling of antagonism against the Government, the Board of Commerce, and some of its members.

"We have yet to learn of a justified complaint from any consumers for the reason that the consumer is pretty well satisfied with the efforts of the Board of Commerce. The consumer needs much enlightenment because, as a rule, he is a superficial thinker and does not concern himself by going very deeply into trade matters, which, as every man (consumer included) should know, are very complicated and can only be understood by years of study, practical experience, and contact with trade conditions. I have no hesitation in making the statement that I am qualified to speak, not only with very considerable first-hand knowledge (having devoted many years to the study of trade ethics) but that I represent the views of thousands of thoughtful consumers and business men in Canada.

"The opinion is that the Board of Commerce, as constituted, will prove to be a blessing to Canada.

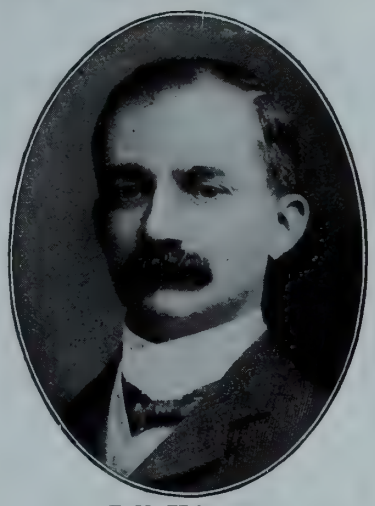
"It is the most outstanding statesmanlike move since Confederation, and now some few vindictive people start out to create trouble before even giving the Board an opportunity to get a line on trade conditions.

"As a matter of fact the Board of Commerce was never intended to deal with the high cost of living except that it would incidentally do so and prevent profiteering at the expense of the consumer, and be the means, through its report, of educating the consumer that supply and demand largely regulate prices.

"Instead of the Board of Commerce being given an opportunity to get thoroughly informed, there was such a rush, demand and clamor for a reduction in prices (and rightly so, since the people did not seem to understand the reason for high prices) that the Board tried to do something in the shortest time possible—to be of some quick benefit to the consumer. The Board discovered some instances of excessive profits—which may yet need investigation to protect the consumer in the future, but on the whole they found in the great majority of complaints investigated that there was very little profiteering, and they said so openly. The consumer was suspicious, and is yet in some cases, so the idea was to allay the unrest by speedy action.

"The Board has been and will be fair to the man in business, and, so far, no man in business has been hurt as much as is the consumer of limited income by reason of high prices.

"Why, then, this opposition? It comes from a section who think they may be curbed in unfair practices so prevalent in Canada to-day. The opposition is secretly fanned by the monopolistic interests. The Board has already proved it will not be swayed by any particular class in Canada, and in this respect the Board is entitled to the highest praise that man can have. They are honest—and they have ability. They are endowed with the qualifications so necessary in occupying such important positions. It shows the wisdom of the present Government, who appointed them, and also the Government's honesty of purpose to make real and lasting progress for the betterment of Canada.



E. M. TROWERN
Dominion Secretary of the R. M. A., who replies to H. C. Beckett's letter.

"Already the big interests, under a cloak, are arranging their forces and spreading their propaganda to, if possible, block the Federal Government in this, the wisest legislation since Confederation. They are fighting to change the personnel of the Board so that some putty men will hold the seat of judgment. It is believed, however, that the Board of Commerce Act provides that trade experts may be called to assist the Board. Such experts could be of great assistance to the Board, and could be selected or appointed by Provincial Governments and thus protect provincial interests, provided, of course, the men appointed were big enough and unselfish enough to be independent."

MR. TROWERN'S VIEWS

SANITARY ENGINEER asked E. M. Trowern for his views in connection with Mr. Beckett's letter and the attitude of the Retail Merchants' Association toward this Board.

Mr. Trowern maintained that the facts regarding the manner in which the Board of Commerce has treated the retail trade are too apparent to require any defence by him. "The retail trade," he said, "from one end of Canada to the other, are up in arms as to the various orders that have been made by the Board of Commerce and applied to them. No such absurd orders have been made regarding the wholesale trade, and whatever orders have been made have been made for their benefit, so that there is no wonder that the wholesale trade wish to retain the present board, and are now rushing to their defence.

"The retail trade everywhere recognize that the wholesale trade are acting with selfish motives, and no amount of argument will convince them differently. At the special meeting of the Dominion Board, which was held in Ottawa on January 13 and 14, members came from every province in the Dominion, and they would not have come that distance if there was no justification for it, and the retail trade feel that the wholesale trade are going out of their way in an endeavor to tell the retail trade what they should do.

"Our organization was formed for the purpose of protecting the retail merchant, and we feel that we understand our conditions better than any other class in the community, and consequently we resent any dictation."

In an address by Mr. Trowern before the Dominion Board of the Retail Merchants' Association at Ottawa recently, he pointed out that the merchants did not want the Act under which the Board of Commerce operated abolished, but they thought the manner in which it is being operated should be changed. Space does not permit the running of this address this week, but it will appear next.

Dr. R. J. McFall, former Cost of Living Commissioner, and more recently Chief of the Inland Trade Division of the Department of Trade and Commerce, who has just resigned from the public service, has accepted a post with the Massachusetts Agricultural College, which is located at Amherst, Mass

Send a catalog to your prospects

"For the Home" and "For the Factory" Catalogs are supplied to the plumbing trade for the asking.

A Hamilton Heating and Sanitary Engineer says:—

"We use the Port Hope Sanitary Catalogs They are easy to carry in the pocket and very convenient to sell from"

THE writer of this advertisement, when he found a very well-worn "For the Factory" catalog on the desk of one of the leading heating and sanitary engineers of Hamilton, asked the manager if he ever used the Port Hope Sanitary Catalogs in his selling, to which he replied that he did and found them very satisfactory and convenient to carry around with him.

Upon further enquiry the writer found that he not only sold from the "For the Home' and "For the Factory" Catalogs, but he sent copies out to prospects. In this way be gained much splendid business.

These people have good ideas and are right on the job.

Every plumber in Canada should carry copies of these two catalogs and should use them in his selling. They often take the place of an overload of stock.

EDITORIAL COMMENT

DO YOU DO THIS?

"WE have what we advertise and we advertise what we have," is the slogan which an Eastern Ontario hardware firm has adopted to close its regular message to the people and it seems on general principles rather a good one. It is a policy which if carried out in a broad sense by every merchant in Canada would be productive of tremendous results. Just imagine the stimulus that business would receive if every merchant in the country adopted a progressive policy of this kind and advertised the merchandise he had for sale and then backed it up by having the stock of good goods. One of the best ways to sell more merchandise is to put it in stock and then let the people know that you have it. To get the best results this must be done consistently. That is, it is no use to put in a good stock and insert one advertisement in the local paper and expect the whole stock to move out. Advertising does not work on the plan of one big explosion as it were, but rather with the force of a steady pull. A daily or weekly message, as the case may be, will keep stock turning steadily if the copy is intelligently directed and seasonable lines are offered.

LUMBER PRICES SOARING

IN spite of the fact that lumber prices have soared to the highest figures on record further advances are anticipated almost immediately. The members of the Western Lumber Association will hold their annual meeting in Winnipeg next week and, it is stated, that among the first business to be considered will be price revision. Enormous orders for lumber are already booked, many of them for shipment overseas. The lumber men claim that it is impossible to secure sufficient help to handle anything like the business that is offering. One of the largest hardware firms in Ontario showed SANITARY ENGINEER a letter this week from a firm in which it was stated that production costs had increased 189 per cent., while efficiency was sixty per cent. of what it used to be. The hardware merchant referred to above stated that ordinary lath, made out of cull pine, which formerly sold for $2.75 per thousand, are now selling at $19 and are hard to obtain at that. This, he said, is merely a sample of a condition that is general. Hardwood flooring prices, he declared, are even higher proportionately.

THE HOUSING GRANTS

A GOOD deal of interest is being taken by the men in the hardware and building trades in the attitude of the new Ontario Government regarding the housing scheme. Since it took over the reins of power, the Drury Government has not advanced any funds in connection with the housing scheme and before any further grants are made it is understood that the work as far as it has been carried out will come up for discussion. There are rumors also that some of the members may have questions to ask that will have an important bearing on what policy is to be pursued during the coming year. Ontario still has about $5,000,000 of its share of the Government allotment and the money set aside last year by the former Government. Up to date about 1,400 houses have been erected under the plan. Many of the municipalities which have been laying plans to relieve housing shortages during the coming summer are wondering just where they stand. The whole question will, it is understood, be settled in the next few weeks.

NOT A TIME FOR DOUBT

RETAIL merchants all over the country during the past fifteen months, ever since the signing of the armistice, have had a rather striking illustation of the fact that the man who has the stock and is prepared for business will get all he can handle. Just a year ago now "watchful waiting" was popular. In spite of their own better judgment, in spite of the views of some of the soundest business men in the country, not a few merchants were led away by the popular view on the street, backed by unwarranted statements in the daily press, that prices were due for a drop. As far as business was concerned the whole country developed into a huge guessing contest. On one side were the men who guessed that they would not buy because prices were coming down. On the other side were the men who took the view that a safe plan was to have the stock and look after their customers' demands. It has turned out that the men in the last class took the correct view. Prices have not declined and the men who did not buy have lost a good deal of money and trade by not having stock on hand. The same problem must be faced again in the coming months. There are still merchants who are looking for a drop in prices in spite of the fact that the stocks

of goods the world over are bare. Until the tremendous world shortage that now exists is supplied and there is a surplus of merchandise, there is little chance of any material reduction in prices. One of the big troubles is going to be to get the goods and it is obvious that the man who has no merchandise on order is not going to have anything to offer.

GET BEHIND THIS MOVE

THE announcement of Hon. Walter Biggs, the new Minister of Highways for Ontario, that the Government plans an expenditure of $60,000,000 during the next five years, is of keen interest to every merchant. Of special interest is the plan to be followed, that is the development of better roads all through the rural districts, rather than the expenditure of a large sum on one trans-provincial highway. Any movement towards securing more and better highways is one which deserves the heartiest support of merchants. Good roads are a most important asset in any community and particularly so to the business men. With the steadily increasing use of automobiles, especially among the farmers, better highways will mean better business wherever they are constructed. Farmers can not only come in to town oftener but they can bring in larger loads of produce and take home larger loads of merchandise. And the experience is that wherever good roads have been built, the farmers do these things.

WHAT IF THIS WERE YOU?

FIRE swept a Canadian town not long ago. Two dealers in the same line suffered heavily. Both lost their stock. Both were determined to get back into business again just as quickly as possible. But there was one thing that blocked their progress—settlement with the insurance adjusters.

One merchant had kept complete records of everything he had. The other was never able to tell just exactly where he stood, even at the end of the year when a general inventory should have been taken.

In less than a day the adjusters effected a settlement with the merchant who knew about his stock. It was a satisfactory settlement too. The other man labored for three weeks before he was able to reach an agreement. Even then he did not get nearly as much as he believed was coming to him.

Because of a little system, just plain, ordinary business system, the first merchant was able to be back into business again three whole weeks before his competitor. Besides this he was satisfied that he had got all that was coming to him in the way of settlement of claims.

The lesson was rather a bitter one for the second man, but he was wise enough to see that it pays to know just where you stand, and he is keeping records now just as carefully as the other man.

COMING TO CANADA

FIGURES just published at Ottawa show that during the period from April to November of last year there was an increase of 166 per cent. in the number of immigrants coming to Canada, as compared with the returns for the same period in the previous year. Of the new arrivals there were 47,585 British immigrants, 38,721 Americans, and 5,114 from other countries, a total of 91,420. A very large percentage of these people are going on farms in different parts of the country. The big percentage of the Americans were practical farmers who have sold their land in the Western States and are coming over to settle with their families in the Canadian West. To those not in close touch with the situation the movement that is going on in the West from an immigration standpoint is surprising and it is predicted that this year's figures will be much larger than those for 1919. All this means more business for the hardware and other merchants and more consumers for merchandise. It explains to some extent also the unusual number of new branch banks that have been opened in the West in the last little while.

METHOD IN THEIR MADNESS

NOT a few business men have commented during the past few months upon the apparent inaction of the British Government in regard to the steady drop in the value of the pound sterling. It is now being realized that there was a good deal of method behind the British plans, especially in view of the keen race for commercial supremacy in the markets of the world following the reconstruction period. No less an authority than the *Wall Street Journal* has the following very interesting comment to make upon the present situation and the future outlook:

"The United States is the only country that is not alive to the international situation. England is getting away with the world's business. The fall in sterling gives her a 25 per cent. protection against imports and a 25 per cent. stimulus to exports, but back of her is a country with still lower exchanges, and England, as mistress of the seas, is gathering up the cheap goods that Europe is starting to pour forth, and is passing them over the world at handsome profits. She buys low in Europe, and will soon be selling at high prices in the States.

"In three years England will be the commanding commercial and trading power of the world, and as she stood as the bulwark of democracy and freedom we shall not regret it. I rather think she is entitled to all she can get. She has been on the seas and in international trade for a long time, and she knows markets over the earth as does no other nation."

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

Business Changes

Brampton, Ont.— Higgins & Large, hardware and plumbing, have sold their hardware business to Robert Lewis.

Vegreville, Alberta.—Harry Trauin has disposed of his plumbing and tinsmithing business.

Elmira, Ont.—Fred Rudow has purchased the plumbing business of Frank Rudow & Son.

New Firms

Long and Maynard, plumbers, have been registered at Montreal.

The Elite Plumbing & Heating Co., 201 Jones Avenue, has been registered at Toronto.

J. W. Hodson & Son, plumbing and heating contractors, have opened for business at 504 Builders' Exchange Building, Winnipeg. They would be glad to have catalogues and prices from the trade.

Personal

Henry Clarke has been appointed sanitary inspector for Elora by the town council.

George Gibbs, of Sprucedale, has been appointed sanitary inspector for the Township of McMurrich by the town council.

Thomas H. Ferguson, of Toronto, who was recently ill with pleurisy, is in the hospital undergoing an operation which, it is hoped, will relieve a serious inflammation which developed in one of his eyes.

Alderman Frank R. Maxwell, of Toronto, president of the Dominion Association of Domestic and Sanitary Engineers, has been appointed a member of the Toronto Board of Health.

At the annual meeting of the Rotary Club of St. John, New Brunswick, Edward J. Terry, local manager for the James Robertson Co., Ltd., was honored by being elected president. Mr. Terry has been an active Rotarian for some time.

Trade Notes

LeFaivre & Gagnon have been appointed liquidators for Lapointe & Cote, Limited, Quebec, plumbers.

James Saunderson & Co., plumbers, Montreal, have dissolved.

Bonneville & Co., plumbers, have been registered at Montreal.

W. J. McQuade, of Ottawa, has assigned to W. A. Cole, and a meeting of the creditors has been called for February 3.

Plumbers' Helpers Form Local Union

Hamilton, Ont.—Another union was added to the long list of craft organizations in this city when the Plumbers' and Steam Fitters' Helpers' local was formed, under the direction of A. Bonner, business agent of the Plumbers' Union, and H. G. Fester, secretary of the Trades and Labor Council. There was a good turnout of helpers, and it was decided to apply for a charter from the A. F. of L., and operate under the jurisdiction of the Plumbers' International.

Hamilton Society Elects New Officers

Hamilton, Ont.—At the regular meeting of the Hamilton Society of Domestic Sanitary and Heating Engineers, officers for the year were elected as follows: President, J. McBeth; vice-president, E. Fletcher; secretary-treasurer, C. G. Stewart.

Journeymen Asking For a Dollar an Hour

Brantford, Ont.—Local journeymen plumbers have made a demand for $1 per hour when their agreement with the masters expires May 1. They are at present receiving 70 cents.

C. D. Henderson Leaves Cowans at Brantford

C. D. Henderson, who has been in partnership at Brantford, Ont., with T. A. Cowan in the firm of "Cowans," has severed his connection with the business and joins the staff of the Bluebird Washing Machine Co., which is locating its Canadian branch factory at Brantford. Mr. Henderson was widely known in the plumbing trade, not only through "Cowans," but also through the Henderson service, which he maintained for the men in the trade.

Plan Inspection of Sschool Ventilation

Brantford.—A thorough inspection of the public schools of the city with regard to ventilation will be carried out by Dr. W. L. Hutton following action by Mr. P. P. Ballachey, chairman of the Medical Committee of the Board of Education.

Master Plumbers Were Entertained

On Monday evening, January 19, in the I.O.O.F. Temple Hall, the members of the Hamilton Society of Domestic Sanitary and Heating Engineers entertained the other master plumbers and representatives from the local union, No. 67, and the plumbing inspector, Thos. Jones, of the Herbert Jones Co., and Chas. Rogers, of the Standard Sanitary Co.

The evening was spent in a most enjoyable manner with cards, speeches and vocal selections, after which light refreshments were served. The meeting was brought to a close at an early hour with all present voting it a real night and hoping that there will be more to follow.

Pipe Line Contract Awarded at Guelph

GUELPH, Ont—At a special meeting of the city council to consider the report of the fire, light and water committee regarding the acceptance of the tender of the Pacific Coast Pipe Company for the supplying of material for the new pipe line, it was decided to give the said company the contract. The company has agreed to send 3,000 feet of pipe per week. The price paid for the 24-inch pipe is $2.26 per foot, $1.04 for 12-inch and 71½ cents for 8-inch. Twenty-five thousand feet will be required, all told. The total cost will be about $100,000.

Apex Electrical Manufacturing Co., Ltd., capital $10,000, head office Toronto, Ont., plans to manufacture and deal in hardware, electrical appliances, tools and utensils.

Automobile Service Syndicate Ltd., capital $50,000, head office Toronto, plans to establish service stations for automobiles.

Ontario Executive May Hold Meeting in Ottawa Next Week

Plan to Take Up Matters in Connection With Organization With the Men in the Trade in the Eastern District

PRELIMINARY arrangements are being made with a view to having a meeting at Ottawa between the Executive Committee of the Ontario Society of Domestic Sanitary and Heating Engineers, and the members of the Canadian Association of Building and Construction Industries. The latter organization is holding its annual meeting at Ottawa on February 3, 4 and 5, and it is the intention of the Ontario Executive of the Sanitary Engineers to take up with them a number of questions, in which, it is felt, that both have a common interest. There are many problems at the present time in the building trades and in the plumbing trade which are closely allied, and by working together it is felt that a big step can be taken in solving the problems.

In case this joint meeting is arranged for, it is the intention of the members of the Ontario Executive to hold a special meeting while they are in Ottawa, to which the Master Plumbers of the city and district will be invited. If this meeting can be arranged, it is intended to discuss with the men in the trade at Ottawa various problems, especially those in connection with the organization work which is being carried on throughout Ontario.

Making Good Progress

Splendid progress is being made by the Ontario society in this work, and it is the earnest desire of the Executive Committee that all the men in the trade throughout the province co-operate fully with them in what is being done. If their efforts are seconded in all parts of the province it is felt that the entire plumbing trade of the province can be placed on a new footing. There is urgent need of better business system, especially a more definite knowledge of the requirements of overhead, and it is the idea of the Executive officers to go into this matter fully and educate the men in the trade to the importance of doing business on a business-like plan. There are also various trade problems which need attention, and by working together and closely co-operating it is felt that these can be quickly solved.

The Annual Meeting

The annual meeting of the society will be held in April, and from present indications some of the most satisfactory reports in the history of the organization will be presented. The Executive Committee has been carrying on an active campaign in various sections of the province for some months, and the results are beginning to be apparent. A great deal has been accomplished, but there is a great deal yet to be done, and it is only by securing the active co-operation of every master plumber that the results which it is desired to obtain will be secured.

Between now and April the members of the Executive intend to hold several other meetings in addition to that which is contemplated at Ottawa. The points where these will be held have not yet been selected. But the Executive will be glad to take up with any of the men in the trade any of their problems and arrange meetings, if they will let them know about this matter.

Annual Ball and "At Home" of Toronto Society Was a Most Successful Affair

THE annual ball and "At Home" of the Toronto Society of Domestic Sanitary and Heating Engineers held on Friday evening in the Canadian Foresters' Building was in every way a most successful and most enjoyable gathering. Owing to the war the members of the Toronto Society were forced to skip several of these "At Homes," but on Friday evening they more than made up for what had been missed by packing into one evening all that might have been enjoyed at the others.

Right from the start things went with a swing. There was not a dull moment for anybody and everyone present had the best kind of a time. There was an excellent turnout, at least 300 being present, and the opinion was unanimously expressed that the evening was one of the most enjoyable in the history of the Society.

The rooms were most attractively arranged for the occasion and the program for the evening provided entertainment for everyone. The committee in charge of the arrangements and responsible for the success of the "At Home" comprised President George Clapperton, Treasurer Harry C. Waterman, Secretary Fred H. Gentle.

Contracts Awarded

J. Kerr has plumbing contract for new store and residence costing $5,000 at Hamilton, Ont., for H. Dunham, 18 Grosvenor Ave.

W. J. McGuire & Co., 332 Craig St., Montreal, have plumbing and heating contract for new $200,000 theatre at Ottawa for Loew's.

John Semple has contract for plumbing for new $9,000 residence at Brockville, Ont., for E. J. Barker, of Chicago.

P. J. Smith has plumbing and James Dow the heating contracts for two residences costing $6,000 for W. E. Louden, 39 Lottridge St., Hamilton, Ont.

The city council of St. Thomas, Ont., has awarded contract for new electrically-operated waterworks pumps to Goldie & McCulloch, of Galt, at $23,000.

Contract for plumbing, heating and ventilating in connection with new school at Windsor, Ont., costing $400,000, has been awarded to W. J. McGuire Co., 91 Jarvis St., Toronto.

W. R. Willis has the plumbing and the Pease Heating Co. the heating for new $7,000 residence for T. J. Madill, 105 Albertus Ave., Toronto.

John Colford has plumbing and heating for new dwelling costing $7,500 for T. McBrearty, 624 Madison Ave., Montreal.

The city council of Winnipeg has awarded contract for cast iron water mains to the Canada Iron Corporation at $7,512.

T. Maxwell has plumbing and heating for two dwellings costing $6,000 for J. Ewing, 1625 Bloor St., Toronto.

Tenders

The Andrews Wire Co., of Watford, Ont., contemplates erecting a new $50,000 factory at Strathroy, Ont., in the spring.

The council at Grand Mere, Quebec, is having plans prepared for the construction of a new waterworks system to cost $200.000. P. C. Neault, mayor.

By-law authorizing construction of a new waterworks system has been passed by the ratepayers of Courtright, Ont. J. W. James, reeve.

T. L. Church, chairman of the Board of Control, Toronto, will receive tenders until February 10 for supply of one or more centrifugal pumps having a capacity of from 16,000,000 to 20,000,000 Imperial gallons.

The town council of Drumheller, Alberta, contemplates constructing a sewer system and plans are to be prepared. It is expected that work will commence during the summer. Harold A. Brown is secretary-treasurer of the Utilities Board.

(Continued on page 36)

Waterworks Strike at Montreal

While Very Serious in Its Aspects, the Trade Does Not Report Major Difficulties—Settlement Reached

Montreal.—While the whole proposition looked ugly for a time, threatening to cut off the water supplies of a very large section of its citizens, the strike of employees engaged at the civic waterworks plant is practically a thing of the past.

Without notice, engineers, pumpmen, firemen and other mechanics struck on New Year's Eve, at midnight, and thus placed the city in a serious predicament. It was expected, of course, that, placed in this position, the city would necessarily have to treat with the men at once, grant them what they asked, and so give the workmen a favorable verdict, leaving in their hands a decision that might be used later to further the interests or demands of the mechanics.

Effect on Plumbing Trade

SANITARY ENGINEER made enquiries of master plumbers and steamfitters, asking if the strike had caused much extra work, and if difficulties had arisen from the bursting of water pipes, etc.; but all replies indicate that, excepting for numerous telephone calls, there was but a limited amount of new work traceable to the shortage of water pressure.

Difficulties were greatest in the "upper" levels of the city, the pressure of the various pumps being very much reduced, and the reservoirs suffering a loss in the average contents carried normally.

"There were many enquiries over the telephone, as to what to do when the pressure had gone off, and some thought that, because this had happened, they would not be able to run their heating apparatus," said one master to SANITARY ENGINEER. "But, after explaining to them that they need have no fear, as only a little water is required, there was no trouble."

Hiccough Story "Rot," Declares Chairman

"That is all rot," was the way Dr. Gordon Bell, chairman of the Manitoba Board of Health, characterized newspaper reports from Winnipeg that he had said that an epidemic of hiccoughs soon would sweep the country. "What I said in my address before the Sanitary Inspectors' Association at Winnipeg was that we had an epidemic of hiccoughs in Manitoba co-incident with the sleeping sickness epidemic," he said. "I further said that I believed the hiccough was a mild form of the sleeping sickness. In Winnipeg, we had about 80 cases of persistent hiccoughs, lasting from 48 hours to five days; but the epidemic is dying out just now, just as the more serious one is."

"And you don't think there is likely to be a country-wide epidemic of hiccoughs?"

"I have no reason whatever to believe there will be one. Apparently, one of those sanitary inspectors misrepresented me when he got outside, because nothing that I said warranted the statement attributed to me."

Earlscourt Seeking Public Convenience

Toronto.—Now that it seems certain that Danforth Avenue is to have a new public convenience, Earlscourt is getting fidgety about the chances of the one promised for this district some years ago. The matter was taken up and spoken of by many of the municipal candidates at the last election; in fact, one candidate promised, if elected, that he would make a special effort to have this very-much-needed convenience as soon after he was a member of the council. He was defeated; but other candidates who were elected are now expected to get busy and to make a noise in the City Council. Ald. George Birdsall, D. C. MacGregor and Brook Sykes have all promised to take care of this, and Earlscourt expects them to keep the agitation active.

Boiler Tubes Burn When Pump Stopped

Hamilton, Ont.—A somewhat unusual accident, of interest to men in the steam heating business, occurred at the Court House, when the pump which is depended upon to supply the boilers with water failed to work, and the boilers went dry. The tubes were badly burned in four boilers, and there was no heat in the buildings, with the result that court had to suspend temporarily.

It is supposed that the float which regulates the flow of water to the boilers became bound. On account of the registry office being connected with the heating system, there wasn't enough condensation from the court house proper to keep the boilers supplied after the pump failed to act.

Steamfitters were called in at once to insert new tubes. The repairs cost several hundred dollars.

Incorporations

Sanitary Plumbing Company, Limited, head office, Ottawa, capital $50,000, plans to manufacture and deal in plumbing supplies and equipment.

Toronto Cement Products, Limited, head office Toronto, capital $40,000, plans to manufacture and deal in sewer pipes and cement products.

Acme Burner and Heater Company, Limited, capital $200,000, head office Toronto, plans to manufacture and deal in heating equipment.

Work Not Retarded By Contractor's Failure

HAMILTON, Ont.—Twenty-three of the twenty-five houses being constructed for the Housing Commission left unfinished by the contractor who, as stated in a previous issue of SANITARY ENGINEER, resigned, are being proceeded with, according to Secretary Campbell. A request has been made for an estimate to complete one of the remaining two and the other is expected to be in the same category shortly.

The work of the commission has not been retarded by the failure of the contractor. Applications continue to come in daily. The commission now has nearly one hundred houses under construction.

Berry Must Sue if He Wants Damages

Toronto.—If John Berry is to collect anything from the city in the way of damages for alleged infringement of patent in connection with the appliance for chlorinating the water, it must be through the courts. This was the decision reached at a meeting of the Board of Control.

The original claim was for $77,000, Mr. Berry stating that the city was using machinery that infringed patents held by him. He offered to compromise on $35,000, but the Board, after being assured by Mr. Harris and other officials that there was absolutely no infringement, declined to consider any compromise, and intimated that Mr. Berry was welcome to proceed with legal action.

More New Homes Urgently Required

WINDSOR, Ont.—Urging civic action to relieve the housing situation, which, he said, was the most serious problem the Council would have to deal with this year, and which was retarding development of the city, Mayor Winter, in his address to the new Council, expressed hope that the Government Housing Plan would be taken full advantage of. Saying that more than 300 persons had already availed themselves of the Government's plan, the Mayor pointed out that approximately $700,000 was still available to the people of Windsor for home building.

Come Awa' Wi' Me and Hae a Wee Bit Curl, Sandy

Montreal Plumbers Again Throw the "Stanes" at Annual Bonspiel—A Rousing Afternoon in Which Winner Ballantyne Takes All the Prizes and "Beats It"

MONTREAL.—"The spiel's on Monday afternoon. Can you come along?"

Such a breezy invitation from John Watson came "over the wire" to SANITARY ENGINEER, and, boy, they were all there, believe it, and "wi' bells on," the sweet melody-producin' kind, what?

When it comes to curling, Montreal is the centre of gravity. Just come this way, if you don't believe it, ring up James Ballantyne, John Watson, Jim Griffin, Capt. Dan Bethune, Peter Ogilvie, Telesphore Latourelle—oh, well, it doesn't matter much which, they are all there with the glad hand when visitors arrive. And they will convey you to two of as pretty sheets of ice as you ever saw. Aye, and you can throw irons or granites; but take a tip—use the irons, mon, and you'll score.

Calls Game Early

One of the "boys" wanted to get away right after the holidays, and so the "Spiel" was slated earlier than usual this year. This proved desirable, and fortunate, for "we never had better ice," said Skip Watson. It was "just right," and, by way of contrast, it was a treat compared with the conditions of last February, when the rinks were "heavy."

It always is a satisfaction to get on the ice early in the curling season, and particularly so as it gives one an appetite for all available games that can be arranged for. The only drawback, usually, is that of ice being scarce, for there are hundreds of enthusiasts, and when the real "artists" begin to throw the "boulders," it is mighty hard to get free ice just when one wants it. Games there will still be this winter—just as many as can be conveniently scheduled.

These Rules Governed

Master Plumbers' Bonspiel.

Caledonia Rink, Dec. 29, 1919, 2 p.m.

Four rinks to play off in three draws. Draw 1—Four ends, two rinks playing on No. 1 sheet, and two on No. 2 sheet. Winner on No. 1 played loser on No. 2, and winner on No. 2 played loser on No. 1.

Draw No. 2

Consisted of 10 ends, the two rinks having the highest score in this playing off in the third draw, and which was for six ends. Winners of third draw declared the winners.

A feature of interest was that the third draw winners might be challenged to a subsequent match by any rink playing in this contest, thus promising a line-up for subsequent games. This contest, according to the rules, will be for not less than ten ends, ice and dates to be mutually agreed upon. The winners of this subsequent match will be known as the Champions of the Montreal and District Master Plumbers' Trade. All games were played with irons.

The Rinks

H. Lavigueur, lead; J. Greenough, second; H. W. Munday, third; D. A. Bethune, skip.

Telesphore Latourelle, lead; Thomas Bain, second; James Buchan, third; James Ballantyne, skip.

Arthur Noel, lead; W. Hughes, second; John A. Gordon, third; James Griffin, skip.

Belisle, lead; P. C. Ogilvie, second; Martin J. Quigley, third; John Watson, skip.

First Draw

Number Two Rink—James Ballantyne, 5; James Griffin, 3.

Number One Rink—D. A. Bethune, 1; John Watson, 4.

Number Two Rink—James Ballantyne, 10; D. A. Bethune, 6.

Number Four Rink—John Watson, 10; James Griffin, 3.

Finals—James Ballantyne, 8; John Watson, 6.

James Ballantyne has a record for "bringin' home the bacon" when it comes to curlin'. Not only so, but he carries off the medals in a way that—well, as one of the "fallen" said, "We all like him, he's a fine sport and plays a clean, clever game." And so, even though the prizes went to the winner, he was congratulated on his good luck and skill.

Warden-King, Limited, presented the first prize of four fine umbrellas. Now, when it's wet, the Ballantyne rink will play anyway, it doesn't matter a great deal what the weather conditions are.

As a mark of appreciation for his good work, the Thos. Robertson Co. presented Mr. Ballantyne with a gold penknife, and the James Robertson Co. supplied the four lucky winners with a box each of select Havanas.

Following the successful "fishin'" of the afternoon, Skip Ballantyne gathered his increment together and "beat it" for Winnipeg, and although his whereabouts are not exactly known, he promises to return ere long. More swift matches are likely to follow before the close of the present season.

Heard on the Side

John Gordon again officiated as "butler." The cupboard could not be called "dry," but most of the contents were "extra dry," but all wool and a yard wide.

"Come awa' noo and gie me a draw; another like that and we're in the winners' class, boy," from John Watson.

Belisle was said to be "on" to the game from beginning to end, and threw some nice stanes, though not an old-timer.

If the Bon Entente needs any support, it will do well to look up the Montreal Master Plumbers. Teles. Latourelle and his confreres are right there with a will.

Peter Ogilvie found the game a great solace after weary nights spent in wrestling with the Montreal plumbing by-laws.

President (Capt.) D. A. Bethune says, "Better luck next time, boys."

Martin Quigley likes a certain kind of race awfully well. Just wait till he gets a "hand in" on those stanes, and there'll be stars in the record of Watson's rink.

It was fine ice, but not the right day of the week for H. W. Munday.

Thos. Bain wanted to say, "Stop your buckin'," to Ballantyne's "third," but 'twas no use.

The "Hughes" shed by the bright sun were welcome.

Greenough is in his second winter, but bids fair to become a winner.

Ninth Annual Convention of the Canada Metal Company, Limited

THE ninth annual sales convention opened at the head office of The Canada Metal Co., Limited, in Toronto.

Forty-five salesmen were assembled when Mr. Harris, Sr., president and general manager of the company, gave an address of welcome, in which he stated what a great pleasure it was for him to once more meet them all together at the home office.

He further added that whilst 1919 had been a most strenuous year, and in fact the biggest and best year, yet all indications point to 1920 being one of the most prosperous for everybody in the history of Canada.

Mr. Harris continued that he wished to impress upon them that their watchword was SERVICE and it was upon the foundation of service that the company's business had been built.

Mr. Harris, Jr., then took charge of the convention. In his opening remarks, he pointed clearly to the object of the convention. He stated this was a sales promotion convention and it is quite easy for any person to sit still and look wise, yet what was required of every individual in the room was real thought later expressed in words.

During the progress of the convention, the sales for the year would be fully dealt with in special reports. In this report, as each individual salesman was criticized, strong points and weaknesses would be shown, for no matter how excellent results might be attained by any individual salesman, yet upon careful investigation some weak spot might be discovered.

He further added there are two kinds of criticism. Our criticism during the convention must be taken as constructive. Constructive criticism is good, because many times it is the means of improving the thing criticized. It analyzes, weighs, compares and scrutinizes from every angle.

During Monday's session, many leading lines were discussed and practical demonstrations were given of the company's manufactured products.

The salesmen were shown the pure pig lead being melted and poured into slabs, and the different stages of rolling sheet lead to different thicknesses.

They also witnessed the process of manufacture of lead bends, pipe of various sizes, nails, laundry tubs, etc. A practical plumber also gave demonstrations of wiping joints with different grades of solder.

Monday evening, the whole staff was entertained to dinner at the Queen's Hotel, and after dinner, Mr. Harris, Jr., made a presentation to every one of a life insurance policy, as he stated the presentation was made as a slight token of appreciation from the firm for the loyalty of its managers and salesmen and to commemorate the largest year's business in the firm's history.

Votes of thanks were passed unanimously to Mr. Harris, Sr., and to Mr. Harris, Jr., for their kind consideration to the employees. A vote of thanks was also passed to Mr. H. C. Crow for the able assistance which he had given to the managers of the branches and the salesmen throughout the past year. Mr. Harris, Jr., arose and stated that he would like to see his name and Mr. Harris, Sr.'s name as president of the company joined in that resolution as they all thoroughly appreciated the value and assistance which Mr. Crow rendered from time to time to everyone. The evening was spent at the Royal Alexandra and finished a most enjoyable day.

DEVIL NO. 1.—Is on the job bright and early. Whispers: "No use trying to see your man before 9.30—give him time to open his mail." And if you waver for an instant he straightway devours the front end of your precious morning.

DEVIL NO. 2.—Get into the game at mid-day. "It is now a quarter to twelve," he adroitly suggests. "If you see your man now he will be hungry and will bustle you out so as not to be late for lunch." If you agree to this and knock off for lunch yourself he will tell you that "You won't see your man before 2 o'clock. He won't be back."

DEVIL NO. 3.—Appears early in the afternoon and whispers: "It is getting dark; you can't start an interview when your man will be tired and inattentive." And before you know it this third imp will gobble up the other end of your day.

DEVIL NO. 4.—Is perhaps the worst of all. His day is Saturday. "You can't do anything on Saturday," he will say; "it's a short day, and no one will have time to listen." And so without even allowing you to start out will swallow up the whole day.

BUT REMEMBER, THEY ARE LIARS, EVERY ONE.

Working Out Plan For New Housing Scheme

Winnipeg.—The abolition of the civic housing scheme was decided upon at a meeting of the Finance Committee when a delegation from the Housing Commission, headed by H. C. Thompson, city treasurer, declared that it was impracticable under existing conditions. The committee decided to replace the scheme with a new system, the details of which are being worked out.

HAVE ISSUED CALENDAR

The American Zinc, Lead and Smelting Company, 1001 Pierce Building, St. Louis, Mo., has issued to the trade a most attractive calendar. It is made of enameloid and the color scheme is blue border with gold and white interior. The calendar pad covers three months and is so arranged that one can refer either backward or ahead without turning any of the leaves. The dates of the present month are printed in red, while the dates of the month past and the month to come are printed in blue.

PLAN TO SPEND $250,000

NORTH SYDNEY, N. S.—It is announced by the Western Union Telegraph Company that $250,000 has been set aside for the purpose of assisting married employees to erect homes.

The illustration shows the forty-five salesmen of the Canada Metal Company, Limited, who attended the ninth annual convention held in Toronto.

May Be Radical Revisions in Steel Prices and Delivery in July

The whole situation in regard to steel prices and delivery at the present time is probably without a parallel in the history of the trade.

Discussing the outlook with SANITARY ENGINEER, *Mr. A. T. Enlow, president of the Dominion Sheet Metal Corporation, Hamilton, Ont., said:*

In the spring of 1919 almost every producer of steel was vigorously soliciting trade, and in many cases offering inducements below the reduced prices established March 21, 1919, in the U.S.

Since then a most demoralizing steel strike killed 80% of the possible production for a period of eight to twelve weeks, followed immediately by a coal strike which prevented resumptions and kept down production for another six to eight weeks.

SERIOUS SHORTAGE

Largely due to these causes there is a serious shortage of steel in all forms, and the characteristic result is a wild rush to buy at any price. The market is the most peculiar in the history of the trade, inasmuch as mills all claim to be sold up and prices are nominal only, yet immense tonnages are being booked through "underground channels" at extremely high prices, and accordingly most producers are now really sold up for many months.

Now a buyer will only take delivery of such tonnage while the "Boom" is raging. The least sign of a decline and he talks cancellation or will refuse to accept when shipped, hence if anything should occur to disturb the general financial situation in the U.S. all these tonnages will vanish overnight, and present high premiums will disappear.

RADICAL REVISIONS

Is seems reasonably certain that present conditions will prevail until July at least, but beyond that date there is every prospect of radical revisions both in price and delivery.

Steel alternates between the dual roles of "Prince and Pauper" and the latter's turn comes next.

I would say that the student of business trends will buy sparringly at present prices, because better conditions for the buyer are inevitable and possibly much sooner than is generally expected.

NEW GOODS

BOILER SEAL

The Economy Scale Remover Co., Inc., Chicago Heights, Ill., are putting on the market a new preparation, which they call Economy Boiler Seal. They claim it will immediately stop leaks in boilers, and that it is equally effective in both tubular and cast boilers, also that it will stop all leaks in from ten to thirty minutes' time, thus permitting continuous use of boiler.

The main features, as pointed out by the manufacturers, are that it will not injure or in any way affect the efficiency of any boiler or hot water radiator. Its formula is compounded on scientific lines in order to save the cost and instalment of new castings, and also to save time and delay, which is often not only inconvenient, but frequently disastrous; also to stop leaks permanently, as well as removing the scale and incrustation from walls of boilers, so that same may be easily washed out with hose.

The Boiler Seal is claimed to repair all leaks in steam heating boilers, although a much greater amount is required in hot water boilers, in order to enable it to coat the water ways of the boiler, so as to prevent rust pit leaks.

Another feature is said to be that it does not crystallize under fire, and it is not necessary to know what sections or tubes are leaking or loose.

Boiler Seal

Campaign Against Deceptive Advertising

NEW YORK, Jan. 29.—With the aid of the National Vigilance Committee of the Associated Advertising Clubs of the world, and local vigilance committees and better business bureaus of local advertising clubs, the War Department is inaugurating a campaign against the deceptive advertising and sale of goods by merchants operating what they call Army and Navy Stores.

At the request of B. A. Mattingly, chief of the sales promotion section of the War Department, the National Vigilance Committee of the Advertising Clubs has just issued a bulletin to local advertising clubs, pointing out some of the dangers to the public in connection with such operations, and suggesting action on the part of local committees. In part this bulletin is as follows:

"The Government is retailing the surplus army and navy goods through its twenty-five stores distributed over the country, known as 'Army Quartermaster's Retail Stores Division.' Unscrupulous men are everywhere taking advantage of this situation, imposing their self-named 'Army and Navy Stores' upon an uninformed public. Only governments have armies and navies. The use of either of these words in the trade name of a store may create the impression at this time that such an establishment is an official outlet for Government goods."

Will Assist Merchants in Better Accounting Methods

Saskatchewan Branch of R.M.A. Plan to Help Members in Many Ways—Educative Moving Pictures and Assistance in Preparing Advertising Part of the Scheme

F. E. RAYMOND, secretary of the Saskatchewan Retail Merchants' Association, was one of the delegates from the West at the special meeting of the Dominion board of the R.M.A. last week. The Saskatchewan board, according to Mr. Raymond, has a very aggressive campaign mapped out for the future to assist their members.

"We are making plans," he said to SANITARY ENGINEER, "to establish district organizations, each to be looked after by a district secretary familiar with the retail trade, who will be able to assist merchants to better accounting methods and to prevent or at least cut down bad debts. We have already one of these organizations in operation with Assiniboia as the centre. These districts will be about 100 miles square. The district secretary will travel throughout the district, hold meetings, arrange list of delinquent accounts and 'slow pays,' so that members of the organization will benefit by knowing exactly where each consumer in the section stands in regard to payment of his or her account."

"What is the fee charged the merchant for this service?" Mr. Raymond was asked.

"Our Provincial fee is $15 per year, having recently raised from $12. The district fee is $40, but the service is of an intensive character and as it means, to a large extent, the elimination of bad debts, it is easily worth that and more to each merchant who is a member.

Educative Moving Pictures

"It is also our intention, if possible, to arrange a series of educative moving picture shows for the benefit of members in each town. For instance, we will endeavor to secure films from manufacturers showing the manufacture of their products from the raw material to the finished article.

"Another service which we are giving our subscribers is a service on retail advertising. At our head office in Saskatoon we have a manager in charge of this work who prepares advertisements for local newspapers, circular letters, posters, bills, etc. We charge, of course, a fee to cover cost of this service. We find many of our members availing themselves of this service, which is proving quite popular throughout the province."

The Western delegation to the special meeting of the Dominion board at Ottawa included, besides Mr. Raymond, J. A. Banfield, president of the Dominion board; Mr. Humphries, of Humphries & Stiles; Mr. Loftus, solicitor for the Manitoba branch; W. P. Ball, vice-president, Saskatchewan Provincial board, Assiniboia, Sask.; G. S. Hougham, Vancouver, Provincial secretary of the British Columbia Association; Mr. McRobie, Vancouver, president of the B. C. Association; Jas. Kellas, of Medicine Hat, Alta., provincial secretary for the Alberta Association, and Mr. Box, president, Manitoba Provincial board, Souris, Man.

Will Ask Women to Do Their Shopping Early on Saturdays

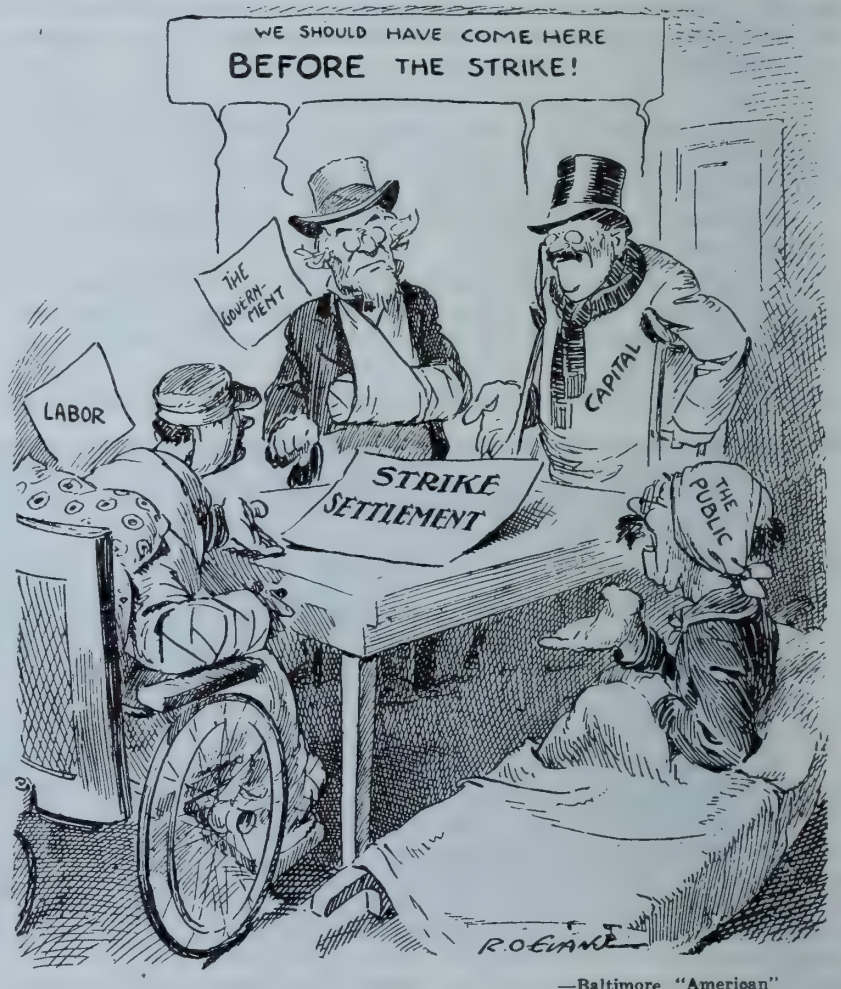
Clerks' Association at St. John, New Brunswick, is Behind Movement to Secure a Saturday Half-Holiday—Plan to Have Employees Paid on Friday Nights

ST. JOHN, N.B.—At a meeting of the Clerks' Association the matter of increased membership was discussed. This association is endeavoring to secure Saturday afternoon as a half-holiday, among its different projects.

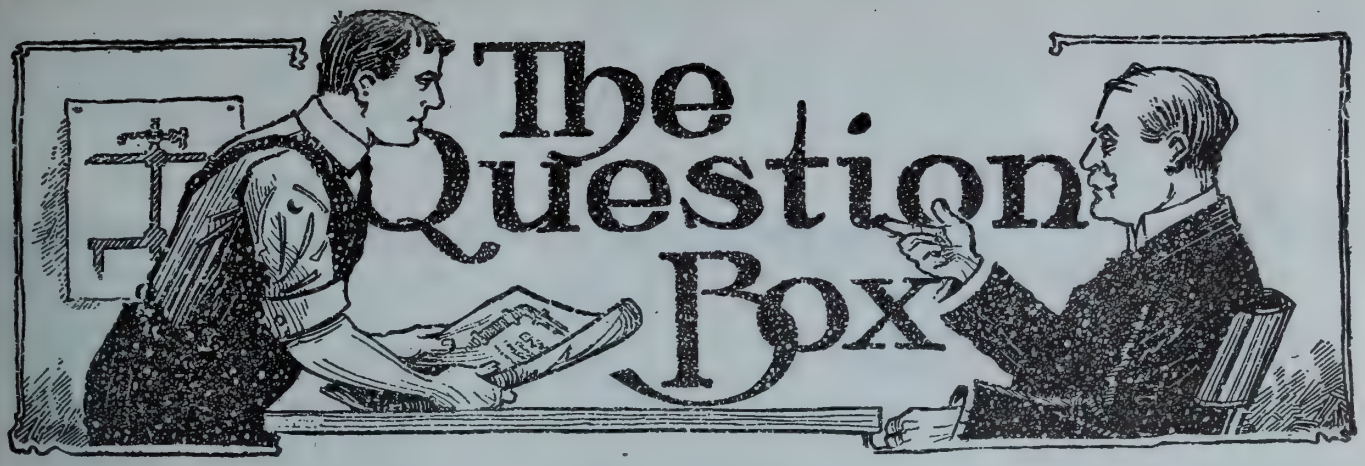
A resolution was passed that the members appeal to the Women's Council, the Young Women's Patriotic Association, the Trades and Labor Council, and other bodies about the city, and ask that their members do their shopping before 1 o'clock on Saturday, so that the shop employees might benefit by the half-holiday.

In the case of trades and labor, the request is to be made to the employers that their employees be paid on Friday night in order that there may be more general co-operation with the idea.

THE PRICE OF EXPERIENCE



—Baltimore "American"

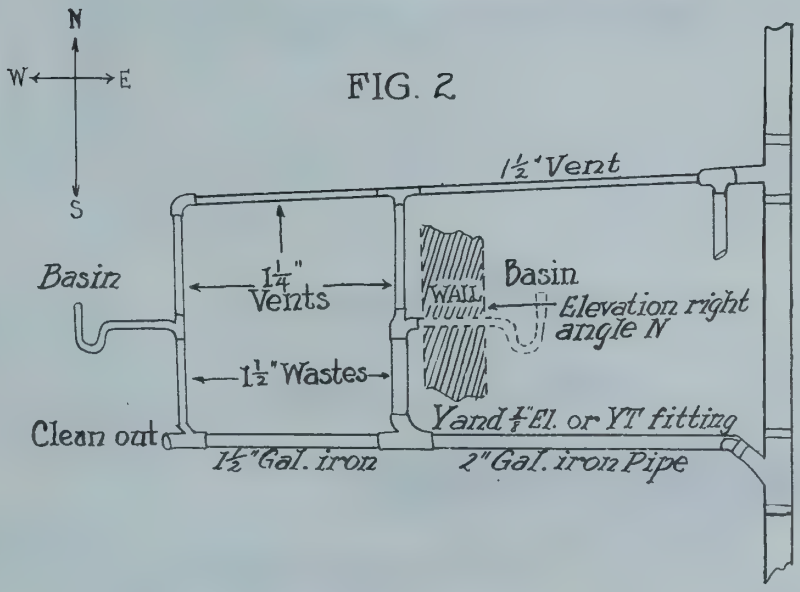


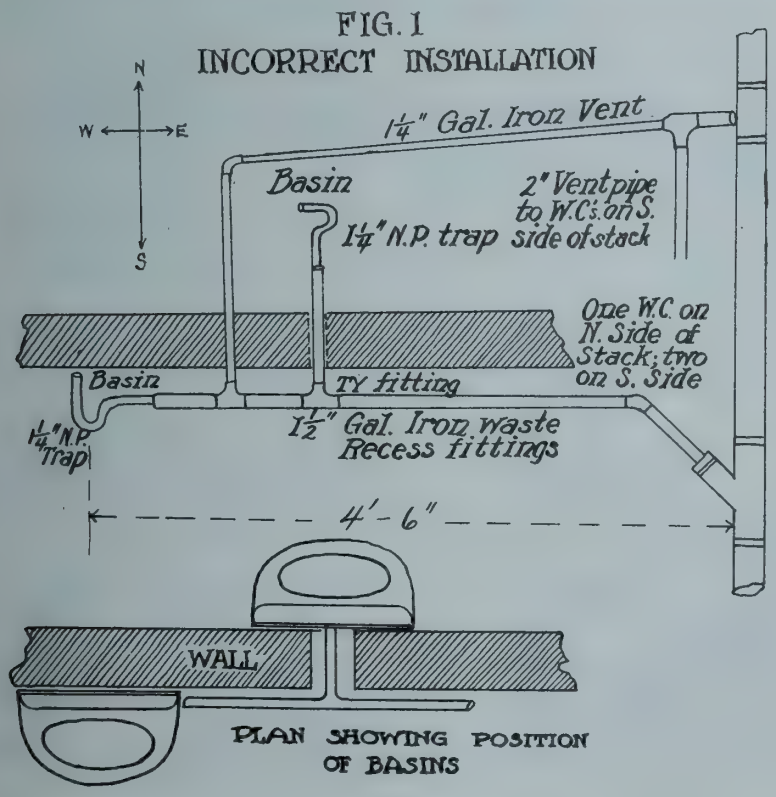
The plumbing inspector of a Western city sends the following:

Editor, SANITARY ENGINEER:

A short time ago I was called to inspect and test a job in one of our offices here, and the installation shown in Fig. 1 is what I was called upon to pass. I turned it down as not being installed in a practical manner, nor according to our by-law regulations. The party who installed the work refused to change it, claiming that it complied with the city ordinance and was a "perfect" job. I had, eventually, to invoke the assistance of the local magistrate to make him comply, although he maintained, and still maintains, that the job was "perfect."

I would like your candid comment on Fig. 1 through SANITARY ENGINEER, and if it in any way complies with our regulations. I enclose sketches showing three different ways they could have been installed according to our by-law.





The faults I found: Waste line for second basin should be 2 in.; one basin not vented; 1¼ inch vent installed to carry two basins, instead of 1½ in.; a T Y fitting on branch connection no clean-out. The whole installation appears to me a "skinned" job, but what gets my goat, as the saying is, for a practical man to maintain and insist that the job is right, is ridiculous.

The Answer

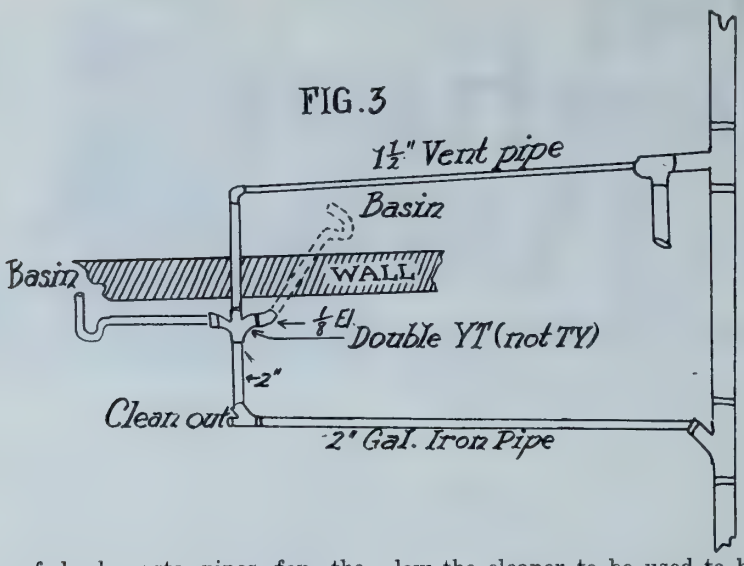
The work shown in sketch No. 1 does not conform to clauses 8, 17, 20 of by-law, and the work has been installed in a very unsanitary manner and not according to good practice.

The T Y used for basin No. 1 is objectionable to clause 8, which states that all branch connections shall be made with Ys and ⅛ bends, besides the arrangement of wastes is liable to allow part of discharge from basin No. 2 to pass into trap of No. 1.

Trap Not Vented

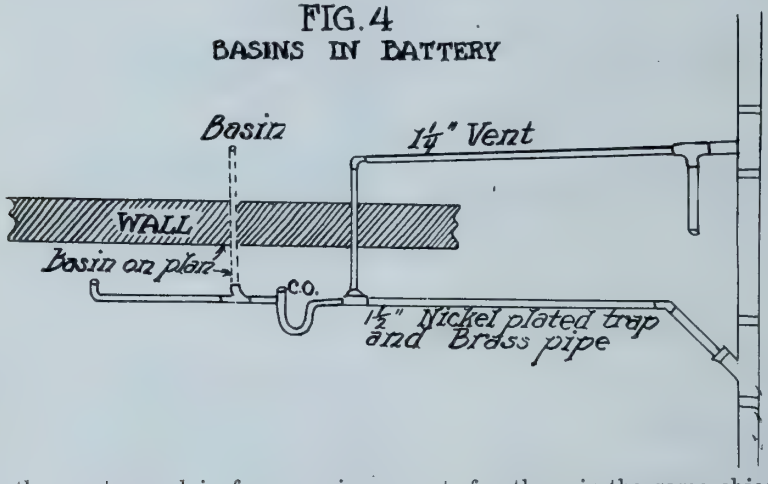
The arrangement of vent leaves one of the traps not vented, as clause 17 states that a 1¼ inch vent may be used for only one 1¼ inch trap, then one serves two 1¼ in. traps; and clause 20 states that all basins shall be properly

trapped and vented. The amendment passed in 1913 has no bearing on the case, as there is no clause which speaks of sizes of lead waste pipes for the various fixtures.



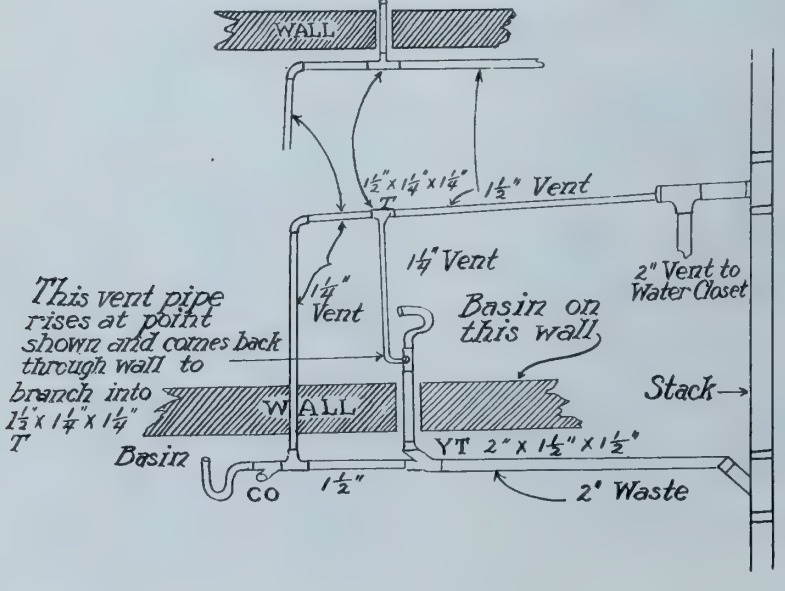
The Ideal Way

Sketch No. 2 is an ideal way of arranging the wastes and is far superior to either 1, 3 or 4 sketches. The only alteration we would suggest is to interchange the Y and ⅛ bend used on waste of basin No. 2, that is, to use the rake-off Y to receive waste and place the ⅛ bend on the horizontal. This would allow the cleaner to be used to better advantage.



Is Not So Good

Sketch No. 3 is not a good arrangement, for there is the same objection to the double T Y as there is to the single T Y of sketch No. 1. That is, the discharge of one basin is liable to and often does pass into the trap of the other basin, preventing them being self-cleansing. Neither do we see the necessity of increasing the waste to 2 in., as a 1½ in., well washed, is better than a 2 in. only half washed.



Not Good Practice

Sketch No. 4, while perhaps within the provisions of the by-law, is not according to good practice, as there will be a constant current of air passing from one basin to the other through the coated and foul waste pipe, which is sure to bring foul odors into the room.

We are sending you copy of the proposed new plumbing regulations for the Province of Ontario.

TENDERS

(Continued from page 29)

The council at Fonthill, Ont., is taking up the question of installing a waterworks system. Councillor Albert Learn, chairman of committee.

Extensions to the waterworks system costing $500,000 are planned at Windsor, Ont.

Tenders will be received until March 5 in connection with the erection at Calgary of a new post office. J. M. Stevenson, of Dowler and Stevenson, architect, Calgary.

Plans for a new school to cost $25,000 are being prepared at Carleton Place, Ont. A. R. Peden, secretary of Board.

Plans are being prepared at Hull, Quebec, for a new technical college to cost $150,000. R. Lafond, president of the Board.

Prices of plumbing, heating and electrical work are wanted by H. Lendon, Leamington, Ont., in connection with erection of new business block costing $15,000.

Plans are to be prepared for a new theatre at Regina to cost $250,000 for the Trans-Canada Theatre Co., R. J. Lydiatt, Calgary, vice-president.

Plans are to be prepared for a $1,000,000 hotel at Windsor, Ont., for the Border Cities Hotel Co., H. H. Walker, Walkerville, Ont., president.

The Owen Sound Housing Commission, Owen Sound, Ont., wants prices on plumbing and heating equipment in connection with new dwellings to be erected at a cost of $200,000.

L. A. Carrothers, Hydro offices, London, Ont., is preparing plans for new school to be erected at a cost of $90,000.

The Nova Scotia Steel & Coal Company plans to erect 100 dwellings for workingmen at Thorburn, N.S., at a cost of $200,000. Prices wanted on all plumbing and heating equipment.

Market Conditions and Tendencies

Statements Regarding Supplies and Trend of Prices

THE MARKETS AT A GLANCE

SHARP advances in many important commodities are again noted. Among the most important advances are: Well pumps, which are about 15 per cent. higher. Eavestrough and conductor pipe, metallic shingles and siding, also the sundries for applying. Prices on fittings have been withdrawn and higher prices are pending.

Soil pipe prices are held firmly and higher prices may be announced. The shortage of pipe skelp continues to be a factor in the pipe situation. Enamelware is reported to be coming in in larger quantities and heavy demands are looked for during the present year. The high rate of exchange is a big factor in the higher prices charged.

Business, generally, is reported brisk, notwithstanding the high prices being charged. The present slow movement of freight is said to be a drawback, although it is not an unusual situation for this season of the year, due to the cold weather and heavy snowfalls.

Many are wondering what lies beyond the second half of the present year in the way of price changes, although some are looking forward with confidence to a busy, prosperous year.

TORONTO, Jan. 30.—Continued advances in many important commodities are noted. The list of advances include well pumps, eavestrough and conductor pipes, metallic shngles and sidings, also the sundries for applying.

Prices on fittings have been withdrawn and higher prices are pending. Soil pipe prices are holding firm and may be advanced. Pipe skelp continues to be scarce and is a strong factor in the present pipe situation.

The enamelware situation has improved and better shipments are reported. The demand is expected to be very heavy for this line. Range boilers are none too plentiful, owing to the difficulty in securing raw material, it is stated. However, notwithstanding the high prpices being charged, business is very brisk for this season of the year and all are looking forward to one of the best years in their history.

Metal Siding Prices Revised Upwards

METAL SIDING.—This commodity, in harmony with other galvanized lines of the same category, is now reported at new and higher prices. The prevailing price on galvanized metal siding is quoted at $9, while the painted remains the same as the former price of $6.50.

Metallic Shingles Up; Galvanized $10.50 sq.

METALLIC SHINGLES.—Owing to high prices of galvanized iron, also the scarcity, manufacturers state they have been forced to raise their prices on this commodity. The new prices on metallic shingles are quoted as follows: Galvanized is selling at $10.50 per square; painted is selling for $8 per square; while the sundries that go with this class of roofing have advanced, approximately, 2 to 5 cents a foot.

Well Pump Prices Jump About 15%

WELL PUMPS.—Higher prices have been announced on well pimps. The new advance shows an increase of, approximately, 15 per cent.

Salamanders Showing a Heavy Demand

SALAMANDERS are beginning to show considerable activity. This is said to be due to the changeable weather and many are requiring these to dry up the plaster of walls, etc.

The makers say that on account of the shortage of raw materials, they experience difficulty in supplying the present demand. The grates are said to be very hard to procure owing to the shortage of raw material and labor; the foundries being rushed to capacity with other work, it is said.

Range Boilers Firm; Are Selling Well

RANGE BOILERS are holding firm. Owing to the scarcity of raw material, this commodity has not been to plentiful and higher prices have been predicted for the future. Business continues very good. Some believe that the extra demand for what is usually a quiet season of the year is due to the housing situation, as in some cases people have been moving into unfinished houses, and are naturally anxious to rush to completion.

The present prices are as follows:

Range Boilers—	Standard	Ex. Heavy
30-gallon	$12 00	$14 00
35-gallon	14 00	16 00
40-gallon	16 00	18 00
52-gallon	22 00	25 00
66-gallon	35 00	38 00
82-gallon	40 00	47 00
100-gallon	50 00	58 00
120-gallon	60 00	67 00

Boiler Tubes Firm; Slow Deliveries

BOILER TUBES.—The demand for this commodity continues to be very brisk and jobbers state that the cold weather has materially assisted sales, although they claim that the delivery from the mills has been very poor.

The present price remains very firm and the tendency is reported to be of an advancing nature and higher prices would not surprise many.

The following are the present prices:

	Per 100 feet	
BOILER TUBES—	Seamless	Lapweld
1 inch	$27 00	$.....
1¼ inch	29 00	.....
1½ inch	29 50	.....
1¾ inch	32 00	27 00
2 inch	31 00	26 00
2¼ inch	35 00	28 00
2½ inch	43 00	32 00
3 inch	48 00	40 00
3¼ inch	.....	47 00
3½ inch	60 00	44 00
4 inch	75 00	56 00

Oakum Firm; Prices Remain Steady

OAKUM.—Business, although seasonably quiet, is reported to be heavier than the same time last year. The outlook is said to be bright for a large turnover during the present year.

The present quotations are as follows:

	Per 100 lbs.
Best American	$22 00
Clipper, spun	22 00
Do., unspun	20 50
Plumbers' spun	10 50

Eavestrough and Conductor Pipe Higher

EAVETROUGH AND CONDUCTOR PIPE.—An advance has been proclaimed on each commodity. This has been intimated for some time in these pages. The new higher prices are approximately 10 per cent. higher than the previous quotation. Jobbers state that this is due to the scarcity of galvanized sheets, also to the higher cost of production. The new prices are as per current market quotation pages, and are marked at net list.

PIPE (Conductor)
Plain

2 in., in 10-ft. lengths, list	8 00
3 in., in 10 ft. lengths, list	9 70
4 in., in 10-ft. lengths, list	12 80
5 in., in 10-ft. lengths, list	17 50
6 in., in 10-ft. lengths, list	21 30

F.o.b. Toronto, Ottawa, Oshawa.
Net list.

Enamelware Firm; Better Deliveries

ENAMELWARE.—This commodity is said to be coming in in much larger shipments, and all indications point to a heavy demand during the present year. Some believe that if the exchange situation is adjusted there will be a big European demand for goods of Canadian manufacture, and state that if production is no greater than last year and the European demand continues, higher prices may be the result.

The following are the present quotations:

Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide	$37 05
Bath tubs, 5½ ft.	41 20
Lavatories—	
17x10" Apron F139 or P4745	11 05
18x24" Apron F154 or P3845 or P3847	17 00
18x21" Apron F169 or P4205	12 70
18x21" Roll rim F197, F199 or P4655-6	11 10
17x19" Roll rim F241 or P4345	9.05
Sinks, roll rim, 18 x 30 in.	16 60

Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$5 40	$5 35	$5 30
18 x 30	6 20	6 50	6 10
20 x 30	7 10	7 05	7 00

Sheets and Plates Scarce; Many High Prices Quoted

SHEETS AND PLATES.—Prices are nominal on this commodity and the scarcity is very pronounced.

Jobbers claim the demand was never so heavy as at the present time, and expect the situation might be slightly worse as the warmer weather comes on, figuring on the present demand being larger than the supply, which is usually the reverse this season of the year.

Jobbers express the situation on this commodity as tight, and claim that the scarcity is still prevalent. A new factor recently has entered the situation in the way of shortage. As is often the case during the cold weather and heavy snow storms, freight deliveries are seriously delayed, making any deliveries that were ready to ship hard for them to be transported.

The following are some of the prices quoted, although in most cases these are nominal.

BLACK SHEETS—

14 gauge	8 60
16 gauge	8 00
18-20 gauge	7 45
22-24 gauge	7 45
26 gauge	7 60
28 gauge	7 70
3-16 inch plate	
¼-inch boiler plate	

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

GALVANIZED SHEETS—

	Premier		Apollo	
10¾ oz.	$9 50	$10 00	$9 50	$10 45
U.S. 28	8 10	9 60	9 10	9 75
U.S. 26	8 80	9 30	8 80	9 40
22 and 24	8 65	9 15	8 65	8 20
18 and 20	8 50	9 00	8 50	9 00
16	8 35	8 85	8 35	8 80
12 and 14	8 20	8 70	8 20	8 55

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga. when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

Corrugated Sheets Have Been Advanced

CORRUGATED SHEETS are reported at new and advanced prices. The pronounced shortage of flat sheets is said to be the main reason, and the high price of sheets cannot help but be reflected in the price of corrugated sheets, it is stated. The demand, although seasonably normal, is said to be heavier than the supply. The following are the present quotations:

Corrugated Sheets	Per 100 square feet Gal'zd.	Painted
No. 28 gauge	$9 25	$7 75
No. 26 gauge	10 00	8 75
No. 24 gauge	15 00	11 00
No. 22 gauge	17 50	13 75
No. 20 gauge	21 00	17 50
No. 18 gauge	26 50	21 50

Discount, 7½ per cent.

Pipe Fitting Prices Have Been Withdrawn

PIPE FITTINGS.—The prices on this line have been withdrawn, pending an advance, it is stated, and new higher prices will soon be issued. This is said to be due to the scarcity of raw materials, also the higher cost of labor and other factors.

SOIL PIPE, although sellinfi at a firm price, has so far shown no change. However, it is the belief of many that higher prices may take effect in this commodity.

The prices shown herewith are those ruling at present. The new prices will be announced in a later issue.

Medium and extra heavy soil pipe, 2, 3 5 and 6 in.	10%
Medium and extra heavy soil pipe, 4 in.	15%
Medium and extra heavy soil pipe fittings, 2 in. to 6 in.	25%
8 in. extra heavy pipe and fittings	5%

Quick opening	34%

Lead and Zinc Products Firm; Unsettled

LEAD AND ZINC PRODUCTS. — These commodities continue to rule at a firm and somewhat unsteady price, although the basic metals are of a fluctuating nature. The demand is said to be very good for this season of the year and a good volume of business is being looked forward to for at least the first half of the present year. The following are the quotations:

Lead pipe, list, per lb.	0 15
Lead waste pipe, list, per lb.	0 16
Do., over 8 inches, list, per lb.	0 17

Scrap and Waste Materials Hold Firm

SCRAP AND WASTE MATERIALS.—The price remains very firm on these materials and are showing strong undercurrents. Higher prices all through the list would not be unlooked for.

The scarcity of waste paper, rags and like materials are said to be causing paper industries, etc., no little inconvenience, and manufacturers of products from these materials claim that the higher prices they are forced to charge are mainly due to this prevailing shortage and other factors.

The present quotations are as follows:

Iron and Steel Pipe Firm; Price Unchanged

WROUGHT PIPE.—A good demand is reported for pipe, both wrought and steel, and the situation is said to be a firm one. The skelp situation has shown little improvement and the scarcity is being felt. Manufacturers and jobbers are predicting large demands for the year, which are already beginning to be noted, and in their opinion one of the largest yearly turnovers of this commodity is looked for, providing the raw materials come forward in sufficient quantities to meet the demand.

The following are the present quotations:

WROUGHT PIPE

Darling in St. Louis Globe-Democrat

How do you suppose they are going to coax him away if everybody keeps on feeding him?

Ingot Metals Firm; Stocks Reported Light

INGOT METALS.—No changes are reported, although the present list is firmly held. Stocks are said to be light, and a fair amount of business is being offered. Every indication points to a big year, providing the stocks are available to turn over.

COPPER remains unchanged. A good demand is noted, the present price being quoted at 25 cents per pound, which is said to be a reasonable figure.

TIN is showing a good seasonable demand, although the price remains unchanged and is quoted at 73 cents per pound. Stocks are reported low.

SPELTER continues to remain unchanged at 12 cents per pound, with a limited demand offering.

LEAD shows no change in price, although recent figures have been of a fluctuating nature. The present quotation continues at 10½ cents per pound.

ANTIMONY.—A fair movement is noted on antimony, and the demand continues to be a fair one. The present price is 12 cents per pound.

ALUMINUM remains quiet, with low stocks reported; the price being quoted is 34 cents per pound.

Manager Wanted, for Canadian National Newspaper & Periodicals Association

To act also as Secretary-Treasurer, and carry on the Association's general work, under the direction of the President and the Board of Directors, study the interests of the various classes of publications in the Association, and plan and carry on promotion work in their interests. Applicants should understand advertising and merchandising.

Apply in writing only, stating age, full details of experience, and salary expected. Applications will be treated as confidential.

Address Acton Burrows, President, Canadian National Newspapers & Periodicals Association, 70 Bond Street, Toronto.

TRADE MARK J.M.T. REGISTERED A GUARANTEE OF QUALITY

An Injector that You'll be Proud to Sell—

Morrison

Beside being a well-known and ready seller, this efficient injector insures satisfied customers.

Injectors that offer 40 pounds more field. A reliable, trustworthy injector that sells as well as it operates. Morrison High Pressure Injectors operate successfully on 20 lbs. low to 220 lbs. high steam pressure, from 4 to 300 horse-power, and are made in sizes from ⅜ inch to 2 inch.

Supreme in the mechanical field, it is one of a successfully selling line of products that you can sell with confidence and profit.

Pipe and the Public Welfare

By R. C. McWane

A Book of the Greatest Value to Every Sanitary Engineer

Every sanitary engineer should possess this book. It deals with pipe making of all kinds, cast iron, wrought iron, steel, wood and tile pipe. It is valuable because it gives a true idea of how much service pipe should give under various conditions.

Price $1.00 Postpaid

The MacLean Publishing Co., Limited, Book Dept.
University Ave., Toronto

OPEN VIEW NO. 10-A

The CEILING PLATE that's better

TOP VIEW NO. 10-A

THE NO. 10—A NARROW FLANGE PLATE—IS A STEEL HINGED PLATE. FLANGES ¾" WIDE. HIGHLY FINISHED. ESPECIALLY DESIGNED FOR TWIN CONNECTION "NARROW."

The split ceiling plate is coming more and more into use than ever and ALWAYS GIVES A NICE FINISH, because it can be attached to mains and risers at the very last, and is not exposed during completion of a building on the floors.

High quality at the right price.

Gem No. 4.

Gem No. 4 Automatic Air Valve

Made from the best brass obtainable. Pressed shell and pressed brass base which eliminate danger from blowholes, which is a fault with cast bases.

TORONTO

COME ON IN!

You are invited to become one of the Canadian Society of Domestic Sanitary and Heating Engineers.

Every man, firm and corporation engaged in the Plumbing and Heating business throughout the Dominion of Canada owes that duty to themselves first, and to their brother craftsmen second.

The need of an organization of this sort is so obvious that no great amount of argument should be necessary with a broad-minded man of business.

The need of Association has been proven and the existence of the Canadian Society justified in so many ways in the past, that every man of the Plumbing and Heating craft should see the necessity of supporting it, and should be proud to join it.

Commence a local organization at once, by getting in touch with your nearest competitor.

DO NOT HESITATE. DO IT NOW and put the weight of your influence and support with others, whose interests are similar to your own, by mailing your name or enquiring for further information to our Secretary.

ALL FOR ONE and ONE FOR ALL

Yours for co-operation,
FRANK R. MAXWELL,
President

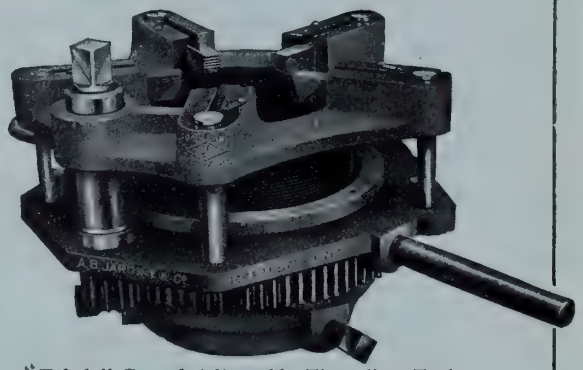
JARDINE and TOLEDO PIPE THREADING TOOLS



"Toledo" Geared Adjustable Threading Tool, No. 2½. Capacity 2½ to 6 in. inclusive. Weight 120 lbs.

THE ratchet feature of Jardine and Toledo Tools permits their being used to thread pipe which is already in place, no matter how awkward it may be to reach. The Jardine and Toledo have no cams or jim cracks to get out of order; and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

FORWARD!

A Little "Straight Talk to the Canadian Plumbing Trade

"THE FORWARD MOVEMENT" is just now enlisting the sympathy, energy and financial support of Canadian people who are earnestly desirous of advancing standards of religious and moral development to a higher and more stable position in our national life. It is a splendid concrete example of "practical idealism" worthy the co-operation of every member of our communities.

There is a splendid tendency noticeable in these days wherever business men gather together to voice a similar creed for business uplift and for the promotion of the highest principles in daily work and in trade endeavor. Surely we should all rejoice at such a development, not of sounding cant or empty preaching, but of practical, visible effort to better conditions.

In our own particular field we must agree that the possibilities in this direction are unlimited. With the steadily mounting prices for all supplies and labor there is a more insistent demand for the very best results. These results can be obtained only by close attention to detail, by giving the very best **"service"** obtainable, by following with particular care the rule that "quality" must mark our work, by being certain that "efficiency" is the keynote of our daily occupation.

The health and happiness of a very great proportion of our population depend very largely upon the successful efforts of Sanitary Engineers. Continuous association with the men who carry out this important work proves clearly that they are realizing more and more their important duty to those whom they serve. These men at the same time owe a high duty to their fellows in the craft and trade by observing the best principles of co-operation and mutual help and protection.

It must be clearly apparent that even the most mercenary motives should lead us to these high standards. If we can lift our ideals to a better plane we will find a FORWARD MOVEMENT in our business life which will bring to us the utmost satisfaction.

Predicts Canadian Building Boom

It Will Take Canada Ten Years to Catch Up With Work That Accumulated During the War Period, Says President of Provincial Builders' and Supply Association —Matters of Interest to Sanitary Engineers Discussed at Convention

THAT it will take ten years for Canada to catch up with the accumulation of building and construction work which was held up during the war period, was the view expressed by President H. Elgie, in his address before the members of the Provincial Builders' and Supply Association, who recently held their annual meeting in Toronto.

He declared that builders and contractors need fear no shortage of work, but urged that everything possible should be done to try and stabilize the prices of materials, even if only for periods of a year, in order that there might be some degree of certainty for estimating.

BUILDING REGULATIONS

He also drew attention to the need for building regulations with a general application. In many of the towns and villages there were either no regulations at all or regulations which were badly in need of revision. In many places, he said, buildings are allowed which are a menace to human life. In other places many buildings are veritable fire traps. There was a great deal that the men in the trade, and also those selling building materials, could do if they worked together to improve conditions generally and make for betterment in the community.

HOLDS UP THE WORK

One of the most serious drawbacks to construction work last year was the lack of a working agreement between the men in the various building trades. The men in one section would make demands which would upset the men in half-a-dozen trades, and either greatly delay the work or prevent its going on at all.

Every effort is being made by the delegates to the convention to prevent anything of this sort occurring during the coming season as it is realized that it is bad for business all around.

SECRETARY'S VIEWS

"Until we can get labor as an incorporated body under the Government we cannot hold them to anything," was the view expressed by Secretary John Wright, of London, Ont.

President Elgie, of Toronto, endorsed the industrial council plan, declaring that it had worked out well in Toronto. He also instanced the case of Indianapolis, where, he said, the contractors and their employees co-operated so well that the one protected the other. There a wage agreement had been lived up to faithfully, while the contractors, in recognition of altered conditions, had granted an increase of their own accord.

UNSETTLED CONDITIONS

The general attitude taken by those who entered into the discussion was not an opposition to the employees securing the wages, but to the unsettling of the whole situation caused by counter-bidding between contractors for workers. It was claimed that as a result it was impossible to prepare anything like definite estimates on work, and serious delays were caused in construction owing to sudden losses of workmen.

SEE MUCH BUILDING

In making their reports to the convention the delegates from every city spoke of exceedingly bright building prospects during the coming year. Practically without exception they reported the promise of a year of record activity in building.

In declaring that some stabilization of wages was absolutely necessary, Geo. Crain, Ottawa, stated that about half of the mechanics in Ottawa had left there last summer as a result of higher wages paid in the Western cities.

LOST THE CONTRACTS

As another instance, he said, Ottawa firms had failed to secure a certain large contract right in their own city which went to a Montreal concern simply because the latter was paying a wage scale of only 55 cents, while the Ottawa contractors paid 75 cents.

URGES CO-OPERATION

"After-the-war conditions," said Fred. Armstrong, of Toronto, who presided at the annual banquet, "finds us with a great need of housing accommodation and a shortage of building materials. The only remedy for this is for everyone to get together and each to do his part to allay as far as possible labor unrest and strikes."

Plumbing Shop at Ottawa Technical School is Proving a Splendid Success

Classes in Practical Instruction Are Well Attended and the Authorities Are Planning to Extend the Work

THREE years ago, at the request of the master plumbers of the city, a course was opened at Ottawa Technical School in plumbing, steamfitting and related subjects, membership being confined to apprentices and others actually in the trade. The success that has attended these classes and the great benefit they have been to the craftsmen here has led the Industrial Advisory Committee to make plumbing and steamfitting one of the main departments in the new shop building recently erected and now nearly ready for occupancy. It is intended to install a complete four-fixture domestic plumbing system for demonstration purposes, also hot water and steam heating systems, and the members of this year's classes have volunteered to set up the apparatus under supervision of their instructors and make all the necessary connections.

Manufacturers Help

Canadian manufacturers of special plumbing supplies and fixtures have been very much interested in the project and at the meeting of Industrial Advisory Committee last evening Principal Nichol announced that the following firms had donated the articles mentioned for instructional purposes, which, when assembled, will make a very complete model domestic service: Port Hope Sanitary Mfg. Co., Toronto, apron front lavatory basin; Thos. Davidson Mfg. Co., Montreal, 30-gallon range boiler and stand; Jas. Morrison Brass Mfg. Co., Montreal, stack gas water heater, automatic cellar drainer; Canada Pipe & Steel Co. and Galt Brass Co., Ltd., galvanized complete combination outfit; Canadian Asbestos Co., Montreal, asbestos products; Thos. Robertson Co., Ltd., Montreal, Canadian Brass Co., Galt; Wallaceburg Brass & Iron Mfg. Co., full sets of fixtures and connections.

Attendance is Good

All the committees report that good progress is being made and that several new departments will be opened at an early date.

The principal reported an evening enrolment in various classes of 2,900, and that the attendance at the day classes was very nearly 90 per cent., showing that the interest taken in this course of education in Ottawa is very great.

Will Not Appeal Against Order of Provincial Health Board

Peterborough Board of Works Takes Definite Step for Installation of a Sewage Disposal Plant

PETERBOROUGH, Ont.—The Board of Works has decided to bow to the inevitable and install an activated sludge sewage disposal plant as practically ordered by the Provincial Board of Health, whose decision in this respect is endorsed by the Railways Board.

The city has till March 1 to submit to the Provincial Board of Health plans for Engineer Parsons was instructed to go ahead and complete his plans for this plant already started.

Went Before Board

Engineer Parsons, Ald. Phelan, and City Solicitor Widdifield appeared before both the Provincial Board last December, when their proposal for an Imhoff tank system, which the engineer considers especially suitable for local conditions, was emphatically rejected.

Engineer Parsons admits that the sludge from an activated process is purer than that from Imhoff tanks, but its disposal is a costly and complex question. Then the activated sludge system is more costly in its operation than the Imhoff method. In illustration of this point, Engineer Parsons declared it would cost considerable money every year to pump air for the activated process, which, in addition, would also require the services of high-priced mechanics.

Says Not Obsolete

Engineer Parsons quoted many important centres in the United States using, adding and enlarging Imhoff tank sewage disposal systems in spite of the Provincial Board of Health's contention that this method is obsolete. He also contended that the activated sludge process is yet in more or less of an experimental stage, especially in regard to disposal of the sludge, which is of a jelly-like substance with a top layer of slush, a centre layer of water, and a bottom of grease. Consequently, drying this sludge on gravel beds is a long and difficult process, the sun not gaining ready access to the water to assure quick evaporation.

Would Kill Crops

This sludge would not be acceptable for cultivation when dried out by open-air exposure, as the large percentage of grease contained therein would cake some soils and kill crops. The only way to use this sludge would be to commercialize it, and Peterborough is not large enough to warrant such a course.

Ald. Hamilton was strong for appealing against the Provincial Board's order, but Mr. Parsons did not consider such a course in Peterborough's best interests.

This activated sludge system of sewage disposal will cost the city at least $170,000 to install, apart from land costs.

Planning Tenements In Workers' Houses

MONTREAL.—Included in the draft of suggestions the Administrative Commission is submitting to the Legislature as amendments to the Act passed at the last session, in connection with the federal grant for the construction of workmen's dwellings, is one by which the Corporation of Montreal desires to empower a workman to build a dwelling containing one, two or three separate tenements. According to information already given out at City Hall the object of this is to provide the borrower with a rental income which would help to repay the sum lent to him by the Governmetn. It is stated that rigid inspection in connection with any work of this kind will be made to see that all sanitary requirements are lived up to.

Conditions Excellent In City Of Quebec

Expenditures of considerable sums are projected in Quebec City and various extensive building programmes, SANITARY ENGINEER understands, are mapped out. In speaking with a prominent business man in the historic capital, he stated that in one location alone an expenditure of from $300,000 to $400,000 for a modern property would be shortly undertaken. As there is much prospect of extensive building being carried out in other parts of the city, the figures will total very high in a short time. It looks as though several million dollars' worth of building will be under way as soon as weather conditions permit. This development is eagerly awaited by the hardware and plumbing trade as well as by building contractors generally. Conditions in the city have been excellent during the winter and the outlook is very promising at this time. One of the greatest difficulties is that of obtaining requisite material.

H. J. Halford Goes On Health Council

Ottawa.—H. J. Halford of Hamilton, vice-president of the Trades and Labor Congress of Canada, has been appointed a member of the Dominion Council of Health. Mr. Halford succeeds Hon. W. R. Rollo, who resigned from the council on his appointment as Minister of Labor and Health for the Province of Ontario.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

IN beginning the series of practical articles on "Sewage Disposal For Small Communities" SANITARY ENGINEER would direct the attention of the men in the trade to the practical treatment of everyday problems which will be given.

Every effort has been made to present these questions in simple, easily understood language and to make clear a number of points which are consistent with good practice.

The series is one of the most valuable that has ever been presented to the sanitary and heating engineers in the Dominion, and it will be well worth keeping for reference and for study.

A large number of illustrations have been prepared and the articles will be illustrated fully.

Preface

In view of the increased attention being given to all subjects appertaining to public health the author has compiled this small text-book describing the many successful methods that are being and have been adopted for treating and disposing of sewage from small communities, thus filling a long standing want of Sanitary Engineers, Architects, Builders and Farmers for a reference book explaining the design of small modern sewage installations for the removal of foul water waste on the best sanitary grounds and with the least nuisance.

Many good text-books have been written on the sewage treatment of large cities and towns and enormous expenditures are being made by progressive cities to protect the health of their people, and similar protection is surely due to the country residents and with the growing practice of erecting large mansions and institutions away from the smoky atmospheres, the Architect or Owner is generally called upon to instal a small private disposal plant to take care of the foul water, so this work has been carefully compiled and fully illustrated to help them in this important and necessary branch of house construction.

Whilst the book treats the purification of sewage on a small scale, it is not intended to cover the sewage disposal of large towns and cities, which will be treated fully in the author's new edition of sewage disposal works for large cities and towns.

Chapter I

The question of sewage disposal in small communities, in which are included country houses, mansions, isolated institutions, hospitals, asylums, prisons, railway stations, villages and small towns, is one of considerable importance and one must carefully consider first of all the best system to adopt, having in view local conditions of disposing of the sewage from these buildings without injury to public health, nuisance, pollution of rivers and water supplies, with the maximum convenience.

The composition of sewage from such places is what the engineer terms "domestic sewage" and consists of human excrement from w.c's., waste water from kitchens and wash houses, chamber slops and drainage from stables.

Is Different

The treatment of sewage from private houses is different to that from large cities owing to the fact of more perfect system of drains and complete separation of storm water and frequently the restricted water supply. Then again the small distance generally traversed discharges the sewage into a fresh state on the disposal works, there being no comminution or resolution of solids, the character of various discharges being recognized on arrival at the works.

Sewage from private houses is generally more difficult to treat than that of a large town, The Engineer, instead of providing for a constant flow of partially prepared dilute sewage of comparatively uniform composition, must deal with interrupted series of discharges of filth of the most varied nature in the crudest and most concentrated condition, arriving at most irregular intervals. Therefore, it is necessary to calculate and design your works to meet these requirements.

Very Troublesome

The small area under control, limited funds and the common absence of any proper outlet, render the economical solution of the house disposal scheme very troublesome and although the treatment of sewage for large cities has progressed considerably during the last few years, sufficient attention has not been given to the design and construction of small installations, for, whilst many important details obtained from the many valuable and systematic investigations of treating sewage of large centres of population hold good in small communities, difficulties and much disappointment have resulted from inconsiderate transfer of methods from one to the other as the composition of the sewage varies, considerably due to trade waste, water supply and diluted form of sewage as it arrives at the works.

Bacterial Method

The evolution of bacterial method of sewage disposal has been the means of employing artificial filters in place of land treatment, thus facilitating the purification of sewage on small areas and allowing a greater area of grounds being utilized for other purposes and eliminating the unsightly appearance and smell nuisance by locating same on a convenient and ideal location. The ultimate aim of sewage disposal is to separate the organic matters from the water in the sewage in which they are suspended and dissolved in order to make same, by oxidation and decomposition, inocuous and so render the sewage comparatively pure in order to allow same being discharged into streams, rivers, etc., without pollution.

Living Organisms

Sewage purification is largely brought about by the action of living organisms which feed upon the waste products of animal vegetable life undergoing decomposition, thus splitting their constituent elements, producing fresh chemical combinations.

In every kind of disposal works manual, attention is required which means expense, but on small installations the object of the designer of the work should be to instal wherever possible, reliable, automatic apparatus in order that the sewage can be treated as efficiently as possible, bearing in mind the requirements of sanitation in order to meet the high standard of purification required.

Regularity Essential

In order to accomplish this, especially when the flow is intermittent, including day and night discharges, regularity is absolutely essential, hence the demand for modern and reliable automatic apparatus which reduces considerably the maintenance cost, but at the same time partial supervision and attention must be given to all apparatus for the successful working of a modern small installation.

Distinct Processes

Sewage purification undergoes two distinct processes classed under the headings of Clarification and Oxidation. The former is brought about by the treating of same in various sedimentation tanks, which is equivalent to straining, and thus reduces the solid suspended matter which settles in the tanks in the form of sludge, whilst the dissolved impurities and matter in suspension are purified by the process of oxidation in the interstices of the soil or on artificially constructed filters.

The Second Process

The second process, of Oxidation, is absolutely essential, otherwise secondary putrefaction takes place in the clarified effluent which still contains approximately 50 per cent. of the sewage impurities owing to the organic matter retained in solution and in time will become very offensive.

The Clarification process consists of screening, sedimentation, precipitation and

liquefying, which are successfully accomplished in well-designed tanks, whilst the Oxidation process consists of land filtration and artificial filter beds which will be fully explained and illustrated later in this book.

How They Work

Living organisms, known as anaerobic and aerobic bacteria, produce the purification of sewage in both stages of process respectively by destroying certain substances and liberating others which produce the chemical changes of rendering sewage into a comparatively pure and harmless state. The anaerobic bacteria produces purefaction, releasing offensive gases and live without air and light, living in all sedimentation tanks whilst the aerobic produce oxidation and must be supplied with a plentiful supply of air and light and exist and thrive by the millions in well-constructed filtration areas. The process of sewage disposal is partly mechanical and partly bacterial, consisting of straining or screening, tank treatment, final filtration and chlorination.

Screening Process

Screening consists of intercepting and removing rags, floating garbage, sticks, etc., by passing sewage through coarse or fine screens which remove the heavy suspended matter at the same time not hindering purification. Sewage passing through tanks in small installations may remain from 18 to 24 hours entirely at rest; the solid syspended matter settles out in such a tank and, according to experiments, is partially liquefied, deodorized and destroyed by countless numbers of bacteria which thrive and live without air: To assist in producing anaerobic bacterial life, a thick scum generally is formed on the surface of the sewage in tanks, protecting the bacteria from light and air and at the same time, to some extent, preventing the free exit of foul smells.

Clarified Sewage

Sewage after passing through the tanks is termed clarified sewage and is far from being pure, and then passes through its final stage of purification by surface irrigation, land filtration, artificial contact or percolating filter beds.

Sewage problems, however small, cannot be designed for efficient results without careful thought and good planning and every scheme should be treated separately as everything depends upon local conditions—such as the composition and volume of sewage to be treated, fall and space available, and the configuration of grounds, nature of soil and destination of the final effluent.

Selecting the Site

In selecting the site not only the character, area and level of the land for filtration purposes should be considered, but also proximity of suitable effluent outlet, also the liability of flooding and water logged in wet weather and, lastly, placing same in such a location so as not to be unsightly to houses, causing smells, flies and other obnoxious objections which may crop up and can be easily remedied if sufficient care and thought are given in laying out the grounds of the different houses.

Obtaining Volume

The volume of sewage to be treated can be approximately obtained from the gallons per capita used in the houses from which the sewage is to be treated, but if the storm water, that is, rain water, collected from roofs, backyards, etc., finds it way into the sewers to the disposal works, then sufficient capacity must be designed for in the tanks and filtration area to take care of this increased flow, which can only be obtained from the records kept of the daily rainfall sheets for that particular district. As local conditions vary considerably it must be left in the hands of a capable man who designs the scheme to use his own discretion after studying the local conditions.

Dry Weather Flow

In large disposal works three times the dry weather flow must be treated fully as crude sewage, whilst three additional volumes on stormwater beds or land without tank treatment, but anything over six times the dry weather flow can be passed direct into the effluent conduit. Sewage flow may be measured with sufficient accuracy by passing sewage over rectangular notches, providing that the exact width and depth can be easily taken, so that the discharge can be computed from any well-known hydraulic formula by this method, not only the mean dry weather flow can be obtained but the maximum flow during excessive storms.

A Simple Method

Another simple method of obtaining the actual flow, either minimum, mean or maximum, is by observing the actual time it takes to fill a tank of known size, such observation being done systematically at regular intervals, then the various flows can be so calculated.

If rainwater is rigidly excluded from the sewage no need exists for gauging etc., as the sewage discharge can be readily obtained from the water supply, sufficiently accurate for working purposes, but it is a great advantage to lead same to the filters, as the first washing from paved yards and roofs, especially after a drought, is just as impure as sewage and it is dangerous to discharge it into the nearest water course.

Small Catch Pit

If the works are designed for a large institution and part of the rainwater finds its way to the disposal works, it is always advisable that a small catch pit or detritus tank with screen should precede the sedimentation tanks and filters, as the stormwater collects from the surface a mineral grit which silts up the tanks and filters with irresolvable mineral matter and thus preventing the best results being obtained from the works.

Final Treatment

The final treatment of the clarified tank effluent on small installations is generally successfully accomplished by surface irrigation or land filtration by means of under drainage and should be successfully worked, otherwise by continuous sewage treatment the land becomes sewage sick and thus purification is retarded so all filtration areas should be periodically rested to allow the aerobic bacteria to obtain an ample supply of oxygen by well aerating the soil. Artificial filters, where the land is not available or suitable, can be substituted with excellent results and will be fully described in the chapter on Filtration.

THE WAY TO BRING IT DOWN

St. Louis "Star."

And the Board of Commerce might help "Everybody" by telling how to handle the weapon.

Pressure Systems Offer Opportunities

Fifty-Three Per Cent. of the Women in the Rural Districts by Actual Official Figures Asked for Running Water in Their Homes—Very Few Know That This May be Obtained at Prices Within Reach of All

NOT long ago the following question was sent out to several thousand farmers' wives in all parts of the country by the Department of Agriculture of the United States.

"What one change or improvement would be of the greatest benefit to your home, or which would you rather have?"

When one considers the really large list of devices of one kind and the other on the market for women to make a selection from, the replies received are strikingly significant.

No less than fifty-three per cent. of the women indicated that they would prefer the installation of some system by which they could have running water in their homes to any other improvement.

A Wonderful Opportunity

Just think of it, one woman out of every two desires above all else an ample supply of running water for the house. This offers a wonderful opportunity for the sanitary and heating engineer.

A remarkably small percentage of these women, probably not more than one or two out of every hundred, have any idea that by the installation of a water pressure system they can obtain at a moderate cost the convenience for which they are longing.

Bringing pressure systems to the attention of these women, showing them what the systems will do, how easily they are installed, and how small is the upkeep, will mean business for the sanitary and heating engineer who goes after it.

Business is There

The business is there. It is only waiting a little sales talk and demonstration to be closed. Some of the men in the trade who have been giving the installation of pressure systems a little attention have been getting results that were not only surprising but satisfactory.

"My experience in the country districts was that the farmer's wife is the best one to take the matter up with first," said one sanitary engineer. "She knows what she wants, but very, very few of the women know that they can get what they want at a price that is within the reach of all. Once they understand this and know that the system costs little for maintenance they never rest until they have prevailed upon their husbands to instal a system. If left to themselves, the men, from my experience, would keep putting the matter off. It is the women who generally inaugurate the campaign to secure equipment of this kind in the home and who see the thing through. The men are easy to "sell" on the proposition once they have been talked to by their wives, and are convinced that the women want it and that it will be a real help to them in their everyday work."

Too Much Hardship

When one realizes the conditions under which thousands of farmers' wives are working every day, especially in weather such as has prevailed recently, it is easy to understand their desire for improvement. One of the things she needs a hundred times a day in her work is water. Water for cooking, for cleaning, and for a dozen other purposes. And yet every time she wants it she either has to go herself or coax her husband or some member of the family to go—

Out through the snow to a pump that may be working or may not, or a well, or as is often the case, to a spring.

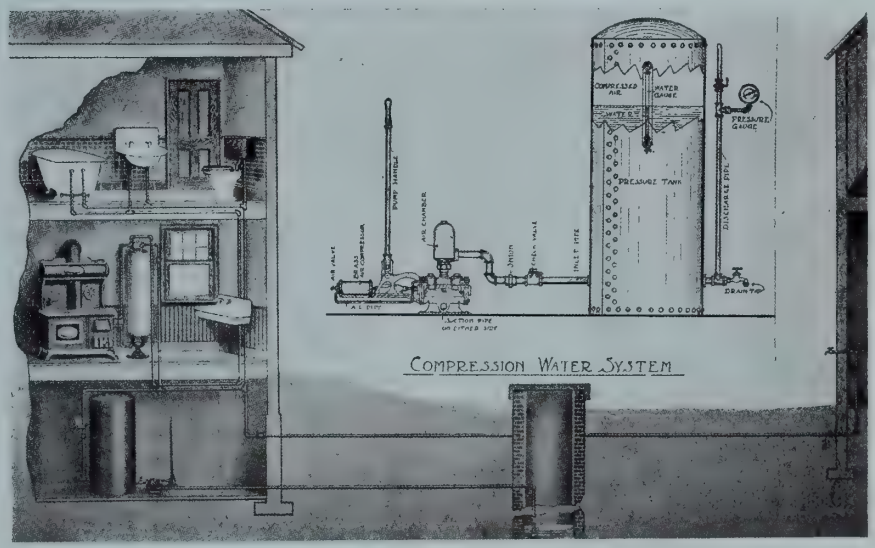
Whoever goes can only carry at the most two pails full, not a very generous supply, and one that is soon used up, and then another trip.

A Big Day's Work

"The cooking of three meals a day on a meagre allowance of water will necessitate ten buckets, which will make for cooking alone 1,200 pounds of lifting per day. When to this is added the water necessary for bathing, for scrubbing, and for the family washing, it will easily bring the lift per day up to a ton, and the lifting of a ton a day will take the elasticity out of a woman's step, the bloom out of her cheeks, and the enjoyment out of her soul."

Is It Any Wonder?

Is it any wonder that the thousands of women who are facing conditions of this kind every day are anxious to get away from them and will welcome any improvement? The great majority of these women are the wives of well-to-do farmers. They are ready and willing



The illustration shows a simply arranged pressure system for a farm home.

Just What it Means

A prominent engineer who made a careful investigation into the matter of water supply in the rural districts is responsible for the astonishing statement that many farmers' wives are lifting at least a ton of water a day. In his report he says in part:

"The getting of the water from the source of supply to the point of application requires more manual labor than any other item of housekeeping. The water for the kitchen has to be lifted from the well, carried to the kitchen, poured into a kettle, poured out of the kettle into the dishpan, and from the dishpan out of doors. This makes six times that the water is handled, and a bucket of water containing two gallons, with the containing vessel will weigh twenty pounds. When this is handled six times the total lifting is 120 pounds.

to spend the money, but do not know that water pressure systems are the solution.

A little campaign of education on the part of the sanitary and heating engineers will produce big results. Once half a dozen of the pressure systems are installed and are in operation they will advertise themselves and will be one of the best talking points the sanitary engineer can have to refer to.

Other Considerations

It is not only the women who will benefit by their installation but the whole household. "Plenty of water for everyone" means general satisfaction, especially when it is fresh, running water.

Put the facts before the people in your territory and cash in on the opportunities which exist on every hand. The business is there and it is a profitable

trade that offers endless possibilities for development.

In England Also

In connection with what has been stated above, it is of importance to note that the Women's Housing Subcommittee, which is working with the Government in England in plans to provide proper housing accommodation, especially in the rural districts, has stated emphatically in its report "that an improvement in the water supply of country districts is a matter of national urgency."

Mrs. C. S. Peel, one of the most active workers, says: "I have been collecting letters from women, and they all demand, before everything else, running water in every home."

Working Agreement Is Needed Between Various Sections of the Building Trades

Lack of Co-operation Threatens to Hold Up Some of the Construction Work That Is Planned For 1920—Are Business Agents To Blame?

ONE of the chief necessities in the building situation for 1920 will be the working together of the various sections of the building trades. Efforts have been made in some of the larger centres to arrange a working agreement. In taking this step it is essential that all parties to it cooperate. Lack of co-operation in 1919 was responsible for thousands of dollars' worth of building being held up because prospective builders were uncertain if they commenced when they would get finished. In some places the demands of the carpenters were not in harmony with those of other trades. In other places it was the bricklayers whose schedules caused the trouble. The result was that many of the men had to go outside of their own cities to work because the work that had been planned did not proceed.

Still Same Trouble

That the same trouble still exists is recognized by many of the men in the trades and they realize that it is detrimental to business generally.

Discussing the situation in Toronto the "Telegram" says editorially:

Some of the employees of the building trades are becoming disgusted with the attitude of some of their business agents of trade unions who are apparently anxious to have their names in the paper preaching about agreements, but when it comes to real action "they are not there."

"They have always some excuse for not signing when it comes to a showdown." One of the employers said today: "I feel like advising our section to do nothing until the labor men agree among themselves and then we will be prepared to sign anything so that we might proceed with the work."

"It would seem," said another employer, "that this business agent man is afraid his occupation would be gone when an agreement is reached, and he is evidently a believer in safety first for himself."

"The latest phase of the situation in the building trade, according to the morning papers, is that the bosses are to blame for not reaching an agreement, and I want to say," said one contractor, "that this is not true."

"For weeks there has been talk about the joint Industrial Council adjusting matters, but now there appears to be a difference between the bricklayers' business agent and the business agent of the electrical workers. Secretary John Collam, of the carpenters, is alleged to have said that 'it is more difficult to organize some of these contracts than it is to get men into the labor movement.'"

"If there is to be peace in the family," said Mr. Collam, "they must act and work faster, or our members may instruct us to cut away from the combination altogether."

Representatives of the Plumbers and Steamfitters' Union state that representatives of this section of the exchange and architects whom they had met some days ago were under the impression that one of the chief objects of the recommendation of the Industrial Council was to bring employers and men together frequently. They were prepared to sign an agreement in 1921. With plenty of work in sight and a shortage of mechanics, the plumbers were indifferent regarding the agreement. John Vick, business agent of the Bricklayers' Union, expected to sign an agreement within a short time.

Jimmie Gunn in It

Business Agent James T. Gunn, of the Electrical Workers' Union, said: "At the last meeting employers were prepared to fall in with my proposal that a blanket agreement for the entire industry be negotiated by a body representing the employers and another the unions," said Mr. Gunn. "Mr. John Vick wouldn't support the suggestion. Mr. Vick had a perfect right to oppose it as a craft unionist of the American Federation of Labor."

The structural steel workers have a grievance. They complain of the attitude of employers in refusing recognition of their organization, and insist that the older organizations of the trade secure this right before negotiations are concluded.

Retail Association Urges Its Members to Keep Accurate Accounts

THE officers of the Brooklyn Retail Merchants' Association, in an effort to induce more accurate accounting methods among the members, are sending them the following "14 Points," with the request that they be followed:

First—Charge interest on the net amount of your total investment at the beginning of your business year, exclusive of real estate.

Second—Charge rental on real estate or buildings owned by you and used in your business at a rate equal to that which you would receive if renting or leasing it to others.

Third—Charge, in addition to what you pay for hired help, an amount equal to what your services would be worth to others; also treat in like manner the services of any member of your family employed in the business not on the regular payroll.

Fourth—Charge depreciation on all goods carried over on which you may have to make a less price because of the change in the style, damage, or any other cause.

Fifth—Charge depreciation on buildings, tools, fixtures, or anything else suffering from age or wear and tear.

Sixth—Charge amounts donated or subscriptions paid.

Seventh—Charge all fixed expense, such as taxes, insurance, water, lights, fuel, etc.

Eighth — Charge all incidental expenses, such as drayage, postage, office supplies, delivery expense of horses and wagons, telegrams and telephones, advertising, canvassing, etc.

Ninth—Charge losses of every character, including goods stolen or sent out and not charged, allowance made all customers, all debts, etc.

Tenth—Charge collection expense not enumerated above.

Eleventh—When you have ascertained what the sum of all the foregoing items amount to, prove it by your books, and you will have your total expense for the year.

Twelfth—Divide this figure by the total of your sales, and it will show you the per cent. which it has cost you to do business.

Thirteenth—Take this per cent. and deduct it from the price of any article you have sold, then subtract from the remainder and what it cost you (invoice price and freight), and the result will show your net profit or loss on the article.

Fourteenth — Go over the selling prices of the various articles you handle and see where you stand as to profits, then get busy in putting your selling figures on a profitable basis, and talk it over with your competitor as well.

The Salesman Must { Be Well Groomed / Have a Good Vocabulary / Be Well Developed

Necessity of Concentrating Upon Outstanding Advantages of Merchandise Was Emphasized by Frank E. Fehlman, of New York, in Addressing Montreal Publicity Association on "Retail Salesmanship"—Appearance and Address Two Big Essentials.

WHAT proved to be a most illuminating address on "Retail Salesmanship" was delivered in Montreal last week before the Montreal Publicity Association by Frank E. Fehlman, of New York. Mr. Fehlman has been connected with some important firms, in which he has had the direction of their sales policies. Taking as his subject "Advertising Through the Retail Salesman," the speaker proceeded to deal effectively with various phases of retail selling, and brought some exceedingly strong arguments to bear on this very important question.

Mr. Fehlman referred, at the outset, to a School of Salesmanship which he had developed while connected with the Gossard Corset Company. As a result of the training extended to salesladies, and of which they turned out between eight and nine thousand, these women were able to dispose of several pairs of corsets to customers when they came in with the avowed intention of purchasing only one pair. In many cases, they had sold three, and even four, pairs of corsets, simply by knowing their business thoroughly and the use made of corsets. The speaker pointed out that this success in selling more than the customer asked for depended very largely upon what the saleslady knew.

"People rise just as high as their intelligence will take them. If you teach them right, they will do wonders. The clerk or salesman is successful just to that extent to which they are educated by the sales director," he pointed out.

Made Use of Charts

Mr. Fehlman made extensive use of various charts, which were simple but right to the point. The first of these was very interesting, in that it treated of the mentality of a prospective customer. Through investigation and extensive tests, the mind of the average individual develops gradually until noon. At noon, or the usual luncheon hour, the mental faculties are reduced again, and then gradually work up until three or four o'clock in the afternoon. Finally, by 10 p.m., they are at a low ebb.

The reason people do not go shopping until ten or eleven o'clock in the morning, is because they are mentally lazy. The logical time, therefore, to treat with a customer is when the mental faculties are at their best, as above outlined. As opposed to this, a customer coming in at 3 or 4 o'clock in the afternoon is likely to be in anything but a good frame of mind for selling. Not only so, but the salesman or saleswoman, who has been in all day, has probably retrograded by the middle of the afternoon, and it is the salesman who steps out for a few minutes, takes in a good lot of fresh air, comes back refreshed, dusts his shoes, washes his face and hands, and is then ready to meet customers for the next two or three hours, who makes a success.

This point was illustrated by the speaker in referring to a customer coming in to buy some tumblers. The lady wanting to buy tumblers did not care for them because they were too heavy, and found some other fault with them. The salesman, in this case, said: "I don't like them myself," and pointed out such advantages as the glasses possessed. They are made heavy, for instance, so that they will not break if they fall on the floor. The buyer has been so impressed with the salesman that she has forgotten she does not like the glasses, and goes away having bought them, and her remembrance is of the salesman rather than of the glasses.

Through investigation, it has been found out that the bulk of sales are centred in the small portion of the week, really the latter half.

Analyzing the Customer

Mr. Fehlman classified various types of customers in the following interesting manner. There are five classes, and these are:

(1) Those compared to a hand car;

(2) Those compared to the local freight trains;

(3) Those compared to the local passenger trains;

(4) Those compared to the fast express;

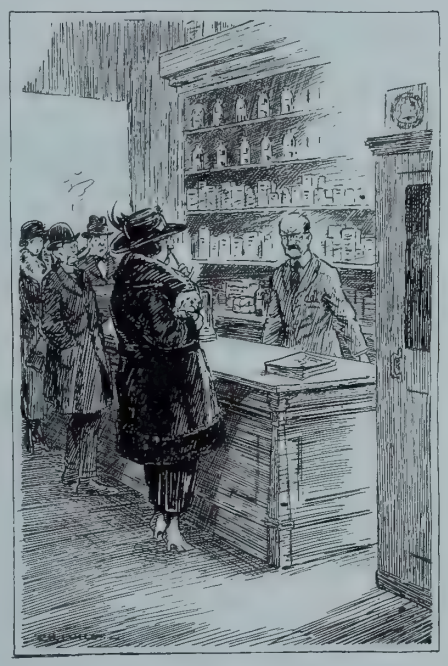
(5) Those compared to the Twentieth Century Limited.

Dividing the various classes of buyers into these divisions, the speaker went on to analyze them.

Of the first, or hand car type, there was a very small percentage among the average customers coming into a store. As a matter of fact, this was figured to be 1.6 per cent. of the total, and the speaker referred to them as pretty close to imbeciles. The next section, that of the freight train class, amount to 18 per cent., and these are rather stupid persons and of slow mentality. These are the people who must be told a story two or three times, explaining matters very fully and going over them. This class of customer, the speaker pointed out, was only 12 or 13 years old mentally, as a rule. The next group, that of a local passenger class, comprised 60 per cent. of customers. These are the people who receive from $1,200 to $1,400 a year, and are the backbone of any business.

"This is a group I like to talk to and advertise to," said Mr. Fehlman. "The next group is that of the express train class, and comprise 16 per cent. of the total. These people usually draw salaries of from $3,000 to $10,000 a year, and with such a class of people the salesman can talk faster and make his point much more rapidly than with any of the previous classes. These people accept the style and the buying case all the way along, and it is one of the reasons why this class is so important. The last class, that compared to the Twentieth Century Limited, comprise but 5 per cent. of the buyers, and these are the 'runners of the world.' This class is very exacting. They care not what they have to pay for an article, and are the hardest people in the world to sell, for the simple reason that they have whims of their own which few people can satisfy. Few salespeople are capable of handling this group."

Ever Meet This Kind?



Drawn for Cartoons Magazine by R. B. Fuller.

The Lady (acidly, to busy pharmacist): 'I have been standing here for some time to be waited on. I want you to look up a number in the telephone directory!

Handling the Merchandise

The speaker went on to point out how important it was to properly display merchandise before the customer. Some people like and some do not like a given article. Picking a napkin up from the table, Mr. Fehlman introduced a chart to illustrate his point, and emphasized the necessity of remembering that if one were selling napkins to a woman it was necessary to hold fast to the traditional shape and size of the napkin, so as to make use of the mental faculty of the prospective buyer. If a man intended to sell this napkin as a hand towel, the chances of success would be very small. Illustrating this point further, the speaker referred to his chart as one which had two lines; one of these was curved and was easy on the eye, and the other line was jagged and very hard to follow. This illustrated the point the speaker wished to make with regard to placing merchandise before the prospective buyer to the best advantage. It was very important to remember this point when showing goods which were being displayed for the first time, and the idea of the curved line and not the jagged line could be borne in mind.

Attention value was a very important point made by the speaker, and concentration was also greatly emphasized. Tests showed that none had been able to concentrate for more than two seconds at a time. This may sound strange, but the speaker was referring to the inability of the average human to definitely concentrate on a given article or subject without in the least diverging from the subject or matter in hand.

Trained Man's Advantages

This point was further illustrated by pointing out the necessity of concentrating upon the outstanding advantages of a given product. Taking a spoon from the table, the speaker proceeded to explain the advantages to a customer. The outstanding thing about this spoon was that it would not tarnish from using marmalade or eggs at breakfast time. Its second important point was that it is so heavily plated that it would not wear off at the points of contact. In the third place, "we guarantee it."

"By concentrating in this way it is possible to send home such important arguments that a sale is likely to be made," he said.

The same thing might apply to a type of underwear which sells because it possesses certain qualities. The same thing might be applied to clothing, haircuts, shoe shines, etc.

"If salesmen will not keep abreast of developments they will not be a success, for we are in times of rapid and constant change. A trained salesman will outsell untrained salesmen two to one, and this has been proven in many instances," said the speaker.

Mr. Fehlman pointed out that he had carefully analyzed what brought customers to a store. This analysis had revealed the fact that 78 per cent. came through the influence or solicitations of friends, 12 per cent. through advertising, and the balance of 10 per cent. just "dropped in." Repeat sales are the profitable ones.

"I think I can sell a man in 15 minutes the first time, but the second sale must be made on the value of the merchandise. The argument here must sink in if the customer is to be sold, after the first sale has been made. Quality is the only assurance of continued sales. No sale can be neutral. The customer must be either with you or against you."

Appearance and Address

The importance of a salesman being well groomed was pointed out by the speaker.

"When a customer comes into the store and approaches me to ask for something, once I have opened my mouth that customer has a mental measure of me," he pointed out, saying:

"Another important thing which must be possessed in a salesman, if he is to be successful, is that of a good vocabulary. The average salesman has 1,500 words in his vocabulary out of a total to be found in the English language of over 650,000." Through the use of a vocabulary—a business man's vocabulary which has been compiled—Mr. Fehlman pointed out that inside of six months five hundred new words could be acquired by an intelligent salesman.

In the next ten years, the cost of advertising could be cut down immensely if the retailer would open his own school for the development of his salesmen. This was illustrated by reference to an outstanding and successful men's wear man who is doing a large business in Chicago. This firm employed 85 salesmen, and they are required to go into an upper room from time to time, where dinner is served. At the close of dinner, about 7.30 p.m., they start out to sell each other the various goods. A salesman must sell, inside of ten minutes, a banker a suit of clothes, for instance. The same plan is carried out with other lines handled in the store, and the result of this schooling has been that salesman's remunerations have risen from an average of $25 to $60 a week to $45 and $175 per week, based wholly on sales.

"Sell Your Salesmen the Idea of Education," said the speaker. "The proprietor's interest in the salesmen is the most important factor, and he can be of much assistance by following out the above plan.

"Instead of selling a man who comes in to buy one suit of clothes sell him two. If he comes in to buy a hat sell him half a dozen."

"It Can Be Done"

This was emphasized by reference to a concrete case, where a young man who had been coached by Mr. Fehlman had changed his plans on the next customer who came in. He had put his idea into practical use, and when he got through was surprised himself at the results, having sold the customer a very much larger amount than he could have done under the old plan. After the customer had gone out he remarked: "You can do it, can't you?"

The matter of suggestion can be brought in here as, for instance, when a man comes in to buy a pair of socks: "Of course, you want a new pair every day, don't you?" and the customer will not acknowledge that he does not. He is very likely to take the suggestion of the salesman, and buy a pair for each day of the week. The same follows with underwear, shirts, shoes, etc.

"Deference to the customer," said Mr. Fehlman, "is something which all appreciate, and when a man comes in to buy one shirt, visualize his appearance, and then select two or three shirts and show to him that selection which will give him a proper shirt for all occasions."

Unfair Methods Is Latest Charge

WASHINGTON.—The Federal Trade Commission has issued a complaint against Colgate & Co., charging unfair methods of competition, on account of their price maintenance policy. This has come to be known as the "Colgate plan," and has been adopted by other manufacturers, to meet the evils of price cutting.

The company was indicted for violation of the Anti-Trust Law, but received a favorable decision from the Supreme Court of the United States. The new charge by the Federal Trade Commission is that the refusal to sell to dealers who do not resell at the prices which the company suggests is unfair to the competitors of Colgate & Co., in that the effect of the policy is to induce dealers to purchase Colgate products in preference to similar products manufactured by others on which prices are not maintained.

First Steamer From Germany In Five Years

ST. JOHN, N.B.—The arrival of the steamer "Clairton" here marked the re-opening of trade with Germany and this port, after a lapse of five years. This is the first vessel that has come to St. John direct from a German port since the beginning of the war in 1914. She is a British vessel, belonging to the C.P.O.S., but her cargo, 2,000 tons of potash, is German. The "Clairton" is a vessel of 4,259 tons. She had an uneventful trip over from Hamburg, and not many lookers-on knew that the cargo of this steamer coming up the harbor, flying the British flag, was from our former enemy. The cargo is for the Western States and Havana.

Board Says Order Must Be Obeyed

Many Firms Do Not Even Know That Order Has Been Issued, But Statement From Ottawa Indicates That Non-Compliance Will Constitute a Breach of the Act—Ontario Representative of the Board Unable to Give Information

COMMISSIONERS O'CONNOR and Murdock of the Board of Commerce have issued a statement from Ottawa emphasizing the importance of hardware merchants complying with the order as published in SANITARY ENGINEER three weeks ago regarding prices of building materials.

The Commissioners lay stress upon the fact that the order has now the same effect as if it formed part of the Board of Commerce Act, and that non-compliance with the order will, therefore, constitute a breach of the Act.

WHAT THEY WANT

The object of the order, the Commissioners say in their statement, is to secure sufficient information preliminary "to enable the Board to intelligently proceed with further and more extensive enquiries," it being charged by Parliament with the obligation of making such enquiries. Its enquiries do not imply guilt on the part of any person, but its orders must be strictly obeyed.

TO GET AT PROFITS

Full and fair disclosure of the information asked for should be made, says the statement, and if profits made are fair, it will be the Board's duty to say so. If unfair, "it must perform its duty in another way."

Inquiries by SANITARY ENGINEER indicate that many hardware merchants are still very much in the dark regarding just what is required of them by the Board's order.

The hardware merchants are not the only ones who need illumination on the matter. Major Duncan, the Ontario representative of the Board of Commerce, was asked by SANITARY ENGINEER for some definite information which might be passed along for the guidance of the men in the trade.

"Have you read the order?" he asked, and when informed that the writer had read it carefully, thought its meaning was obvious.

DID NOT KNOW

It was pointed out to him that many hardware merchants sell electrical fixtures and electrical equipment of various kinds, and that they also sell heating equipment. Asked if returns were expected on these lines, he said he did not know, and made a note of them.

It was also pointed out to him that nearly every hardware merchant sells paints and varnishes, and he was asked if returns would be required on these. Again he did not know, and made another note.

HOW WILL THEY KNOW?

When told that many of the hardware merchants did not know that the order had even been issued, let alone its requirements, he took the attitude that it was their business to know. The order had been published in the *Canada Gazette* and in many of the daily papers.

It was pointed out to him that only a very, very small fraction of the people in Canada ever see the *Canada Gazette,* and that thousands of them never see a daily paper.

Major Duncan admitted that the *Canada Gazette* was probably not very widely circulated, and said that something would be done to give more publicity to the order.

DID NOT EXPLAIN

He did not explain or make any attempt to explain how the Board of Commerce hopes to get returns from the hardware merchants, when its own representative does not know what is required.

In the meantime the hardware merchants in many cases are endeavoring to find out just what is wanted. Some of them have written to Ottawa. Others have discussed the situation among themselves in an effort to arrive at what will be done. Others are still unaware of the existence of the order.

"We are going to make returns as best we can," said one merchant; "if they are not what is required it will be up to the Board to advise us just what they want, and then we will try and give them the information."

WILL FIND NOTHING

The opinion seems to be general among the hardware merchants that the Board of Commerce will find that profits made by hardware merchants on building materials are very small—in many cases not even what might be called a fair profit.

EDITORIAL COMMENT

DEMANDING WATERWORKS

ONE of the most encouraging signs of progress in connection with many of the smaller municipalities lately has been the steps they are taking to install waterworks systems. This is a move that every man in the trade should get behind and boost with all the energy he can, not because of any work he may secure in connection with the installations but from a public health standpoint. The advantages of a common water supply, with the convenience of running water in each house, as against individual supply, such as comes from a well, are obvious. The former is sanitary, convenient, far cheaper in the long run and has the important general advantage that it reduces hazard from fire. This is an item that can be measured immediately in dollars and cents in the reduction on insurance. The steady growth of the installation of waterworks systems is greatly to be desired from every standpoint. Statistics show that in Ontario and Quebec there are more than 180 public water systems for communities having population of 2,000 or less. A number of others are preparing to install waterworks systems during the coming year.

CONTRACTS ARE IMPORTANT

IN connection with the article in the previous issue of SANITARY ENGINEER, "Proper Form of Contract is Needed," it is interesting to note the action since taken by the Association of Canadian Building and Construction Industries at its Annual Meeting in Ottawa. The members of this organization are face to face with the same conditions as the men in the Sanitary Plumbing and Heating business. They realize that in view of present day conditions that something must be done to protect their interests.

As a result of the discussions which took place at the meeting at Ottawa radical changes in the relations of the members of the Association with Architects and Engineers will be made. Standard forms of contract are favored in every instance, and the Association is going even further in that it will ask the Royal Architectural Institute of Canada, and the Engineering Institute of Canada to meet members of the Building Association to draw up a standard form of contract which may be used throughout the Dominion. They are also advising that the same committee prepare a standard form of sub-contract which would bind the sub-contractor to the same conditions of contract as the general contractor with the same conditions and privileges accruing to both. This move by the men in the building trades is of keen interest to sanitary and heating engineers, and the action which has been taken by the men in the building trades may well be emulated by the men in the plumbing trade. If this is done it will, without any question, save an enormous lot of money which is now being lost. It will also act as a safeguard to the men in the trade all round. As stated in the previous issue of SANITARY ENGINEER, the plumbers of Toronto have adopted a standard form of contract, and it is estimated that it is saving them large sums of money every year. The men in the trade outside the city of Toronto should endeavor to work out by themselves a similar form of contract, and if they do this they will benefit by it.

LUMBER PRICES SOARING

AN advance that will affect all grades of pine lumber, from mill culls up to the finest pieces, has been announced in the Ottawa lumber market with the comment, also, that further increases may be expected at any time. The advances now effective range from $5 to $12 per thousand feet. The lumbermen of the West are also naming higher quotations. The present situation is that many of the firms have such large orders on hand for overseas shipment that they do not care whether they supply home needs or not. This may materially affect the the erection of homes.

THE STEEL SITUATION

PRODUCERS of semi-finished and finished steel are having serious difficulty in making deliveries. The latest reports indicate that the steel market is practically sold up and that the general shortage is increasing rather than diminishing. Advices received by firms during the week indicate that as far as the future delivery of bars, sheets and plates is concerned the demand is insistent without anything like adequate supplies to meet it. "Even under normal conditions," says one letter, "with fuel, labor and transportation in good shape, the supply would still be inadequate. But conditions are far from normal. Labor is high-priced, and general experience indicates greatly lowered efficiency. There is a shortage of fuel, and in some

districts of power, congestion on many railways and car shortage. The latter is one of the worst features of the present situation from the consumers' standpoint. We cannot undertake to promise anything in the way of production or delivery at the present time." Reports from Pittsburgh state that sheet mills are operating at a capacity of not more than 75 per cent., with about the same condition applying to plates. Wire products are not so seriously interfered with. Speaking generally, conditions are such that changes are likely to occur at any time, and many of the men most closely in touch with the situation are looking for radical changes in the next six months.

THE INFLUENZA EPIDEMIC

SOME of the daily papers go too far with scare headings and articles concerning epidemics. In connection with the present influenza epidemic in different parts of Canada, there have been statements made in the daily press and inferences drawn which have tended to so scare people and make them anticipate the disease that, through fear and dread of getting it, their worries actually undermine their constitutions. For instance, a heading in a prominent Canadian morning daily this week read: "Flu Epidemic Continues to Spread," and the article intimated that everybody at all susceptible to the germs would no doubt be stricken before it subsided.

SANITARY ENGINEER has always favored bringing to light facts, but there are different ways of presenting facts. They can be given in a way that they can be understood properly—and this is the big difference between the reports of events in the daily and the specialized business press.

In regard to the present epidemic, publicity showing how to keep the body in good condition, how to avoid the germs as far as possible, and what to do in case the disease takes hold is good publicity. But the scare headings and morbid details could be very well eliminated.

This should be a matter for Boards of Trade of the various centres to take up with their local papers. By pointing out to these papers how such reports, many of which are greatly exaggerated, are unsettling business in general and tending to bring about the very thing to be avoided, the Boards of Trade in Canada could do a splendid work.

GOING ON A CASH BASIS

THE daily and weekly newspapers in all parts of Canada in the past few weeks have contained an unusually large number of announcements from firms who are advising their customers that "we are going to conduct our business on a cash basis." This is a move that has been gathering momentum steadily for some time and has in many cases been necessitated by the conditions which the retailers have had to face. It has been aided by the circumstance also that money has been plentiful and many firms saw an opportunity to adopt a policy which they had long desired to put in effect. The elimination of the tremendous amount of unwise credit that has been granted in the past will undoubtedly have the effect of putting the business of the country on a more sound basis. The move to cut out credit does not mean that there is to be absolutely no credit granted. Legitimate cases such as arise in dealings with contractors or firms who settle at regular periods will be provided for, but the individual who from mere force of habit has been running a charge account and paying when he got good and ready to pay, causing loss and inconvenience to the merchant, will find that it is to his interest to pay up. The firms who are going on a cash basis in their announcements are putting it squarely up to the people and are telling them the reasons why they are making the change.

FARMERS ARE PROSPEROUS

WILL prices of grain, cattle, dairy products and other farm produce remain high? This question is an important one to both merchants and manufacturers. The farmer is the greatest purchasing agent in Canada to-day, and at the prices he has been receiving for some time now for all that he has to offer, he has been buying as never before. The Warden of an Ontario county, a farmer himself and in close touch with the work the farmers' organizations are doing, stated to SANITARY ENGINEER recently that prices of farm products will never go back to where they were because if the farmers see that they are going to drop materially they will limit production. This is the view of a man who is, perhaps, one of the most up-to-date and wide-awake farmers in his community, and may be accepted as correct. This is a situation which is anything but desirable, and its solution would have to be worked out. While the farmers have been receiving large sums of money and have been improving their homes and farm buildings and buying automobiles and improved machinery, they have never forgotten for one moment to be thrifty. In one small Ontario town, a place with 4,000 population, there is more than $3,000,000 in deposit in the banks, and most of it belongs to farmers. In another much smaller town in the same vicinity deposits in proportion to the population are much higher. There is every indication that there is going to be a continued demand for everything in the way of foodstuffs that the farmers can raise. While prices may decline a little from the peaks they have soared to, there is every indication that in so far as the farmer is concerned he is going to have plenty of money and that he will continue to be a large buyer.

REGISTERED TRADE MARK

SUPERIORITY PURITY DURABLE AS THE PYRAMIDS

Port Hope Sanitary Plumbing Ware

Every Fixture is unconditionally guaranteed and bears our label as a protection for you and your customers.

THE "CANTERBURY" LAVATORY

Every Master Plumber Should Have Our *Roughing-in Booklet*

This 212 page booklet contains sectional drawings of every "Port Hope" fixture and accessory shown in our catalog with complete roughing-in measurements.

This booklet, nicely bound in cloth, is printed on good quality paper and has round corners—a real pocket edition.

It may be obtained by writing direct to our head office, our branches or to the jobbers. It's yours for the asking.

Port Hope Sanitary Mfg. Company, Limited

Opportunity Is Knocking at Your Door, Now

THE Building Outlook was never better. Ontario Housing Commission is preparing to build 4,000 new homes this year.

Speculative builders will double this number, 8,000 to 10,000 new Ontario homes.

Sanitary Engineers and Master Plumbers will have the busiest year in their lives. But it must be the right class of business. The best sanitary equipment procurable is none too good for that new home of the Returned Soldier or the Workingman. It is just as essential and economical to the new factory, business house or palatial residence.

We can confidently recommend Port Hope Sanitary Enamelware goods as second to none on the continent. And you can carry our full stock IN YOUR POCKET by means of our catalogue, complete in illustrations of all bathroom, kitchen and laundry equipment.

Get in touch with the builder with one of our "For the Home" or "For the Factory" catalogues, sent on application. Increase your business; your opportunity was never better.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

Personal

Thomas Ferguson, who, as reported in a previous issue of SANITARY ENGINEER, was in Toronto General Hospital to undergo an operation, has recovered sufficiently to be removed to his home.

Harold Barnhart, formerly in the plumbing business at Brockville, Ont., has purchased a piece of property on the lake front at Oshawa, Ont., consisting of eighteen cottages, pool room, confectionery store and boats, and plans to look after same, paying special attention to the confectionery store.

Obituary

The death occurred at Belleville, Ont., of William McGie, aged sixty, for many years in the hardware and plumbing business. He had been living retired for some time.

Trade Notes

Pierre Therien & Co., plumbers, Montreal, have dissolved partnership.

Thermos Heating Systems, Limited, of Toronto, has been granted permission to change its name to Fuel and Heat Systems, Limited.

The Galt Brass Company, of Galt, Ont., will start work shortly on a large extension to its plant.

Incorporations

John A. Lillie & Company, Limited, head office Toronto, capital $40,000, plans to carry on a general plumbing and hardware business.

Sully Brass Foundry, Limited, capital $40,000, head office, Toronto, plans to carry on a general business as brass founders.

The Tube Company of Canada, Limited, capital $100,000, head office, Toronto, plans to manufacture and deal in metal tubing, sheet metal and stamped and drawn products.

The West Furnace Carburetor Company of Canada, Limited, capital $100,000, head office, Toronto, plans to manufacture and sell furnace carburetors and accessories.

Kilmer and Barber, Limited, capital $300,000, head office, Toronto, plans to carry on a general business in the construction of sewage, drainage, gas, water, sanitary and other public works.

Shannon The Plumber, Limited, capital $40,000, head office, Toronto, plans to carry on a general plumbing business and to manufacture and deal in plumbing goods and supplies.

Kitchener Firm Plans To Erect 500 Houses

Kitchener, Ont.—The Kitchener Construction Co. is preparing plans for the erection of from 400 to 500 houses in Kitchener during the year. The company is composed largely of business men of the city and the co-operation of the business men and manufacturers will be enlisted for the purpose of providing the necessary housing accommodation to man the industries of this city.

WILL BE RESUMED IN NEXT ISSUE

Owing to the death of Mrs. N. A. Kearns, following a very brief illness with influenza and pneumonia, the series of articles which Mr. N. A. Kearns is writing for SANITARY ENGINEER *is omitted from this issue.*

The series will be resumed in the next issue.

J. Lorne Bigley Is Victim Of Pneumonia

Pneumonia, which developed after an illness of only a few days with influenza resulted in the death at his home in Toronto of J. Lorne Bigley, vice-president and manager of the wholesale department of the R. Bigley Manufacturing Co., Ltd., manufacturers of steam fittings. He was 35 years old and a member of the Granite Club, and of the Argonaut Rowing Club. Besides his wife he leaves a little daughter and three brothers, all of whom were associated with him in the business.

Plumbing Bylaw Is Planned At Burlington

Burlington, Ont.—Reeve Bridgeman, at the regular meeting of the council, recommended that a plumbing by-law be passed which calls for the inspection of all plumbing done in the town. He stated that complaints had been made and thought the sewer inspector could handle the work. Mayor Cleaver said it was good business to have an inspector for the plumbing. "We must protect our ratepayers. Of course, all the work is not bad, and such a by-law would be fair to everybody." It was recommended that Reeve Bridgeman get in touch with Hamilton, Toronto and Oakville and secure copies of their by-laws.

Plumbers' Helpers Must Affiliate

HAMILTON, Ont.—Alexander Bonner, business agent of the Plumbers' Union, presided at the meeting of the newly-organized local of plumbers' helpers, held in the Labor Hall. The meeting was addressed by J. Bruce, Toronto, organizer of the Plumbers' International Union, and he said that according to the constitution the helpers would have to affiliate with the journeymen plumbers' union—that the organization could not be a separate one. It was decided to take steps for affiliation at once. Six new members were initiated.

Sanitary Inspector Busy At Vancouver

VANCOUVER, B. C.—Efforts of Dr. F. J. Underhill and Chief Sanitary Inspector Jos. Hynes to have ice cream and soft drink vendors provide hot water for sterilization of drinking vessels and utensils are meeting with success.

The health department's campaign for better sanitary arrangements in public refreshment places has been rigorously conducted. In several cases proprietors were notified that their licenses would not be renewed until they had complied with the provisions of the public health department. Several places were found to be rinsing glasses in cold water and in one instance an establishment had no arrangements for cleaning them.

Following action of the health department officials one firm made plans to instal a sterilizing system to cost approximately $1,800. Other vendors are co-operating with the health department in its endeavor to provide boiling water plunges for drinking cups, ice cream dishes and utensils.

Endeavors are being made to have ventilation systems placed in apartment and rooming houses, especially in cases where gas stoves and heaters are used. The danger to the tenants of such rooms is apparent and inspection has revealed that immediate attention is necessary.

Sanitary accommodation at theatres

and picture shows has been found inadequate in several instances and steps are being taken to rectify it immediately.

Will Work On A Percentage Basis

Quebec Master Plumbers are concentrating a new departure in connection with taking contracts. Under the present conditions it is almost impossible to buy material at a stated price. An order may be placed for delivery when the manufacturer is in a position to deliver, but matters have so developed that few would quote a definite price at time of delivery, whenever that may be. At the consequence, the plumber is placed in an awkward position and this has given rise to the suggestion that contract work in the future will be done only on a percentage basis. That is to say, the material and labor cost will be totalled, and the percentage agreed upon before the contract is undertaken.

Empire Mfg. Co. Buys Large New Warehouse

The Empire Manufacturing Company, Limited, of London, Ont., has purchased the Mendelssohn Building, at 110 Adelaide Street West, Toronto, and will move from its present quarters at 119 Adelaide Street West, about April 1. For some time past the firm has required more room in order to look after the needs of steadily expanding business and the new warehouse will give twice as much space as the present quarters.

Sanitary Engineers On Builders' Exchange

MONTREAL.—At the last meeting of the nominating committee of the Builders' Exchange held in the Drummond Building, Montreal, the following were nominated for the year 1920: President, W. M. Irving; hon. secretary, John C. Watson; hon. treasurer, J. E. Walsh.

The Trade Contractors' Section also held their meeting last week and made the following nominations: Chairman of Section and second vice-president of the Exchange, S. J. Parsons; seats on the Board of Directors were: C. Lapourelle, R. F. Sykes and J. Roberts.

Dresden Waterworks To Be Remodelled

DRESDEN, Ont.—Tenders will be called for shortly in connection with extensive improvements to the waterworks system. It is planned to convert the present steam plant into one operated by hydro and plans are being prepared by Engineer F. W. Farncombe, of London, Ont. A contract was recently awarded to the Canadian Des Moines Steel Co., of Chatham, Ont., for a large new steel tank.

Men in Building Trades Recognize Importance of a Proper Form of Contract

Sanitary and Heating Engineers May Profit by the Example Being Set by Others—Under Present-Day Conditions This is Important

IT is interesting to note in connection with the leading article in the last issue of SANITARY ENGINEER, "Proper Form Of Contract Is Important," the action taken by the Association of Canadian Building and Construction Industries at their annual meeting in Ottawa.

Realizing the vital importance under present day conditions, especially of a proper form of contract, the Association went on record as favoring a number of radical changes in their relations with architects and engineers as regards the letting of contracts.

Standard forms of contract are favored and the association will ask the Royal the Engineering Institute of Canada each to appoint two of their members to meet four members of the building association to draw up a standard form of contract and general conditions which can be used throughout the Dominion. They also advise that the same committee prepare a standard form of sub-contract which would bind the sub-contractor to the same conditions of contract as the general contractor with the same conditions and privileges accruing to both.

The association also adopted the recommendation that no sub-division tenders or unit prices be given to architects or engineers before the contract is closed or before written assurance has been received that a contract has been entered into.

Both the architects and the engineers will be notified that general contractors will not, in the future, submit tenders when the architect (or engineer) is at the same time taking bids on his work by trade.

The practice of giving certified cheques with bids is also disfavored by the association and it was suggested that in view of the large deposits which have to be made by bonding companies with the Provincial and Dominion Governments, that bid bonds be substituted.

Penalty and bonus clauses in contracts will also be opposed. The members contend that as the architects and engineers reserve the right to dismiss any contractor for incompetency that these clauses should be eliminated.

HIGHLY HONORED

"JACK" McLELLAN

At the annual meeting of the Dominion Commercial Travellers' Mutual Benefit Association, held in Montreal last week, John McLellan, known to his friends as "Jack," was elected to the presidency. Mr. McLellan has been associated with the benefit section of the Association for the past four years, and in this work has taken a keen interest. In addition to having been a director of the benefit section for four years, he was, for the same period, a director of the Dominion Commercial Travellers' Association, and for the past year was vice-president of the former. He covers Eastern Townships territory for the Thos. Davidson Mfg. Co., Ltd., Montreal.

Banquet In Quebec To Be Held April 10

A very ambitious program for a banquet is contemplated by the Quebec Builders' Exchange. This is proposed to be held on or about April 10th next, and when all lines of the builder's trade will be represented. The banquet will be held, it is understood, at the Chateau and prominent speakers from various parts of Canada will be in attendance.

In speaking with E. G. Brousseau, president of the Plumbing Section of the Builders' Exchange, SANITARY ENGINEER was informed that while the membership is now around 85 it is expected to be 125 in a very short time.

ACCIDENTALLY OMITTED

In the account of the annual ball and "At Home" of the Toronto Society of Domestic Sanitary and Heating Engineers, which appeared in the previous issue of SANITARY ENGINEER, the name of Harry Farthing, chairman of the committee in charge of the arrangements, was accidentally omitted.

Contracts Awarded

Cap de la Madeleine, Que.—Massicotte & Freres have plumbing for new school costing $88,000 for the Public School Board.

Toronto.—The Fred Armstrong Co., 278 Queen Street West, has plumbing, heating and ventilating contract in connection with new school costing $156,000.

Montreal.—J. E. Brule, 3279 Christophe Colomb Avenue, has plumbing and heating for six residences costing $30,000 for Duquette & Patenaude, 2668 Park Avenue.

Kitchener, Ont.—Hollinger & Durst, 65 Frederick Street, have plumbing and heating for several residences being erected by the Kitchener Housing Commission.

Outremont, Que.—P. P. O'Shea, 64 Victoria Square, has plumbing and heating for addition to convent costing $50,000, the Sisters Marie Reparatrices, Mount Royal Avenue.

Toronto.—R. G. Johnston, 17 Galley Avenue, has the heating, plumbing and electrical work for new lavatory building costing $12,150 for the Board of Control.

Montreal.—Selkirk Bros., 2308 Waverly Street, have plumbing and heating for hostel costing $16,000 for the Montreal Sailors' Institute, 6 Place Royal.

Toronto.—W. E. Manners, 2326 Queen Street East, has plumbing and heating for four bungalows costing $18,000 for P. C. Brown.

Victoria, B.C.—McDowell & Mann, 708 Yates Street, have plumbing contract for new garage costing $11,000 for H. A. Davie, 847 Yates Street.

Ottawa.—J. P. Band & Co., 775 Bank Street, has the plumbing, and the Capital Hardware Co., 845 Bank Street, heating for residence costing $5,000 for Miss E. Ronan, 156 Irving Avenue.

Montreal.—A. Blais, 2 Langevin Avenue, has plumbing and heating for new residence costing $8,000 for C. DeGuise, 364 Addington Avenue; also for three residences costing $15,000 for J. P. Tremblay, 293 Prudhomme Avenue.

Tenders

Leamington, Ont.—Plans are being prepared by the Dominion Canners for new canning factory to cost $60,000.

Yorkton, Sask.—The Public School Board contemplates erection of new school to cost $115,000. J. M. Clark, secretary.

Winnipeg.—The erection of new buildings to cost $300,000 for the University of Manitoba is contemplated.

Stratford, Ont.—The Parks Board will call for tenders shortly for new lavatories and pavilions to cost $35,000. R. T. Orr is chairman.

Toronto.—The Property Committee of the City Council is providing in its estimates for the erection of a public lavatory at Queen Street and Kingston Road.

Drummondville, Que.—Plans are being prepared for the building of 150 dwellings for workingmen under the Housing Commission plan. Walter Moisan, town clerk.

Chicoutimi, Que.—J. L. Simard is preparing plans for new residence to cost $10,000. Prices wanted on plumbing and heating equipment.

Kitchener, Ont.—The Kitchener Construction Co. wants tenders for heating, plumbing and electrical work in connection with eleven new dwellings to cost $3,500 each.

Kentville, N.S.—Roy Calkins is preparing plans for new residence to cost $7,000 and wants prices on heating and plumbing equipment.

Biggar, Sask.—Plans are being prepared for the erection of a new hospital to cost $100,000. Frank Hopkins, secretary of the Board.

London, Ont.—The Housing Commission, E. R. Dennis, chairman, will call for tenders shortly for all work in connection with the erection of sixty new dwellings to cost $200,000.

London, Ont. — Tenders will be called shortly for the erection of three new buildings for the staff of the Psychiatric Hospital, to cost $90,000. H. C. McBride, Molsons Bank, London, Ont., architect.

Quebec, P.Q.—C. J. Lockwell, 35 St. Peter Street, is preparing plans for two new stores to cost $100,000.

London, Ont.—Plans are to be prepared for new church to cost $35,000 for the Egerton Street Baptist congregation. Rev. A. C. Bingham, pastor.

Regina, Sask.—The Swift Canadian Co. contemplates erection of a cold storage plant to cost $250,000.

Brantford, Ont.—Board of Education (Dr. J. B. Gamble, chairman) plans to build a 17-room addition to the Collegiate.

Montreal. — The Roman Catholic School Commissioners, 87 St. Catherine Street W., have been authorized to borrow $1,000,000 for building eight schools.

Lachine, Que.—City Engineer A. Laframboise is preparing plans for filtration plant and improvements to waterworks system to cost $300,000.

Plan to Ask for an Increase of British Preference

Canadian Association of British Manufacturers at Their Annual Meeting Discuss Many Matters—George A. Marshall Was Elected President

At the annual meeting of the Canadian Association of British Manufacturers and their representatives, which took place at the Walker House on January 28, a lively discussion arose as to the future attitude of the association towards representatives or agents who may enter into any agency agreement with manufacturers or wholesale exporters whose principal works or places of business are situated in a country which was hostile to Britain during the war. The debate had its origin in a suggestion made that a clause of the constitution, prohibiting representatives of British manufacturers having similar connections with firms of or in former enemy countries from membership in the association, should be deleted. After many arguments had been advanced, it was resolved to submit the proposed alteration in the constitution to a "postal vote."

GEORGE A. MARSHALL

President of the Canadian Association of British Manufacturers. Mr. Marshall is a partner in the firm of Marshall, Son & Bunney; president of the Kerr File & Tool Co., Ltd., and proprietor of the Perfection Sanitary Brush Co.

Arrangement Reached

Mr. John Wilson, the retiring president, in his address, made an announcement which was well received, to the effect that an arrangement had been reached with the Federation of British Industries by which commercial intelligence could be exchanged between members of the Canadian Association and the British manufacturers. The Federation of British Industries, Mr. Wilson stated, had a membership of over 19,000 firms, representing $20,000,000,000 of capital engaged in British industries. It would now act as the London representative of the members of the association, which, he declared, now number 85, representing about 400 British manufacturers. The London office of the F. B. I., situated at 39 St. James' Street, London, S.W. 1, would now be available for members of the association visiting in London as a means of getting in touch with such members of the Federation as they might wish to see.

Want Preference Increased

With regard to tariff matters, Mr. Wilson said that the association was in close communication with the Minister of Finance with a view to increasing the British preference on such items as iron and steel, paints with spirit base, fire brick and other clay products, etc. He invited the members to submit all their tariff difficulties to the Executive Council, so that it might present them to the proper authorities, as the Dominion Government had agreed to receive a deputation from the association when the proposed tariff investigation is held. The Executive Council had also, he said, passed a resolution requesting that the Department of Overseas Trade of the British Government take immediate steps to appoint the necessary inspectors in Great Britain, in order that the certificates required by the Canadian Government, in respect to imports of potted meats, might be forthcoming for shipment to Canada from British firms.

The election of officers for 1920 resulted as follows: President, Mr. G. A. Marshall; vice-president, Mr. J. Harris; council, Messrs. A. C. King, C. W. Beal, James Haywood, R. D. Harding and Harold A. Wilson.

Natural Gas Companies Are Asking Permission to Increase Rates

Claim That Costs Have Advanced 200 to 400 Per Cent. and That They Cannot Maintain Adequate Service Unless Rates Are Advanced

NATURAL gas companies operating in Ontario Province want the Ontario Government to sanction their charging higher rates. A deputation representing all the natural gas companies of the province waited on Premier Drury, Hon. W. E. Raney and Hon. Harry Mills, and made the request.

The deputation, which was headed by C. E. Steele, president of the Canadian Natural Gas Association, told of the increasing costs in the production of gas, and the handicap they were under because of existing rates. They did not ask that the Government sanction the increase in rates on the statements they made. Instead, they asked that the Government instruct their Gas Commissioner, Mr. Estlin, to report on the statements made. If he confirmed the representations put forward by the companies, the deputation felt the Government should then permit of higher prices being charged.

Jump 200 Per Cent.

It was contended by the deputation that within the last few years the costs of materials have jumped from 200 to 400 per cent., and that wages have increased 80 per cent. The price of natural gas is 25 to 30 cents a thousand, which is one-quarter the price of coal to-day. Because of the low prices the companies are receiving, it was said, they are not able to go ahead and drill new wells to protect the future supply of the consumers, and that unless this is done the customers would, within a few years, have to buy coal, which is both scarce and costly. If manufactured gas were used it would probably cost from $1.25 to $1.50 a thousand.

While conditions vary with the different companies, one speaker said that his concern would require a rate of 40 cents during the winter months and 60 cents during the summer months. Consideration was promised.

New Sewage System For Lindsay Will Cost $40,000

Ground Work to be Commenced Shortly, as Plans Are Approved by Provincial Engineer F. A. Dallyn

Lindsay, Ont.—At a special meeting of the council, at which F. A. Dallyn, of Toronto, Engineer of the Provincial Board of Health, was present, the proposed new sewerage system for the Eastern part of the South Ward was discussed.

The new system will not be built in a year, but work will start immediatciy on the ground work. The new system will cost the town between $40,000 and $50,000, which will include a sewerage disposal plant valued at $10,000 or $12,000.

Work on the new sewers will start on Kent Street East, from a point opposite the Canadian Cereal mills, east to Simcoe Street, thence to Durham Street. In time there will be several extensions to the main sewer on the different streets. The system will cover the eastern part of the South Ward at present unserved.

In course of time it is anticipated that a sewerage system will be built in the East Ward with a disposal plant; also a disposal plant in the North Ward to take care of sewerage matter.

The town will build the disposal plant, while the sewers will be charged to the property benefiting thereby.

Figures For Gas Holder Stagger Commission

Guelph, Ont.—At a special meeting of the Board of Light and Heat Commissioners held for the purpose of opening tenders for the new gas holder to be erected here, four tenders in all were received, all from American firms. The commissioners were rather staggered when they found the lowest tenderer asking $55,000 and the highest $81,000, which price does not include the paying of duty, freight or other necessary expense in connection with the transporting of material. The commissioners decided to leave the matter open, and put it in the hands of J. J. Heeg and Mr. Muir, their consulting engineer.

Acute Shortage of Heavy Steel Plate

Montreal.—SANITARY ENGINEER understands that a very acute shortage exists on heavy steel plate. In one instance a quotation was reported as received and some actual business secured from a prominent manufacturer of scrapers, etc. This business, placed promptly, was finally turned down, the manufacturer of the steel plates finding that his mills were booked ahead so far that delivery could not be made for many weeks. It may be a factor in seriously delaying the manufacture and delivery of certain types of wheelbarrows, scrapers, etc.

New Reservoir Will Be Built At London

Work will be commenced early in the spring at London, Ont., on a new reservoir to cost $250,000 and a capacity of ten million gallons. Extensions will be made to the water mains costing $150,000 more. All the work is to be done by day labor under the direction of E. V. Buchanan, general manager of the Public Utilities Commission. Prices will be asked for shortly on five cars of cast iron water pipe from 6 inches to 10 inches.

Work will also be commenced by City Engineer H. A. Brazier on sewer extensions that will cost $80,000.

Water Service For Scarboro Township

TORONTO.—Scarboro township's new utilities commission at a special meeting laid plans for giving effect to the wishes of the ratepayers for the installation of a water service in the southwest district adjoining the city. The clerk was instructed to circulate a petition among the residents, and enroll at once all who desire a service. If half of the householders and two-thirds of the property interests express approval, council will pass a by-law authorizing the building of the system. A district has been laid out embracing all south of St. Clair and west of the Kennedy road, and the engineer's plans are already in the hands of the commission.

Montreal Man Warned To Be More Careful

MONTREAL. — Israel Tannahause, a plumber, has been warned by the authorities that he must exercise more care in thawing out frozen water pipes. This was in connection with the fire which occurred in the tailor shop of Nathan Fickler, 185 Bleury Street. Tanahause had been called to thaw frozen pipes in the cellar. He used a candle in order to find where the pipe was frozen and in doing so he set fire to the oakum with which the pipe was packed. Before the arrival of the firemen, however, he extinguished the blaze.

Port Dalhousie May Secure Waterworks

St. Catharines.—The village of Port Dalhousie is making a move to get a waterworks system, and the supply may come from St. Catharines. When the big pipe line from Lake Erie to Lake Ontario is finished, work on which is to be commenced this spring, all places along the Welland Canal will get their supply from Lake Erie. The digging of the new Welland Ship Canal is destroying their source of supply, and the Government is building the pipe line, which will cost several million dollars.

Public Utilities Are a Most Important Factor in Our Daily Lives

People Could Afford to Pay a Great Deal More for Them Than They Are Costing—Without Them We Would Go Back to Dark Ages

DISCUSSING the important question of the future of public utilities, a report made by the Committee on Waterworks and the American Society for Municipal Improvements says:

"It is well known that within the last few years all material and labor required for the construction, maintenance and operation of water works systems has advanced very greatly in cost, and, in addition, it is the general experience that the amount of labor output per man in most occupations has decreased, all resulting in a very much higher cost per output of service than existed before the war, which has left in its wake many problems of readjustment and reorganization, upon the wise solution of which the future of the world must be determined. These increased costs exist not only in water supply systems but in all public utilities.

"Public utilities generally are a most important factor in our daily lives, ministering directly to our comfort and convenience and affecting our health. If we should eliminate the public utilities to-day, we would go back almost to the dark ages. Every one of them is essential, and rather than eliminate any of them we could afford to pay for the services which they render a great deal more than their present cost.

"It is, we believe a fact, however, that utility charges have not increased because of contract or other legal limitations, or because of public opposition, in anything like the proportion that the cost of the service which they render has increased; many of them which are privately owned are in the hands of receivers; many others are struggling for their lives, and very few of them are in a position to extend and maintain their services as they would be if they could always be assured of adequate return for the services which they render.

"The fact is that neither publicly-owned or privately-owned utilities can be conducted to the best advantage until the public as a whole grasps the idea that every service must earn its cost and that the recipient of every item of service should always pay the full average cost of the items of service which he absorbs, leaving no portion of said cost to be carried by any who do not receive a service of some character from said utility. Once this idea is generally admitted it will be easy to induce capital to invest in privately-owned public utilities and to maintain said privately-owned utilities as well as publicly-owned utilities up to any standard of service which the public desires and is willing to buy."

Retail Merchants Organize Second District Branch in Saskatchewan

Town of Kerrobert Is Selected as Headquarters, and the Work Will be in Charge of A. E. Tutte, Recently Returned From Overseas

THE Kerrobert district of Saskatchewan has been chosen for the establishment of the second district branch of the Retail Merchants' Association, the town of Kerrobert being selected for the headquarters.

Mr. A. E. Tutte has been appointed district secretary and has already commenced a campaign for members. There are at present 100 members of the association in the Kerrobert district, but Mr. Tutte hopes to be able to secure at least 300 members for the district branch from all parts of the district. The Kerrobert branch will be known as branch No. 2 and will cover the territory lying between Ruthilda on the G.T.R., Anglia on the C.P.R. to the Provincial boundary and as far north as Cut Knife, Wilkie being included in the district.

Mr. Tutte, who has taken charge of this district as district secretary, previous to enlisting for overseas service, was commissioner of the Humboldt Board of Trade. Since returning he has received special training with the Retail Merchants' Association at the headquarters in Saskatoon and in connection with the Assiniboia district branch.

The object of establishing these district branches is to enable members to obtain information on subjects in connection with the retail trade, both through their district secretaries and the Provincial office, from which also they will have the service of the various departments, and also to get together at intervals for the discussion of various problems as well as for social intercourse and to further community work in its various phases. Another part of the program will be to co-operate with the various merchants who are members of the association in establishing lines of credit for the accommodation of the consumer and the protection of the retailer.

Address and Bag For Thomas F. Drummie

The St. John, N.B., branch of the Retail Merchants' Association tendered a farewell dinner to Thomas F. Drummie, who is leaving to become manager of the David's Stores, Montreal. After luncheon, P. M. Rising, of Waterbury & Rising, Ltd., tendered Mr. Drummie a nicely-worded address, referring to the valuable assistance he had given the Association. Mr. Rising then presented Mr. Drummie with a club bag on behalf of the association.

Mr. Drummie was one of those who helped to found the Retail Merchants' helped to found the R. M. A., of provincial advisory board of which he is a member, and he has been secretary for the last few years. He represented the Province of New Brunswick at the Dominion convention of this body in Ottawa in 1917.

He is a member of the Canadian Club and on the executive of the Commercial Club, of which he was one of the promoters.

Steel Mills Sold To Line of Safety

Pittsburgh, Feb. 14.—The bulk of the steel sheet trade, in so far as current buying is concerned, is between direct consumers and jobbers. The mill business has practically been closed for the first half, and in many cases it has been sold to the line of safety on production for the second half of the year. Shipments to jobbers are being made by sheet producers on account of contracts that show a good operating result of the mills in face of coal shortage, steel shortage and car shortage, and the jobbers' stocks that are going into the market are all that save the smaller consumer from absolute famine. No effort is made to follow prices on such business as this, but black sheet base has reached 6.50 cents and blue annealed 5 cents in such trading. It is, however, not fair to govern market conditions by such standards.

Sheetmakers are facing a continued shortage in sheet bars and this is as much due to car supply and railroad default as to steel shortage. While a normal car supply would unquestionably put an entirely different aspect on the steel industry, manufacturers say it would not cure the evils now being faced, for the excessive demand is far in excess of the combined raw steel capacity of the country. Galvanized sheet trade is extremely limited in so far as new business is concerned, but is fully normal in proportionate importance, now. Much inquiry for electrical sheets is said to be pending consideration, taking in second half delivery, and which may be put in the form of options on mill capacity.

Solving the Apprentice Problem

George Clapperton, President of the Toronto Society of Domestic Sanitary and Heating Engineers, Outlines Before Members of Builders' Exchange the Work That is Being Done in This Important Matter

THE following address given by Mr. George Clapperton, president of the Toronto Society of Domestic Sanitary and Heating Engineers, before the members of the Builders' Exchange, outlines what is being done to solve one of the most important problems in the trade to-day.

In working out the plans which are now in effect there were many matters that had to be arranged in order that the best interests of all might be served. The basic principle behind the whole plan is to turn out men who will know their business and who can go anywhere and work at the trade. It is likely that the plan adopted in Toronto may be made Dominion wide.

Mr. Clapperton, on rising to speak, said that when invited by Mr. Dillon to explain to the members of the Builders' Exchange the apprenticeship system adopted by their association, the Sanitary and Heating Engineers, had no idea that it would be at a banquet such as this, before so many prominent members of the Builders' and Supplies Association of Ontario, and that he would be sitting at the top table beside so many eminent speakers. He said that he was not present to make a speech, but to tell, in his own simple way, the apprenticeship system.

Being one of a committee appointed to bring in recommendations for the betterment of the system, our first duty was to find out how many boys were actually employed in the trade in the city of Toronto, which was found to be between seventy and eighty. We then found, after several meetings with a committee from the journeymen's association, that the number of journeymen or mechanics required each year was approximately twenty-five to fill the demand.

All Were Canvassed

Every employer was canvassed to find if all the boys in their employ had sufficient education and the desire to follow up the business. Those employers who had not been employing boys were advised strongly to take at least one or two boys to learn the business, so that we should produce the required number of journeymen.

We then proposed that all boys taken on by employers should be given a six months' probation course. By this means the boy would know whether he would like to go on with the trade or not. Likewise the employer would know whether the boy had the qualifications to become a mechanic, and if he had not, the boy could be advised to try some other vocation. If, however, at the end of the six months the boy was satisfied to go on, and the employer felt that the boy had the necessary qualifications,

GEORGE CLAPPERTON
President of the Toronto Society of Domestic Sanitary and Heating Engineers.

the boy would be put under a card system of indenture.

Would Take Out Card

The idea would be that every master employing boys would take out a card supplied by the association. The employer would fill out this card as to when the boy started to learn the trade, and would include the six months' probation. If for any reason said employer felt that he could not keep said boy steadily employed, it would be his duty to try to locate the boy in some other shop. The employer would keep the card of indenture in his possession until the boy had finished his time. In the event of the boy leaving his employment for any cause, he could be handed his card, fully made out as to time served, and qualifications, which, in turn, would be handed to his next employer, and held by him, as stated above.

Must Ask to See It

To prevent boys from leaving one employer to go to another without sanction of previous employer, before any of the members can employ said boy, he must ask to see his card of indenture. If the boy produces this card it would be quite in order to give him employment, but if unable to do so, the employer must readily realize something is wrong, and he should make investigations.

It was recommended that every employer should be careful in the selection of boys to learn the trade. The boy should have a common school education and be of good moral character.

As the members are aware, every boy must pass an examination composed of a joint committee from the employers' and journeymen's associations before he is allowed to handle the tools. This examination can be taken at any time the employer feels the boy sufficiently advanced to do so. Every employer when employing a boy to learn the trade, must insist upon the boy attending the Technical School two nights each week, and if unwilling to do so, employer should take it for granted that said boy has not the real desire to fit himself to become a mechanic.

Will Have Assistance

After several meetings with Dr. McKay, principal of the Technical School, he has given us his assurance that his staff and himself will do everything in their power to assist the boys in procuring the much-needed technical education. These classes are open Wednesday and Friday nights of each week, and one hour each night is given to practical demonstration, the second hour is given to mechanical drawing, mathematics and physics.

We felt at this period that there should be some inducement for these boys to atend the evening classes. We therefore interviewed three of the larger operators in our business, Purdy Mansell, W. J. McGuire & Co., and Bennett & Wright Co., who kindly subscribed a sufficient amount of money to form an endowment fund to be invested and the interest of same given in scholarships, two scholarships to be given to the Technical Schools to be dealt with as they may see fit, and the other two to be given by our association to the boys with the best record for the term. We then wrote a personal letter to the parents of each boy, explaining to them what we were doing, and asking for their co-operation and influence to help

along the good work, and the replies we had from most of the parents gave us a great deal of encouragement.

Called a Meeting

We then called a meeting of all the boys in the different shops and had them addressed by the members of the committee who had had this work in hand, explaining to them our objects and the results that we expected. We then got the assurance of every boy that he would try to do his part. We are glad to say we now have these classes in operation and at the present time there are about seventy boys taking this educational course. If any one of you gentlemen could spare the time to visit our Technical School and see these seventy boys, and see the interest they are taking in the work, I am sure it would be an incentive for every branch of the building trade to follow our lead.

From Six to Ten

When we started to look into the apprenticeship problem, we found that the average journeyman turned out each year in our branch of the trade was from six to ten, and, like a good many branches in the building industry, we depended on immigration from other countries to supply the demand. We found many of these, especially the Old Country men, good mechanics, but no better equipped in regard to technical education than we were ourselves; and we think that is a reason that our trade was falling back in place of advancing. We seemed to have lost respect for ourselves, and, therefore, could not expect the respect of the public.

Our system may not be all that is required, but it is a beginning, we think, in the right direction, and can be improved on as we go along.

Will Ask $50,000 For Housing Scheme

Chesley, Ont.—At a meeting of the council called to discuss the housing question, Mayor Halliday gave it as his opinion that 85 per cent. of the cost of the lots and buildings to be erected on them was too high a percentage in a small town where values are constantly fluctuating. In a time of depression it might result in empty houses being on the hands of the corporation which had guaranteed the bonds. After considerable discussion a motion to request the council to loan up to 60 per cent. of the value of the lot and building was carried unanimously. The council will ask the Housing Commission to set apart $50,000 for building houses in this town.

Housing Plan Dead in Cape Breton

Sydney, N.S.—The Cape Breton council has decided to take no steps locally for the adoption of the Dominion-Provincial housing scheme. Some councillors said that, although the city of Sydney nearly a year ago complied with the provision of the act by appointing a local housing commission, nothing further has come out, and under the circumstances it would be a waste of time for the council to go through it again. The matter was dropped.

All Merchants Must Keep Books

New Bankruptcy Act Includes Advanced Insolvency Legislation—Comes Into Force on July 1—Provisions of Act Are Fair to All.

Ottawa, Feb. 14 (Special).—An order-in-council has been passed setting July 1, 1920, as the date on which the Bankruptcy Act, passed at the 1919 spring session, is to go into force. This act was passed after many years of fighting by those who considered that abuses had grown alarmingly under the old conditions. The bill was not allowed to go into effect at once, as it was desired to give the business community a year or more to adjust itself to the new situation.

There are several important features in the new Bankruptcy Act, which has been declared by merchants and others to be the most advanced piece of insolvency legislation on the continent.

It provides that all assignees must be appointed by the various Provincial Governments, and that they must be capable men, who will be bonded for the work they are to perform.

Open to Private Citizens

Another provision is that the benefits of the act are open to men in business, or private citizens, if the latter so desire to make an assignment. They may be declared insolvent if it is found that the circumstances warrant such action.

When a merchant has filed a statement showing his financial condition, his creditors can take action to have him declared insolvent, if his statement justifies this being done.

All Must Keep Books

Another important feature of the new act is that all persons carrying on business must keep books showing the record of all their transactions. This becomes compulsory from the date of the act coming into effect, on July 1 next.

In outlining the above features, which are of particular interest to business men, E. M. Trowern, Dominion Secretary of the Retail Merchants' Association of Canada, said that the news that the act was to be effective soon would be well received. As it passed the House, the measure had the support of business and professional men of all classes, and its provisions were equally fair to those in all lines of trade, as well as farmers and private citizens.

Iron Pipe Prices May Advance Soon

Montreal.—SANITARY ENGINEER understands that the present undertone of the pipe market is such as to suggest an almost immediate advance for gas and water pipe. An advance has been made this week for one line of unions and the continued strike of the market on old scrap suggests that new material will rule at high figures. It will not be surprising if another advance becomes effective in the immediate future. The undertone is decidedly strong and with a heavier buying season just ahead it will be interesting to watch the turns of this market.

Many Business Men Are on Committees

MONTREAL. — Standing committees for the year 1920 for the Montreal Board of Trade have been named, and among these are a number of prominent business men. The list is as follows: Executive—Geo. Summer, chairman; Hon. Lorne C. Webster, Wm. M. Birks, Arthur Lyman. Municipal Affairs—W. S. Leslie, chairman; A. M. Irvine, Clement H. McFarlane, Alphonse Racine, John W. Ross. Harbor and Navigation—Walter B. Ramsay, chairman; Graham Drinkwater, H. D. Dwyer, E. H. Hodgson, W. S. Leslie. Provincial Legislation—Alphonse Racine, chairman; Graham Drinkwater, Geo. W. Grier, W. S. Leslie, Clement H. McFarlane. Dominion Legislation—Clement H. McFarlane, chairman; R. E. Calder, H. D. Dwyer, E. H. Hodgson, Walter B. Ramsay. man; R. E. Calder, Geo. W. Grier, E. H. Hodgson, Walter B. Ramsay. Increased Membership — Graham Drinkwater, chairman; H. B. Henwood, A. M. Irvine, Alphonse Racine, John W. Ross. The following, previously admitted to membership, have qualified therefor: P. A. Curry, White-Star Dominion Line; W. F. Forbes, White-Star Dominion Line; Percival F. Gilford, Southern Sales Corportation; J. S. Dumont, Mile End Milling Co., Ltd.; Geo. S. Dingle, managing director, British Merchants, Incorporated, Canada.

TENDERS

Sherbrooke, Que.—The council plans to expend $300,000 during the coming summer on waterworks extensions.

Ottawa.—The Knights of Columbus will shortly call for tenders for new lodge building to cost $60,000.

Vancouver, B.C.—By-law for the building of an isolation hospital to cost $300,000 will be submitted in May.

Vancouver, B.C.—Plans are being prepared and tenders will be called shortly for erection of a $400,000 addition to the store of the Woodward Departmental Stores, Ltd. W. C. Woodward, manager.

London, Ont.—Erection of an apartment building containing 20 suites, to cost $100,000, is contemplated by John Hayman & Sons, Ltd., 432 Wellington Street.

Right to Fix Resale Price May Figure in Hamilton Investigation

If Manufacturers Have This Right Then Secret Commissions Act Makes It Illegal for Wholesaler or Traveller to Allow Rebate to Retail Trade—Board of Commerce Sitting Expected to Clear the Air—How the Act Reads

THE SECRET COMMISSIONS ACT MAKES SECRET REBATES ILLEGAL

"Everyone is guilty of an offence and liable upon conviction, on indictment, to two years' imprisonment, or to a fine not exceeding two thousand five hundred dollars, or to both, and, upon summary conviction, to imprisonment for six months, with or without hard labor, or to a fine not exceeding one hundred dollars, or to both, who

(a) being an agent, corruptly accepts or obtains, or agrees to accept or attempts to obtain, from any person for himself or for any other person, any gift or consideration as an inducement or reward for doing or forbearing to do, or for having after the passing of this Act done or forborne to do, any act relating to his principal's affairs or business or for showing or forbearing to show favor or disfavor to any person with relation to his principal's affairs or business; or

(b) corruptly gives or agrees to give or offers any gift or consideration to any agent as an inducement or reward or consideration to such agent for doing or forbearing to do, or for having after the passing of this Act done or forborne to do, any act relating to his principal's affairs or business, or for showing or forbearing to show favor or disfavor to any person with relation to his principal's affairs or business; or

(c) knowingly gives to any agent, or, being an agent, knowingly uses with intent to deceive his principal, any receipt, account, or other document in respect of which the principal is interested and which contains any statement which is false or erroneous or defective in any material particular, and which, to his knowledge, is intended to mislead the principal.

(d) Every person who is a party or knowingly privy to any offence under this Act shall be guilty of such offence and shall be liable upon conviction to punishment hereinbefore provided for by this section.

The latter clause was an amendment to the original bill which passed the Senate on March 31st of the same year. After being amended, it was sent back to the House of Commons and agreed to on April 21st and was finally sanctioned by the Senate.

Hamilton, Ontario. — (Special). — Among the chief topics of conversation among retail merchants is the proposed investigation in connection with the Wholesale Grocers' Association and the Retailers' Organization in Hamilton. The consensus of opinion is that the investigation of the alleged conspiracy will clear the air and show exactly what power the wholesale organization has and how far it can go in the matter of refusing to purchase from manufacturers that permit other wholesalers to cut the price of goods bearing an established price to the retail trade. It is more than likely that this point will come up in the investigation, together with the whole question as to whether manufacturers have the right to fix a resale price from wholesaler to retailer, and perhaps from retailer to consumer.

As mentioned in SANITARY ENGINEER recently, there has only been one occasion when this question has been before Canadian courts, and that was during the Wholesale Grocers' Guild case about eleven years ago. This point has been before the United States courts on many occasions. Sometimes the principle of the right to fix the resale price has been upheld by the courts, and sometimes it has not.

What Resale Price Means

If the manufacturer fixes the price from wholesaler to retailer, no wholesaler is allowed to sell for less than that price. If he does, it means that he or his travelling salesmen must give what is known as a secret commission or secret rebate; or else he must openly declare that he does not intend to keep the price. In the latter case he runs the risk of being cut off by the manufacturer.

A Hamilton retailer stated to SANITARY ENGINEER that there were many travellers of wholesalers that did offer these secret rebates. On one occasion a traveller from a wholesale house —not a Hamilton wholesaler—was selling him some goods. He purchased a carload of merchandise from him and intimated he would not require anything else. The traveller mentioned other lines, including cereals. The retailer knew he could not get any better price on them than he could from his own local wholesaler, so declined to buy. The traveller then pointed out there was a 5% discount for him on a certain cereal which the retailer knew was sold on the fixed price basis. He decided to take a number of cases. When the draft came through he noticed the 5 per cent. had not been deducted. He, however, paid the draft.

Traveller Offers Discount

The next time this salesman came along he refused to buy, pointing out that he had not been allowed the 5 per cent. The salesman was apparently surprised and stated he would have the matter fixed up. He then gave him another order for the same cereal, but the draft came through without the 5 per cent. deducted. He refused at first to accept the draft, and secured the information from the bank messenger that there were other retailers who were sending back the same company's drafts without acceptance. He, however, finally paid the draft. The salesman came back again. The merchant, of course, refused to purchase any more goods, and explained the reason. The traveller was more surprised than ever, and agreed then and there to pay the merchant the 5 per cent. discount out of his own pocket on the two shipments. This was refused, as the retailer in question did not believe in secret rebates, and had never accepted one. He would not ask a traveller for anything his house did not intend him to have open and above board. His idea was to draw out the salesman, to determine just how far he was prepared to go. He states he understands the traveller since signed a declaration, under oath, to the effect that he never offered anyone a secret rebate.

The above episode shows there are some merchants who apparently do accept rebates, and there are some wholesalers who, if not openly, through their travellers, allow them. The Secret Commissions Act, passed by the Dominion Government in 1909, makes it a criminal effence to give or accept a secret rebate or commission. This act is printed in connection with this article.

It is believed that an investigation into the affairs of the Wholesale Grocers' Association and of the Hamilton Retailers' Organization will clear the air and demonstrate distinctly just what can be considered business ethics in so far as the resale price question is concerned.

Quebec Builders' Exchange Active

Expected That $1,500,000 Will Be Expended in Accordance With Plans of the Housing Commission

CONSIDERABLE activity is manifest in the city of Quebec on the part of the Builders' Exchange. A sum of $1,500,000 has been allotted under the Government Housing Scheme, and builders of the city are anxious to have this money expended in accordance with the plan of the Housing Commission during the present season.

Committee is Formed

A committee known as a "Civic Progress Committee" has been formed, comprising lawyers, physicians, builders, and other representatives of many vocations. Each section is entitled to send two delegates to subsequent meetings, SANITARY ENGINEER understands, and they will work in conjunction with Dr. Nadeau, chairman of the Housing Commission. Dr. Nadeau has already been in Quebec and explained at a recent meeting the plans of the Housing Commission. At this meeting the Civic Progress Committee approved of the plan outlined and a further meeting was decided upon to consider the various clauses and elements of the proposed scheme.

The Builders' Exchange at Quebec seem to be in flourishing condition and as this method develops new material for membership, it is understood, will be solicited and secured.

Marshall Ecclestone Store is Destroyed

Timmins, Ont.—Fire, which apparently started from spontaneous combustion among the stock of oils in the basement, completely destroyed the big hardware store of Marshall, Ecclestone, Limited, causing a loss of $150,000. The loss is only partially covered by insurance.

The blaze spread with tremendous rapidity. The alarm was turned in a few minutes before noon, and by 12.30 the floors were falling in and soon after the walls went down.

The staff, as soon as the fire was discovered, made every effort to put it out with the fire extinguishers in the store, but were soon forced to retire by the heat and stifling smoke which poured from the basement.

The store was one of the finest in Northern Ontario, and only recently the basement had been extended to the full size of the building. Heavy stocks of hardware and furniture were carried on the first and second floors and on the third floor were apartments for members of the staff.

Hardware Firms Hit By Fire at Moose Jaw

MOOSE JAW, Sask.—Fire losses which may run into $100,000 were sustained by Morrison and Blackwood, wholesale hardware, and by the Moose Jaw Hardware Co., in a blaze which started in the basement of the Moose Jaw Hardwere building. The flames were noticed shortly after seven in the morning and made rapid progress. Morrison and Blackwood estimate their loss at fully $50,000.

Soo Is Doubling Its Housing Loan

SAULT STE. MARIE, Ont.—The City Council has decided to apply for $400,000 for building loans for the town if the Ontario Government decides to continue operation of the Ontario Housing Act this year. This is double the amount borrowed last year when seventy houses were built.

Fire, which started from a spark from a locomotive, caused a loss of $25,000 in the sash and door factory of Wm. Gerry & Sons, at London, Ont.

Does Not Approve of Housing Loans

Edmonton.—In regard to their request that the Government take advantage of the housing loan offered by the Dominion Government for the building of homes for workers, the Premier told the Alberta Federation of Labor that he was opposed to the scheme entirely. He did not think it at all feasible for a Government directly to lend money to the people, and, while such a proposition might be necessary in such crowded cities as are found in the Old Country, he could not see that it was at all necessary here.

NEW DIRECTORS APPOINTED

At a meeting of the directors of the Pressed Metals Company, Limited, the following were added to the board: Benjamin Lowenstein, president Nassau Smelting & Refining Company, New York; Morris Moskin, of Moskin Bros., New York; Edward Hay, late general manager Imperial Bank; W. R. Johnston, of Toronto; Eugene Coste, E.M., of Calgary.

The board previously consisted of C. E. Calvert, president; J. W. Leighton, vice-president; Simon Goldsmith, of New York; H. L. Nussbaum, of Toronto; J. R. L. Starr, K.C., Toronto; who remain, together with the men appointed.

SKATING ON THIN ICE

St. Louis "Star."

The Functions of a Board of Commerce

An Address Delivered Before the Members of the Dominion Board of the Retail Merchants' Association of Canada, at a Special Meeting in Ottawa, by E. M. Trowern, Secretary

WITH the advance of civilization a great many men recognized that much more could be accomplished for the improvement of trade conditions by consultation with one another, than could be accomplished by destructive and unfair competition. This desire produced the formation of craft guilds and a host of trade associations of various kinds. As these organizations grew in power and influence and improved their trade conditions, these conditions became conspicuous and stood out in open contrast with the conditions which prevailed under unorganized effort. Those who were not organized and those who suspected that these various guilds and trade organizations were formed for the purpose of overcharging and increasing prices to the public, but who had no means of knowing whether their suspicions were true or not, raised a public clamor, and this public clamor reached the ears of the politicians, and, with their usual astuteness to try and do something to catch the popular vote, the Conservative Party, on February 26th, in the year eighteen hundred and eighty-nine (1889), introduced an amendment to the Criminal Code, under the guidance of Mr. Clark Wallace, M.P., known as Section 498 of the Dominion Statutes, entitled: "Legislation to prevent Combines in Restraint of Trade."

The Object of the Measure

The object of this measure was to attempt to stop the operation of the various organizations, whether their purposes were good or bad. No tribunal was provided whereby an investigation could be made by those competent to know what the effect would be upon the general public of the various decisions that were arrived at by any commercial body, but the clauses in the Act were narrow, dangerous, meddlesome and unreasonable, and, like all other artificial attempts to interfere with the natural and God-ordained laws of trade, this legislation proved to be of no value to the public, but only a good source of revenue for the legal profession. Briefly, this legislation threatened all persons who were engaged in commerce who met together for the purpose of mutual protection with a summons to appear at the Police Court, and it gave every Police Magistrate in Canada power to charge them with violating the Act.

Laboring Classes Exempt

This dangerous piece of legislation, however, did not apply to the laboring classes, who were clever enough to see its real purpose, and they had a clause inserted as follows:—

> "Nothing in this section shall be constructed to apply to combinations of workmen or employees for their own reasonable protection as such workmen or employees."

The placing of this clause in the Act immediately created class legislation—the very thing that we are all endeavoring to be freed from—and the very fact that the above clause was inserted proved that the legislation was purely camouflage.

After reciting our views concerning this Act, it might very properly be asked by some retail merchants, what was our association doing in the matter to allow such legislation to pass? The answer is that all this occurred over thirty years ago, before the Retail Merchants' Association of Canada came into existence. It was legislation of this sort that proved the need of an association and hastened its formation, and although the association had not been formed at that time your secretary has a distinct recollection of appearing, as a retail merchant, before a special committee of the House of Commons, with a number of public-spirited Canadian citizens, among whom was that old highly-respected war horse who has helped to fight many commercial battles in his day, and who, I am pleased to say, is still active and at his post, Mr. Hugh Blain of Toronto, and after some strenuous arguments we succeeded in having several clauses inserted in the Act which removed, to a small extent, some of its dangerous features.

Meddlesome Piece of Legislation

During the entire thirty-one years that this legislation has been on the Statute Books, very few cases have ever been brought to court, and the principal ones have cost those who defended their action thousands of dollars, and the public to-day is in a worse position than it was before this meddlesome piece of legislation was enacted, and legitimate organization work among all commercial classes has been hampered, and trusts and monopolies abound greater than ever.

Through a counter agitation, which had been continuously made by various commercial classes, and particularly by our association, from the time that the afore-mentioned legislation was enacted, the politicians, true to their instincts, again placed their ear to the ground and heard the rumblings of discontent, and on May 10th, 1910, the Liberal Party placed an Act upon the Statute Books, through the Hon. Mackenzie King, which was known as "An Act to provide for the Investigation of Combines, Monopolies, Trusts and Mergers."

When this Act was introduced it also contained some clauses that would have seriously interfered with the operations of the retail trade, but fortunately our association had come into existence, and upon the presentation of our case we were accorded a respectful hearing and our recommendations were incorporated into the Act and it became law. We fully anticipated, however, that upon its passage the old Combines Act would be abolished, but in this we were mistaken, as we were again told that the "General public might become alarmed and the 'opposition' would strongly oppose its removal, and they would make political capital out of it," so the commercial classes of Canada had to content themselves with knowing that two pieces of legislation had been placed upon the Statute Books, both having the same object in view, but both of them diametrically opposed to each other.

Under the last mentioned legislation, although it contained some useful clauses, only one or two cases had come before the courts, although it was open for anyone so disposed to take advantage of the legislation. The difficulty was that while the Act was a reasonable and fair one, and quite an improvement on the former Act, no permanent machinery was provided to carry it out.

Commercial Conditions Disturbed

The chief fact, therefore, remains that both political parties considered that some legislation was necessary to control combines, monopolies, trusts and mergers, and they both provided legislation for that purpose, but both attempts proved of no value in providing a remedy—they only complicated and disturbed commercial conditions.

As soon, however, as the war broke out we were faced with new and extraordinary conditions, and we all willingly consented to all sorts of restrictions and curtailment of our personal liberty in order to free ourselves once and for all from the reign of the Prussian autocrat. In our eagerness and our desire to accomplish our purpose we were subjected, as it is well known, to some of the most unfair and uncalled for "Orders-in-Council," all having in view the fact that the retail merchant class instead of being the chief factors who were engaged in doing everything in their power to "keep the home fires burning," and notwithstanding that the official records show that from among our sons, clerks and drivers, etc., we represented the largest single class who took up arms—that we were out to deliberately take advantage of these brave and noble-hearted women who were not only suffering the mental and physical strain of having to take care of their little families without the advice and support of those brave men who were fighting for our liberty, but, in addition, we were the class who had to be especially legislated against.

Refused To Be Discriminated Against

These conditions existed until such time as we could no longer bear the accusations and annoyances, and by our strong condemnation of those Orders-in-Council, and our refusal to be improperly discriminated against, we succeeded in having the Orders that affected us the most severely annulled, and those who were appointed to operate them removed. While we were thus defending ourselves and endeavoring to preserve our place in the economic distribution of retail merchandising—some few classes in the community, together with those of the public press who were not familiar with our position, and who desired sensational matter to sell their publications—notwithstanding the fact that they require our advertising to enable them to live—were stating that we wished to avoid public investigation, and we, therefore, determined that we would ask the Dominion Government to appoint a special committee of the members of the House to make a full report on our position, as well as on the cost of living generally.

The committee was appointed and an exhaustive investigation took place, and I am pleased to say that the findings of the committee in no way showed that the retail merchants of Canada were guilty of taking undue profits or conducting their affairs in an improper manner.

Cost-of-Living Committee

For a great many years our association has been advocating the appointment of an Inland Trade Commission, consisting of capable business men who had practical experience in commercial affairs, and so we appeared before the special Committee of the House of Commons and urged again the appointment of such a commission. On page 723 of the Cost of Living Report, which sets forth the evidence which was presented asking for the appointment of such a commission, we stated among other things:—

> "We would suggest that the Board be comprised of five members: one manufacturer, one wholesaler, two retailers and a commercial solicitor."

The special Committee reported favorably and recommended that a commission be appointed, consisting of three members to commence with, and additional members to be appointed as occasion required. Legislation was introduced and very careful consideration was given to it as it passed through the various stages of the House of Commons and the Senate.

The manner in which the Bill was drafted gave us considerable concern as we saw great danger ahead for us if those appointed to administer the Act were unfamiliar with

practical, commercial transactions. We felt, however, that the Government would, in their own interests, see that properly qualified men were appointed on the Board or great discredit would be cast upon them, as well as upon the Act itself. It might be mentioned here that upon the passage of this Act, the Act which was placed upon the Statute Books by the Liberal Government, and which has been previously referred to, was repealed, and the Act placed upon the Statute Books by the Conservative Government still remains.

Wanted a Proper Trade Court

It must be remembered also that the reason for the passage of the Board of Commerce Act as understood by a great many members of the House of Commons and the Senate, as well as by the general public, was of an entirely different character to what we understood it, as members of our association. The public and others regarded the Act as a measure that would reduce the cost of living and prevent combines and mergers. The members of our association regarded it as a measure that would establish a proper court or tribunal for the adjudicating of all trade matters, similar to the manner in which the Railway Board deals with all matters concerning railways.

In the presentation of our case before the special Committee of the House on the Cost of Living when we were urging for the passage of the Act, the following statements appear in the printed report:—

> "We suggest that the proposed Inland Trade Commission should consist of competent, commercial persons, who shall be men of knowledge, experience in trade, manufacturing, wholesale and retail. We would suggest that all trade agreements made between any persons, firms, corporations or association engaged in the same or other lines of trade throughout Canada, in which the arranging of prices is concerned, should be submitted, with full reasons therefor, to the said commission for their examination and approval, and any persons, firms, or corporations who entered into such agreements without submitting them and having the approval of the Inland Trade Commission would render themselves liable to prosecution.
>
> "The formation of this commission would enable any person or persons to have commercial practices and complaints investigated, and practices which are found to be injurious to the trade, or contrary to public interest could also be investigated and decisions rendered thereon, similar to the decisions that are arrived at by the Dominion Railway Commission."

As soon as the Act became law, we immediately urged upon the members of the Government the necessity of appointing capable persons on the Board who had a complete knowledge of the retail trade. For some reason best known to the Government the three persons who were appointed, and who now constitute the Board, have had no practical knowledge of the manufacturing, wholesale or the retail trade, and although the laboring interests enjoy special privileges and are exempt from the operations of the Act, they pressed for representation on the Board and they were favored by having one of their class appointed, while the requests of the retail merchants were utterly ignored.

Endeavoring to Fix Profits

Administration of the Act up to the present time has proven that our fears were well grounded, and instead of the Act becoming a measure of strength to all the commercial interests, and something which the public would regard as a business men's court, they now see the harrowing spectacle of a group of three men, who are unfamiliar with the underlying principles of trade, endeavoring to fix the profits under which retail merchants should operate, and everything that they have so far endeavored to investigate has increased in price instead of decreasing, as those who are unfamiliar with the laws of supply and demand expected.

This brief outline of our position leads us to the following considerations:—

1. Should the Act be abolished entirely, or,
2. Should the manner under which it it is being operated be changed?

The reasons which we put forth as an association for the establishment of such a Board is, in our opinion, just as necessary as it was when the legislation was passed which created it. The chief thing that we require to do is to see that it is properly administered.

No Court Like It in the World

It is always a very unwise proceeding to attempt to criticize any action of any person or persons unless we have an amendment to put in its place, and we would, therefore, suggest that instead of the Board of Commerce attempting to meddle with the peculiar details of the various sections of trade, and acting in a manner unheard of by any properly qualified court in the world—that is, by the court laying a charge against an individual or a group of individuals, and after so doing they proceed to sit in judgment on the said supposed transgressor or transgressors whom they have charged, and then try a case that they themselves have been the means of accusing before the evidence has been heard. These proceedings are so unfamiliar to the Canadian public, and to the principles of all free men, such as retail merchants, and so contra to what we all understand and know to be British fair play, and which we all admire so profoundly, that it is a wonder it has been allowed to continue even so long as it has without being overthrown, which it seems is now about to take place.

Our answer to the two questions should, therefore, be, to the first question—Should the Act be abolished entirely? No. And to the second question—Should the manner under which it is being operated be changed? Yes. And, in order to present our views as to how we think the Act should be administered, we would suggest the following:—

1. The Board of Commerce should meet properly appointed committees from—
   The Canadian Manufacturers' Association,
   The Wholesale Merchants' Association, and
   The Retail Merchants' Association of Canada,
   and other organized, commercial industries, and secure proposals from them as to how the trades in which they are interested could be improved by proper regulation.
2. That instead of the court endeavoring to dictate to the commercial classes as to how they should conduct their affairs they should become a real court and decide on the evidence that is laid before them on any commercial matter, and in this manner their judgments will be respected.
3. That all agreements that are made, either by a group of manufacturers among themselves, or between the wholesale trade and the manufacturers, or between the manufacturers, the wholesalers and the retailers, should be laid before the Board of Commerce, and the parties thereof should appear, if necessary, and give the reasons why said agreements are made.
4. That all price contract agreements regarding trade-marked goods should be laid before the Board for final ratification.
5. That charges could be made to the Board by any person who was subject to unfair and unethical methods of trading, and the same could be investigated and a remedy enforced.
6. Persons should be dealt with who are engaged in unfair commercial practices whose methods are contrary to the public interest.
7. That if it was found that the operations of any commercial legislation that is now on the statute books is operating unfairly and not producing the results aimed at, that the effects of said legislation should be laid before the Board and if the Board decided that the complaint so laid justified a change in the Act they could make a recommendation to the Government.
8. The Board should strictly avoid interfering with the regular and natural channels of trade, and devote their time to seeing that the said proper channels of trade are not interfered with.
9. That they should investigate the reason for the increase of any commodity, commencing with the producer or manufacturer, and encourage the manufacturers to assist the Board.
10. That all classes of the community buying or selling merchandise should come under its operations.
11. That all agents and subsidiary agents in connection with the Board should be abolished, and that the Board itself should be the only constituted authority to take evidence.
12. That the Board should consist of five persons: one manufacturer, one wholesaler, one retail merchant, one farmer and one commercial solicitor or judge.
13. That all commercial, statistical reports should be under the direction of the Board of Commerce and removed entirely from the Department of Labor, or other Departments.

There are other important matters that could properly come under the direction of the Board, and we feel sure that every retail merchant in Canada is only too willing to give every possible assistance to raise the standard and elevate the commercial conditions of Canada.

Why do WE stand for it

Builders of Houses Will Suffer Loss

In connection with the recent assignment of one of the contractors who had done considerable work for the Housing Commission at Hamilton, Ont., Secretary Wm. Campbell, of the Commission, states that until applicants file agreements to have the Commission finish the houses, no work will be done.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

THE MARKETS AT A GLANCE

IMPORTANT advances in the price of many important commodities have taken place. Among these higher quotations are: Metallic siding, roofing and sundries for applying, pipe wrenches, pipe fittings, corrugated sheets and plates, wrought pipe, lead pipe, compression work and conductor pipe.

The exchange situation has shown no improvement and higher prices on some commodities are said to be the result. The tendency throughout the entire line is said to be for higher prices. Notwithstanding the high prices current, the demand for goods is a heavy one. Manufacturers state that many are stocking more heavily this year and that the volume of business handled so far has greatly exceeded that of the same period last year.

TORONTO, Feb. 13.—Important advances have taken place, affecting many important lines. Among these higher prices are: Stillson and Trimo pipe wrenches, metallic siding, roofing and sundries for applying; pipe fittings, corrugated sheets, sheets and plates, wrought pipe, lead pipe, compression work and conductor pipe.

The exchange situation has affected prices on some lines. Notwithstanding high prices current on many commodities, the demand is said to be very encouraging and a large turnover is expected during the present year.

Genuine Stillson Wrenches Are Higher

STILLSON WRENCHES, genuine, have been recorded at an advance price. The present new discount being quoted at 40 per cent. off the list. This commodity is effected by practically the same factors as other iron or steel tools which have recently advanced, namely the high rate of exchange and advanced cost of raw material and labor.

Trimo Wrenches and Parts Advance

TRIMO WRENCHES AND PARTS.—Higher prices have been announced on these wrenches, the new discounts be-in 32½ per cent. off the list; this is said to be due to the ever advancing cost of raw materials and is said to be in line with many commodities whose basic material is of iron or steel.

The high rate of exchange, also the slow movement of freight, is said to be a big factor for higher prices. Although the slow freight movements only affect the finished product indirectly, they have direct bearing on the cost of the raw material, it is stated.

Metallic Shingles Are Marked Up 5%

METALLIC SHINGLES have again been advanced 5 per cent. This new price is said to be the result of the ever-increasing difference in exchange rates. However, the demand continues despite the high prices and many are finding some difficulty in securing supplies of many commodities whose basic material is iron or steel.

The new price is: Galvanized metallic shingles, $10.50 per square foot, plus an additional 5 per cent.; while the sundries that go with this class of roofing have also advanced a further 5 per cent.

Metal Siding Again Raised Upwards

METAL SIDING.—A further advance is again noted on metal siding. This is said to be a direct result of the unsatisfactory exchange situation. The new price on this commodity is quoted as follows:

Galvanized metal siding, $9, plus an additional 5 per cent.

Scrap and Waste Materials May Advance

SCRAP AND WASTE MATERIALS.—During the past few days, scrap and waste materials of nearly all kinds have shown brisk movement, and it may be that the next two or three weeks will show higher prices. A number of buyers have been holding off, it is stated, in view of anticipated higher prices.

Dealers state that there is every indication of heavy buying movement in the very near future and state that they are looking forward to one of the best years in the history of their business. The present slow movement of freight is said to be causing some inconvenience for the present, although this condition it is believed, will soon adjust itself on the approach of warmer weather. The following are the present quotations:

DEALERS' BUYING PRICES

Pipe scrap	11 00
Stove plate, per ton	18 50
No. 2 busheling	13 00
Yellow brass	0 10
Red brass	0 15¾
Light brass	0 08
Scrap zinc	0 06½
Heavy copper	0 17
Wrought iron, No. 1, per gr. ton	15 00
No. 1 machinery cast	24 00
Heavy melting steel	15 00
Old rubbers, boots and shoes	0 06
Overshoes. lumbermen's rubber boots	0 04
Bicycle tires	0 01½
Automobile tires	0 03
Tea lead	0 04
Heavy lead pipe	0 06

Cotton Waste Scarce May Be Advanced

COTTON WASTE.—The present price of this commodity is said to be a firm one. Although present prices are unchanged, every indication points to higher prices in the near future. Waste seems to be no exception to other commodities and is said to be scarce. This is accounted for by manufacturers working in their short lengths with those of longer lengths, incidentally leaving a smaller quantity to be reclaimed.

The following are the present quotations:

WASTE

Cream, Polishing	0 25
White—	
XXX	0 21

Pipe Wrenches, Stillson Pattern, Now 45% Off List

STILLSON PATTERN WRENCHES.—New and higher prices have been announced on Stillson pattern wrenches. The new discount is now being quoted at 45 per cent. off the list.

Soil Pipe Firm Remains Unchanged

SOIL PIPE continues to hold at a firm prices, although an advance in prices in the not distant future may take effect. However, it is hard to predict just what the future will show. Notwithstanding the high prices being charged in nearly all kindred commodities, the demand continues to be a heavy one, and many are looking forward to one of the best turnovers in their history, providing they can secure the stock to sell.

The following are the present quotations:

Medium and extra heavy soil pipe, 2, 3 5 and 6 in.	10%
Medium and extra heavy soil pipe, 4 in.	15%
Medium and extra heavy soil pipe fittings, 2 in. to 6 in.	25%
8 in. extra heavy pipe and fittings	5%

Enamelware Moving Well; Prices Steady

ENAMELWARE. — Prices remain steady. Many are carrying heavier stocks this year, it is believed, and manufacturers state that a larger volume of business has been handled so far this year in comparison with the same period of last year.

Quotations on some of the better known lines are as follows:

Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide	$37 05
Bath tubs, 5½ ft.	41 20
Lavatories—	
17x10" Apron F139 or P4045	11 05
18x24" Apron F154 or P3845 or P3847	17 00
18x21" Apron F169 or P4205	12 70
18x21" Roll rim F197, F199 or P4655-6	11 10
17x19" Roll rim F241 or P4345	9.05
Sinks, roll rim, 18 x 30 in.	16 60

Sinks, flat rim—	1 only	2 only	3 only

Corrugated Sheets Are Marked Up 5%

CORRUGATED SHEETS.—Manufacturers have advanced their price on this commodity 5 per cent. They claim that this was necessary on account of the high rate of exchange and may be effective till such a time as the exchange situation recovers to more normal figures.

The shortage of flat sheets is said to be causing inconvenience. This coupled with the freight and labor shortage helps to keep the situation of corrugated sheets in a very unsettled condition. Very seasonable demand is reported and manufacturers are looking forward to a large volume of business, providing they can get the materials to make the products out of. The following are the present quotations:

CORRUGATED SHEETS—	Per 100 sq. feet Galv'd	Painted
No. 28-gauge	$ 9 25	$ 7 75
No. 26-gauge	10 00	8 75
No. 24-gauge	15 00	11 00
No. 22-gauge	17 50	13 75
No. 20-gauge	21 00	17 50
No. 18-gauge	26 50	21 50

On shipments of 300 lbs. and over, freight is allowed south and east of and including North Bay; also several western counties in Quebec Province. Places north and west of North Bay, the freight is equalized on North Bay. For Quebec and Maritime Provinces, freight is equalized on Montreal.

Ad 5% to above list.

Sheets and Plates Have Advanced 50c

SHEETS AND PLATES have advanced 50 cents per 100 lbs. The scarcity of this commodity continues to be very noticeable and many stocks are exhausted. The mills are said to be making better headway with orders and some claim they could get more stock if the movement of freight were better.

The prices quoted here are nominal, and it may be found that some are charging prices at a variance to those shown below.

This, to some extent, may be expected, as warehouse stocks are practically cleaned out, and jobbers frequently have to go out to the local market to replace their stocks.

BLACK SHEETS

14 gauge	....	8 00
16 gauge	....	8 00

Wrought Pipe Up; New List Herewith

WROUGHT IRON PIPE.—Advance has taken place on wrought pipe. This is said to be due to the shortage of skelp. The high rate of exchange is also said to have a direct bearing on the situation as considerable skelp comes from the U.S.A. The slow freight shipment, caused, it is believed, by the shortage of cars as well as the cold weather and heavy snow, is also said to be a factor.

It is hard to predict just what will be the future for pipe prices. The demand is said to be very heavy for this time of the year and every indication points to a very heavy anticipated demand for the coming season, and if skelp does not come to hand in larger quantities and other conditions improve great shortage may be noticed, it is stated. The following are the present quotations:

Range Boilers Firm; May Be Advanced

RANGE BOILERS continue to hold at a firm price. Manufacturers state that the supplies of raw material are scarce and are selling at a high figure. This coupled with the high rate of exchange and other factors may result in higher prices for the finished product.

The following are the present quotations:

Range Boilers—	Standard	Ex. Heavy
30-gallon	$12 00	$14 00
35-gallon	14 00	16 00
40-gallon	16 00	18 00
52-gallon	22 00	25 00

Net list.
Add 5% to above list.

Oakum Prices Firm; May Be Higher

OAKUM.—Prices on this commodity continue firm at unchanged prices. The demand is very good for this season of the year. Higher prices would not surprise many as the present tendency is upward.

The following quotations are current:

	Per 100 lbs.
Best American	$22 00
Clipper, spun	22 00
Do., unspun	20 50
Plumbers' spun	10 50

Boiler Tubes Firm; Remain Unchanged

BOILER TUBES continue to show very good demand, although jobbers state they are rather scarce. This is accounted for, it is stated, by the slow delivery of freight, which is said to be causing considerable shortages of raw materials. Skelp is said to be very hard to procure.

The exchange situation continues to be very inconvenient. As well as being the direct cause, in many cases, of higher prices, although the present price remains unchanged, the price tendency is very firm. The following are the present quotations:

BOILER TUBES—	Per 100 feet Seamless	Lapweld
1 inch	$27 00	$.....
1¼ inch	29 00	.....
1½ inch	29 50	.....
1¾ inch	32 00	27 00
2 inch	31 00	26 00
2¼ inch	35 00	28 00
2½ inch	43 00	32 00
3 inch	48 00	40 00
3¼ inch	.....	47 00
3½ inch	60 00	44 00
4 inch	75 00	56 00

Ingot Metals Show Little Movement

INGOT METALS.—The list, as shown below, are said to be showing little movement, the prices remaining unchanged. The exchange situation is said to be having considerable effect on the movement of these metals.

SPELTER remains at 12 cents per pound, showing no change in price, with a limited demand offering.

LEAD shows no change in price, although recent figures have been of a fluctuating nature. The quotations continue at 10½ cents per pound.

COPPER.—The present price of copper is quoted at 25 cents per pound.

TIN.—The market on tin continues to be quiet. The present price of 73 cents per pound is holding firm, although stocks are reported low. The high rate of exchange may account of some of the inactivity.

ANTIMONY. — Prices remain unchanged, the quotation being 12 cents per pound.

ALUMINUM remains quiet, quotations going are 34 cents per pound.

Soo Wants $400,000 For New Residences

SAULT STE. MARIE, Ont.—The City Council has decided to apply for $400,000 for building loans for the Sault if the Ontario Government decides to continue operation of the Ontario Housing Act this year. This is double the amount borrowed by Sault Ste. Marie last year under the provisions of the Act. Seventy houses were built here in 1919 by means of these loans. A considerable influx of population is expected this year, and houses are unobtainable now.

"You say, young man, that socks, shirts, underwear, handkerchiefs, and everythin' made of cotton hez riz? Whad d'ya s'pose is makin' cotton so scarce?"

"Epidemic of earache among the elephants at the circus!"

—Rehse in "Louisville Times."

New British Ruling Affects Exporters

The actual presence of an insurance policy among the documents incident to a "c.i.f." transaction is necessary in Great Britain in order to compel a purchaser to accept the consignment, the British High Court ruled recently in a decision of interest to exporters. Previously the submission of a certificate that the goods had been insured was all that customary procedure required.

The decision was to the effect that when goods were bought "cost, insurance and freight," the purchaser was not bound to accept the certificate of a broker, or anyone else, that they had been insured, but was entitled to call for the delivery of an insurance policy.

The ruling was the culmination of a suit brought against a purchaser who declined to accept goods because the insurance policy was lacking. His action resulted in a loss to the shippers, as the market had declined in the meantime. The shippers claimed that the acceptance of a broker's note or a certificate of insurance instead of an actual policy was allowed by custom.

Campaign Against Deceptive Advertising

NEW YORK, Feb. 14.—With the aid of the National Vigilance Committee of the Associated Advertising Clubs of the world, and local vigilance committees and better business bureaus of local advertising clubs, the War Department is inaugurating a campaign against the deceptive advertising and sale of goods by merchants operating what they call Army and Navy Stores.

At the request of B. A. Mattingly, chief of the sales promotion section of the War Department, the National Vigilance Committee of the Advertising Clubs has just issued a bulletin to local advertising clubs, pointing out some of the dangers to the public in connection with such operations, and suggesting action on the part of local committees. In part this bulletin is as follows:

"The Government is retailing the surplus army and navy goods through its twenty-five stores distributed over the country, known as 'Army Quartermaster's Retail Stores Division.' Unscrupulous men are everywhere taking advantage of this situation, imposing their self-named 'Army and Navy Stores' upon an uninformed public. Only governments have armies and navies. The use of either of these words in the trade name of a store may create the impression at this time that such an establishment is an official outlet for Government goods."

You Can Flood Your Business With Prosperity Through

Morrison Valves

These efficient valves sell well because their reliability is so well understood and accepted that they are specified almost as a matter of course on the drawings for most all important contracts.

This enviable reputation not only helps sales, but builds prestige for your store. A full guarantee of satisfaction.

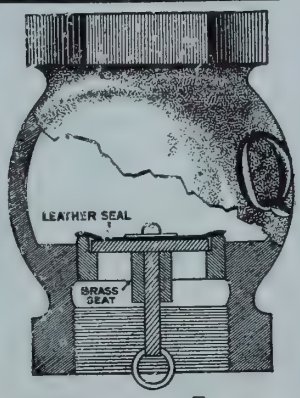
Salisbury Electric Co., Limited
615 Yonge St., Toronto



This is a "Q" Foot Valve

And it Just *CAN'T* Leak

There are more pump troubles caused by "leaky" valves than from all the wear and tear which occurs in the average life of a pump.

The "Q" valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that JUST CAN'T LEAK.

Made in sizes from 1 to 8-inch.

Eliminates Costly Mistakes

Allpriser Service

Prevents mistakes concerning cost and selling price. Men don't make mistakes when they know! Mistakes are made unconsciously. With Allpriser Service men know.

Allpriser Service consists of a flexible leather bound book 7 x 9, of 150 loose-leaf pages. The service includes a list of net prices of all staple articles and a regular service of new sheets revised to the latest changes. Allpriser Service is only $25.00 annually.

It eliminates losses, unnecessary overhead, and Confusion of cost data. Don't sell 12c articles at 10c; use Allpriser and know costs.

Clears Clogged and Frozen Pipes

That's Why It Sells

Desolvo thaws frozen pipes because when mixed with cold water it creates heat in addition to its own action. It clears clogged pipes easily and without the aggravating and expensive tearing up of house and grounds. It has many points of appeal to customers, pays a good profit and sells easily and often.

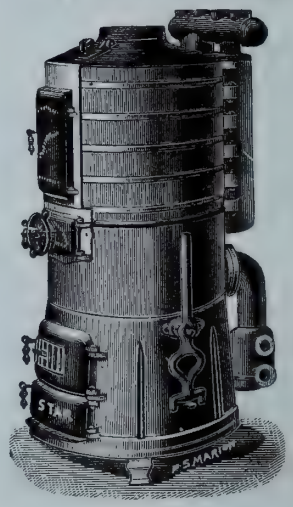
Thousands of Star Boilers in Use requiring repair Parts



It will be a long time before folks forget the coal troubles of the last few seasons.

The principal feature of the Star Boiler is that no other round hot water boiler has any coal-saving improvement not embodied in the "Star."

Then, too, while boiler installation and repair time is here, why not stock up with Star parts, for which O. Belanger has taken over the rights and is now making?

Many thousands of Star Boilers are in use requiring these repair parts hitherto unobtainable.

Write to us at once in time to catch the season's business.

We guarantee prompt deliveries.

O. BELANGER, REG'D.
Amherst Street
MONTREAL

It's Just Common Sense!

MANY a man will put a wise look on his face and say, "You *can't get something for nothing in this world.*"

Then, like as not, he'll turn around and try to buy something as good as "X" Boiler Liquid—for less money!

Isn't it too bad that his wisdom doesn't go *far* enough?

Wouldn't you think he'd know that any amount spent on an article that *didn't make good*—is money wasted?

"X" maintains its DOMINATING position as the biggest selling Boiler Liquid not because it is the original—but because it does its work *right.* It has done over $3,000,000 in repair work—for over 28,000 plumbers and steamfitters.

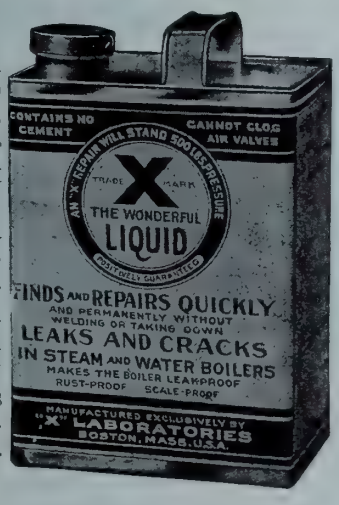
"X" Liquid makes a permanent repair. It is a scientific process for keeping boilers—and entire hot water heating systems—LEAK-PROOF — RUSTPROOF — and SCALE-PROOF. By eliminating and preventing Rust and Scale "X" keeps the boiler more efficient and *saves coal.*

One can will do a $200 repair job in 30 minutes; and make a repair that stands 2000 *pounds pressure.*

Imitations of the genuine "X" Liquid *cause foaming.* "X" Liquid *prevents foaming.*

Stick to the genuine. The big "X" is plainly marked on every can. It is there for your protection. Ask for "X" Boiler Liquid by name.

The United States Government uses "X" Liquid. It is used and recommended by 99 out of every 100 manufacturers of boilers and radiators. *Your* jobber sells it.



Get It To-day. Be sure to get the original

THE VITRO COMBINATION

Good Appearance
Plus Guaranteed Service

The VitrO is an All-One-Piece Tank. The absence of seams and joints renders it absolutely leak-proof.

The white enamel finish makes it a decidedly attractive fixture in the modern bathroom.

The VitrO oak and mahogany combinations are equally attractive.

This variety in design makes it easy to have this tank installed in either the modern or old-fashioned home.

WE guarantee that should a VitrO Tank at any time prove defective through either material or workmanship, a new one will be given to the plumber by the jobber from whom he purchased it. In no case will credit be given to the jobber until the defective tank is returned and examined, and when a tank is returned same must be complete with all fittings; otherwise, credit will be given based only on the value of the goods returned.

Exception

This guarantee does not apply to defects caused by carelessness or abusive wear and practice.

Note

A VitrO Tank must not be returned because of a defective fitting or cover. A defective fitting or cover will be replaced at once; however, the defective one must be returned for examination.

When tanks are broken in transit, claim must be made against the Railroad Company.

Empire Quick Pression Basin and Shampoo Cock

Here is an Empire sanitary fixture which for attractive design and simplicity of operation is a valued asset in a barber's shop.

It is designed to fit any size lavatory and water can be run from the shampoo outlet or for the basin without the necessity of turning on or off two or more taps.

All the cocks are on the quick pression principle insuring absolute shut-off and durability.

It is a time-saver especially constructed to meet every requirement for barber shops.

It is efficient, durable and sanitary as all Empire fixtures must be before they leave the factory backed by the Empire guarantee.

The trap that keeps the radiator hot

Any kind of a boiler will shove the steam up to a radiator. But it takes a mighty good trap to let all the air and water out without letting steam into the return line.

The Dunham Trap has been doing it since 1903—and doing it so well that you don't see many old-style traps nowadays. Everybody is busy pushing thermostatic disc traps. But do not forget that the Dunham was the FIRST radiator trap of this type.

The **first** of its kind—and the **best** of its kind according to many, many engineers, and to architects and heating contractors who know that quality counts above all else.

Our new booklet, "Data on Dunham Heating" tells some heating facts in an interesting way. May we send you a copy?

Jenkins Valves

JENKINS BRASS "WHISTLE" VALVES

STOP WATER WASTE

At bakeries, in the departments where fruits are washed and prepared, Jenkins Brass "Whistle" Valves are installed on hot and cold water supply lines to stop water waste.

A pull of the lever instantly permits a free full flow of water which is automatically shut off by means of a spring as soon as the lever is released.

Jenkins Brass "Whistle" Valves are extensively used in bath houses, garages, restaurants and factories, and, doubtless, numerous other uses will occur to you for these substantial, quick opening valves.

The Canadian Society of Domestic Sanitary and Heating Engineers

President	*Vice-President*	*Secretary-Treasurer*
FRANK R. MAXWELL	HARRY MAHONEY	GARRETT F. FRANKLAND
TORONTO	GUELPH	TORONTO

LEAP YEAR

Custom tells us that Leap Year gives the right to the ladies to request the hand of their beau, if being bashful, he has not the courage to pop the eternal question.

The Canadian Society of Domestic Sanitary and Heating Engineers has patiently waited for you to embrace her; she has appealed to you; she has wooed you; she has given you every opportunity to take the necessary step, but still you have hesitated.

You seemingly have lacked initiative, or maybe you were not confident like the bashful beau, that you were fit to woo membership in the Canadian Society of Domestic Sanitary and Heating Engineers.

For, whatever the reason you have hesitated, just hearken to the trend of the times—the need of organization and co-operation.

"1920 is Leap Year, because February has 29 days."

1920 is the year of Canada's opportunity. The year of your opportunity because you are in Canada, and let us make it the year of opportunity for the Canadian Society of Domestic Sanitary and Heating Engineers.

Delay no longer; she approaches you with arms wide open, extending to you fellowship and all it stands for.

Become one of us, Mr. Sanitary and Heating Engineer, wherever you may be throughout our Dominion, and let us together, by the co-operation most essential to progress, partake hand in hand of our united endeavor, those accomplishments which are our just due, by forwarding your name for membership to the Secretary at once.

ALL FOR ONE and ONE FOR ALL

Yours for co-operation,
FRANK R. MAXWELL,
President

Address all communications to

How Close It Comes to "Heating All Out-Doors"

Say, folks, there's something kind of homey like about those words: "heating all out-doors."

It takes me back to when I was a kid and Maw used to be forever "airing out" the house.

It sort of got Dad's goat.

He'd come in a bit grumpy and say tart like to Maw: "Say, Sis, what you trying to do, heat all out-doors?"

Come to think about it, we had a Burnham Boiler in them days, too.

Had it, because Dad said: "if a boiler could heat a greenhouse economically, which is next to heating all out-doors, I figure it will heat our home mighty satisfactorily like."

And it did.

And it still does.

And as I said, that was what Dad said the Burnham would do.

Furthermore he said it, close on to a quarter of a century ago.

Which is about all I have to say just now.

But the next time I'm going to be introduced to all of you in my real name of Booster Binx.

Till then, kindly keep Mum, what I've told you.

Burnham Cosy Comfort Heat

BB

IS THIS THE SOLUTION?

Another scheme to rectify the distressing prices now prevalent, by other than sound economic measures, was outlined before the Union of Canadian Municipalities which recently convened at Kingston.

THIS RESOLUTION HITS YOU WHERE YOU LIVE

"We submit the principal root of the evil is the present wasteful, inefficient and antiquated method, or rather lack of method, of distributing the goods from the producer and manufacturer to the consumer—wasteful of time, labor, health, happiness and even human life—inefficient and antiquated in this age and to such an extent that even the huge economies effected by the greatest array of labor-saving machinery the world has ever seen are in a large measure rendered null and void. An ever-increasing army of unregulated distributors and relatively an ever-decreasing army of producers with the leaders of all these practising profiteering and price-manipulation as their fancy may dictate or opportunity may permit.

"Among the minor causes are the various classes of idlers and usurers, who in devious ways levy toll on labor and industry. Waste of time in high schools and colleges teaching dead languages and other unpractical subjects to the partial or total exclusion of vocational training, economics and useful branches of learning which would be of greater value for purposes of mind development and discipline and thereafter more useful to the individual and the country."

SAYS THE FINANCIAL POST IN REPLY:

"It is, of course, possible that there might be a dissenting voice, heard above this chorus of condemnation. A voice that might suggest, for instance, that the fact that the producer is getting $24.50 per hundred for hogs, where he formerly got $6, might, perhaps, have as much to do with the matter of increased cost as the inefficient handling that gives to the packer 5-16 of a cent per pound on bacon, or to the retailer a bare 5 cents a pound. Or the fact that the farmer is now guaranteed a price of $2.15 a bushel for wheat that formerly he sold with satisfaction for 90 cents, may be as much responsible as the half cent a loaf profit of the baker, or the cent profit of the retailer.

"It is a question, too, whether all the blame for the trying conditions of the present time should be laid at the door of established trade, any more than at any other door. There seems no good evidence for believing that the business morals of the merchant class are worse than any other, and there might be those who might reply to the stricture that our schools and colleges are not devoting their attention strongly enough to the bread and butter needs that "man does not live by bread alone."

The frank object of this resolution was "to attain a substantial reduction in the cost of living generally, but without increase of hours of labor or reduction of wages." It is the possibility of this which THE FINANCIAL POST doubts.

You want to read such discussions as this. They appear weekly in THE FINANCIAL POST.

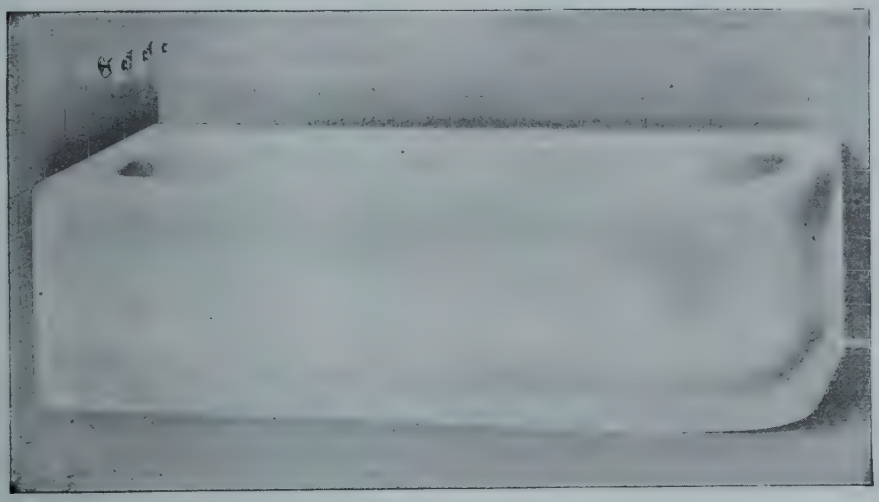
"Standard"
"Perfection" Built-in Baths

Made in One Piece Enamelled All Over



These Baths represent the last word in design and finish, and are made to build into Right or Left Hand Corner or into a Recess.

The "Perfection" Built-in-Bath is only 17½ inches high, therefore convenient. It builds into walls and floors, the absence of all dust-collecting cracks and corners meaning bathroom sanitation.

Made in 5 and 5½ foot sizes.

Illustrations on request.

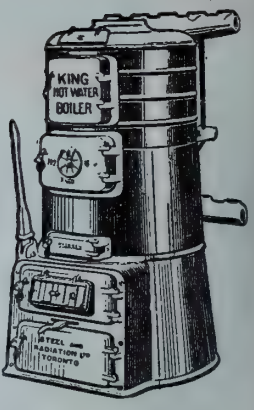
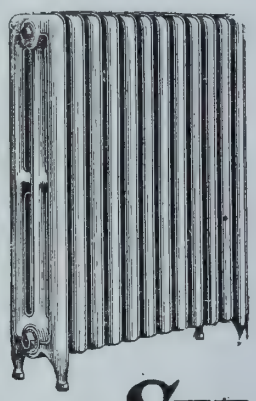
KING HOT WATER BOILERS AND IMPERIAL RADIATORS



A Satisfactory Heating System



You can't afford to "take a chance" with satisfying your customers. There is nothing so valuable to you for future business as to have them know you supply the best. You can make every Heating System you install a "talking point" for your service if you use a King Hot Water Boiler and Imperial Radiators. The perfect heat and low operating cost will delight your customers. Eliminate all "chance" by recommending King Hot Water Boilers and Imperial Radiators.

Demand versus Acceptance

Editorial in "Printers' Ink"

A prominent retail merchant walked into the office of "Printers' Ink" the other day and asked us to advise advertisers to go easy on the you'll-have-calls-for-my-goods argument. According to this man, this plea does more harm than good.

He says that too often it is the concern that advertises only in flashes for the sole purpose of impressing the retailer, that is the loudest in talking about calls. The buyer discounts these promises, because he knows from experience that the few calls that such advertising may produce can be safely ignored.

When an article is well advertised, it may be taken for granted that the retailer will receive calls for it. But to emphasize this too much is dangerous. There is nothing easier than for the buyer to declare that he is not receiving calls. That is always his pet objection, and an overmastering one it is. Most salesmen give way before it.

As a matter of fact, the call argument is fallacious, both from the standpoint of the man who uses it to make a sale and also from the standpoint of the prospect who tries to get out of buying by saying he never had a call. Demand is not always expressed vocally. Advertising accumulates a host of desires in most persons that they do not express until a favorable occasion for the purchase of the desired article arises.

The chances are they may never ask for the product at all. Some time when they see it displayed, they will buy it merely by saying, "I will take one of those." Every experienced advertiser knows that advertising is vastly more potent in creating consumer acceptance of a product than it is in bringing oral demand for that product.

Recently one of Hart, Schaffner and Marx's largest dealers told us that it is seldom a man comes into his store and asks for this brand of clothes. This retailer is widely known as a Hart, Schaffner and Marx distributor. Customers who come in take it for granted that they will be given these clothes. They do not call for the brand; they accept it. Nine times out of ten that is the way advertising works.

It is a mistake to pin too much faith on the "call" theory. It is rarely a reliable guide. We heard a druggist not long ago say that he had greatly increased his sales since he stopped waiting for "calls" and began to handle everything that he thought his trade should buy. One illustration that he gave is graphic. He declared that he always carried dental floss, but did not display it because "there were so few calls for it." In an entire year he sold only a gross of floss. However, a salesman one day induced him to group all his dental goods in an imposing display. The sale of all this merchandise immediately increased. Almost everyone who came in picked something off the counter. The increase in the floss sales was particularly noticeable. Picking up a package his customers would say, "My dentist told me to use this. I did not know that you handled it." He now sells twenty-four gross of dental floss in a year. In this one case waiting for calls was euchring this druggist out of about 96 per cent. of his possible floss business.

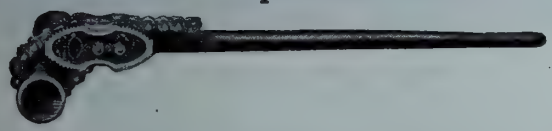
Williams' Improved "Vulcan" Drop-Forged Chain Pipe Wrench



FEW tools are called upon to stand greater strain and harder wear than the pipe wrench. Because Williams' "Vulcan" Chain Pipe Wrenches have withstood every test during years of hard, continuous service under all conditions, they have earned a well-deserved reputation for dependability, and are favorably known the world over. They embody every good feature for which Williams' *Superior* quality stands.

Made in 8 sizes for ⅛ to 18 inch pipe. All Flat Link Chains are "proof-tested" on a standard tension machine and "certified." Every wrench is unconditionally guaranteed.

Certain Protection Against Common Leak Losses

Se-Ment-Ol is sold only in handy cone-topped cans that reach most awkward places without spilling or wastage. No funnel needed. The package is like the product, convenient and fool-proof as it is possible to make it. List prices, United States and Canada: Quarts, $4.00; Gallons, $14.00.

Thousands of dollars in losses, for years considered unavoidable, have now been completely eliminated by leading heating and plumbing contractors by simply pouring Se-Ment-Ol into the heating system of all new installations.

For Se-Ment-Ol eliminates any possibility of leaks developing in loose set-ups, bad threads, poor gaskets, sand holes and leaky valves. It finds all leaks *at once;* repairs them *instantly—economically—permanently.* This saves the time and money of drawing the fire and tearing down the boiler and hunting for leaks. No foaming or odor.

Figure in your original estimate the necessary quantity of boiler Se-Ment-Ol and apply it after cleaning out the boiler—just the same as you would apply it in an old boiler that leaks.

There's a coupon below. Mail it to-day.

Will Comply With Board's Order

Sanitary Engineers of Calgary and District to Make Returns as Requested by the Board of Commerce—Cost and Selling Price is Asked on Long List of Builders' Hardware and Plumbing Goods

CALGARY—Sanitary Engineers of this city and district will supply to the Board of Commerce at Ottawa full information in respect to the cost and selling price of materials of all kinds used in the building industry prior to March 31 of this year as required by the board. This was decided at a conference held by men in the trade in the Board of Trade rooms with James Kellas, secretary of the Alberta Retail Merchants' Association.

WHAT IS REQUIRED

The order applies to all producers and vendors, whether manufacturers, wholesalers, jobbers, retailers or otherwise, and includes the cost and selling prices of the materials in foundations and walls, such as bricks and cement flue linings, lime, sand, stone; plaster and all kinds of laths, bishopric board and beaver board, etc.; rough and manufactured lumber; glass and paints, roofing; plumbing and accessories; kitchen necessaries for building in such as cooking stoves, etc.; hardware and sundries, such as nails, hinges, locks, clothes hooks, building paper, tar paper, electric wiring and fixtures, heat registers, steel reinforcements, steel beams, fire protection apparatus, contractors' plant.

WERE NOT FAMILIAR

The local firms were not familiar with the nature of the particulars required by the government, but after these had been thoroughly explained, the representatives of the firms expressed confidence that the information could all be obtained and forwarded within the period named by the board.

In the order of the Board of Commerce it is ruled that "building materials of all kinds ordinarily or necessarily used in the construction or sanitary completion of houses for homes, including plumbing fixtures and building hardware, are necessaries o flife under part two of the Combines and Fair Prices Act, 1919. This special regulation is made pursuant to Section 16 of said Act." It is required that the buying and selling price of such materials, whether to contractors or individuals, must be given, and the dates on which these prices governed must also be given.

THE BOARD'S ATTITUDE

"Any dealer or dealers holding or offering for sale within Canada such building materials," said the order, made by Judge H. A. Robson, K.C., chief commissioner, and W. F. O'Connor, K.C., and James Murdock, commissioners, "will hereafter be deemed to have committed an offense under the Combines and Fair Prices Act, 1919, if an unfair profit is made by them or him in the sale of such building materials."

COMPLAINTS

A more recent order of the board deals with complaints against the first one, made in certain trade papers. Certain vendors, it was stated, considered that because no personal service was made upon them of the first order, compliance with the order was not required by law. To this the board reply that as the order was published for three weeks in the Canada Gazette it had by Section 39 of the Board of Commerce Act the same effect as if it formed a part of the act.

To the contention of the trade papers that the information required by the board would be insufficient to serve any practical purpose, the board replied: "The object of this order is to secure information, preliminarily, to enable the board intelligently to proceed to further and more extensive inquiries.

SAYS IT IS NECESSARY

A third ground of protest against the act was that "compliance under such order is burdensome and unnecessary because no unfair profits are being made by such vendors." "Compliance with law is always burdensome," was the reply, "board's proceedings are necessary. It is charged by Parliament with the obligation of making such inquiries in the public interest. Its inquiries do not imply guilt on the part of any, but its orders must be strictly obeyed. Let those to whom its inquiries are addressed make full and fair disclosure and where profits are but fair it will be this board's duty to so declare. If profits are found to be unfair this board must perform its duty in another way. In either event all prejudicially concerned will have ample opportunity to explain or defend."

TO SUFFER PENALTIES

The commissioners further comment on certain articles in which, they say, it had been stated "that certain vendors have decided not to comply with such order." Such persons as disregard this board's orders," was the reply, "will suffer the appropriate statutory penalties."

Will Ask Board of Commerce to Furnish Information

Montreal Chamber of Commerce Discusses Recent Order—Business Profits Tax Also Up For Consideration

AT the regular meeting of the Montreal Chambre de Commerce criticism of the Board of Commerce was precipitated by Alex. Prudhomme, a member of the Board and president of A. Prudhomme & Fils, Limited, wholesale hardware merchant.

Mr. Prudhomme contended the recent order of the Board of Commerce relative to building materials, builders' hardware, etc., was unreasonable. He submitted that the order regarding returns concerning the prices of builders' hardware was entirely unjustified and practically impossible to answer. The wholesale hardware house carrying thousands of different articles could not be expected to furnish information such as that asked for, and particularly in view of the fact that a hardware stock is so comprehensive. Mr. Prudhomme believes that the annual inventory of a house should be sufficient for the purposes of the Board of Commerce.

Will Seek Information

As a result of a discussion which followed, it was suggested that a representative of the Board of Commerce be asked to attend a subsequent meeting of the Chambre de Commerce, who will give the members information on the subject on which no one seems to know a great deal. The questionnaire of the Board of Commerce is rather vague and for this reason fuller information is desired and will be sought in the above manner.

In discussing the matter with Mr. Prudhomme, he emphasized to SANITARY ENGINEER the difficulty of the hardware trade giving information on lines which are handled. For instance, goods are bought at so many different times and delivery is made in so erratic a manner, that it would be impossible to furnish the Board of Commerce with the details of purchase price, etc. "I am quite willing to give this Board any information which they desire, and still I think it is impossible to give the details they seem to want. I have been following with much interest the special articles in SANITARY ENGINEER along this line and I am going into the matter more fully."

Business Profits

Another matter taken up by the Chambre de Commerce was that of the Business Profits tax and various members spoke on this topic. Mr. Prudhomme urged a resolution that the Government be asked to discontinue this tax. R. Tourville, M.L.A., spoke on the subject, and Henry Viau and A. Lambert also gave voice to their sentiment on this question. The matter was finally referred to the Initiative Committee, made up of the chairmen of the various committees, among which the work of the Chambre de Commerce is divided.

The matter of interest to the trade was that of a communication which had been received from the Hon. Mr. Pelletier, the Canadian Trade Commissioner in London. It is pointed out by the Trade Commissioner that many English industrial men are anxious to trade with Canadian manufacturers and the Chambre de Commerce will furnish the Trade Commissioner with list of Canadian manufacturers, giving him information regarding their respective industries.

Strike in the Building Trades at Quebec is Feared

Bitter Feeling Between the International and National and Catholic Unions May Cause Serious Trouble

MONTREAL.—Possibilities of a general strike in the building trades throughout the Province of Quebec are looming up as a result of a clash which has come to a head between the international and national Catholic unions in the industry. The two organization groups are diametrically opposed in ideals and purposes. Both sides are now engaged in preparation for a struggle which must result in the obliteration of one of the groups, and which may result in a general upheaval of the building industry, which would be disastrous at the present time, when a building boom is early expected. Both unions are holding meetings in the city at the present time and are organizing a fight for supremacy.

John W. Bruce, general organizer of the International Plumbers' and Steamfitters' Union, and chairman of the International Conference Board now sitting in the city, stated: "There appears to be an effort on the part of the National Catholic Union to make a fight against the international unions. A serious clash is inevitable unless steps are taken to overcome it."

In view of the seriousness of the local situation the International Conference Board is sending officers to Washington to lay the full facts of the case before the international presidents of the building trades unions there.

Oppose Expenditure For Public Baths

While the Winnipeg "Tribune" is not opposed to an expenditure of $300,000 for public baths for the city, it is against laying out the money at the present time. Discussing the question it says editorially:

"It may be that Winnipeg should have, when more money is in sight, an additional expenditure of $300,000 for public baths, but in the meantime we do not think the citizens will endorse the proposed $300,000 bath by-law.

"The city and surrounding municipalities have expended somewhere around $15,000,000 to bring soft water into the city. It is in every home. The supply is ample, and there is practically no restriction upon its use for family household purposes. It is a boon.

The argument may be used that boys and girls, and even grown-ups need the temptation of a swim in order to keep their bodies clean. Let us try, in our schools, the effect of instruction; say five minutes, twice a week, to ascertain how many scholars have taken their bath. And tell the children, even more frequently, that cleanliness is next to godliness. Dirt and decency, in fact, cannot travel together.

For the masses of people here the summer is the popular swimming season. Erect, if necessary, cheap, yet safe, places on our rivers.

While our taxes and the cost of living are sky-high, let us proceed cautiously; let us save and produce.

Therefore, if the proposed $300,000 by-law is submitted, vote it down."

Shipping Board To Close Office

The British Ministry of Shipping, which has practically controlled the export trade of Canada inland and overseas during the war, will be closed, according to a statement of its director-general, Sir Arthur Harris, on March 31.

It is stated that during the period from August 25, 1914, to December 31, 1919, over sixteen million gross tons of munitions, war material, and various supplies were moved inland and overseas under the direction of this department. All correspondence concerning the affairs of this ministry in Canada after March 31 should be addressed to E. M. Raeburn, Director-General, British Ministry of Shipping, 165 Broadway, New York.

Windsor, Ont.—Prices wanted on heating, plumbing, and electric lighting in connection with new $250.000 theatre to be erected for Loew's Syndicate.

London, Ont.—Plans are being prepared for new church to cost $50,000 for the Edgerton Street Baptist congregation, Rev. A .C. Bingham, pastor.

Gravenhurst, Ont.—The Water Commissioners plan to lay new water mains during the summer at a cost of $5,000.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

CHAPTER II

In designing a small installation for disposing of the foul waters from a private house, the first point to be considered is the best location for the works to be constructed, which depends greatly upon the levels of the site and the layout of the grounds. The most ideal location is as far as possible from any habitual buildings, talking into consideration the best available land suitable for land filtration as well as a convenient outlet, because beneficial and good results depend greatly upon the selection of a suitable site.

After the site has been definitely fixed the design of the works must be carried out by the engineer and the usual procedure which have in practice given the best results, is either the installation of modern cesspool or a small septic tank with secondary land filtration. The former produces good results in light soils such as gravel, sand, etc., but is being superseded by the septic tank which, if properly and scientifically designed, undoubtedly produces the best results with the least amount of maintenance cost and supervision.

Cesspools

Many years ago the usua method of disposing of sewage was by means of excavating a hole in the ground at a suitable location away from the house buildings and allowing the sewage to deposit its sludge into this chamber, the clarified effluent percolating through the porous lining of the cesspool into the earth.

Later impervious concrete lining was substituted for the rubble or bricks laid dry and the sewage allowed to collect in the circular chamber until the level of the liquid reached the overflow pipes, which usually discharged into the porous soil or were connected to a system of lateral land drain and purified by land filtration.

The Solids Settle

The solids settle in the bottom of the cesspool and require periodically cleansing. The cesspool, if constructed, should be thoroughly watertight and well ventilated, as the solids in the sewage undergoes decomposition, giving off a large amount of impure gases, and they should be located in an isolated position away from all sources of water supply and wells, stream, watercourses and, as far as possible, from the main buildings of the house. Owing to the small discharge of sewage from the overflow feeding the filtration area, which is never more than a dribble unless tile drainage is laid, the filtration area directly next to the cesspool is treating the whole of the clarified effluent from the cesspool and the land in time becomes what the engineer terms "sewage sick" and purification ceases. So in a good system it is always advisable to connect the overflow with land drains and purify the sewage on a given filtration area.

Figures 1 and 2 show plan and section of a circular cesspool constructed in concrete, applicable for any residence where secondary filtration through land drainage tile is adopted. The walls should be constructed of good Portland cement concrete in the proportion of 1 part cement, 2 sand and 4 broken stone or gravel, nine inches thick, well tamped so as to ensure a perfectly watertight chamber. The cover should be reinforced with 3-8 inch steel rods and filled with an airtight inspection cover for cleaning-out purposes. The ventilation shaft should be carried up the side of a suitable outbuilding, having a free access to the open air. In all cesspool construction sharp angles should be avoided and the floor should fall towards the centre to facilitate the removal of sludge.

For Light Soil

Figure 3 shows the construction of a cesspool which is suitable for very light soil, the filtration area being dispensed with and the sewage percolates through the dry rubble course into the adjacent light soil for secondary purification. The bottom part of the cesspool acts as the sludge chamber and its capacity depends upon the number of persons using same and the time required between each cleansing operation, so in designing one of these cesspools the bottom half of the chamber should hold at least 6 to 12 months' sludge deposit and, for successful results, the sludge deposit must never reach above the lower joint of the coarse rubble or filtration area will become choked through the fine particles of sludge which would find their way through the open joints into the filtration media.

Being Superseded

With the advancement of sanitary science many disadvantages against the cesspool have been practically proved which has discouraged its installation for solving the sewage problem of country homes, farms, etc., and it has been superseded with the small septic tank installation. One of the greatest drawbacks to the best constructed watertight cesspool, is the disposing and handling of its contents when the cesspool must be cleaned, which is usually accomplished by means of a small pump at least

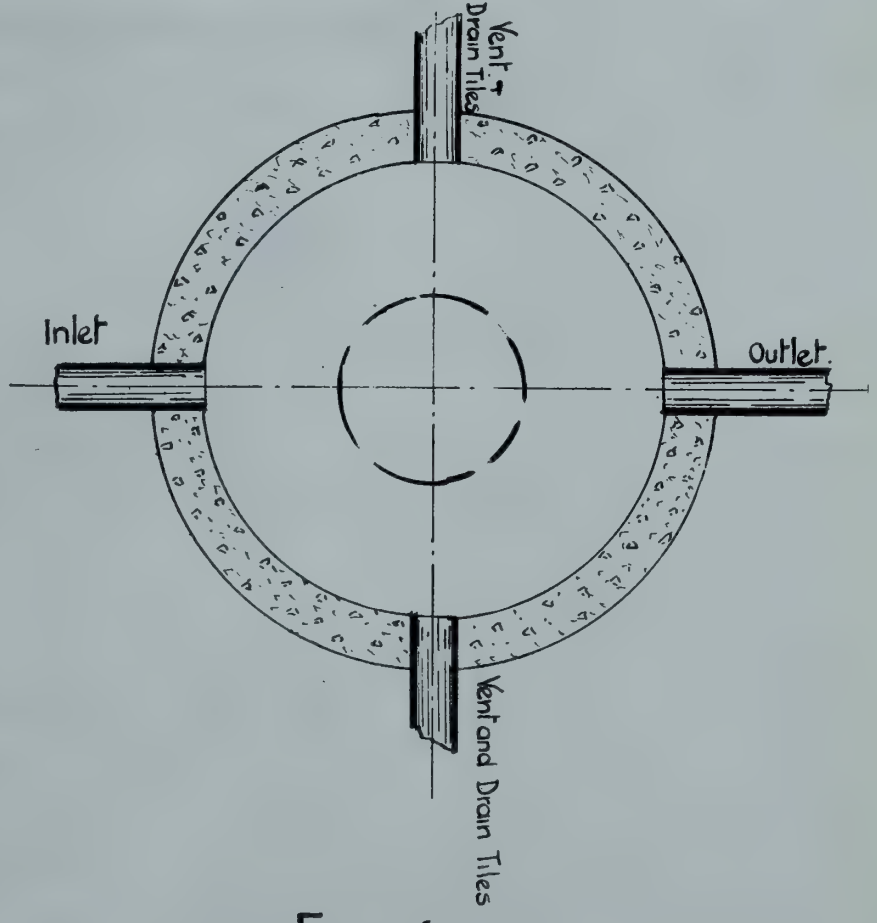

FIG. 1

once a year, according to the capacity and design of the cesspool.

If a cesspool is constructed it should not be constructed less than 50 feet from any dwelling house and at least 60 to 80 feet from any well or spring likely to be used for drinking or domestic purposes, as it necessarily involves the storage of a somewhat large accumulation of excremented filth and, therefore, very liable to become a source of nuisance and danger to health. With a view of obviating the risk of obnoxious smells and water pollution, which may follow on some undetected defect in a cesspool originally well constructed, the above minimum distances should be carried out for safety reasons.

Septic Tank

A septic tank consists of a dark, watertight, underground compartment used for the storage and purification of sewage by bacterial life. The tank can be constructed of any materials, provided same are constructed perfectly watertight and finished with a smooth surface, keeping in view the exclusion of all air, etc.

The size of the tank depends upon the number of persons, the residence accomodation and the number of gallons of water per capita used by the occupants. But in designing a tank sufficient tank capacity should be allowed so that the total flow can always remain in the tank from 24 to 36 hours; the solid matter, during this period, settles to the bottom of the tank and is partially liquefied, deodorized and destroyed by countless numbers of bacteria which live and thrive without light or air in all manner of filth.

Obtaining the Size

Another simple manner of obtaining the size of the settling chamber, found by actual practice to produce good and satisfactory results, is by allowing so many cubic feet of tank area per person governed by the amount of retention.

A thick scum is formed on the surface of all septic tanks a short while after the tank has been in operation which encourages and develops bacterial action and the breaking up of this scum prevents and retards the bacterial action of purification for a time, until same re-accumulates, at the same time allowing the foul gases to escape into the outside air.

Tank Accommodation

In designing works, especially for "fresh" sewage which varies considerably from the septicized sewage of a large city through the action and splitting up process undergone in the many miles of sewers, it is advisable to provide tank accommodation for from 1 1-4 to 1 1-2 times the normal daily flow in order to bring the fresh sewage to the same standing of putrefaction. Longer tanking process is essential to balance the septic action which takes place in sewers to the sewage during transit to the works.

Toronto, Ont.—R. C. Vaughan, 66 Dunvegan Road, is preparing plans for converting four residences into duplexes. Prices wanted on plumbing and heating.

Blyth, Ont.—Tenders will be received until March 15 for the erection of Memorial Hall to cost $12,000. W. G. Murray, Dominion Savings Bldg., London, Ont., architect.

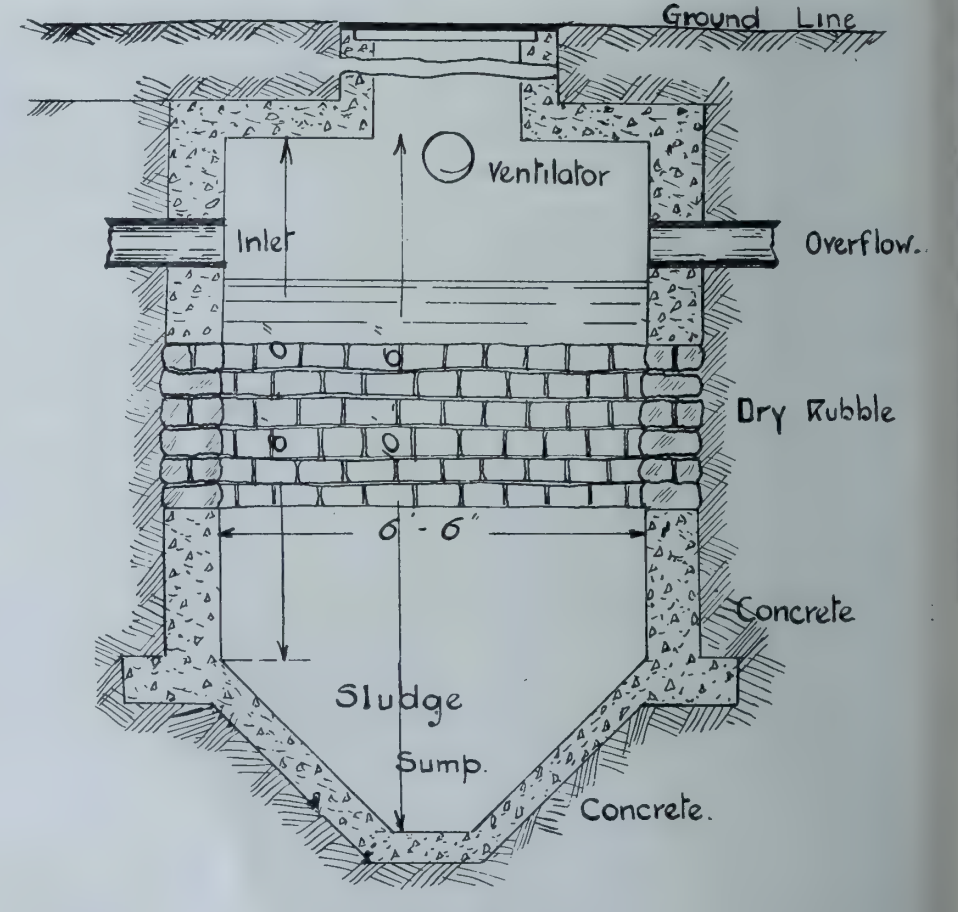

FIG. 3.

New Plumbing By-laws at London, Ont. in Line With Proposed Provincial Law

Important Step Forward is Taken by City Council With a View to Securing the Sanitary Condition of Buildings—Plumbing Inspector is on the Job to See That Regulations Are Carried Out

RIGHT in line with the proposed new plumbing regulations for the Province of Ontario is the new code of by-laws for plumbing which has just been adopted by the City Council at London, Ont., and is now in effect under the supervision of Plumbing Inspector J. Young and the Department of Public Health.

In order that every sanitary and heating engineer in the city may be thoroughly familiar with the by-laws, Inspector Young held special meetings in the Technical School to which they were invited. He went thoroughly into all the clauses and explained them in detail, frequently using charts and drawings.

The new by-laws, together with the regulations of the Board of Health in regard to plumbers, are as follows:

BY-LAW NO. 6008
To Secure the Sanitary Condition of Buildings

Be it enacted by the Council of the Corporation of the City of London as follows:

1. It shall be unlawful for any person or persons to do any work in connection with plumbing or drainage of any building within the City of London, unless the same shall conform with the following requirements:

2. Before proceeding to construct, reconstruct, alter or relay any portion of the drainage, ventilation or water system of any hotel, warehouse, dwelling house or other building, the owner or his agent (in the case of agent his authority from owner must be produced in writing) desiring to construct the same shall file in the office of the Medical Officer of Health an application for a permit therefor, and such application shall be accompanied with a specification or abstract thereof in a blank form prescribed and supplied for this purpose, stating the nature of the work to be done, and giving the size, kind and weight of al lpipes, traps and fittiings, and a description of all closets and other fixtures, and also a plan thereof, showing the street and street numbers marked thereon and the drainage system.

3. All plans must be legibly drawn in ink an heavy white paper or tracing linen, and on a scale of eight feet or four feet to an inch, and such scale plainly marked on plan.

4. If the Medical Officer of Health finds that the plans and specifications do not conform with this by-law, he shall not issue any permit, and it shall be unlawful to proceed with the work referred to in the application.

5. A permit shall be granted or refused within two days from the time of filing the application, and (if granted) shall be valid for six months from the date of issue.

6. After a plan or specification has once been approved no alteration or deviation from the same shall be allowed, except on a written application of the owner, or agent of the owner, and with the approval of the Medical Officer of Health.

7. No master plumber, plumber or tile drain layer, engaged by the owner of any building to construct, reconstruct, alter or relay any portion of the drainage, ventilation or water system thereof, shall do any work in connection with such construction, reconstruction, alteration or relaying at or upon any such building until such master plumber, plumber or tile drain layer has satisfied himself that the owner has filed his application for a permit for such work, as required by this section, and has obtained a permit therefor as required by section 2 of this by-law, and the production of such permit from the Medical Officer of Health shall be sufficient evidence to the said master plumber, plumber or tile drain layer, of the application at the Department of Health having been properly made.

8. Between the building and the public sewer or drain there shall be placed a ventilation hand-hole cleaning trap of approved description and make.

9. Between the said trap and the foot of the soil pipe there shall be connected with main house drain an inlet pipe, for the admission of fresh air, four inches in diameter, to be situated at least 10 feet, if possible, from any opening into the house, and not less than 12 inches above finished grade, the mouth of which shall have a return bend or a cap giving an area of one-fourth more than the diameter of the inlet pipe.

Should cellar window or other opening be within, or adjoin verandah, the air inlet must be situated as remote as possible from the same, it must not terminate under closed verandah or under steps, but he brought out and finished in the open.

10. In case of a building or buildings to be built on a street which is not sewered, septic tanks may be installed upon receiving a special permit from the Medical Officer of Health, and they shall be subject to conditions imposed by him from time to time.

11. The pipe in underground drainage shall be of the best material and workmanship, and free from all blisters, cracks, flaws, or defects of any description.

12. All changes in direction shall be made with "Y" junctions and curved bends; no right angle junctions will be allowed; all joints must be put together with the best portland cement properly mixed and tempered, and finished flush with the edge of the pipe; the joints on the inside of the drain to be in all cases properly cleaned and finished so as to be perfectly free from all burrs. No drain shall be laid with a less grade than the following:

Drains 4 inches in diameter, a minimum grade of 1 foot in 40 feet.

Drains 6 inches in diameter, a minimum grade of 1 foot in 60 feet.

Drains 8 inches in diameter, a minimum grade of 1 foot in 80 feet.

Drains 10 inches in diameter, a minimum grade of 1 foot in 110 feet.

Drains 12 inches in diameter, a minimum grade of 1 foot in 140 feet.

Drains 15 inches in diameter, a minimum grade of 1 foot in 200 feet.

Drains 18 inches in diameter, a minimum grade of 1 foot- in 250 feet.

Drains 24 inches in diameter, a minimum grade of 1 foot in 330 feet.

13. Vitrified salt glazed earthenware drain pipe shall be equal in quality to those used for the private drain connection, as specified from time to time by the City Engineer for private drain connections. The pipe used for weeping or subsoil drainage tiles shall be connected to a rain water leader drain on house side of trap; surface and floor drains must be trapped and have a rain water leader discharging through trap used for same.

Waste pipes from sinks or a plumbing fixture of any size whatsoever shall, under no consideration, be connected to weeping tile under any building.

14. All drains used for weeping and subsoil drainage of any building must connect to main drain of building on sewer side of main trap and be so arranged that sewage will not pass or back into their trap.

15. All earthenware drains laid on newly made ground or very wet soil, shall be laid on a prepared foundation of 2-in. pine plank or 4-in. concrete. No built trap or mason's traps shall be used inside of any building. All traps on earthenware drains shall be of vitrified salt glazed earthenware, and all traps to have hand-holes, and said hand-holes extended to the surface. No inverted joints of any kind will be allowed below any fixture.

16. All private drains laid by the Corporation are to be taken to the outside of the wall where buildings are on the street line.

17. All rain water leaders shall be trapped when connected with the drainage system of any building.

(a) Rainwater leaders shall not be used for soil or waste pipes, nor shall soil or waste pipes be used for rainwater leaders.

(b) When the conductors or roof leaders connect to drain inside of the main trap they shall be of the same material as a soil drain, and when passing up to roof within a building they shall be tested the same as the soil system with the water test.

(c) Where roof area of any building is grreater than 1500 square feet, plans showing proposed drainage thereof shall be submitted for approval to the Medical Officer of Health and the City Engineer.

18. All drains used for sewage or waste water under any building shall be of cast iron, and of the kind and weight specified by this By-law.

19. All cast iron drain, when ten feet or longer, shall have at least two cleaning-out screws, or approved hand-hole fittings, one to be about twelve inches above and in front of the bend at the basement floor, that is, one on each vertical soil pipe or waste pipe, and the other between the said bend and the outer wall of the house; in all other cases, one clean-out screw or hand-hole fitting placed at foot of sail pipe as before described, will be sufficient.

All cast iron soil waste pipe shall be rendered impervious to gas or liquid, by the joints being caulked with oakum and run with molten lead.

20. Clean-out screws or air-tight hand-hole fittings shall be of the same size as the pipe to which they are attached, except when pipe is larger than 4 inches, when 4 inches will suffice.

21. When alterations are made in a building already drained by a tile drain, same may be re-used (provided they are satisfactory to the Medical Officer of Health).

If necessary to relay, it shall be relaid as provided in clause 18 of this By-law.

22. All plumbing fixtures put in for use in any building shall be properly trapped, vented and connected to a sewage drain, soil or waste pipe. Wooden laundry tubs and wooden sinks connected with house drains are prohibited.

23. Refrigerator wastes, if drained, shall terminate and discharge either into an open sink, which is supplied with City water, or an opening used for draining of cellar floor surface.

24. No safe waste, range boiler, heating boiler, or cistern overflow shall be allowed to connect to any drain. Wherever safes are placed under fixtures the safe waste shall

be run separately to a tapped sink or basin in the basement or cellar and be closed by a hinged brass flap valve of approved device, to prevent cellar air from rising through the pipe. Urinal platforms shall not be provided with safe wastes.

25. Drinking fountains, manufactured for this purpose only, placed on wall or pedestal, and used for drinking only, may be cannected to a rain water leader drain on building side of its trap without having a separate trap and vent; but if connected to a sewage drain they will be considered a plumbing fixture, and shall have a trap properly ventilated.

26. Each house or building must have its own separate soil pipe, four inches or larger, and drain, and such soil pipe shall be so placed as to enable it to be readily inspected without destruction to walls; and the plumber shall be responsible for the proper connection of his work with the system of drainage; and no two or more buildings shall have any drain in common except where there are two buildings on the one lot, one in rear of the other! if in that case there is no sewer or drain in the lane or alley to which the rear building can connect, and the rear building is not used as a dwelling-house or for human habitation, the drain of the front building may be extended to serve such rear building.

27. All drains must be properly connected with the private drain and not covered until inspected. $n no case shall the drains between th walls of the house and the street line be laid until the private drain from the street line to the public sewer shall first have been laid and completed. Where the tile and iron pipes are of the same size, the iron pipe must be connected to the tile drain by a taper pipe.

28. All soil pipes within the walls of any building shall be of cast iron or wrought galvanized, and shall be continued at least three feet above any opening in the roof, which may be within fifteen feet of the same, and three feet above any opening into any adjoining building or extension when such building or extension is within fifteen feet of such pipe, and be left open so that the whole of the inside drainage may be thoroughly and constantly ventilated. All soil or vent pipes, when they pass through the roof, must be properly flashed with five-pound sheet lead, or 18-gauge copper, and made water tight. That portion of metal resting on roof must be at least 20 inches square, and that portion extending up pipe if used, must be 10 inches high.

29. No soil pipe of 4 inches in size shall receive or have connected to it the discharge of more than four floors of any apartment or flats building; each floor must not contain more than two W.C.'s, four baths, two basins, two sinks, and two sets of laundry tubs. Main vent pipe for this or similar cases must be increased one size below roof, and pass out separately through roof.

30. No cast iron pipe used for soil pipe shall weigh less than the following per length of five feet:

2-inch inside diameter	20 lbs.
3-inch inside diameter	30 lbs.
4-inch inside diameter	45 lbs.
5-inch inside diameter	85 lbs.
6-inch inside diameter	100 lbs.
7-inch inside diaemter	135 lbs.
8-inch inside diameter	167½ lbs.
10-inch inside diameter	225 lbs.
12-inch inside diameter	270 lbs.

31. No cast iron pipe used for drains under ground shall weigh less than the following per length of five feet, and must be coated with asphaltum or tar applied hot, together with all fittings in drain under ground:

2 inch inside diameter	27½ lbs.
3-inch inside diameter	47½ lbs.
4-inch inside diameter	65 lbs.
5-inch inside diameter	85 lbs.
6-inch inside diameter	100 lbs.
8-inch inside diameter	135 lbs.
9-inch inside diameter	167½ lbs.
10-inch inside diameter	225 lbs.
12-inch inside diameter	270 lbs.

And all pipes, traps, bends or fittings of cast iron shall be of good quality, and shall be free from flaws or defects, and shall be of uniform thickness; untarred pipe and fittings only to be used above ground, which shall be immersed in linseed or other vegetable oil, or other coating which the Medical Officer of Health from time to time may approve of, to prevent them from rusting.

32. All traps and fittings shall be equal in quality and thickness to the pipe to which they are attached.

33. Garage drains must be of the same material as that required for house sewers when underground; and for soil and waste pipes, when above ground.

In garages or other buildings where petroleum oils are used, all drains coming in contact with the same, including bell traps, sink and lavatory wastes, must pass to sewer separately from ohter drainage, and shall pass through a sump made according to the instructions of the Board of Health. The diameter of this sump shall be eighteen (18) inches if one or two machines are provided for; twenty-four (24) inches if there are more than two machines.

The material for vent pipes must be the same as required for house drains when below the ground, and for soil and waste vents when above ground.

34. No wrought iron pipe galvanized shall weigh less than the following per lineal foot:

	Per lineal ft.
1¼ inches inside diameter	2.24 lbs.
1½ inches inside diameter	2.68 lbs.
2 inches inside diameter	3.61 lbs.
2½ inches inside diameter	3.61 lbs.
2½ inches inside diameter	5.74 lbs.
3 inches inside diameter	7.54 lbs.
3½ inches inside diameter	9.00 lbs.
4 inches inside diameter	10.66 lbs.
4½ inches inside diameter	12.34 lbs.
5 inches inside diameter	14.50 lbs.
6 inches inside diameter	18.76 lbs.
7 inches inside diameter	23.27 lbs.
8 inches inside diameter	28.18 lbs.
9 inches inside diameter	33.70 lbs.
10 inches inside diameter	40.00 lbs.

All fittings used for soil or waste pipes in connection with wrought iron shall be extra heavy galvanized cast iron or malleable iron recessed and threaded drainage fittings. The burr formed by cutting the wrought iron pipe shall be carefully reamed out, and pipes left full bore.

35. Vertical lines of soil, waste, or other pipes inside of building shall be provided with strong wrought iron floor rests at intervals of every second floor.

36. No double nubs, straight crosses, double "T's" or double "T-Y's" shall be used in any soil or waste pipe below any fixture; no branch fitting other than a full "Y" or "Y" and ⅛ bend shall be used on any soil or waste pipe running in a horizontal direction.

37. When a system is to be installed for soil and waste pipe, it must be either entire galvanized wrought iron, or entire cast iron, but must not be part galvanized wrought iron, and part cast iron.

38. Waste pipes from bath and basin or other fixture will not be allowed to connect to water closet bend, but must have a separate fitting to receive the same.

39. No waste pipe from any plumbing fixtures shall be less than inside diameter of its trap.

40. The size of traps for a given fixture shall never be less than the following inside diameter:

Water closets	3 inches
Slop sink	2 inches
Pedestal urinal	2 inches
Urinals	1½ inches
Laundry tubs, 1 to 3 considered 1 fixture	1½ inches
Kitchen sink	1½ inches
Pantry	1½ inches
Wash basin	1¼ inches
Bath tubs	1½ inches
Shower bath	2 inches
Sitz bath	1½ inches
Drinking fountain	1¼ inches
Dental cuspidor	1¼ inches

41. All drains and plumbing fixtures of every house or other buildings shall be provided with sufficient traps and vents to prevent gas from the sewer, drain, or waste pipes from escaping into any apartment; and each such fixture shall have its own trap with sufficient vent, said trap to be placed directly under, and as close as possible to fixture.

42. No fixture shall drain through more than one trap (main trap excepted), the vent to be not less than one size smaller than trap, and no vent of less than one and one-quarter inches in diameter.

43. No trap vent pipe shall be less than three inches inside diameter where it passes through the roof or outside wall, and all vent pipes must continue to rise after leaving the trap, and pass out through the roof or connect with soil pipe, above the highest fixture. Traps for basins and sinks, when ½ "S" or "P" traps are used, may be vented by a continuous vent if centre of waste opening is not more than 12 inches from face of finished plaster or wall which they pass through or along, measured, at right angles from face of wall—in all other cases location of trap vent will be governed by paragraph (c) of this clause.

(a) No trap vent will be allowed to connect to another vent below a point level with top of fixture for which it is used.

(b) A vent taken off a trap or lead bend under a floor shall be extended in the shortest way to nearest suitable wall or partition, and then extended vertically as high as required above floor line.

(c) No slip or washer joint shall be allowed on sewer side of any trap or on any vent pipe. Trap vents in all cases (W.C.'s excepted) must be taken off discharge side of trap or waste pipe, as shown in diagram —crown venting will not be permitted. No wrought iron vents will be allowed below top of cellar floor, or to be buried under any earth.

44. The rule for soil pipe terminus, as hereinbefore mentioned, shall govern said vent pipe.

45. No brass pipe used for waste or vent pipes shall be less than No. 19 Imperial gauge in thickness, and all brass pipe and fittings must be properly tapped and threaded.

46. Vents for water closet traps shall be 2 inches for a length of 25 feet, and for a greater length, 3 inches.

47. Vent pipe stacks must be increased one size after passing through four stories, and keep on increasing one size for each succeeding four stories.

48. Trap vents must be of brass, lead, cast iron, with brass galvanized cast malleable iron or brass fittings.

49. Closet vents, into which other vents are connected, shall be three inches in diameter. When the vent pipes combine, they must be increased in size.

50. All water closets (slop sinks, when in separate compartments), and urinals, must be supplied with three-inch local ventilation pipe having an area equal to that of a three-inch round pipe, and connected to a heated flue; when a number of pipes combine, the main or trunk pipe must be increased proportionately.

51. No gas heater used for heating water shall be installed without having a vent pipe, which shall be connected to a flue or carried into any unoccupied attic.

52. No lead waste or vent pipes shall weigh less than the following, when used in any building:

	Per yard
1¼ inches inside diameter	7 lbs.
1½ inches inside diameter	8 lbs.
2 inches inside diameter	10½ lbs.
2½ inches inside diameter	13½ lbs.
3 inches inside diameter	16½ lbs.
4 inches inside diameter	24 lbs.

53. For City Waterworks pressure, no lead pipe shall weigh less than the following: ⅜ inch internal diameter, 4 lbs. per lineal yard; ½ inch internal diameter. 6 lbs. per lineal yard; ⅝ inch internal diameter, 8 lbs. per lineal yard; ¾ inch inter-

nal diameter, 9 lbs. per lineal yard; 1 inch internal diameter, 12 lbs. per lineal yard.

54. In all cases where water pipes are placed under ground they shall be of lead pipe up to and including one inch inside diameter, and of the weight per lineal yard as specified in section 53 of this By-law.

55. All lead pipes shall have proper wipe joints.

56. Brass pipes used for waterworks pressure shall be standard wrought iron sizes and properly threaded. All fittings used for waterworks pressure must be proper threaded fittings; no slip joints will be allowed.

57. All water supply pipes shall be laid with due regard to danger from freezing, properly laid with a fall to a stop and waste cock, placed in the cellar or other convenient place where they can be entirely drained off. Each consumer in a tenement building shall be supplied with a separate stop and waste cock on the service pipes inside the building unless metered, or unless the owner pays the water rates for the entire building.

58. Every connection between lead and iron pipes shall be made with brass thimbles, ferrules, solder nipples, or ground-in unions, having properly wiped joints, and the ferrules shall be properly gasketed, leaded and caulked into the said pipe.

59. Brass thimbles, ferrules or solder nipples must not be wiped into closet bend or pipe or trap when used for venting same. All brass thimbles shall be increased in size at the top so that the lead pipe will enter full size.

60. Ferrules for 4-inch pipe shall weigh not less than 2½ lbs., for 3-inch pipe not less than 1¾ lbs., and for 2-inch pipe not less than 1½ lbs., each ferrule must not be less than four inches in length.

61. Where the trap to closets is above the floor, the connection of the same with the soil pipe shall be made with lead bend or lead pipe and cast brass floor flange with gasket or rubber or asbestos, said brass flange to be not less than three-sixteenths of an inch thick.

62. No closet or other convenience which allows the escape into the house of air or gas from any part of it, or from the drain or soil pipe connected with it, or which allows any accumulation of filth in or about it, shall be fitted up or used. Range closets or latrines will not be allowed.

63. No arrangement shall be made for supplying water closets or urinals except by self-closing cocks, unless when water is supplied by meter; and no arrangement shall be made for cleaning water closets or privy vaults by waste pipes from wash basins or sinks or other improper means; but they shall be fitted up with the proper fixtures and appurtenances belonging to them respectively. No copper lining of tank for a water closet shall be lighter than 10 ounces to the square foot, and weight must be stamped on lining in a conspicuous and accessible position. Sheet galvanized iron shall not be allowed.

(a) Where tank is used in attic or upper room of any house or building in connection with the domestic plumbing, said tank shall be lined with sheet lead weighing not less than 5 lbs. per square foot, or any other material approved of by the Medical Officer of Health.

(b) Tell-tale pipe shall not be less than ½ inch inside diameter of pipe, and shall discharge into sink to which pump is attached. All iron pipes connected to lead-lined tank shall be connected with lead pipe and brass ferrule or soldering nipple, and all joints shall be properly wiped. Iron pipes connected to lead-lined tank with locknuts shall not be permitted.

64. No person shall locate or cause to be located any water closet in any sleeping room, apartment or vault which is not in direct communication with the external air by means of a window or air space having an area of at least two (2) square feet, or vertical air shaft having an area of two (2) square feet for the first storey, and increased ten percentum for each storey it passes through.

65. Sec. 1.—All piping, traps and fixtures of a house drainage or plumbing system shall be inspected by the inspector to ascertain if all the requirements of this By-law have been complied with.

Sec. 2.—Whenever any connection is made with either a public or private sewer, it shall be subject to inspection the same as other piping, traps or fixtures of a house drainage system. All drains shall have a tee provided at street line for testing.

Sec. 3.—No drainage or plumbing system or part thereof shall be covered until it has been inspected or tested and approved as herein described.

Sec. 4.—If any house drainage or plumbing system or part thereof is covered in before being regularly inspected or tested and approved as herein prescribed, it shall be uncovered upon the directions of the Health Officer.

Sec. 5.—If an inspection or test shows defects, the defective work or materials shall be replaced with three (3) days and the inspection or test made again.

Sec. 6.—(a) It shall be the duty of the plumber or drainlayer to notify the Medical Officer of Health, in writing, when the work is ready to be inspected or tested. Inspection will be made the following day on all notifications received before 12 a.m.

(b) It shall be the duty of the plumber or drainlayer to make sure that the work will pass the inspection or stand the test prescribed before giving the above notification.

(c) If the inspector finds that the work will not pass inspection or stand the test, the plumber or drainlayer shall be required to renotify as above. Any extra inspection fee caused by defective workmanship shall be paid by the plumber in default.

Sec. 7.—(a) The material and labor for the inspection and test shall be furnished by the plumber or drainlayer.

(b) All piping, traps and fixtures of a drainage or plumbing system shall be tested by the plumber or drainlayer first, the roughing in shall be tested with water.

(c) The water test shall be applied by closing the opening at the outlet end of the house drain and all other openings in the piping with proper testing plugs and the system filled with water to the top of stack above the roof when the entire system is tested; the water column to be left standing at least fifteen (15) minutes. If the water level remains constant during such time, the system shall have been acceptably tested.

(d) The smoke air test shall be made by attaching the smoke machine to any suitable opening or outlet that will enable the inspector to ascertain that smoke has reached all parts of the system and when the system is completely filled with dense pungent smoke and the roof openings emit smoke they shall be closed and an air passage maintained for at least ten (10) minutes without leakage. The use of spring gauges or wooden plugs in making the tests is prohibited. The inspector may require the removal of any clean-out or unsealing of any trap to ascertain if the smoke has reached all parts of the system.

66. The tests may be made separately as follows:

Sec. 1.—(a) The soil, waste, vent, back vent, inside conductor and drainage pipes which would be covered up before building is enclosed or ready for completion.

(b) When the main house drain, rainwater and tile drains are laid before being covered.

(c) When the soil and waste pipes within the buildings are in place, connected to the traps and before being covered, they shall be filled with water to top of stack above the roof. If leaks are indicated they shall be found and corrected, removing all defective material and replacing the same with sound material and a new water test applied until the work is found to be tight.

The water test shall be applied to all buildings up to and including the fourth floor, above which a smoke test under pressure may be applied.

(d) Immediately after the work is fully completed there shall be a written request sent to the Medical Officer of Health for a final inspection. When the work has been properly inspected, tested and approved the Medical Officer of Health shall issue a certificate of acceptance to the plumber and drain layer, and no work will be entered as complete until the plumber and drainlayer has obtained this certificate.

Sec. 2.—(a) If a stable or any part of a stable be used for human habitation, the same inspections and tests of plumbing and drainage system thereof shall be made as in the case of any ordinary dwelling; all stable and stable yard drains shall be inspected.

(b) The smoke test shall be used in testing the sanitary condition of the drainage system of all buildings where there is a reason to believe that the plumbing system has become dangerous or defective on account of settlement of the building, or by abuse, accident or any other cause. In such buildings condemned by the Health Officer because of the insanitary conditions of the house drainage or plumbing, no such drainage or plumbing shall be considered as coming under the head of repairs, but all such house drainage or plumbing shall be done as in the case of new buildings.

(c) When alterations are made requiring the addition of two fixtures or a water closet or when a new bathroom is installed or the building is remodeled the entire drainage system shall be made to conform with the requirements of this By-law.

67. Every water cock, bibb tap or hydrant attached to any water service or pipe connected with and supplied from the waterworks system of the City of London shall have legibly stamped thereon, in a conspicuous place, the name of the maker, and the same shall be of sufficient strength to withstand the city water pressure, and of such make and design as the Water Commissioners may approve.

68. Every master plumber who shall himself or by his apprentice, agent or employees make any extension or alteration to, or shall remove any tap, pipe or other fixture attached to the pipes of the waterworks, shall on the last day of the month in which such extension, alteration or removal was made, report the nature or extent of same in writing to the Secretary of the Board of Water Commissioners upon a written form to be supplied by that department.

69. No person shall be allowed, without first having obtained a permit from the Waterworks Department, to open or shut off the street stop cock connected with the service supplying any premises or building, unless in case of urgent necessity, to prevent loss or damage from flooding, or when a plumber requires to do so in order to make necessary repairs, or to test his work, and in every such case he shall leave the stop cock as he found the same, and any person who shall commit any damage or injury to any stop cock in the service pipes of the waterworks shall be liable for the amount of such damage.

70. All work contemplated in this By-law shall be done in a workmanlike manner, and shall be subject to the inspection, supervision and approval of the Medical Officer of Health or any inspector appointed by him; and all plumbing work required under this By-law shall only be done by a licensed master plumber, or by a licensed journeyman plumber in the employ of such licensed master plumber, and all faulty or defective work which may at any time be discovered shall be made perfect to the satisfaction of the Medical Officer of Health or inspector appointed by him, and when so found satisfactory, a certificate shall be issued to the plumber at the expiration of seven days from date of inspection, unless in the meantime such work shall have become faulty or defective. Provided, however, that this section shall not prevent a person from doing necessary plumbing to and on his own premises subject to the inspection and the regulations demanded by this By-law.

71. The Medical Officer of Health, with the approval of the Council, shall appoint such inspectors of plumbing as may be found necessary after passing an examination considered proper by him, appointments to be made from applicants who obtain sixty-five per centum or more marks at such examination or examinations; such inspectors shall be under the supervision of said Medical Officer of Health.

To Prevent the Discharge of Steam, Hot Water or Oil, Tar and Grease Into the Sewers

72. "No person shall damage or injure any common sewer or private drain, or sewer communicating therewith, and no person shall cause or permit the discharge of steam or hot water above a temperature of 150 degrees Fahrenheit from any engine or boiler, or oil, tar and grease, into any common sewer or private drain, or sewer communicating therewith." (See diagram of intercepting tank in office.)

7. Any person convicted of a breach of any of the provisions of this By-law shall forfeit and pay, at the discretion of the convicting magistrate, a penalty not exceeding (exclusive of costs) the sum of twenty dollars for each offence, and in default of payment of the said penalty and costs forthwith, the said penalty and costs, or costs only, may be levied by distress and sale of the goods and chattels of the offender, and in case of there being no distress found out of which such penalty can be levied, the convicting magistrate may commit the offender to the common gaol of the City of London, with or without hard labor, for any period not exceeding six calendar months, unless the said penalty and costs (if any), including the costs of the said distress and of the committal and conveyance of the offender to the said gaol, are sooner paid.

74. Sections 30, 31, 32, 33, 34, 35, 36, 37, 38, 39 and 40 of By-law 4937 relating to the public health, are hereby repealed.

AREAS OF CIRCULAR IRON PIPES

BY-LAW NO. 5996

To Amend By-law No. 5594 respecting the issue of Licenses.

Be it enacted by the Municipal Council of the Corporation of the City of London, as follows:

1. That by-law No. 5594 respecting the issue of licenses passed on the seventh day of August, 1917, be, and the same is, hereby amended, as follows:

(a) By adding the following sections after section 26 thereof:

26—(a) No person shall carry on the business or calling of a master plumber or journeyman plumber or engage in the work of a plumber unless or until, he or they shall procure a license so to do.

(b) By adding the following sub-sections to section 41 thereof:

"(24) For a master plumber, $25 per annum.

"(25) For a journeyman plumber, $5.00 per annum.

"(26) For inspection, by the plumbing inspector of plumbing ($1.00), one dollar, for inspection of five fixtures, with an additional fee of twenty-five cents for each additional fixture."

No plumbing shall be permitted without an inspection by the Plumbing Inspector, as directed by the By-laws of the City of London.

REGULATIONS OF THE LONDON BOARD OF HEALTH.

PLUMBERS.

1. Every person desiring to carry on the trade or business of a plumber, master plumber, or journeyman plumber, in the City of London, shall register his name and address at the office of the Plumbing Division of the Department of Public Health in the City Hall, under such rules and regulations as the said Department shall prescribe, and shall file at the said office a petition in writing giving the name of the applicant, and, in the case of a partnership, the names of each member thereof, and, in the case of an incorporated company, the name of some shareholder of the company to whom it is desired that a licnese should be issued, together with the place of business, and asking for a certificate that the person to whom the license is to be issued is qualified as a master plumber or a journeyman plumber.

2. No plumber, master plumber or journeyman plumber, who is not already licensed and recognized as in good standing with the Department of Public Health, shall be entitled to receive the certificate referred to in the foregoing section unless he passes an examination to the satisfaction of an authorized Examining Board composed of the Medical Officer of Health (or the Chief Plumbing Inspector) and two plumbers, one to be a master plumber and one a journeyman plumber, of not less than ten years' experience, to be named by the Medical Officer of Health, and the Chairman of the Local Board of Health.

3. If the applicant is found qualified by the Examining Board referred to in the foregoing section, the certificate of such qualification shall be forwarded to the office of the Issuer of Licenses, where it shall remain on file, and the applicant shall thereupon apply to the Issuer of Licenses for a license as a master plumber or a journeyman plumber and such license in the case of a corporation shall be issued to the shareholder named on behalf of the corporation.

4. A partnership of two or more persons desiring to carry on the business or trade of plumbers may do so upon one member of the partnership having charge of or overseeing the plumbing work of the firm obtaining the license hereinbefore provided for, and a corporation may obtain a license on its behalf in the name of some shareholder thereof named in the petition for the license.

5. Any change in the persons composing the firm, or the shareholders representing a corporation, or in the location of the business, shall be promptly reported to the Chief of the Division of Plumbing and Drainage, and also to the Issuer of Licenses.

6. No person shall carry on business as a plumber or Master Plumber in the City of London unless he is the holder of a License as hereinbefore provided; is a resident of the City of London and is of the full age of twenty-one years.

J. H. SAUNDERS, Chairman. W. S. DOWNHAM, M.O.H.

Concrete Sewer Pipes Collapse at Vancouver After Being Down Only Eight Years

New Sewers Costing $58,000 Are Being Recommended—City Engineer Says Old Pipes Should Have Lasted for Twenty Years at Least

VANCOUVER, B.C.—Various concrete sewer pipes in the city, installed eight years ago, proved so inferior and unsatisfactory that they have collapsed. As a result the city council has been asked to ratify the order of the civic Board of Works, that $58,400 worth of new sewers, according to the city engineer, should have proven satisfactory for twenty years. He had a sample of the pipe in his office which crumbled easily under hand pressure, being principally sand, with very little concrete in it.

Seven items were contained in the engineer's report of "urgent" work. The cost will have to be set up in the sewer by-law, which now has approximately $200,000 of a balance.

The largest item is a trunk sewer in Ward Seven, connecting with the trunk sewer at Nootka and Turner streets. It will require a four-foot reinforced concrete sewer at Nootka and a 3½-foot sewer on Venables street and will cost approximately $31,000. The flat area on Dufferin street, from Crown to Main streets, is also to benefit by a new $16,750 sewer on Dufferin street.

Other necessary and urgent sewers are on Vine street, from Fifteenth to Sixteenth avenues, and on Sixteenth from Vine to Yew, the two to cost $4,340; the lane west of Fraser between Nineteenth and Twentieth avenues, to cost $1,830; on Cambridge street east of Wall street, to cost $1,250; on Sixteenth avenue from Laurel to Oak, to cost $2,500, and in the lane east of Main street from Twenty-third avenue to the centre of the block, to cost $730.

The amount for all the work was $58,400, which the engineer recommended as urgent and required immediate attention, breaks having occurred in some of the cases mentioned.

Ontario Society Plans to Extend Its Aggressive Campaign Throughout the Province

Meetings Will be Held With the Men in the Trade to Discuss Organization, Business Methods and Topics of General Interest to All Sanitary and Heating Engineers

WITH the coming of spring the executive officers of the Ontario Society of Domestic Sanitary and Heating Engineers plan to extend the aggressive campaign which was inaugurated and carried out so successfully during the summer and fall months last year. Owing to the unusual amount of illness recently, and the long and very severe winter, it has not been found practicable to make a number of visits to Ontario points that had been contemplated.

However, the matter has not been forgotten at all and stimulated by the success of their past efforts the executive officers are already busy with an aggressive campaign for the coming months.

Made Good Progress

The reports that are being prepared for the coming annual meeting of the Ontario members in April will tell their own story of a busy year's work and of the progress that has been made. Neither hard work nor expense has been shared. to spread broadcast among the sanitary and heating engineers of Ontario the benefits to be derived from working together and following proper business methods.

The response that has been made has been encouraging, and shows what can be done by sticking to the work. It has proved an incentive for further effort, and if the present plans are carried through 1920 from a progress standpoint is expected to be a banner year.

Are Realizing It

Not only by changing conditions, but by seeing the good results that others are obtaining, many of the men in Ontario are realizing that there is only one way to carry on business succesfully these days and make any money, and that is to use practical business methods and to work together. The men in other trades are exemplifying this every day, and are raising the standards of business and getting real results. The same thing is happening in the plumbing business.

Month Just Passed Was a Very Active One in Montreal Plumbing Trade

In Addition to Many New Installations, Permits Have Been Granted in Large Numbers for Alterations Requiring Sanitary Equipment

THE month of February has been a very active one in Montreal plumbing circles. Numerous permits have been taken out of the installation of new plumbing in various residences, flats and also in industrial establishments. In addition to this a large number of permits have been granted for alterations in the above class of building. Among those granted during the month of February the following will be of interest:

M. Belanger has taken out a permit for the plumbing and sanitary work in a house at 2692 Notre Dame Street W., St. Henry. He also has secured plumbing for his adjoining apartment Nos. 2694 and 2696.

A. Gareau has taken out a plumbing permit for a house adjoining 644 Fabre Street.

Wm. Desjardins has secured the plumbing contract for four apartments beginning at 3032 Benoit, St. Laurent, for N. R. Viau.

Arthur Delong has taken out a plumbing permit for general repairs in the recently damaged University of Montreal..

James Ballantyne has taken out a plumbing permit for additional plumbing to Dowd's Brewery, 703 St. Paul St. West.

J. Cuson has taken out a plumbing permit for plumbing at De La Roche, De Fleurinery.

J. B. Staton has secured a contract for plumbing in the apartments of Rock & Sheppard, 293-295 Hampton Ave., Notre Dame de Grace.

E. Lalonde has secured a contract for the plumbing required in cottages on West Hill, N.D.G., for J. Hersey & Son.

J. B. Staton has been awarded the plumbing contract for Roberts & Wilder, 412 Alvard Ave., and also for similar work on Monkland Boulevard.

A. Benard has taken out a permit for repairing plumbing at 125 Bonsecoeur for J. A. Laurente.

A. Small has been granted a permit for the plumbing in a new house for Mr. Milroy, 738 Shuter St.

E. Prosseau has been awarded the plumbing contract for Mr. Dagnais' three storey house, 2019a St. Ubrain.

J. E. Kabelle & Co. have been awarded the contract for plumbing in two flats at 213 Northcliffe St., N.D.G.

J. P. Brunet & Co. have taken out a house plumbing contract for A. Rheaume, 133 St. Laurent St.

John Russell has been awarded a house plumbing contract for Mr. Starnes, 126 Cedar St.

The plumbing contract for alteration in the new premises of Canadian Fur Auction Sales has been awarded to John Burns & Co.; premises located at 130 Lagauchetiere St. W.

M. Belanger has been awarded contract for C. Blais, 2692-94-96 Notre Dame St. W.

M. Walsh & Co. have taken out a permit for plumbing in houses for H. Joseph, 27 Cathcart Street and also 245 University Ave., Montreal.

James Ballantyne has taken out a contract for plumbing for the Bank of Nova Scotia, 263 St. James Street.

H. Gareau has secured a permit for plumbing at 644 Fabre St., for B. Frenette.

John Burns & Co. have secured contract for general alterations in the premises of A. Joyce Regd., 873 St. Catherine St. West.

W. J. Barber & Company have been awarded a contract for plumbing in the house of H. W. Burnett, 315-21 Prince Arthur West.

W. J. Evans has secured a contract for plumbing in the new addition to the Dougall Varnish Company plant, 305 Manufacturer St.

A. Raoust has been awarded plumbing contract for the St. Henry Shoe Company, 366 Greene Ave.

Joseph Pricard has taken out plumbing permit for the work required in the house of O. Preault, 342 Lejeunnesse Street.

T. O'Connell has been awarded the permit for alterations in the plumbing of Benson & Hedges, Ltd., 173 St. James Street.

T. O'Connell has secured a plumbing contract for the new premises of Holt, Renfrew Ltd., in the rear of 401 St. Catherine St. West.

T. O'Connell has been awarded the plumbing contract for the Presbytery being erected in Old Orchard Ave., N.D.G. This being done for St. Augustus' Parish.

Wm. Blackwell has been awarded the plumbing contract for an apartment above Sherbrooke and Milow, in N.D.G., for Geo. E. Blackwell.

Canada Plate is Very Scarce

SANITARY ENGINEER understands that Canada plate is very hard to obtain and that there is bound to be great scarcity of this commodity during the present season. Some supplies will be forthcoming from the English market, it is understood, and a shipment is understood to have arrived at a Canadian port lately of certain supplies, which will be put into trade channels at once. Just what the forward outlook is cannot be determined at the present time, but hope is entertained of some further supplies coming forward.

Danger Lurks in Cheap Gas Tubing

If those in the trade would condemn every attempt to connect gas appliances by means of cheap rubber tubings, there would be less news of deaths from asphyxiation.

Nearly all gas appliances should be connected directly to the supply by means of iron piping. Accidents are almost sure to happen if the use of cheap gas tubing is persisted in. Cheap gas tubing often sold by irresponsible agents and dealers, hardens and cracks in a very short time, and is liable to become a source of danger. It is best to insist on consumers having their appliances directly connected to the piping. but if this is impracticable because of the need to move appliances from place to place, then advocate the use of tubing of known strength and quality only.

The Five-in-One Combination

The following extract taken from report from one of our agents:

IN the past six or eight months we have received innumerable inquiries re our Combination Tubs and Sinks, and builders are specifying these combinations in preference to Roll Rim Sinks.

"In conversation with different customers they mention that in the great majority of cases new homes are being built to accommodate those who in the past have been dwelling in apartment houses and who have been used to this fixture and find it a great advantage and convenience, and in building homes for their own use they insist on having a fixture of this nature installed.

"It has been said that this combination is practically a 'Five-in-One' fixture, namely: Sink, Drainboard, Laundry Tray, Pot-Sink and Infant's Bath, and you can, therefore, readily see that in building a home the builder will specify and install a fixture which will not only give good service, but is at the same time a compact and labor-saving device."

This report we believed to be so interesting to our customers that we have passed it along.

This combination fixture is shown on page 62 in our "For the Home" catalog. Besides being very convenient, it adds wonderfully to the appearance of the kitchen.

Carry the "For the Home" catalog with you and call attention to this combination.

EDITORIAL COMMENT

DAYLIGHT SAVING

THE question of whether or not daylight saving is to be in effect this year is coming up for consideration shortly and the usual efforts of the farmers to remain on the present time will be made. All over the country the farmers are preparing to make strong representations against daylight saving. The whole situation will probably hinge on whatever policy is adopted by the railways. The farmers in some cases are trying to argue that if daylight saving must be adopted that it only be adopted in the cities. In the United States the farmers in some sections are openly boasting that they have made city people pay and pay heavily for passing daylight saving measures in opposition to the wishes of those in the rural districts. In New York State they claim that city people paid no less than $25,000,000 last year to farmers who jumped prices to get even with those who carried daylight saving in spite of strong opposition from the country.

A PROGRESSIVE MOVE

A PROGRESSIVE move has been made in Ottawa of considerable interest to all business men in the completion of arrangements for the expropriation of the many toll roads leading into the city. Every road leading into the city has had at least one toll gate so that it was impossible for even a motorcycle rider to enter or leave the capital without paying all the way from ten to forty cents toll. Upwards of fifty miles of highways were owned by private companies. These have been acquired by a Suburban Road Commission which will represent the city of Ottawa, Carleton County and the Province of Ontario. It has cost about $200,000 to secure the roads and eliminate the toll system, but the business men believe that it is money well expended. One of the most important links between the city stores and the rural districts is the highways and anything that tends to limit the number of trips the farmers make to the city directly affects the trade of all merchants. There is little doubt that the collection of tolls worked in this direction and the complete elimination of that system is expected to have a good effect on business, especially now when automobiles are becoming so numerous all through the country. Another good result will be the improvement of the roads taken over. A number of these toll roads still exist in various parts of the country and the example set by Ottawa is one which might well be followed in other places. Business men can take an important step in leading any move which will make for freer or better highways and bring the rural buyers in to their stores.

TO COMPLY WITH ORDER

FOLLOWING a conference of the sanitary engineers of Calgary and district the decision was made to comply with the recent order of the Board of Commerce requiring returns showing the cost and selling price of builders' hardware and materials to be made by March 31. The Calgary plumbers appear to have far more definite information regarding what is required than so far has been available at the Toronto office of the Board of Commerce. As stated in previous issues of SANITARY ENGINEER the Ontario representative of the Board in Toronto was asked if returns were wanted on paints, on heating equipment and on electrical fixtures. He stated that he did not know but would find out and advise SANITARY ENGINEER. Up to the present time no word has been received from him. At Calgary it was stated that returns are required on heating equipment including cooking stoves, and also on electric wiring and fixtures. A very large number of hardware merchants are still unaware that the Board has issued any order. A great many more know about the order but are in the dark as to what is required. The sanitary and heating engineers are even more at sea regarding the matter. It might be a simple matter to set all the men in the hardware trade and also in the plumbing and heating trade right by issuing a really definite statement and seeing that each man who is required to make returns receives proper notification.

THE HOUSING PLANS

ACCORDING to Thomas Adams of Ottawa, town planning adviser to the Commission of Conservation, every one of the nine provinces of Canada has now passed Housing Acts which will permit them during the present season to obtain portions of the grant of $25,000,000 set aside by the Government. He states that there is every indication that the entire Federal appropriation for relieving the scarcity of dwellings will be taken up. It is esti-

mated that in Ontario alone there will be between 4,000 and 5,000 new dwellings erected. Last year about 1,400 dwellings were either built or commenced and ninety municipalities took advantage of the money available for this purpose. There are indications that in some places schedules will have to be revised owing to the largely increased cost of many materials, especially lumber. In some instances committees have already been appointed to report on what course should be pursued.

INDICATES SPLENDID CROPS

THERE is an old saying among the farmers that if snow is plentiful crops will be good. If there is any truth in this Canada should have an unusual harvest this year because reports issued from the meteorological and weather departments show that not in a long time has there been so much snow in the country. In many of the Western provinces well over five feet of snow has fallen during the winter. Throughout Ontario and Quebec the entire country is covered with a heavy mantle of snow. Good crops mean prosperous farmers and prosperous farmers are big buyers. Many merchants have found out just how big the buying power of the farmers has become since the war. Steady and increasing prosperity in the rural districts, and Canada is essentially an agricultural country, means many millions of dollars in active circulation.

FLOATING LOANS AT HOME

THE announcement of Hon. Peter Smith, Treasurer of the Province of Ontario, that the Government intends to float new loans at home and give the business men and the public at large a chance to become subscribers has aroused a good deal of interest. Back of the move, of course, is the effort to get away from unusually high interest charges, which have been increased enormously owing to the rate of exchange against Canada. The success of a number of the cities and towns in floating small loans at home by giving citizens and farmers in the surrounding country a chance to invest at fair rates of interest may be equalled by the Government.

INSIST ON RECEIVING A COPY OF EVERY ORDER

"I ORDERED from a salesman five gross of a certain brand of merchandise upon which I was to get ten per cent. discount. In due time the goods arrived, also the invoice without the discount being allowed, and upon taking the matter up with the manufacturer I was told that no such discount was allowed, and that no mention was made on the order sent in to the firm by the salesman. I did not get a copy of the order so of course had to pay the bill."

The above is a statement by a retailer to SANITARY ENGINEER recently. It goes to show that the retailer cannot be too careful in insisting that he get a copy of every order given to salesmen. It also serves to prove the necessity of incorporating all conditions of sale on every order. The majority of salesmen are perfectly sincere in their verbal agreements upon making a sale, but occasionally a salesman is found, who, through lack of experience or over-enthusiam, or perhaps because he is working on a commission basis, will make any promise in order to get the merchant's name on his order book.

GETTING AFTER COMBINES

DISCUSSING the recent moves of the Board of Commerce the Financial Post Says: "The announcement of the Board of Commerce that proceedings will be taken against trade organizations and associations under the Combines and Fair Prices Act would indicate that belated action is being taken in the right direction. It is to be hoped that in these proceedings a more practical knowledge of what is injurious and what is beneficial in business combinations will be displayed than has marked the investigation of some industries in the past. Canadian manufacturers generally have suffered, and are suffering, through public suspicion created through the unfair operations of a few within their ranks. Business generally will benefit if the offenders can be brought to time.

If the Board is to make its investigation effective it must proceed very carefully and inquire most thoroughly. The majority of trade organizations will undoubtedly be found to be operating for the good, not only of the industry concerned, but also for the benefit of the ultimate consumer. Those which have in view only the increase of profits by artificially established markets, or curtailed output, have no doubt studied carefully the Combines and Fair Prices Act, and have probably secured legal advice as to how to best evade its provisions."

CANADA'S FIRE LOSSES

OFFICIAL figures just published at Ottawa regarding Canada's fire losses for 1919 are significant. In spite of all the fire-prevention efforts that have been made, and it is freely acknowledged that excellent results have been accomplished as a result of the campaigns being carried on, the losses totalled $23,500,000, a waste equal to $2.90 for every man, woman and child in the country. Canada has the highest per capita fire loss in the world, a distinction which is not to be envied. The great bulk of the losses outside of those due to forest fires are in manufacturing plants, warehouses and retail stores. These losses are so large because every time one of them burns, great quantities of merchandise are destroyed.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

Business Changes

Montreal.—W. Chatillon & Co. have dissolved partnership.

Delisle, Saskatchewan.—M. Smith & Co. have purchased the plumbing and tinsmithing business of P. E. Tufts.

Dundas, Ont.—H. W. Kufske, formerly of Kitchener, Ont., has purchased the plumbing business of L. Gies.

New Firms

The S. L. Dobbin Heating and Plumbing Co. has been incorporated at Edmonton.

Smith and McNaughton have opened a shop for plumbing, heating and gas fitting at 15 Quebec St. E., Guelph, Ont.

Trade Notes

The American Radiator Company of Canada, Limited, has been granted permission to increase its capital stock from $500,000 to $1,000,000.

The Empire Manufacturing Company, Limited, of London, Ont., has been granted permission to increase its capital stock from $100,000 to $1,000,000, and also to change its name to the Empire Brass Manufacturing Company, Limited.

The City Brass Foundry Co. has been registered at Toronto.

M. Beatty & Sons, Ltd., foundry, Welland, Ont., has been succeeded by the Canadian Mead-Morrison Company, Limited.

H. N. McAlpine Is Now Sales Manager

H. N. McAlpine, who has been travelling for the Empire Brass Mfg. Co., Limited, of London, Ont., has been appointed sales manager, and in future F. F. Heximer will represent the company in the territory formerly covered by Mr. McAlpine.

Mr. Heximer was in the plumbing business at Niagara Falls for a great number of years.

Price of Gas Is Raised At Peterboro

Peterborough, Ont.—As a result of the rise in price of oils, labor and coal, the price of gas has been raised from $1.75 per thousand cubic feet to $2.00 net. Mr. W. G. Ferguson said that the management of the local gas plant has been forced to raise the price from $1.25 at the outset of the war to the new price by the rise of all things necessary to gas manufacture. The same regulations regarding discount, if paid by a certain date, still exist.

Saskatchewan Sanitary Engineers Call Convention for March 2, 3 and 4

Important Matters in Connection With Organization, Closer Co-operation and General Business Are Coming Up for Discussion

A CONVENTION of the Saskatchewan Society of Sanitary and Heating Engineers will be held at Regina, on March 2, 3 and 4. It was originally planned to hold this gathering on April 6, 7 and 8; but after taking the question up with the Saskatoon Local and with a number of the men in the trade throughout the province, it was deemed advisable to call the meeting earlier.

A number of important matters in connection with the sanitary and heating business are coming up for discussion. There are a number of matters in connection with closer co-operation throughout the province, business system and organization that the executive wishes to discuss with the members, and a large amount of general business.

J. B. Lacroix Joins Inspectors' Forces

Montreal.—J. B. Lacroix has joined the inspection forces of the Sanitary Department of the City of Montreal, with headquarters at City Hall Annex. Mr. Lacroix, SANITARY ENGINEER understands, has been successfully engaged in the plumbing trade for many years, and was the successful applicant out of upward of a dozen, and all of whom had to pass a rigid examination before the vacancy was filled.

John Walker Sees Busy Season Ahead

Montreal.—John Walker, John Street, Que., looks for an active building season in Quebec, and says that there will be a lot of contract work to engage the attention of the trade.

"It has been a busy winter," said Mr. Walker to SANITARY ENGINEER. "We have had eighteen men out on work and this morning there is not one in the shop, if we should be asked to send another one out; they are all out now. This activity has been due to the cold weather in this part of the country, where, for twenty-five days the temperature ranged from 10 to 25 degrees below zero. I expect that there will be a lot of jobbing and contract work in the spring, although it is very difficult to get material."

Wright-Teale Co. Starting At London

Under the firm name of the Wright Teale Co., C. R. Wright and W. Teale are commencing business for themselves at 60 Dundas Street, London, Ont., on March 1. Mr. Teale was with the plumbing firm of Noble & Rich, at London, for eleven years, and has had charge of the plumbing and heating installation in a number of large contracts, including that at the Westminster Military Hospital. Mr. Wright was with the firm for sixteen years in the capacity of bookkeeper. Messrs. Wright and Teale plan to carry on a general business of plumbing and steam fitting.

PLANNING WATERWORKS

Dundas, Ont.—A deputation from the Richmond Hill town council visited Dundas for the purpose of looking over the waterworks system. Richmond Hill is considering the installation of a system.

LETTER BOX

CANE

F. H. Hackman, Esq., Vancouver, B.C. —Please advise where I can procure cane rods with fittings for clearing choked sewers.

These may be procured from Burn Bros., 3 Blackfriars Road, or 6A Stanford Street, London, S.E., England.

Tenders

London, Ont.—Tenders will be called about March 15 by City Engineer H. A. Brazier for the erection of a new comfort station to cost $7,500. Plumbing equipment includes eight lavatories and six urinals. Building to be heated electrically.

Brandon, Man.—The Provincial Department of Public Works will call for tenders in about two weeks for all trades in connection with building of a nurses' home to cost $150,000.

Kitchener, Ont.—Plans are to be prepared at once for an addition to the public school. E. G. Lang, chairman, will call for tenders early in spring.

Garnier, Que.—School board will have plans prepared for two new schools. Joseph Potvin, L'Ascension, P.Q., secretary.

Edmonton, Alta.—W. G. Elliott, 10168 102nd Street, is preparing plans for three dwellings to cost $6,000.

Delia, Alberta.—Tenders are wanted immediately for hot water heating, water system, and electric lighting for new bank costing $20,000 for the Merchants' Bank.

Leamington, Ont.—E. D. Hills is preparing plans for new residence to cost $7,000. Prices wanted on all heating and plumbing equipment.

Montreal, Que.—A. E. Gagnon, 358 Outremont Ave., is preparing plans for several residences and wants prices on heating and plumbing equipment.

Regina, Sask.—Fred. England is preparing plans and will call for tenders in a few weeks for residence to cost $18,000.

Tilbury, Ont. — H. J. Beuglet wants prices on plumbing and heating equipment in connection with new bungalow to be erected in spring at a cost of $6,000.

Incorporations

The H. Mueller Mfg. Co., Limited, of Sarnia, Ont., is increasing its capital stock from $500,000 to $1,200,000, and plans to carry on a general business in brass, iron and steel goods.

The Port Arthur Sheet Metal Manufacturing Company, Limited, capital $40,000, head office Port Arthur, Ont., plans to carry on a general business in sheet metal products.

Montreal Gets New Swiss Consul

Dr. Carl Paul Huedscher has been appointed Swiss Consul-General in Montreal. Dr. Huedscher is a native of Switzerland, where he studied law in the Universities of Lausanne and Basle. From 1907 to shortly before the outbreak of the war he was Attache of the Swiss Legation in Rome and was also connected with the Swiss Legation in Argentinue, Uraguay and Paraguay, being charge d'affaires in the latter country.

In addition to being a diplomat Dr. Huedscher has taken a considerable interest in commercial questions.

Montreal Plumbing By-laws Are Nearing Adoption

New Legislation is Ready for the Civic Commission and Will Come Up for Consideration Very Shortly—No Delay is Expected in Passing Measures

MONTREAL.—In discussing the new Montreal Plumbing By-Laws with Aime Cousineau, director of Sanitary Department for the city, SANITARY ENGINEER was given to understand that the new by-laws are ready for the Civic Commission, and since recommendations have been received from the Master Plumbers, and which are embodied in the draft which is now being submitted, the adoption of these laws should not be far distant. It is simply a matter now of proper consideration of the recommendations to be made through the special committee which will doubtless be appointed. The By-Law is of course a lengthy one and will require careful consideration. As such matters go, the customary delay will likely ensue, but it is earnestly hoped that the adoption of these by-laws will not be unduly deferred.

Mr. Cousineau is very hopeful that the By-Laws will be adopted without delay of much consequence, as he feels that the By-Laws submitted have been very carefully worked out. The adoption of this By-Law will also provide the Sanitary Department of the city as well as the master plumbers, who are desirous of having a good working by-law, that for which they have for many years been longing. It is probable, also, that when the by-law is adopted it will be put in such form that it may be carried in the pocket of a journeyman or a master plumber.

While it is impossible to say just when the By-Laws may be eventually adopted, hope is entertained that this may be arrived at within the next few months at the latest. In view of the fact that the whole Montreal building by-law has been extensively revised, this may be an excuse for holding up the plumbing by-laws more or less indefinitely.

Says Air That is Too Dry in Schoolrooms Has Harmful Effects on Children

Discussion on Ventilation by Prof. J. J. Macleod—Lack of Humidity is Responsible for Irritation of the Mucous Membranes During the Winter Season

THE general impression that ventilation is merely a matter of supplying pure air is entirely wrong, said Professor J. J. Macleod, head of the Department of Physiology at Toronto University, in an illustrated address given at the University buildings. He took the ground that the temperature and humidity of the air are the physical conditions of the atmosphere which are of paramount importance.

ED. J. WANLESS.

Of J. C. Wanless and Sons, Chatham, Ont., honored at Hamilton convention of the Ontario Retail Hardware Association by being elected President.

Observations made very largely on properly selected groups of children have established that for school room air a temperature of 65-68 F. with a relative humidity of 45-60 is the most desirable state, he said, adding that to maintain these conditions throughout the period that the class occupies the class room, usually requires, in this country at least, the addition of a considerable quantity of moisture to the ventilating air. He stated that the air in most of our school rooms in winter is too dry, and under these conditions the mucous membrane suffers.

"There is very good evidence for believing that much discomfort and ill-health could be avoided if people understood more clearly the physical conditions of the atmosphere which bear a relationship to the well-being of the body," said Professor Macleod.

He stated that oxygen deficiency had nothing to do with the evil effects of ill-ventilated places.

"The odor of polluted air has no bearing on its unhealthy influence," he remarked, "except in so far as it excites disgust and puts one off his appetite."

50,000 Tons of Sheets Accumulated Owing to Shortage of Cars

What Will Happen in the Sheet Market? New Business at Pittsburgh is Being Taken on the Open Price Plan

PITTSBURGH.— Accumulations of sheets and tin plates at the makers' mills during the past week have increased alarmingly owing to the lack of care for shipments, and there is sufficient stock now to force reduced production of both products among many of the manufacturers. It is estimated that at least 50,000 tons of sheets are held up in this manner, causing the stringency in the sheet market to become acute. In spite of this, however, there is some forward business being taken in this sheet trade, where old customers are asking for protection beyond the second quarter. In most instances this new business is being taken on the open price plan, the price to be adjusted later.

Somewhat Improved

Sheet bar supply to the mills dependent upon the open market for their source has been somewhat improved, not so much through increased receipts as because of the inability of the mills to run so fully with lack of car supply, which has shortened coal and crowded warehouses and storage capacity with unshipped stocks. Sheet and tin plate manufacturers who are engaged to any extent in the export trade are reporting the present situation regarding foreign exchange is discouraging that business and really acting as a temporary aid for the domestic shortage.

Maximum Prices?

Most of the steel consumers in Pittsburg territory regard the market as having reached its maximum in price advances in so far as basic materials are concerned, and in finished lines any further upward movement will be only a readjustment to cover higher costs. The basis for this belief is the manner in which pig iron and semi-finished steel have acted over the past two weeks. Here and there have been spot sales of steel-making iron at a little advance in the prices, but the bulk of business that has been seriously considered has been clinging close to the $43 base for basic and $42 for Bessemer. Some trading has been on a $41 base for basic for the last half and malleable pig has been unable to rise above $14, and the bulk of the business may be regarded as $43 tonnage or below that figure during the past few weeks.

Semi-Finished Market

In semi-finished steel the contractual obligations of the leading producers not affected by the Steel Corporation influence, have been holding back from any advance. Billets and sheet bars have been taken on the books at $65 maximum for billets and $70 for sheet bars. Occasional sales up to $90 for forging billets and $80 for sheet bars have been reported, but represent the abnormal, not the general trading area of price. The fact that steel is scarce because of lack of fuel and the shortage of cars satisfies the buyers as well as the seller that the advances based on such conditions are not lasting and once car supply increases, a chief cause for the present confused state of trading will be broken and a more satisfactory basis of trade is bound to follow. Shippers are looking for improved car supply with the resumption of ownership of the railroads by the stockholders organization. Preliminary steps to this end have been under way and are really the basis of much of the present acute car shortage which is felt throughout the Pittsburg district, for all roads have been gathering their equipment into their own control as much as possible.

The Pipe Market

The feature of the week in the pipe trade that has aroused interest is the butteweld pipe trade which is wanting to expand along with the building and other lines of industry, but which appears to be caught in a vise-like grip of car and coal shortage, and which is going to interfere with building this year. It is not a question of price but of getting material that concerns the pipe consumer at this time. Small sales of line pipe are being made at premiums varying according to the sizes and the quantity involved. It is noted that the smaller dimensions of tubular goods are the most difficult to place anywhere. Jobbers' stocks have been cleaned up to a remarkable degree.

With More People West Will Expand

Montreal Credit Man Says West in Good Shape With Better Things Ahead—Far West Fast Developing

D. H. GORDON, secretary-treasurer of the Sherwin-Williams Company of Canada, Limited, returning from a trip of several weeks through the Western provinces, is very pleased with the present conditions there, and with the prospects for this season of 1920. Interviewed by SANITARY ENGINEER, Mr. Gordon expressed particular satisfaction with the coast province of British Columbia. "Conditions there are excellent, and fruit-growing, in particular, has made great strides. Much wealth is involved in the development of this industry, and in addition to this the lumbering industry is a growing one, and this being one of the greatest producing provinces in Canada, of lumber, the development will be big in the future. The resources of that province are very great indeed," said Mr. Gordon.

"Vancouver is, of course, a busy place, and is a most substantially-built city. It is bound to develop greatly. The smaller towns, too, have been growing, and are in a thriving condition, business being good.

"What the West needs is more people. There is room in British Columbia for a much larger population, and this will come. When it does, there will be real progress in that country as a result.

The Prairie Section

"Calgary is a thriving business centre and is growing. The conditions there are very excellent and Calgary has a splendid class of business men.

"Winnipeg, of course, is a busy centre, and there is much activity there. Business men are hopeful, and the conditions are very satisfactory."

Asked as to the conditions of credit in the West, Mr. Gordon, while admitting that some places had been hard hit, expressed his belief that there will be a general improvement if a good crop is harvested this year. In spite of the bad crop last year, however, many points have come through well.

Thomas C. Stewart Dies At Woodstock

Following an illness of only a week with heart trouble, the death occurred at Woodstock, Ont., on Monday of Thomas Cook Stewart, director in the James Stewart Mfg. Co., Limited. Mr. Stewart attended the annual meeting of the Ontario Hardware Association at Hamilton and was apparently in excellent health then. He was taken ill soon after his return and grew steadily worse.

He was widely known and esteemed among hardware merchants, having represented his firm on the road for over 40 years.

He was the third son of the late James Stewart, who founded the Stewart Stove Foundry in Hamilton, Ont., almost 70 years ago, and carried it on until the business was removed to Woodstock thirty years ago. Thomas C. was born in Hamilton 76 years ago. Mr. Adam Stewart, of Woodstock, Ont., is a brother.

Water Hammer Action

The Following Article Discusses Water Hammer in an Interesting and Very Practical Manner and Gives Many Facts Which Explain the Theory of This Obscure Action

"WATER-HAMMER action" is the action which occurs in a steam boiler or in steam piping, when a mass of water is driven with considerable velocity against a solid body, or against another mass of water, in such a way as to have its motion suddenly checked or destroyed. Under these circumstances a severe momentary pressure is generated in the region where the collision occurs, just as happens when we bring a heavy sledge hammer down forcibly upon an anvil. If the moving water strikes directly against the boiler shell, the pressure is exerted directly against the shell; while if the moving mass is stopped by colliding with another mass of water, the pressure arises in the midst of the fluid, where the collision occurs. In the latter case, however, a pressure-wave is generated in the water, and this travels forward until it presently comes to bear against the shell of the boiler. In either case, therefore, the shell will be subjected to a shock, as the result of the sudden stoppage of the moving water; and under suitable conditions this shock may be very heavy indeed—quite sufficient, in fact, to rend the boiler.

Conditions for the Development of Water-Hammer Action

It is plain, from what has been said, that the immediate conditions for the development of water-hammer action are two in number. (1) Some portion of the water must be caused to move with a considerable speed, and (2) this moving mass must strike against the boiler, or against another mass of water, in such a way that its own speed is suddenly checked or destroyed. The pressure which is generated is only momentary, but it may be of great intensity during the instant it lasts.

The violent commotion which precedes and leads to the water-hammer effect cannot arise unless there are sensible differences of pressure or of temperature, within the boiler. There can be no water-hammer action, for example, in a boiler whose contents are everywhere at the same temperature and pressure.

In practice we find that the action develops in undrained steam pipes when steam is turned into them, and in boilers which are being cut in with a steam main which is already in communication with other boilers; but in order to realize it, the conditions referred to above must be fulfilled. That is, the water and steam must be at different pressures, or at different temperatures.

When a boiler is cut into a steam main, it will be the difference in pressure which determines the action, provided the pressure in the boiler exceeds that in the main; for when we open the stop-valve under these circumstances the water in the boiler will tend to "lift," and considerable masses of it may be thrown against the shell, with a resultant shock which may be sufficient to produce rupture.

Conversely, if the pressure in the boiler is less than that in the main, the action will be primarily due to the difference in temperature between the steam in the pipe and the water in the boiler. (This will appear later.)

The case in which the pressure in the boiler is greater than that in the pipe, and the action consists in the lifting of the water, is undoubtedly the better understood of the two, and we shall therefore dwell, in this article, upon the second case, in which the pressure in the boiler is less than that in the main. This second case appears to be widely misunderstood by engineers in general and yet it is the one which is most likely to

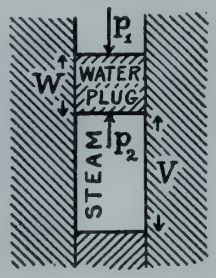

Fig. 1—The Cylindrical Plug of Water

arise in practice; for in firing up a boiler which has been out of service for a time, the attendant is far more likely to cut it in as soon as the pressure approaches that in the main, than he is to wait until it is higher. In fact, it is a more or less common (though highly dangerous) practice, to cut in the boiler as soon as the pressure comes up to within (say) ten or fifteen pounds of that prevailing in the pipe line at the time.

Our attention has been called quite recently to a plant in the South, where the practice was, for a time, to fill up a boiler with comparatively cold water, and then to open its stop-valve at once, so that the steam in the main would assist in bringing the water up to the operating temperature. It seems incredible that this can be true, and the boiler still remain upon earth; but from the representations which have been made to us we are forced to believe it. At all events the practice has been discontinued in that particular plant, on account of certain emphatic counsel given by our inspector. The superintendent of the plant admitted, by the way, that the boiler occasionally "jumped some" while it was being warmed up. Why it didn't jump a couple of miles is a mystery which we cannot solve.

The Two Points of View

We may look at the water-hammer problem from two different points of view. Thus we may ask ourselves (1) what pressure may be produced within a boiler by water-hammer action, or we may ask (2) what is the maximum mechanical work which can be performed, under given circumstances?

The first of these questions cannot be answered with any approach to precision, partly because we never know, in any given case, just how the water in the boiler is thrown about, and partly because the entire theory of impact is still in an imperfect state. Second question can be definitely answered, however, since, in solving it, we do not need to know the exact way in which the disturbance of the water takes place.

We shall take up these two questions in order.

Nature of the Disturbance in the Boiler

The steam which is discharged into the boiler from the main disturbs the surface of the water, and generates waves; and the moment one of these waves breaks, so as to form a sort of bubble enclosing some of the steam, the water-hammer action begins. For, by hypothesis, the water is somewhat cooler than the steam (on account of the original pressure in the boiler being lower than that in the main), and it follows that the steam enclosed within the bubble will condense, leaving a partially vacuous space there. The pressure acting upon the surface of the water will then close the bubble up almost instantly, the water which forms its upper wall being brought down against that which forms the bottom of it, with great speed and corresponding violence. The hammering action thus initiated will increase the disturbance in the water, and larger bubbles will be formed in the same way, with the production of increasingly violent shocks when they collapse.

A more concrete idea may be had of the action by considering the familiar operation of blowing steam into cold water from a small pipe. A bubble of steam forms momentarily, and is immediately condensed by the cooler water, the sides of the bubble coming together with a resounding crack. In the boiler the case is similar, but the experiment is there performed on a terrible scale, with steam furnished by a battery of boilers, through a six-inch pipe (perhaps), instead of a quarter-inch one, and with the bubbles, quite likely as big as water pails, collapsing under a pressure

of 100 pounds or so, per square inch, instead of under simple atmospheric pressure.

Ideal Case of a Cylindrical Plug of Water

In order to estimate the magnitude of the momentary pressure which is produced in the water by these sudden shocks, we proceed as follows:

Consider first the case of a cylindrical plug of water, moving along the interior of a smooth cylindrical tube which it just fills. (See Fig. 1). Underneath the plug there is a space which is filled, at the outset, with steam fresh from the main steam pipe, and having therefore a temperature higher than that of the water in the boiler. Now let us suppose that the imaginary tube in which the plug travels is surrounded by water at the temperature which prevails in the boiler, and that the walls of the tube are not real walls, of metal, but that they are imaginary, permitting the free passage of heat, while not allowing the water composing the plug to flow out sidewise.

Under these circumstances the steam under the plug, being surrounded by water cooler than itself, will partially condense. Its pressure will promptly fall, in fact, to the pressure corresponding to the temperature of the water.

If we represent the pressure in the steam main by p_1, and the reduced pressure below the plug by p_2, and if we also assume that the sectional area of the plug is one square inch, we see that (as indicated in Fig. 2), the plug is subject to a downwardly-directed force equal to p_1, and an upwardly-directed force equal to p_2. Since p_1 is greater than p_2, the resultant force acting on the plug is downward, and equal to $p_1 - p_2$. In forcing the plug downward through a distance of V inches, so as to cause the space under it to disappear, the work done by the steam is therefore $(p_1 - p_2)$ V inch-pounds.

As soon as the plug strikes the water below it, a pressure is produced at the surface where the two come together, accompanied by a local compression of the water along that surface, in the vertical direction. This pressure at the surface of contact acts downward on the free substratum of water, and upward on the water-plug. The motion of the plug is arrested at this point, but the rear (or upper) part of the plug will continue to press forward, for a moment, after the front part has become stationary. So far as the pressure within the water is concerned, the effect will be as though there were a wave of compression transmitted through the water, travelling with the same velocity as sound (since sound is only a succession of compression waves). As soon as the wave of compression has passed back through the plug and reached its rear (or upper) surface, this rear surface will also become stationary, and for an instant the entire plug will be motionless and in a state of uniform compression, like compressive stress to which it is subjected at this instant, by reason of its own sudden loss of momentum is, in fact, the "water-hammer pressure" which we are seeking to determine.

The water below the plug will be compressed, in just the same way as is the water of the plug itself; and since the compression wave will have the same velocity, downward through the free water, as it has backward through the plug itself, it follows that at the moment when the pressure-wave reaches the back end of the plug (the length of which we will call W inches), it will also have penetrated the water below the plug to the same distance. Hence, at the instant the plug comes to rest, there will be a total volume of water under compression, equal to 2W cubic inches (the sectional area of the plug being one square inch); half of this being the volume of the plug itself, and the other half being the volume of that part of the free water which is also at the same time under an equal compression.

If we think of this volume 2W, as being under a momentary uniform compression equal to P lbs. per square inch, we may deduce the pressure, P, by the following process: Let C, be what is termed the "modulus of compressibility"

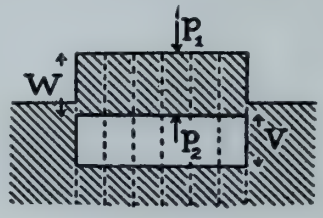

Fig. 3—Oval Bubble

of water. That is, C is the pressure, per square inch, which would suffice to compress the water to nothing, if its diminution of volume, at indefinitely high pressures, should follow the same law which holds for pressures which are moderate. (Of course there is no pressure which actually would compress the water to a zero volume; but the "modulus of compressibility," as defined above, is an exceedingly convenient thing to use, in practical computations.) Also, let x be the amount by which the volume 2W of the compressed water is reduced by the actual (though as yet unknown) pressure P. We then have the proportion

$$P : C :: x : 2W$$

And solving this for x we find

$$x = \frac{2PW}{C}$$

The work done in compressing a liquid is very nearly independent of the way in which the compression is performed. (We mention this, because the fact is quite otherwise with a gas or vapor.) Hence the potential energy stored up in the compressed water will be the same (or sensibly the same) as it would be if we effected the compression slowly and uniformly, beginning with the pressure at zero, and gradually increasing it up to P. Now in this case the average pressure applied would be ½ P; and multiplying this by x (the height by which the volume 2W has been reduced), we find that the total work done would be ½Px. And if we replace x by its value as just found, above, we see, finally, that the potential energy stored in the 2W cubic inches of water under compression is

$$\frac{P^2 W}{C}$$

Now since energy cannot be created nor destroyed, this must be equal to the work done by the steam in pushing the plug to the end of its cylindrical passage and hence we have the equation

$$(p_1 - p_2)\ V = \frac{P^2 W}{C}$$

This, it is to be remembered, is the expression for the pressure which may be produced in the ideal case, in which a plug of water is driven along a cylindrical channel so as to come suddenly and violently against another mass of water of equal cross section, and extending indefinitely in the direction of the length of the channel.

Application to the Actual Case

In order to see how the foregoing formula for P applies in the actual case which arises in practice, let us consider a bubble of rectangular shape, such as is indicated in Fig. 3. This consists, as will be seen, of a sort of slab of water, of thickness W, raised to a distance V. Let us imagine the upper slab, the space below it, and the water which lies below the space, to be divided into imaginary cylindrical tubes, as suggested by the dotted lines. If now, the top wall, or slab, comes down uniformly in all its parts when the bubble collapses, the water in each of these imaginary cylindrical tubes will act just as we have supposed the plug to act, in the ideal tube described above. There will be no sidewise flow of the water, or none of any account, provided the rectangular bubble is big enough in its horizontal dimensions. Hence the formula will be as applicable to this case, as it is to the case of the single plug in its cylindrical tube.

Finally, if the bubble, instead of being rectangular, is more or less oval or ellipsoidal, as in Fig. 4, the pressure actually developed will agree with the calculated pressure to an order of approximation corresponding to the (unknown) degree in which the conditions in the actual case conform with those which were assumed to exist, in deriving the formula.

After the pressure which is due to the impact has been generated, it is transmitted through the water to the boiler shell. In this transmission it will be somewhat lessened in intensity, and it will be propagated mainly in the direction in which the top slab of the bubble collapses.

We have supposed, for the sake of simplicity, that the bubble collapses ver-

tically but since the water in the boiler is thrown about in an utterly indescribable manner, the actual collapse may take place horizontally or obliquely, and hence the maximum pressure may be exerted upon the boiler shell sidewise, or in any other direction.

The formula may be expressed in words as follows: First find the difference (p_1—p_2) between the pressure in the steam main and that in the boiler before opening the valve, and multiply this by the modulus of compressibility of water (C), which may be taken as equal to 300,000 lbs. per square inch. Then multiply again by the depth (V), in inches, of the steam inside of the bubble, measuring this depth in the direction in which collapse takes place. Finally, divide the product so obtained by the thickness of the upper layer (W) of the bubble, in inches, and take the square root of the quotient. The result will be the momentary pressure produced in the water by the collapse of the bubble.

This rule, be it understood, cannot be used to determine anything but the general order of magnitude of the pressures produced by water-hammer. No rule could do more than this, however, when applied to a problem as indefinite as the one with which we are dealing. Yet with all its limitations the rule has a considerable value, since it shows that water-hammer effects may be exceedingly serious, and that we need to guard against their production, with the greatest care.

Numerical Example

Let us now apply the formula to the calculation of the maximum possible pressure which water-hammer might produce, in a particular case. We shall suppose, for this purpose, that a boiler is being cut in with others, and that the pressure it carries is less than that prevailing in the steam main at the time. We shall assume that the pressure in the main is 95 lbs. per square inch, and that in the boiler is 88 lbs. per square inch.

In this example, as in all others of like nature, we shall have to arbitrarily assume the thickness of the bubble and of the top layer thereof. We cannot tell what these thicknesses were, but we must endeavor to choose values for them which might reasonably be expected to occur. Let us suppose that the thickness of the steam-filled portion of the bubble was 6 in., and that of the slab, or top portion, was 3 in. Then our rule works out as follows: The difference between the pressure in the steam main and that prevailing in the boiler just before opening the stop-valve was 95 — 88 = 7 lbs. per square inch. This, multiplied by 300,000, gives 300,000 × 7 = 2,100,000. Multiplying again by the thickness of the steam space of the bubble, we have 2,100,000 × 6 = 12,600,000. Then, dividing this by the thickness of the top layer of the bubble, we have 12,600,000 ÷ 3 = 4,200,000. And, finally, taking the square root of this last number, we have $\sqrt{4{,}200{,}000} = 2{,}049$ lbs. per square inch, which is the maximum pressure which could be developed by water-hammer action in the given boiler, under the assumed conditions. It is evident, here, that we may make very large allowances indeed for the fact that the conditions may not have been just like those presupposed, and yet we shall have a pressure quite sufficient to cause rivets, or any other part of the boiler, to snap at once—especially when we remember that the instantaneous pressure developed by the water-hammer action was in addition to the normal load of 95 lbs. per square inch, which the steam exerted upon the shell directly, as soon as the stop-valve was opened.

Once again we may state that when a boiler is burst by water-hammer action, the pressure which is generated acts only for an instant, and its effect upon the boiler is similar to that of a sudden hydrostatic pressure. That is, it disrupts the boiler, but it does not throw the pieces about. The momentary water-hammer pressure having separated the parts of the boiler, it is the normal steam pressure within the boiler which does the rest of the work.

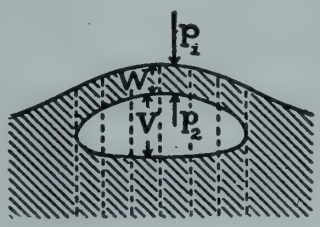

Fig. 2—Rectangular Bubble

The Maximum Amount of Mechanical Work Which Can Be Performed

We come now to the second aspect of the water-hammer question. Namely, we have to look at the case from the following point of view, which is more general than the one from which we have approached it above. A boiler containing a mass of water at a given temperature is placed in free communication with a steam main capable of supplying a practically unlimited amount of steam at a pressure higher than that due to the temperature prevailing within the boiler. As we have here two bodies, or substances, at two different temperatures (namely, the steam in the main and the water in the boiler), the theory of heat teaches us that a certain amount of mechanical energy can be developed, as an accompaniment to the process of temperature-equalization which at once begins. The quantity of mechanical energy which can be so developed, however, is strictly limited by the laws of thermodynamics; and it is not at all difficult to find an expression from which its maximum amount can be calculated.

Let t_1 be the temperature of the steam which is admitted from the steam main —this being constant throughout the entire operation, since the steam is furnished by outside boilers, at a constant pressure and temperature. Also let t_2 be the temperature which the water in the boiler has at the outset, just as the stop-valve is opened. As soon as the steam, at the higher temperature t_1, enters the boiler, it comes in contact with the cooler water there, and begins to condense; and although the heat which it gives out in condensing may be partially converted into mechanical energy, available for throwing water in the boiler about, the major portion of it must go to the direct heating of the water, without the production of any such mechanical work. In fact, the principles of thermodynamics, show that when, in the equalizing process, the incoming steam gives up small quantity of heat—a quantity so small, namely, that it does not materially alter the temperature of the water in the boiler as a whole—we may find the maximum quantity of mechanical energy which can be developed, by multiplying this small quantity of heat (expressed in foot-pounds) by the fraction

$$\frac{t_1 - t_2}{t_1 + 459.7^\circ}$$

the constant number 459.7° being the Fahrenheit temperature of the Fahrenheit zero, on the absolute scale of temperature.

If, as in the example worked out above under the other rule, we take the pressure in the main at 95 lbs. per square inch, and that in the boiler before the stop valve was opened at 88 lbs., we find, by consulting a table of the properties of steam, that the temperature (t_1) of the steam in the main was 334.4°, and the temperature (t_2) of the water in the boiler was 329.5° Fahr. Hence $t_1 - t_2 = 334.4^\circ - 329.5^\circ = 4.9^\circ$, and $t_1 + 459.7^\circ = 334.4^\circ + 459.7^\circ = 794.1^\circ$. With these values of the temperatures, the foregoing fraction becomes equal to 4.9 ÷ 794.1 = 0.00617; so that when the entering steam begins to condense, the first foot-pound of heat which it gives up can generate 0.00617 of a foot-pound of mechanical energy, which can manifest itself by throwing the water about; but the remaining 0.099383 of the foot-pound must pass directly and quietly into the water, without appearing in the mechanical form at all.

As the water in the boiler rises in temperature, owing to the heat which it is receiving from the steam, the same sort of calculation can be made at every stage of the process. The only difference will be that the value of t_2 will increase as the water warms up, while the value of t_1 remains constant. The fraction which expresses the proportion of the heat which can be converted into mechanical energy will grow less, therefore, as the temperatures become equalized. The average value of the expression given above for the efficiency of the conversion is

$$\frac{1}{2}\,\frac{t_1 - t_2}{t_1 + 459.7^\circ};$$

and if we multiply this last expression by the amount of heat given up by the steam, we shall have the total amount of mechanical energy which can be developed, within the boiler as a result of cutting it into the steam line, at a temperature (or pressure) below that of the steam in the main.

Now the total amount of heat which is given up by the steam is equal to that absorbed directly by the water, plus that which is converted into mechanical energy. But since considerably more than 99 per cent. of that which the steam gives up is directly absorbed by the water, we shall not commit any error of the slightest practical importance if we assume, in this particular calculation, that the two are equal. If the average specific heat of the water between t_1 and t_2 is S, then each pound of water, in becoming warmed from t_2 to t_1, will absorb S $(t - t_2)$ units of heat. To express this quantity of heat in foot-pounds, which is a more convenient way for our present purposes, we have merely to multiply it by Joule's equivalent, which we will take at 780 foot-pounds per Fahrenheit heat unit. Moreover, we may take the specific heat, S, of the water as equal to unity. Hence, the total quantity of heat absorbed by the water is 780 $(t_1 - t_2)$ foot-pounds. Assuming that this is equal to the amount given up by the steam (as explained above), we have merely to multiply it by the fraction given in the preceding paragraph, and again by the number of pounds (say w) of water in the boiler, and we have the total number of foot-pounds of mechanical energy which can be developed when the boiler is cut in with its fellows. Thus the expression in question becomes

$$\frac{390w\ (t_1 - t_2)^2}{t_1 + 459.7^\circ}$$

In words, this may be expressed as follows: Find the square of the difference in temperature between the steam in the main and the water in the boiler, multiply this by the number of pounds of water in the boiler, and multiply again by the constant number 390. Then divide the product so obtained by the temperature of the steam plus 459.7°. (Fahrenheit temperatures are to be used.) The result is the greatest possible number of foot-pounds of mechanical work which the water can do, in being thrown about as a consequence of the boiler being cut in before the pressure within it has become equal to that prevailing at the time in the steam main.

Application to a Numerical Example

By way of illustration, we shall apply this formula to the same example as before. We have already found the difference of temperature between the square of this is $4.9 \times 4.9 = 24.01$. We shall throw away the small decimal, and call it 24. We next need to know the total weight of water in the boiler, and for the purposes of illustration we shall take this to be 12,000 lbs. Then proceeding with the application of the rule, we have $12,000 \times 24 = 288,000$; and $288,000 \times 390 = 112,320,000$. We have already found that $t_1 + 459.7^\circ = 794.1$. Hence we have $112,320,000 \div 794.1 = 141,440$ foot-pounds, which is the maximum quantity of mechanical energy which could be developed inside of the boiler, as a consequence of cutting it in with the others before the pressure had become equalized to within less than seven pounds per square inch.

As before, this result is merely a maximum one, but in obtaining it we do not have to make any supposition respecting the proportions of the steam bubbles which are formed. The result is exact, save that we have made certain assumptions of a merely arithmetical nature, in, the interest of simplicity—assumptions which certainly do not affect our conclusion by more than a slight percentage.

A mere fraction of this maximum available amount of work would suffice, without doubt, to start the rivets shearing; and, as we have several times remarked, it is the steam pressure normally within the boiler which throws the parts asunder when once the work of disruption has been well begun. The energy developed directly by the water-hammer does not have to account for any portion of the mechanical work of the explosion, save that which is required to stress some parts up to their breaking points.

We would direct attention particularly to the fact that the quantity of mechanical energy which can be developed within the boiler, and be manifested by throwing the water about with more or less violence, varies as the square of the difference in temperature between the water and the steam. Hence if this difference were twice as great as we have assumed, the quantity of mechanical energy which could be developed, under otherwise similar conditions, would be four times that calculated above.

Can the Water-Hammer Action Be Delayed?

Water-hammer action, if the conditions for its occurrence exist, usually begins the moment the stop-valve is opened. If, however, the pressure in the main exceeds that in the boiler, and the stop-valve is opened cautiously, there appears to be no reason why the steam might not enter quietly. Part of it must condense, of course, on account of the chilling action of the water upon it; but this might conceivably occur without mechanical disturbance, the superficial layers of the water in the boiler becoming heated, so that a sort of equilibrium would be established. If nothing should occur to agitate the water, this state might persist until the entire bulk of the water became heated up to the temperature of the steam in the main; and after that no water-hammer would be possible.

The pseudo-equilibrium thus established would be highly unstable, however, and the least disturbance of the water, by bringing its deeper and cooler layers to the surface, would precipitate water-hammer action at once. It would be only under the most exceptional circumstances that delayed development such as we have suggested could occur, and yet such delay is manifestly possible.

Precautions for the Avoidance of Water-Hammer Action

In conclusion, let us emphasize the fact that it is of exceeding importance, in cutting in a boiler, to be sure that the pressure upon it is as nearly identical as possible with the pressure which is prevailing, at the time, in the steam main. Mathematically, equality can hardly ever be attained, however, partly because commercial steam gauges will seldom agree to within a pound or so. Hence when the equality of pressure is judged to be exact, the stop-valve should be opened very carefully, indeed opened just a bare crack at first, and then, as the slight outstanding difference of pressure equalizes itself, opened wider, very slowly, until it is open full. The complete operation should occupy a couple of minutes or more, and the attendant should hold himself in readiness, at every instant, to close the valve at once, if there is the slightest evidence of any unusual jar or disturbance of any kind, about the boiler.

Excessive Demands For Sap Supplies

The outlook for an exceedingly b-- season in all kinds of sap supplies is forecast. The last season was a very busy one and immense quantities of sap products and all other supplies sold extensively.

In speaking with a large Canadian manufacturer this week, SANITARY ENGINEER was informed that the demands for the present season will exceed those of any previous season. Already immense quantities of sap buckets are going forward, and this applies to various evaporating apparatus. Whether there will be enough material to make up supplies in such quantities as are necessary to supply the big demand, is as yet indefinite. It is not easy to get tinned iron, and supplies are very limited in the hands of manufacturers and jobbers. The material is also higher in price, and in view of the outlook for delivery it is quite probable that before the season begins there will be a shortage of material of a more or less serious nature.

Regina, Sask.—Tenders will be called shortly for new warehouse to cost $75,000 for the Canadian Fairbanks-Morse Co.

Brockville, Ont. — Robert Armour, Pearl Street, is preparing plans for four residences to cost $6,000.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

THE MARKETS AT A GLANCE

HIGHER quotations are now in effect on all lines of brass valves, on boiler tubes and pipe wrenches. The advance in brass goods include brass steam cocks, globe, angle and check valves and radiator valves and range from five to twenty per cent.

Soil pipe remains unchanged, but it is stated that if materials remain as difficult to secure as they are now and labor costs keep mounting, an advance is inevitable.

Present quotations on enamelware are expected to hold until May 1. About that time, according to reports in the trade, an advance may be expected.

Getting delivery is the big problem with everyone from the installer to manufacturer and there is apparently little hope for improvement in the situation for some time.

Manufacturers are more than satisfied with the prospects for business and some of them are already booked months ahead. Price, they say, is not going to be the big factor in business during the coming months, but rather getting the goods. It is even now impossible to get some lines in anything like the quantity required for work in hand.

In marine business a nice volume of orders has been coming in steadily from the East. On the Western coast things are reported very quiet.

All over the country a big demand is expected for products required in connection with building.

TORONTO, February 28.—While price changes are not numerous, all markets are very firm and from all parts of the country reports are coming regarding the annoyance being experienced by delays in deliveries. Everywhere business is reported good and the men in the trade and the manufacturers are finding the greatest difficulty in finding sufficient goods to even partially fill orders.

During the week advances ranging from five to twenty per cent. have been made in brass valves. Boiler tubes have advanced about fifteen per cent., this being a direct result, it is stated, of the rate of exchange.

Reports indicate that an advance in enamelware may be expected sometime about May 1 and it is stated that unless the situation in regard to the securing of raw materials eases considerably and labor costs cease mounting, an advance must be made in soil pipe.

The markets generally are very firm.

Advance is Made In Brass Valves

BRASS VALVES.—Advances which will work out from five to twenty per cent. are now in effect on various makes of brass valves, including brass steam cocks, globe, angle and check valves and radiator valves. Quotations are now on the following basis:

Compression work, standard	25%
Fuller work, standard	**34%**
Bath cocks, compression	25%
Bath cocks, Fuller	**34%**
Flatway stop and waste cocks, standard	**32%**
Roundway stop and waste cocks, standard	**32%**
Brass steam cocks, standard	plus 10%
Globe, angle and check valves, standard	Net list
Do., removable disc	5%
Radiator valves, standard	**15%-23%**
Do., removable disc	20%-38%
Basin Cocks—	
No. 0 and 1, Fuller pattern	**34%**
Compression	16%
Quick opening	**34%**

Exchange Situation Is Affecting Tubes

BOILER TUBES.—Advances, which, it is stated, are a direct result of the rate of exchange against Canada, are effective in tube prices. While there is a fairly active demand for tubes, deliveries are very slow and letters received indicate that delivery is likely to be a problem for some time. The quotations are as follows:

BOILER TUBES—	Per 100 feet Seamless	Lapweld
1 inch	$28 00	$.....
1¼ inch	30 00	.....
1½ inch	31 50	.....
1¾ inch	33 50	30 00
2 inch	32 00	28 75
2¼ inch	36 00	31 25
2½ inch	45 00	35 75
3 inch	53 00	45 75
3¼ inch	.....	52 50
3½ inch	69 00	48 75
4 inch	96 00	62 50

Soil Pipe Prices Somewhat Uncertain

SOIL PIPE.—Prices of soil pipe, while showing no change, are regarded as somewhat uncertain. Owing to increasing costs and difficulty in obtaining raw materials, it may be necessary before long to revise quotations to a higher level. In the meantime business is active and there is every indication that the demand will perhaps break all records if the building program that is developing proceeds. Following are the present quotations:

Medium and extra heavy soil pipe, 2, 3 5 and 6 in.	**10%**
Medium and extra heavy soil pipe, 4 in.	15%
Medium and extra heavy soil pipe fittings, 2 in. to 6 in	**25%**
8 in. extra heavy pipe and fittings	**5%**

Enamelware Steady; May Advance Later

ENAMELWARE.—With a fairly good volume of business offering and prospects for a heavy demand later, quotations on enamelware remain steady. No change is looked for until about May 1, when, according to reports that are current in the trade, a revision upwards is not unlikely. Quotations on some of the well-known lines are as follows:

Bath tubs, roll rim, 4. 4½, 5 feet, 24 to 30 in. wide			**$37 05**
Bath tubs, 5½ ft.			**41 20**
Lavatories—

A Reliable Indication of Good Indicators

Morrison Gauges

include gauges for every conceivable purpose —for indicating or recording:—pressure, temperature, altitude, revolutions, etc.

These well-known, reliable gauges sell well because they are regarded by mechanical men as standard.

There is hardly a requirement for gauges that you cannot supply with Morrison Gauges. With the Morrison line you can make a sale of every order and most inquiries.

James Morrison Brass Mfg. Company
LIMITED

Operating on Natural Laws.

ANTHES SYPHONS

are the heart of the sewage disposal system. Anthes Syphons, operating purely on natural laws with no moving parts to get out of order and being made seamless in one piece, have a variety of "points" that account for their great popularity, wide use and great sales.

We will furnish you with Sewage Disposal Blueprints on request.

Anthes Foundry Co., Limited
Toronto and Winnipeg

Wire Solder Is Revised Upwards

LEAD AND ZINC PRODUCTS.—Further advances have taken place in solder. This is said to be due to the recent higher prices attained in the basic metals. Guaranteed solder is quoted at 43¾c per lb.; wiping solder at 37¼c per lb. and wire solder at 45¾c per lb.

Jobbers state that the demand for all products is fairly heavy for this season of the year, although they claim the shortage of cars, slow movement of freight and other factors are to some extent the cause of slacker business than would otherwise be under more favorable circumstances.

The following are the present new quotations:

Lead pipe, list, per lb.	$0 16
Lead waste pipe, list, per lb.	0 17
Do., over 8 inches, list, per lb.	0 18
Above subject to discount of 10 per cent.	
Lead traps and bends	add 10%
Lead wool, lb.	0 16
Lead sheets, 4 to 6 lbs. sq. ft., in rolls, per lb.	0 12½
Cut sheets, ½ to ¾c lb. extra, and cut to size 1c lb. extra.	
Solder, wire, lb.	0 45¾
Solder, strictly, lb.	0 40½
Solder, commercial, lb.	0 38
Zinc sheets, per lb.	0 19
Solder, guaranteed, lb.	0 43¾
Solder, wiping, lb.	0 37¼

Range Boilers Are Holding Unchanged

RANGE BOILERS.—Difficulty is being experienced by manufacturers in obtaining much needed supplies of raw materials, and this in turn makes slow deliveries to the men who do the installing. Prices are very firm, but show no change, the quotations being as follows:

Range Boilers—	Standard	Ex. Heavy
30-gallon	$12 00	$14 00
35-gallon	14 00	16 00
40-gallon	16 00	18 00
52-gallon	22 00	25 00
66-gallon	35 00	38 00
82-gallon	40 00	47 00
100-gallon	50 00	58 00
120-gallon	60 00	67 00

Wrought Pipe Is Somewhat Scarce

WROUGHT IRON PIPE.—No changes have been made in prices of wrought iron pipe, but a scarcity is being experienced in obtaining many sizes. Deliveries at best are slow, especially shipments coming from the United States and the rate of exchange is a factor that has to be reckoned with also. Business is active, unusually so, it is stated, for so early in the season and with a scarcity now there is no telling what may happen later. Quotations are as follows:

PIPE — WROUGHT

CONTRACTS AWARDED

Hamilton, Ont. — R. McCardle has plumbing and Robert Dow heating for new apartment costing $17,000, for Horace Hazel, Caroline and Bold Streets.

Ottawa, Ont.—J. R. Maclennan has plumbing and J. R. Cameron the heating for two residences costing $11,500 for M. E. Davies, 33 Bellwood Avenue.

Toronto, Ont.—Robert Steen has heating contract for residence costing $12,000 for J. A. Gordon, Delisle Ave.

Wilcox, Sas.—Waterman & Waterbury, 118 Donahue Block, Regina, have general contract including plumbing and heating for new school costing $25,000.

Fergus, Ont.—James Gow has been awarded contract for building new reservoir for the town council.

Toronto, Ont.—A. J. Wise Heating Co. has plumbing and heating for two residences costing $8,000 for I. Broadway, 433 Kingston Road.

Toronto, Ont.—Leslie Bros. have heating contract for bungalow costing $6,500 for H. A. Johnston, 404 Lake Front Road.

Toronto, Ont.—Douglas Bros. have heating and plumbing for two residences costing $10,000 for W. Simpson, 117 Balliol Street.

Toronto, Ont.—J. Barrett has the plumbing and Leslie Bros. heating for four residences costing $28,000 for W. Summerville, 258 Danforth Avenue.

Outremont, Que.—Lalonde & Dueau have plumbing and heating contracts for twelve residences costing $120,000 for the City Housing Commission.

Three Rivers, Que.—Germain Freres have heating and plumbing contract for residence costing $4,000 for L. E. Denoncourt.

Sir Thomas White Will Be Next Premier

THIS prediction is made by J. K. Munro in the March 1st issue of MacLean's, now on sale. He carefully reviews the situation that has developed at Ottawa and indicates the straws which show that the wind is setting in the direction of the Ex-Finance Minister: A clear and shrewd summing up of the situation written in semi-humorous vein.

This article is one of a great many unusual and vital articles in this number. For instance:

Pellatt the Plunger

By J. L. Rutledge

A very readable sketch of the picturesque Toronto financier, containing some stories that have never before been told.

All We Like Sheep

By Nellie L. McClung

A humorous account of a rather sad investment.

Balking the Bootlegger

By Guy E. Morton

An article on the methods followed in detecting the illicit sale of liquor; interesting and amusing.

Stories by Basil King, Camilla Kenyon, Robert E. Pinkerton and E. Llewellyn Hughes.

The World in a Nutshell

One of the best features in any magazine the world over is the "Review of Reviews" department, which gives the best articles from all periodicals in condensed form. Some of the reprinted articles found in this number are:

News Dealers often run short of copies of MacLean's.

Get yours early.

And remember that the big March 15th issue will be on the news stands in two weeks time.

SOLE MANUFACTURERS

586 Commercial Road London, E 1.

Have You Taken Down Your Sign?

A prominent merchant who has made a great success of all branches of his business has said that withdrawing advertising from a good trade paper is like taking down your sign. Advertising to the trade you serve is business insurance, but premiums must be kept up or the policy will lapse.

There never was a time when the trade was keener for business information. That is why the advertising pages of the Sanitary Engineer are being followed so closely at the present time.

The Trade K-T Mark

ALLINGHAM POP-UP WASTE

DESCRIPTION

Allingham Pop Up Waste (Patented), Nickel-Plated, with China Waste Knob, indirect action (raising knob closes plug, lowering knob opens plug).

MEASUREMENTS

Diameter of flange under waste knob 1¾ inches. Diameter of flange inside hole 2⅛ inches. Diameter of flange below bowl 2⅜ inches. Outside diameter of outlet tube 1¼ inches.

The Allingham Waste is sanitary. The Waste Plug can be removed and cleaned without touching other parts. It is simple and mechanically correct. It is easily adjusted for friction or lift rod. It is reversible and can be easily changed from indirect to direct action if desired.

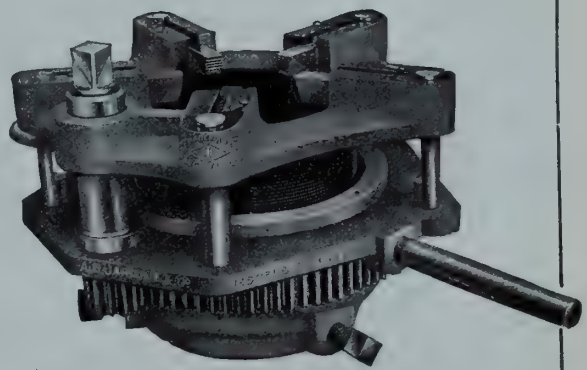
JARDINE and TOLEDO PIPE THREADING TOOLS



"Toledo" Geared Adjustable Threading Tool, No. 2½. Capacity 2 to 6 in. inclusive. Weight 120 lbs.

THE ratchet feature of Jardine and Toledo Tools permits their being used to thread pipe which is already in place, no matter how awkward it may be to reach. The Jardine and Toledo have no cams or jim cracks to get out of order; and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

This is a "Q" Foot Valve

And it Just *CAN'T* Leak

There are more pump troubles caused by "leaky" valves than from all the wear and tear which occurs in the average life of a pump.

The "Q" valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that JUST CAN'T LEAK.

Made in sizes from 1 to 8-inch.

R. McDOUGALL CO., LTD.
GALT., CANADA

TRIMO

THE WORD TRIMO

Stands for good tools made by the Trimont Mfg. Co., which are the following:—

The Trimo Pipe Wrench
The Trimo Chain Pipe-Wrench
The Trimo Monkey Wrench
The Trimo Pipe Cutter (Hand)

The four good points that make **Trimo Pipe Wrenches** superior are the **Spiral Spring** always in place—**Steel Frames** that will not break—**Nut Guards** that protect adjustment nut — and the **Inserted Jaw** in handle that can be replaced when worn—**Save Money** and buy Trimo goods, made by

Trimont Mfg. Company
Roxbury (Boston,) Mass.

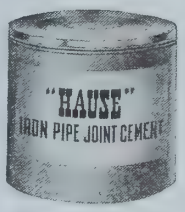
"HAUSE" PIPE JOINT CEMENT

For steam, water, air, oil, gas, gaskets, etc. The cement that cements. Sets like gum. Allows no leaks.

The Great Value of "HAUSE PIPE JOINT CEMENT" lies in its peculiar chemical properties which permits of its hardening and expanding after the joints are made up. In making up joints it has the same effect as a lubricant on the best graphite, and while the joints may be made and broken readily, a perfectly tight joint is maintained at all times. Comes in 1-lb., 5-lb., 15-lb., 25-lb., 50-lb. cans, 100-lb. barrels. Manufactured in ready mixed and powder form. Ask your jobber for prices, or write us direct.

Made in Omaha, Neb., U.S.A.,



Manufactured in Ready Mixed and Powder Form.

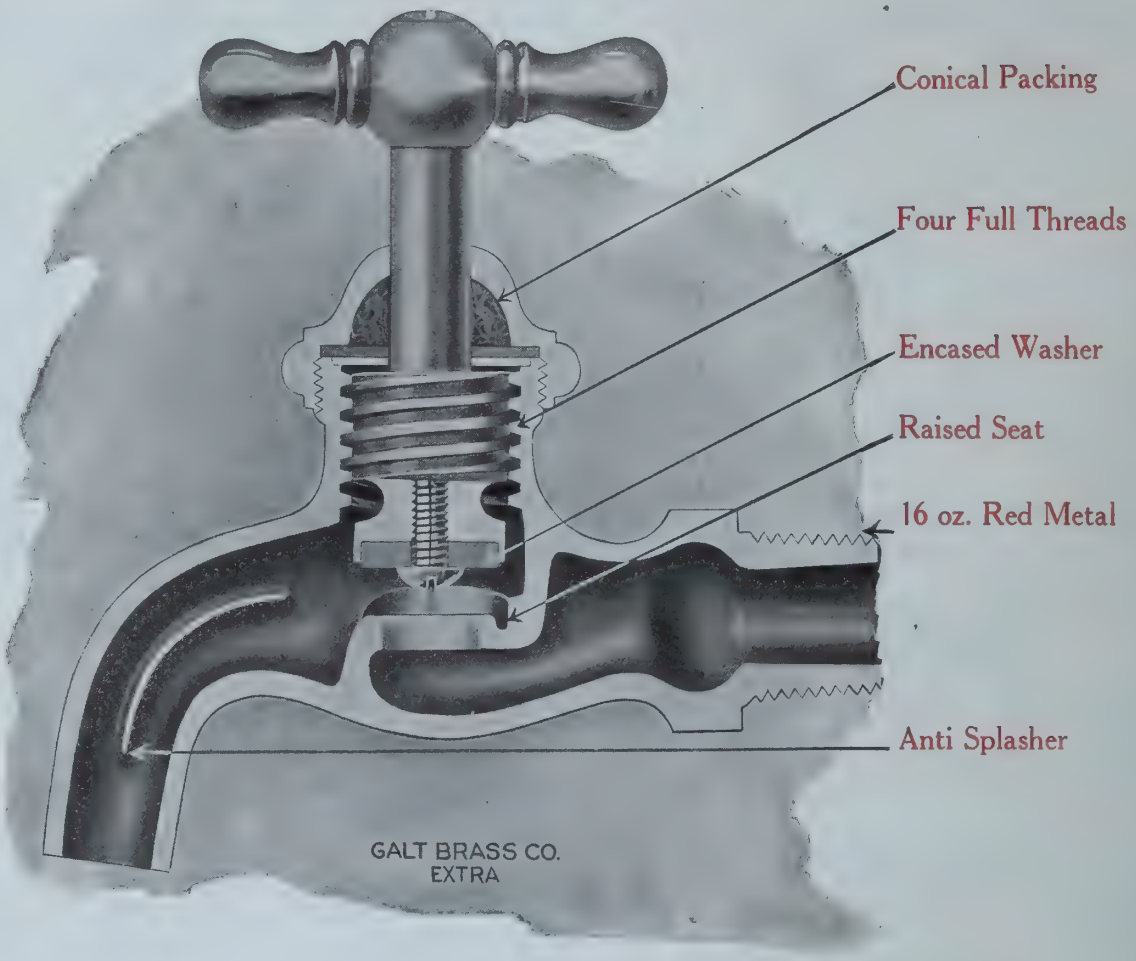
THE KERR ENGINE COMPANY, LIMITED - Walkerville, Ontario

Your Sales Depend on Grade of Goods Stocked



To allow a customer to leave your store not entirely satisfied means a dead sale for you, because nine times out of ten he will never return to do business with you again. Moral—Stock "Perfecto" Goods.

There is no better grade line of taps than those carrying this trade mark.

Some of the many splendid selling features of this line are the conical packing, four full threads, washer encased in bib, raised seat, Briggs Standard Thread, and anti-splasher.

Stock "Perfecto" Lines

Your customers will appreciate their value—you will increase your sales.

Sanitary Engineer

Plumber and Steamfitter of Canada

VOL. XIV. PUBLICATION OFFICE, TORONTO, MARCH 15, 1920 No. 6

Beauty plus Efficiency

Our aim to supply Sanitary fixtures that meet every requirement and combine beauty of design with efficiency of operation is well brought out in this Empire "Atlantic."

This fixture is absolutely efficient, non-corrosive, durable and sanitary.

The highest quality materials are used in its manufacture. Note the DOUBLE WAVED Vitreous China Tank and the SQUARE BASE bowl. Every feature of this fixture is the most modern obtainable. The trimmings are nickel plated.

It is so easily kept clean that it practically never loses its bright, new appearance.

All Empire fixtures are thoroughly tested before leaving the factory and are backed by the Empire guarantee.

We guarantee prompt shipments. Write for our illustrated catalogue.

TINKER TOM'S TALKS.

No. 250

It may strike you as rather queer that we who are manufacturers of Galvanized Steel Sheets should recommend—

TONCAN METAL

ANTI-CORROSIVE GALVANIZED SHEETS

But we know that in certain exposed places where corrosive conditions are excessive, longer life and reduced cost may be had by using Toncan Metal Galvanized Sheets.

These will be **GALVANIZED IN CANADA** and carried in stock here, and in addition stocks will be carried by jobbers at logical points.

Send for text-book on Corrosion.

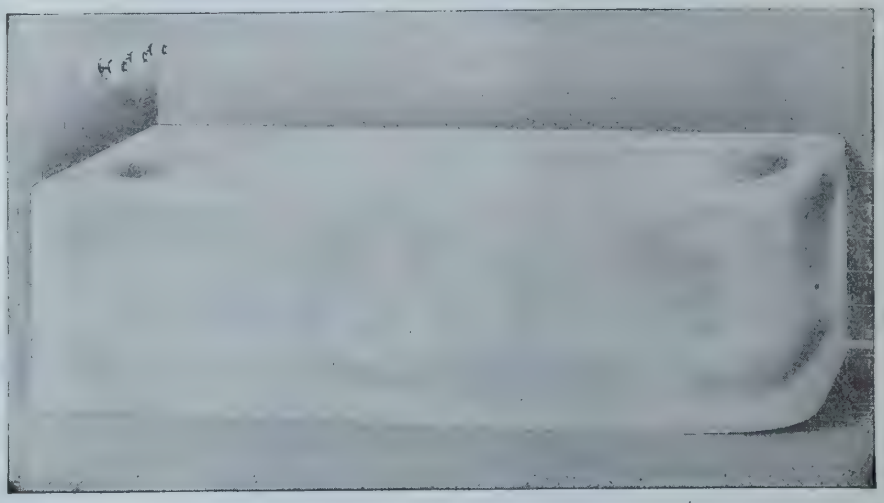
Yearly subscription price, Canada, $1.00; United States, $1.50; Great Britain and the Colonies, 4s. 6d.; elsewhere, $2.00. Entered as second-class matter at the Post Office, Ottawa. Entered as second-class matter July 1st, 1912, at the Post Office at Buffalo under the Act of March 3rd, 1879.

"Standard"
"Perfection" Built-in Baths

Made in One Piece Enamelled All Over



These Baths represent the last word in design and finish, and are made to build into Right or Left Hand Corner or into a Recess.

The "Perfection" Built-in-Bath is only 17½ inches high, therefore convenient. It builds into walls and floors, the absence of all dust-collecting cracks and corners meaning bathroom sanitation.

Made in 5 and 5½ foot sizes.

Illustrations on request.

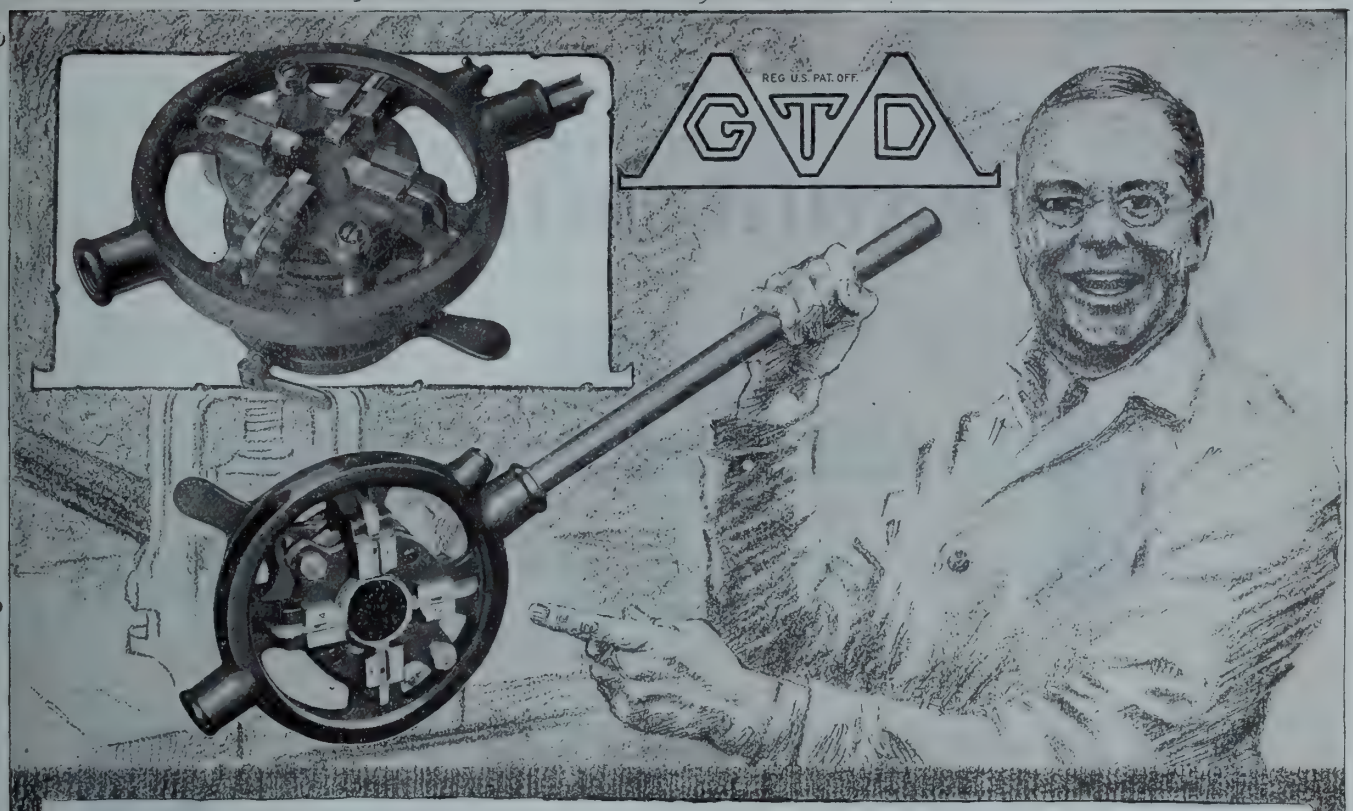
"MADE IN CANADA"



"It Works So Easy"

Bill is demonstrating—and Bill doesn't make a practice of showing off tools—but he is so enthusiastic about the good qualities of the

Greenfield Ratchet Receding Pipe Threader

that he just can't help himself.

Easy cutting—ratchet action
Direct pull—no twisting strain
No unwinding on the pipe or off

10 Good Reasons

1 Quick Releasing
2 Quick Resetting
3 Adjustable Chuck
4 Replaceable Lead Screw
5 Replaceable Lead Nut
6 Chip Proof
7 Adjustable Chuck
8 Frictionless
9 Cuts Close Nipples
10 No Stripping

Cuts from one to two-inches

TRY THE TRIO

For smaller sizes Bill swears by the Trio Die Stock. 3 dies in one stock ready for use—no lost dies. Saves time and temper. Dies reversible—bushings removable.

"WELLS" PIPE WRENCHES

Dropped forged handle and jaws—holds like an electric magnet when the power is on—releases as quickly when the pull is off—strongest by actual test.

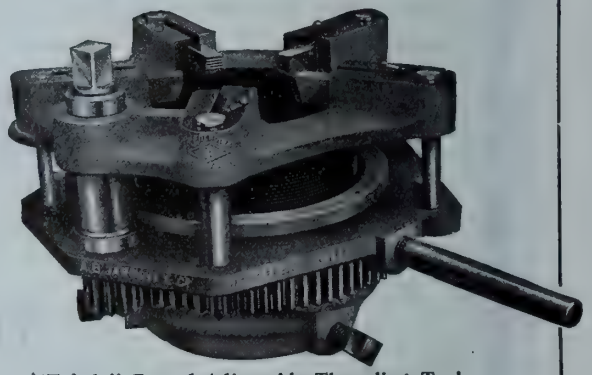
JARDINE and TOLEDO PIPE THREADING TOOLS



"Toledo" Geared Adjustable Threading Tool. No. 2½. Capacity 2½ to 6 in. inclusive. Weight 120 lbs.

THE ratchet feature of Jardine and Toledo Tools permits their being used to thread pipe which is already in place, no matter how awkward it may be to reach. The Jardine and Toledo have no cams or jim cracks to get out of order; and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

TRADE B.O.T. MARK

GOOD-BYE—

CANADIAN BRASS GALT ONT

To the unsanitary, unclean, germ-collecting wood strip seat, and let it remain an error of the past. This date we announce to the trade and public in general our decision not to offer this fixture for sale, in fact it is off the market. Our action is supported by Health Boards and physicians throughout the Dominion and we know the Sanitary Engineer is with us in the move, in fact, scores have asked us to eliminate this construction.

A Worthy Substitute

No. 201 Round Seat and Cover, full 1¼" stock in either golden oak or imitation mahogany, fitted with heavy Bar Post Hinges, N.P., having sufficient clearance between the bar and top of bowl to allow cleansing with a rag. It looks better, is better, lasts longer, and above all is sanitary. Wood doweled front and back of the seat opening, straight grained and will not split. Same features apply to Horse Shoe and Blanco Seats.

Yours for efficiency and service

When Writing to Advertisers

Have You Taken Down Your Sign?

A prominent merchant who has made a great success of all branches of his business has said that withdrawing advertising from a good trade paper is like taking down your sign. Advertising to the trade you serve is business insurance, but premiums must be kept up or the policy will lapse.

There never was a time when the trade was keener for business information. That is why the advertising pages of the Sanitary Engineer are being followed so closely at the present time.

REG. U.S. PAT. OFF.

PUTS AIR TO WORK

Do you base your profits on initial cost?

MOVING PICTURE THEATRES OFFER A FRUITFUL FIELD FOR THE WIDE AWAKE HEATING AND VENTILATING CONTRACTOR.

YOU find contractors placing orders for equipment many times simply as a result of what they think their profits are going to be.

Their figuring is done somewhat as follows:

Manufacturer's price to me	So much
My price to the purchaser	So much
My profit	So much

Disappointment frequently follows when their profits start to dwindle, because:

The apparatus has to be refitted.

Holes have to be repunched.

Foundations do not line up.

Parts fail to arrive on time.

At this point they are convinced that low initial cost should not be the only consideration. They agree that care in manufacture, supported by co-operative service, is equally important.

When you specify heating and ventilating apparatus you should consider the Sturtevant System because it is made absolutely *right*.

Let us know the particular kind of heating and ventilating work you are interested in and we will send literature bearing directly on the subject.

Board of Commerce Specifies Lines

List of Articles on Which Information is Required — Information Must be in by March 31st

The Board of Commerce order covers approximately all lines which are specified in the list accompanying this article. Returns are to be made by March 31, and the order affects wholesalers, manufacturers and distributors of all kind, as well as the Retail trade.

OWING to uncertainty in trade circles as to the lines included in the Board of Commerce order respecting building materials, a specific list of materials has been enumerated in a new order issued by the Board. SANITARY ENGINEER is, therefore, printing both orders in full, as follows:

Order No. 37
Commodity: Building Materials
Location: Canada

Present:
H. A. Robson, K.C., Chief Commissioner.
W. F. O'Connor, K.C.,
James Murdock,
Commissioners

It is hereby declared that building materials of all kinds ordinarily or necessarily used in the construction or sanitary completion of houses for homes, including plumbing fixtures and building hardware, are necessaries of life under part two of the Combines and Fair Prices Act, 1919. This special regulation is made pursuant to section 16 of said Act.

It is further ordered that, prior to the 31st day of March, 1920, all dealers within Canada in such building materials do deliver to the Secretary of the Board of Commerce of Canada, at Ottawa, a statement showing the cost price to them of each article or class of building material being sold or offered for sale, with their selling price thereof, to a contractor or other individual, for use in the building of houses, and stating the dates as of which such cost and selling price is reported.

And it is declared that any dealer or dealers holding or offering for sale within Canada such building materials will hereafter be deemed to have committed an offence under The Combines and Fair Prices Act, 1919, if an unfair profit is made by them or him in the sale of such building materials.

(Sgd.) H. A. Robson,
Chief Commissioner.
(Sgd.) W. F. O'Connor,
(Sgd.) James Murdock,
Commissioners.

Order No. 62
Commodity: Building Materials
Location: General

Present:
W. F. O'Connor, K.C.,
James Murdock,
Commissioners.

It appearing from certain articles in trade papers and from correspondence with this Board:

1. That certain vendors of building materials infer that because no personal service was made upon them of this Board's Order No. 37, requiring, among other things, transmission to this Board of their cost and selling prices of such materials, compliance with such order is not required by law;

2. That the information so required by this Board is claimed to be insufficient to serve any practical purpose;

3. That it is contended that compliance with such order is burdensome and unnecessary, because no unfair profits are being made by such vendors;

4. That certain of such vendors have decided not to comply with such order;

5. That many are undecided as to what commodities such order extends to and includes;

This Board now observes and declares:

1. That such order, having been published for three weeks in the "Canada Gazette," has, by section 39 of the Board of Commerce Act, the same effect as if it formed part of that Act, and that non-compliance with the order will be a breach of the Act.

2. That the object of the order is to secure sufficient information, preliminarily, to enable the Board to intelligently proceed with further and more extensive inquiries.

3. That compliance with law is always burdensome. The Board's proceedings are necessary. It is charged by Parliament with the obligation of making such inquiries in the public interest. Its inquiries do not imply guilt on the part of any, but its orders must be strictly obeyed. Let those to whom its inquiries are addressed make full and fair disclosures, and where profits are but fair it will be this Board's duty to so declare. If profits are found to be unfair, this Board must perform its duty in another way. In either event, all prejudicially concerned will have ample opportunity to explain or defend.

4. That such persons as disregard this Board's orders will suffer the appropriate statutory penalties.

5. That for the better information of all concerned, it is declared that said Order No. 37 extends to, applies to, and includes, all producers and vendors, whether manufacturers, wholesalers, jobbers, retailers or otherwise, and the following commodities:

Foundations, Walls, etc.—
- Bricks, clay burned.
- Bricks, sand, lime.
- Bricks, special.
- Cement or concrete blocks or slabs.

Acting Chief Commissioner.
JAMES MURDOCK,
Commissioner.

Has Your Insurance Increased With the Value of Your Stock?

Many Merchants May Have Forgotten That Their Stock Has Increased in Value 100 Per Cent., While Their Insurance on Same Has Stood Still—Delay May be Fatal

IF A fire should break out in your store to-day and your stock were ruined either by flames or water, how would you be fixed for insurance? No doubt you have insurance placed on your stock; perhaps you have carried the same insurance for years and feel snug with contentment, so far as the possibility of fire with its ruinous consequences are concerned. Premiums have been paid promptly on the $5,000, $10,000, or $20,000, or more, worth of insurance that you have been carrying; the rest you leave in the hands of a merciful Providence.

But—

Providence, however, usually helps those who help themselves. Have you overlooked the fact that, during the last four or five years, your stock has increased in value from 50 to 100 per cent.? Did you ever sit down to figure out what it would cost to replace the stock you are carrying to-day, and then to compare that figure with the amount of insurance you are carrying on that stock? It might be time very well spent and it might, in addition, bring you very sharply to time with regard to insurance. Many merchants may have forgotten that their protection against fire has stood still while the value of their stock has been going up by leaps and bounds.

Stock Protection as Important as Self Protection

It is just as important to the welfare of your business that your stock be protected as that you, yourself, should be protected both by life-insurance and a salary from your business. Many of the leading financial men in big firms, or the heads of big concerns are increasing their business life assurance to protect their business against the possibility of shock should they suddenly die. Such a shock is inevitable when the directing head of a great institution is suddenly taken off. Every merchant should give his own business the same protection. All good merchants do. Every merchant knows that his stock to-day is almost twice as valuable as it was before the war and that it would cost him more than much to replace it. You always figure, of course, the fire will never come nearer you than next door. But it may. How are you fixed for such an eventuality? This is a reminder to the man who has not attended to insurance matters.

EXCHANGE RATE FOR DUTY PURPOSES ON CANADIAN GOODS IMPORTED INTO ENGLAND

Mr. Harrison Watson, Canadian Government Trade Commissioner in London, was asked to ascertain how the British Customs authorities fixed the rate of exchange in the valuation of dutiable goods invoiced in Canadian currency. A cablegram from Mr. Harrison Watson says:

"Customs converts at the rate of Canadian exchange current the day the importing vessel reports at the Customs House."

GOOD AND BAD COMBINES

The attitude of the Board of Commerce that there are good and bad combines, will appeal to the business community; they can be made to serve the public or gouge the public. The difficulty is to discover which is which, and the public is inclined to consider all guilty that cannot be shown to be innocent.

ONTARIO INCORPORATIONS

Adam Clark, Limited, head office, Hamilton, capitalized $250,000, to manufacture, and wholesale and retail furnaces, radiators, plumbing and heating equipment, etc.

The Hubbell Mfg. Co., Ltd., capitalized $40,000, head office, Toronto, to manufacture and deal in electric heating and lighting devices, etc.

BIG BUYERS

The purchasing power of the rural population is much greater than it was a decade ago, and the merchants in rural communities have much more competition than they had ten years ago. The mail order houses, the parcel post, the interurban trolley, and the automobile have all been factors in turning the trade of the rural dweller citywards. Conditions are changing, and methods of transacting business are changing. The small town merchant who wants to succeed to-day, must have more than a stock of goods to sell; he must have some attraction that will distinguish his store from the ordinary every-day store. He must also sell service along with his merchandise.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

Purification Percentage

Whilst the clarified effluent from a septic tank produces about 40 to 45 per cent. purification, the action caused through the liquification renders the tank effluent very much stronger than the effluent from other tank systems, so that either filtration or distribution on natural suitable soils is essential for final purification of the sewage before passing same into any stream or watercourse, which will be taken up fully in the following chapter of land filtration, but it reminds the reader that sewage after passing through septic tanks is far from pure and is dangerous to public health and not fit to be discharged into any small stream, sluggish watercourse or stagnant pool, as secondary decomposition is sure to take place, which will in a short time give off foul gases and smells and become a disagreeable and dangerous nuisance to the surrounding neighborhood.

Reinforced Concrete

It is usual, in small septic tanks, to cover same with a reinforced concrete cover, thus excluding all air and winds which are liable to disturb the formation of the scum and sludge and retard bacterial life. Then again, same can be covered over with earth and grass and practically be hidden from view with the exception of the inspection manhole cover used for cleansing purposes.

In small tanks it is always advisable to form a substantial roof which not only prevents the emanations of odious gases but protects the sewage from sun and disturbance of wind and rain and rapid evaporation of the liquid surface, which proves very obnoxious to houses in too close a proximity to an open tank, so that it is practically essential under such circumstances to provide an airtight roof covering which gives better working results.

In Cold Climates

In very cold climates it is always advisable to keep the sewer pipe from the house below the action of the frost, but there is very little danger of freezing taking place in the septic tank as the discharges from the house are nearly always warm, which together with the heat given off by the bacterial action, prevents actual freezing taking place, but the activity of bacterial life becomes greatest at a temperature varying from 70 degrees to 100 deg. Fahrenheit, so wherever possible the tanks should be buried under the ground as far as possible and covered with earth as a protection.

The Grade

The main pipe discharging from the house should have, if possible, a grade of not less than 10 times the diameter of the pipe and should always be carried well below the water level of the tank so that same can discharge without disturbing the scum formed on the water surface of the tanks as well as having the tendency of encouraging the descendancy of the sewage to be treated, producing better settlement of solids and whilst the scum acts as a roof over the septic tank, it is always liable to disturbance by the action of the weather.

Emptying and Cleaning

Provision should always be made for emptying and cleaning out the tank from time to time and an easy access provided so that all parts, especially the automatic flushing syphon, can be easily got at for periodical inspection at any time, as for successful results, grease from the kitchen sink and waste should never be allowed to enter the septic tank unless previously intercepted by some form of grease trap located on the branch, as the grease is destructive and in time clogs up and retards the bacterial action of the tank.

Has Little Odor

Fresh sewage has very little odor, but if allowed to decompose gases are given off during putrefaction from which all the complaints and nuisance arises. Sewage quickly decomposes if allowed to remain stagnant and provision should be always made in tanks for carrying off these harmful gases by efficient ventilation.

The action in a septic tank can be classified under two headings, namely, mechanical and bacterial. The former consists of the settlement of the heavier particles to the bottom, the lighter and smaller particles in the solution rising to the surface and forming the scum which shuts off the air and light and protects the active anaerobic bacteria. Whilst the heavier particles are lying stagnant at the bottom of the septic tank, large numbers of active anaerobic bacteria come into existence and attack and feed upon the deposited sludge, thus reducing the volume considerably and disintegrating and breaking up the particles of organic matter into very fine particles, which float on the surface of the liquid in the tank and partly help to form the thick scum. The remainder remains in solution in the t nk effluent and in time clogs the filtration area unless the tank effluent is passed through fine screens.

The best design of septic tank to install is the two chamber, as this type of tank produces the best results and can be constructed on a small, level piece of ground. The first chamber receives the sewage and acts as the liquefying chamber and the other serves as a collecting chamber where an automatic syphon is installed which greatly reduces the owner's attention and supervision as well as preventing the outlet pipes being laid too near the ground surface.

Sometimes, to save cost, the automatic syphon can be dispensed with and a small hand plug inserted in the second chamber (as shown in Fig. 6), which is released on the contents of the tank reaching a certain height. This can be operated by means of a float or by hand from a chain, but whilst the initial outlay is less, the time and attention required to operate the latter method more than counteracts the extra cost of the syphon, which proves in time o be money well spent.

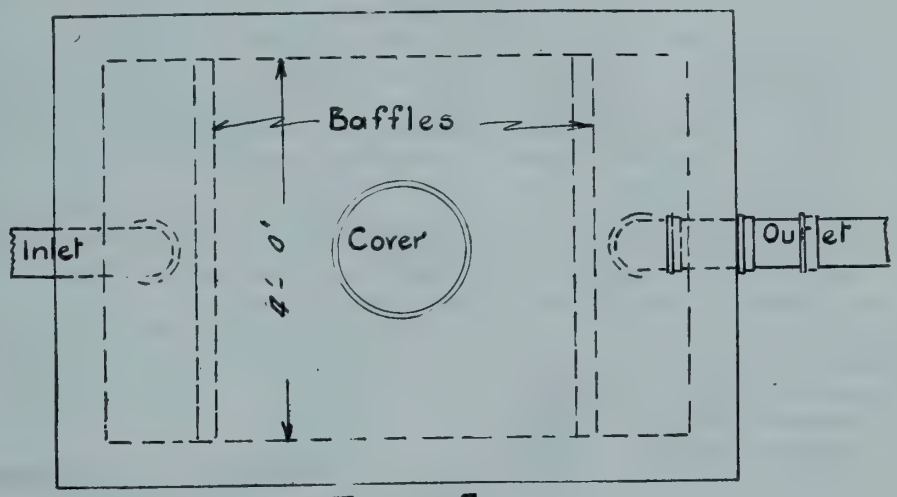

FIG 4.

A well-designed two-storey septic tank should not require cleaning out more than once a year. as for best results the scum formed on the surface of the liquid should not be disturbed more often than necessary, as the working results of the tank depend a great deal upon the scum so formed, and when the scum is once disturbed it takes considerable time to reform.

The sludge can be drawn off by a hand valve placed in the centre of each chamber connected with pipes laid at a grade of not

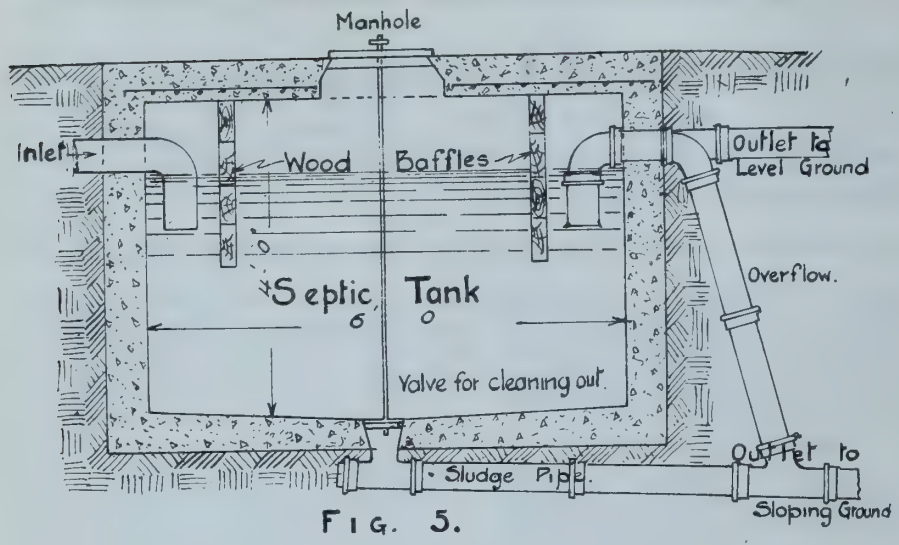

FIG. 5.

less than 1 in 30, which discharge into small sludge drying beds where the sludge is evenly spread over the whole area and allowed to dry until spadable by the sun; it is then removed, and dug into the land under cultivation as manure.

If the levels will not permit of the adoption of sludge gravitation pipes, the emptying process is best performed by a small pump, the discharge being run direct onto the land and ploughed or dug in as manure.

The capacity and depth of the automatic syphon chamber varies in different schemes and depends altogether upon local conditions as regards the nature of the soil of the filtration area.

The usual storage capacity varies from 8 to 12 hours. The lighter the soil the less storage capacity required, so that in a heavy loam the chamber must be made larger and deeper in order to give more time between each discharge, as heavy soil requires greater time to purify the sewage and longer aeration between each discharge. The lighter the soil the more frequent the discharge may be, which allows the chamber and syphon being constructed of smaller capacity, thus reducing the first cost of the installation.

Septic tanks should be carefully designed, otherwise they simply act as nothing more than a receiving tank or cesspool and produce bad results, which retards their adoption through being constructed by persons ignorant of the first principles of the requirements and working of a well-designed septic tank.

CHAPTER III

Small Septic Tank Installations

The actual design of a septic tank depends upon local conditions and levels of the surrounding land and can be constructed as either single or double chamber, but infinitely better results are obtained from the double chamber as previously explained. Still the single-storey tank can be constructed very much cheaper from the initial first cost standpoint.

Figures 4 and 5 show a plan and section of a modern single chamber tank designed for a small family. The tank is of concrete construction with a self-supporting roof, which should be reinforced with 3-8 inch longitudinal and cross steel rods placed at 5-inch to 7-inch centres, according to the span, placed 1 1-2 inches from the lower edge of the concrete slab and the bars well wired at intersections.

The bottom of the tank should slope at a grade of not less than 1 in 50 toward a central cleaning outlet, which is fitted with a watertight hand plug valve which allows the tank being emptied from time to time, discharging in a sludge drain, which gravitates to a convenient sludge-drying area especially located so as not to become a nuisance. If sufficient fall cannot be obtained so that the liquid sludge will run by gravitation, the central cleaning-out valve should be eliminated and cleaning out must be accomplished by pumping or manual labor.

Under no circumstances must the sludge pipe be connected to the pipes supplying the filtration area as the sludge would clog up and ruin the pipes and land set aside for purification of the clarified tank effluent.

A cast iron inspection manhole should be centrally placed in the reinforced concrete cover for inspection purposes, and a method of operating the hand valve during cleansing operations.

The inlet and outlet pipes are carried well below the level of the surface of the liquid so as not to disturb the scum which collects on same, also wooden baffle boards should be placed as shown in Figs. 4 and 5, which protect the inlet and outlet pipes, and prevents the disturbance of the sludge which would be caused through the rate of sewage discharge (obtained from the grade of the house drains), and produces greater sedimentation.

These baffles should be placed in cast iron channels built in the concrete walls and so constructed in section in order that same can be raised or lowered to meet the varying working conditions.

This tank is constructed so that the discharge i practically always continuous; every discharge of new sewage when the tank is full forces the clarified effluent through the overflow pipe to the filtration area. This system of continuous small trickling discharge does not produce ideal distribution of the sewage over the filtration area—the area nearest the outlets treats the sewage continuously, whilst that farther away gets very littl sewage if any, and the former, through continuous work and lack of aeration, becomes sewage sick and loses its purification qualities—therefore for successful results some method mus be adopted of intermittently diverting the tank effluent, which always requires constant supervision, likewise the tank also requires a certain mount of attention, as in this form of tank automatic syphons cannot be successfully installed owing to the clogging which would take place in the bend and cap of the syphon and owing to the sludge deposit being in the same chamber.

This type of tank can be installed in either level or sloping ground by either discharging the tank effluent through the top pipe line or through the overflow into the pipe line at the bottom of the tank, as shown in Fig. 5.

A concrete baffle wall must be constructed above the level of the sludge deposit so as to prevent the solid matter being washed down the pipes into the filtration area, which would clog up and render, in time, this area useless for secondary purification.

Fig. 6 shows another form of single chamber septic tank. The inlet and outlet overflow and ventilator are similar to the present example, the only difference is being able to periodically feed the filtrating area with regular discharges, thus ensurion better distribution over the filters. This is

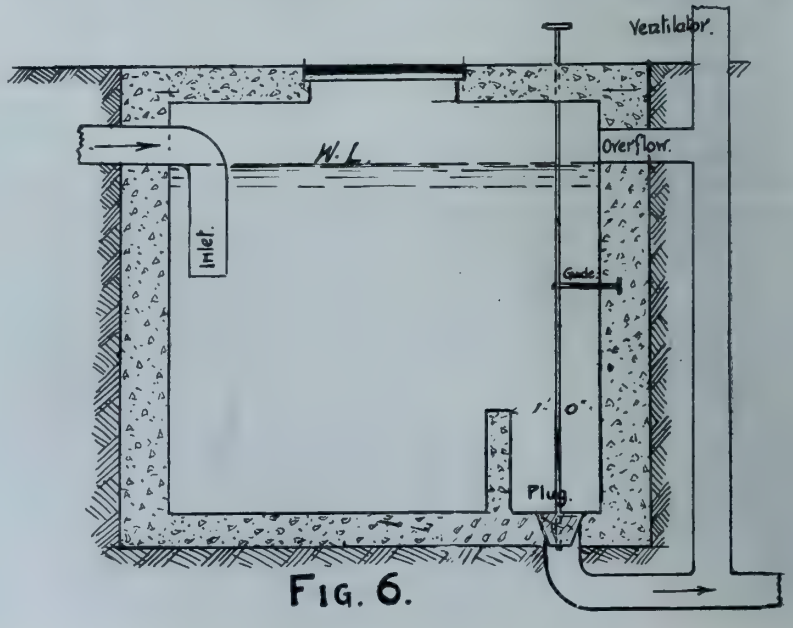

FIG. 6.

accomplished by means of a hand plug as shown in the illustration and requires lifting when the tank is full, which depends upon the size and capacity of the chamber and number of persons served. They are usually constructed to hold two days' flow, so it would mean the sewage would have to be liberated every other day, which is very inconvenient.

There are several well-known standard types of double compartment septic tanks which have been installed with good success throughout the American continent, and although the principles and design are calculated for one standard they have been modified to suit the various styles of profile of the land at the engineer's disposal, but in many cases it is far better for the engineer to design the works to suit the location he has at his disposal, embodying the general principles of the past experience of other similar installations.

It is a bad policy to have one stock pattern of septic tank and instal this without giving the thought and attention required for the proper installation of a successful working plant which will produce the best results. There is quite as much importance in designing a small plant as a large one. Whilst the following sketches and examples have been carefully selected and obtained from various tanks that have been constructed with good results, and cover as far as possible the various conditions most generally met with in designing small works, they should only be used as a basis for carrying out the general principles necessary for obtaining a first-class septic tank. Careful thought is essential and same can and should be modified to meet mostly any location selected suitable for the private disposal of sewage.

Thoughts on Life and Business

By B. C. Forbes.

THE fellow who isn't fired with enthusiasm is apt to be fired.

Excess is an arch enemy of success.

If top-notch effort yields you no happiness, there's something wrong either with you or your efforts. Sit down and do some analyzing.

After all, you've got to give full, fair value. Or you won't last.

Carelessness and failure are twins.

The most valuable "system" is a good nervous system.

Saving is Having.

If you have half an hour to spare, don't spend it with someone who hasn't.

Don't simply see how you can "put in the day." See how much you can put into the day.

Never contrive to make it easy for your concern to get along without you.

Make sure the prize you chase is worth the price.

If you cultivate your talents you'll always find an opportunity to use them.

When in a fix, sweating will get you farther than swearing.

Let mules do the kicking.

Honking your horn doesn't help so much as steering wisely.

Don't expect poor work now to lead to brilliant work hereafter.

You have no idea how big the other fellow's troubles are.

It's all right to aspire to control others, but have you begun with Number One?

Notice that two-thirds of "Promotion" consists of "Motion."

The wages of idleness is demotion.

There is no higher rank than that of worker. No title can ever make a loafer a nobleman.

There must be output before there can be income.

Defeat is often a spur to victory.

The best reward is sense of worthy achievement.

Good times for all can only be the product of good work by all.

Trade Outlook Good for Years; Standardization Aids Output

R. E. Hattersley, Joint Managing Director of United Brass Founders and Engineers, Ltd., Outlines Conditions in Motherland—Hopes Wages Will Never Come Down to Pre-War Days—Better Conditions Amongst Workingmen Make for Better Production—Must Eventually Trade With Germans

THAT owing to standardization, production has taken the turn in the road and is now on the increase so far as their products are concerned, that there are four or five years of good trade in both the domestic and the foreign markets of the world, that prices are bound to remain high for some time to come, and that Germany cannot be crowded out of the markets of the world for an indefinite period, were views expressed to SANITARY ENGINEER by R. E. Hattersley, joint managing director of the United States Foundries, Ltd., with head offices at Manchester and factories at Ormskirk, Halifax, Birmingham, Woodchester and Manchester. Mr. Hattersley has just come to Toronto after a visit to New York, Chicago and Detroit, where he has gleaned valuable information regarding conditions in the republic and the outlook there. Mr. Hattersley spent several days with the company's Canadian representative, W. H. Cunningham, of W. H. Cunningham & Co., Church Street, Toronto. Labor conditions, he believes, are causing some thought across the borderline inasmuch as their ranks are being depleted by the return to their home-lands of many of the laboring foreigners. He speaks optimistically of conditions in the Old Land and expresses the belief that there are still years of plenty ahead for the manufacturers.

Mr. Hattersley, fresh from his visit to a number of the important American centres, said he believed manufacturers in the United States were worrying considerably over the question of emigration and immigration. His impression was that a shortage of labor was beginning to be felt because emigration was exceeding immigration. Considerable reliance was placed by the American manufacturer on foreign labor and he believed that in this respect the American manufacturer has previously stood in a better position, perhaps, than those in England, because the foreign laborer would do that class of work better than the Englishman born in his own country. There was a current of opinion, he said, which held that many of the foreigners were being driven from the United States on account of prohibition; but he believed that the best opinion there was that, since drink had been cut out, efficiency had been of a higher standard. Americans, he felt, were viewing with some apprehension the emigration of so many of their substantial farmers to Canada. The result of the foreign emigration from the United States was an increase in wages to laboring-men.

"Before the war," said Mr. Hattersley, "skilled workmen were getting forty to forty-five shillings and now many of them are getting from five to seven pounds, whether on day or piece work, and they are still asking for increases in their wages. This is largely on account of the increased cost of living. So far as production is concerned, there has been a slight improvement lately and the reason this improvement did not commence sooner was that men, from the executive heads to the workmen, were tired after the war. The average manufacturer has come to realize that there is no use in manufacturing a large variety in small quantities, but that it is better to manufacture a large quantity of fewer varieties and so they are going in for mass production. We could be turning out more under the old conditions than now, but in a few months we will be turning out vastly more than we ever could under the old conditions and old methods. If we are making one-half dozen articles instead of five or six hundred we give those five or six articles the proper attention and watch them go through the entire process. Our executive men are paying specific attention to these half-dozen lines rather than to a wide variety."

The fact that several manufacturers might be specializing on the same article was not regarded by Mr. Hattersley as a possible indication of overlapping or an immediate decrease in the cost of goods. "We estimate," he said, "that there are four or five years of good trade ahead on account of the shortage in both the domestic and the foreign market, and we are being asked just now to pay particular attention to export trade on account of the exchange rate." So far as Canada was concerned, Mr. Hattersley believed that British manufacturers were changing their attitude toward this country and every other country and were very anxious to keep up and to increase their export trade. He felt that Canadian business would be well looked after during the next four or five years, providing the tariff was not so high that it paid the British manufacturer to ship his goods to other countries in preference to Canada. There was, at present, a good deal of talk in England regarding the tariff and it was his impression that the majority of the people believed that the open market was still the best policy.

"I believe trade with the Germans has not started yet," stated Mr. Hattersley, "but the feeling is that the whole world will have to trade with Germany in the end. The latest reports we have are that German trade is yet very unsatisfactory because they cannot tell the price or give any date as to delivery. But I think you will find eventually that, suppose the Germans are offering an article for three shillings where other prices are five, Canadians will buy it, and that we will gradually work back to trading with the German people. We cannot keep Germany out of the markets of the world for years to come."

Prices Bound to be Higher

Despite the fact that the English goods used to be placed on the market at lower prices than the Canadian or the American makes, Mr. Hattersley pointed out that prices were now bound to be higher than formerly on account of the scarcity of the raw materials. He believes that higher prices will prevail for some time yet. It was his hope that wages would never go back to where they were before the war. "Workmen are getting more wages and are getting more out of their wages," he said, "and many of the better class are saving money, though they are also spending more. The higher wages are partially offset because of the higher cost of living but these costs must come down and we do not want wages to come down in proportion to the cost of living. We want the workmen to have better standards of living, believing that it will mean better production under such a scheme and under the scheme whereby manufacturers are specializing on production in co-operation with the workmen. One hears a good deal about labor unrest, a good deal more than is real. But the best manufacturers are not having labor troubles. So far as our men are concerned—and we have about 3,000 of them—they want to help us as much as

Continued on page 22

Mr. Wanless says that showing people exactly how an installation is going to look in their homes is one of the most effective methods of closing sales. Displays like that shown above are arranged frequently, while the showing of bathroom fixtures is permanent. This has greatly increased th e firm's business in fixtures.

Get the Stock—Then Let People Know It

Tendency for Farmers to Improve Homes—Rich Field in Rural Districts for Selling Sanitary Plumbing and Heating Goods — Also Selling Farm Lighting Equipment

Based on an Interview by C. E. PARSONS of SANITARY ENGINEER with Ed. Wanless, Manager of J. C. Wanless, Chatham, Ont.

J. C. WANLESS, Chatham, Ont., have secured some excellent business through advertising window and interior displays and also through personal solicitation. The above illustration shows how attractively the goods look when displayed in the Wanless store.

The firm backs up its advertising by seasonable window and store displays. The windows are dressed every week and the stock in the store is changed around continually and seasonable merchandise kept to the front.

"Our windows," said Mr. Wanless, "are, I believe, one of the very best advertising forces we have. They never stop working and our experience proves that the public generally is really interested in window shopping, especially the hundreds of farmers and their wives who are in the city continually on business."

A Rich Section

Just here it might be mentioned that although Chatham has a population of only 11,000, it is right in the heart of one of the very richest farming sections in the whole Dominion. Rich clay land stretches away on every side of the city for miles, and hundreds of thousands of dollars' worth of corn is grown and fed to countless hogs. Everyone knows the prices which have been ruling for hogs for years, and a fair estimate may be made of the wealth of Kent County. Add to this the rich tobacco fields south of Chatham and the mixed farming districts and the total is complete.

It is said that there are more automobiles owned among the farmers of Kent County than in any similar area in the Dominion.

Right After Trade

J. C. Wanless and Sons are right out after the trade in this rich territory. It might be thought that looking after the requirements of these people would be an easy matter, but when one stops to think that the rich, prosperous farmer of to-day, with his big car, and his sons and daughters attending the best schools, not only knows what he wants, but is ready to look elsewhere if he does not find it at home, the problem takes on a new aspect.

The firm aims to keep its store and its service absolutely up-to-date. "The Up-to-Date Hardware" is a feature at the bottom of every ad., and the company plans to make good.

An Important Development

As might be expected in a rich and progressive farming community of this kind, there is a big demand for electricity. Power lines and radial railways have been built and still the demand is for more and still more. This opens up opportunities for the sale of bulbs, irons and other equipment. It is necessary in selling these to meet the opposition from a Hydro shop. This opposition killed the business in the city itself for such lines as lighting fixtures, but J. C. Wanless and Sons are going after the trade in the country with both feet and are developing the special farm lighting plant business rapidly. This offers splendid opportunities for the sale of lighting fixtures and special equipment.

Improve Their Homes

"There is a noticeable tendency," said Mr. Wanless, "in the country districts towards improvement of the homes. The farmers are interested any and every time in anything that will make their

work easier, or that will make their homes more comfortable or more sanitary. Curiously enough, we find that in a great many cases it is the farmer's wife who is behind many of the moves which result in improvements being made. It may be a bathroom or a water pressure system, some electric device that will make her work easier or some other proposition, but the women are interested in them all. The farmers have the money and they are constantly planning to make things better for themselves. It is seldom a question with them of how much will it cost, but rather of what service will be got. It is usually easy to show them the years and years of every-day service they will secure from a bathroom, a water pressure system, or some other equipment. In selling bathroom equipment and other lines for use in the home, it is always a big help if we can show them just how the bath or other equipment will look when installed. We frequently install as many as sixty bathrooms in a season. Every installation is a good ad. for the firm, as other people in the neighborhood sooner or later want the same equipment, and we aim to make our work and our service speak for themselves.

Tell Them About It

One of the important things in connection with developing business in bathroom equipment, water pressure systems, and other home conveniences, is to let people know that there are such things and that you have them for sale. It is astonishing the hazy ideas the average person has about such things as pressure systems. They know that there are such things, but have no idea whatever about their cost or the simplicity of their action or the convenience they are in the home. It is only by getting them interested in these points and by actually demonstrating to them the lifetime of service such devices will render at a cost per day of a fraction of a cent that they see how much they are missing. Once they realize these points it is difficult to close the sale, especially if they happen to have had other devices installed previously which are giving satisfaction. There is a lot of good business to be had in this field and it is one which is developing every year."

New Water System For Chatham

Chatham, Ont.—The Chatham waterworks commission at a special meeting adopted a report of Major Adams, city engineer, in which he recommended a new rapid sand gravity filtration system as the solution to the local water problem. The proposed system will necessitate the scrapping of the old plant and building an entirely new system, with the intake pipe located several miles up stream, and estimated to cost $371,000. The city engineer was instructed to prepare plans and specifications to be approved by expert waterworks engineers.

T. J. Alexander, President Saskatchewan Association

Annual Business Convention Held at Saskatoon—Next Convention to be Held at Moose Jaw

T. J. ALEXANDER, Moose Jaw, Sask., was elected president of the Saskatchewan Sanitary and Heating Engineers at the second annual convention held in Saskatoon.

On strong representations of Mr. Alexander, supported by C. Clark, of the Moose Jaw Heating and Plumbing Co., and Tom P. Baylis, the other two representatives of the Moose Jaw plumbers, it was decided that the convention should be held in Moose Jaw, Sask., next year.

The meetings were held in the city council chamber and the program was a business one, for the most part, but, working on the theory that "all work and no play makes Pete a poor plumber," the engineers included a couple of social features. These took the form of a theatre party at the Empire and a banquet in the Baldwin hotel.

Such technically interesting papers were on the program:

"The relation of sub to general contracting," by W. Whiteford, of Regina.

"Business methods, pricing and collecting," by C. Greene, of Saskatoon.

"Construction of builders from the heating engineer's standpoint," J. Yates, of Brandon, Man.

"Contracts and credits," Neal Beaton, Saskatoon.

"Relation to the wholesalers," D. A. Ross, Saskatoon.

"Septic tanks," S. P. Paulin, Regina.

Board of Health Wants Houses Connected Sewers

Peterborough, Ont.—Considerable discussion arose at the Board of Health meeting on the question of earthen closets during the course of which it developed that there were at present in the city less than 1,500. They were condemned as unsanitary by the different members of the board and a resolution was moved by Mr. James Lynch and seconded by Mr. Mason that the Board of Health recommend to the City Council, in the interests of public health, that all houses should be connected up with the sewerage system, the costs of the same to be paid in instalments with the taxes if necessary. This resolution was unanimously carried.

Pt. Dalhousie Plans Waterworks

Port Dalhousie. — Preliminary steps are being taken to establish waterworks in Port Dalhousie. The sum required will be $120,000 and the Port water commission has asked the town council to issue debentures for this amount. A sewerage system will likewise be put in to cost $30,000 at the outset.

Asks Big Expenditure On New Waterworks

Toronto, Ont.—Works Commissioner R. C. Harris, of this city, intends to ask the city later in the year to authorize expenditure for a duplicate waterworks plant in the eastern part of the city. In 1912 the project came before the ratepayers, who voted $6,000,000 for it. Expenditures to be asked will double that amount, stated Mr. Harris yesterday.

TRADE OUTLOOK GOOD

Continued from page 20

they can and get back to normal conditions."

Mr. Hattersley stated that they were cutting out a number of the lines which they formerly manufactured and were standardizing both lines and methods and paying more attention to the lines which were in greatest demand, both in the domestic and the foreign market. "We are finding out the best selling lines for each country to which we export and we are trying to alter selling conditions to the conditions obtaining in those countries, and this includes the Canadian buyer. Whereas, formerly, a few men ran the whole institution, we are now departmentalizing the whole concern as to selling, manufacturing, etc."

The Exchange Rate

The impression was not given by Mr. Hattersley that British manufacturers were worrying greatly over the exchange rate. He believed that the chief worries in the United States to-day were due to immigration, emigration and exchange. Were the British manufacturers not so busy in other directions, they could export more goods and bring conditions more to normal. The exchange rate should right itself, however, because for the great mass of the people it would help to bring down the cost of living. So far as he was concerned, he did not want to see wages go down, but he did not feel that they would reach much higher levels according to present production; nor did he care how high wages did go so long as production was at such a cost as would enable them to compete successfully in other countries.

Mr. Hattersley is accompanied by Mr. Herbert T. Marsh, a director of the company, both of whom left Toronto for New York this week on the return trip to England.

Bathroom Fittings Good Selling Line

Interior Displays and Advertising Will Sell a Highly Profitable Line—Bathroom Fittings Make Attractive Displays

BATHROOM fixtures are always in demand and the dealer who keeps them where people can see them and who occasionally lets the public know through his advertisements that he has a good stock from which to choose, finds no trouble at all in keeping them moving.

This season, as a result of the large number of better class homes being erected, there has been an exceptional demand for bathroom equipment. Dealers state that they find people not only willing to pay a fair price for quality fittings, but demanding them. The dealer who is in a position to show the man who is building a new home an assortment of bathroom accessories that will make not only for beauty, but for service and comfort, can cash in on some good trade and one that carries a nice profit.

Those dealers who got busy and studied the building situation in their district and then stocked accordingly, have done well with bathroom equipment. Some of the larger firms have found it an excellent plan to arrange a model bathroom showing the fixtures in position. By taking home builders in and showing them exactly how the fittings would look when installed, they aroused an immediate desire for possession, and the only thing that remained was to make the selection

Other dealers in districts where the building conditions did not warrant carrying such an extensive stock rounded up a lot of trade by arranging store and window displays and using newspaper space.

Make a Fine Showing

The better the fittings the better the display. Dealers state that they show off as well at night as in the day time and that they find a large percentage of householders, aside from those who are building new homes, interested in the goods. They come and ask about the prices and frequently take home a towel bar, a soap dish or some other piece.

Besides the lines usually stocked, some dealers have found that it pays to push such goods as bath brushes, bathroom mirrors, sprays and even manicure sets.

Sell Themselves

Keeping these lines well displayed, the dealers say, is half the battle in keeping them moving. Once people know where they can get them they become regular buyers.

The splendid appearance of many of the articles very often causes people to "sell themselves" on them. They realize at once that this or that piece would add that touch to their bathroom that they would like to have, besides giving real service to the users.

Many dealers report a steady development in this business as a result of the enterprise of manufacturers in getting out new designs and in keeping pace with the demands of the public for quality articles.

Good Talking Points

Aside from their splendid appearance the majority of the bathroom fixtures give the dealers real talking points to emphasize. It is obvious that they are well made and well finished. Many of them are nickel-plated, and as they are made of brass may be guaranteed not to rust or corrode. They are easily kept in good condition and looking nice. Many a house builder these days is breaking away from the old-time idea of putting the bathroom in some obscure part of the house, under a stairway or hidden away at the back. The new idea is to make the bathroom one of the most useful and attractive rooms in the house. Dealers state that many home builders now state that they want to be as proud of their bathrooms as they are of their drawing rooms, and that with this idea in mind they want fixtures in keeping with the costly equipment they are installing.

Means Good Business

This idea is apparent in the money that is being spent on equipping bathrooms in hundreds of the better class of houses that are now being built, and it offers some splendid opportunities for business for the dealer who can supply the goods. A great many of the plumbing firms are realizing it and are cashing in on the opportunities offered. A big share of the business is secured because they have learned the value of letting people know they have the stock, and of keeping it well arranged in their display rooms and windows.

Dealers also state that even in the older houses the owners are good buyers of the new fixtures. They say that the new lines carry a strong appeal to buyers because they help to make for better bathrooms no matter where they are installed and the smallest bathroom can be greatly improved by the installation of handsome new fixtures. People realize this, the dealers say, and buy the equipment.

ONTARIO FIRE LOSSES

Smaller in 1919 Than in Either of Two Previous Years

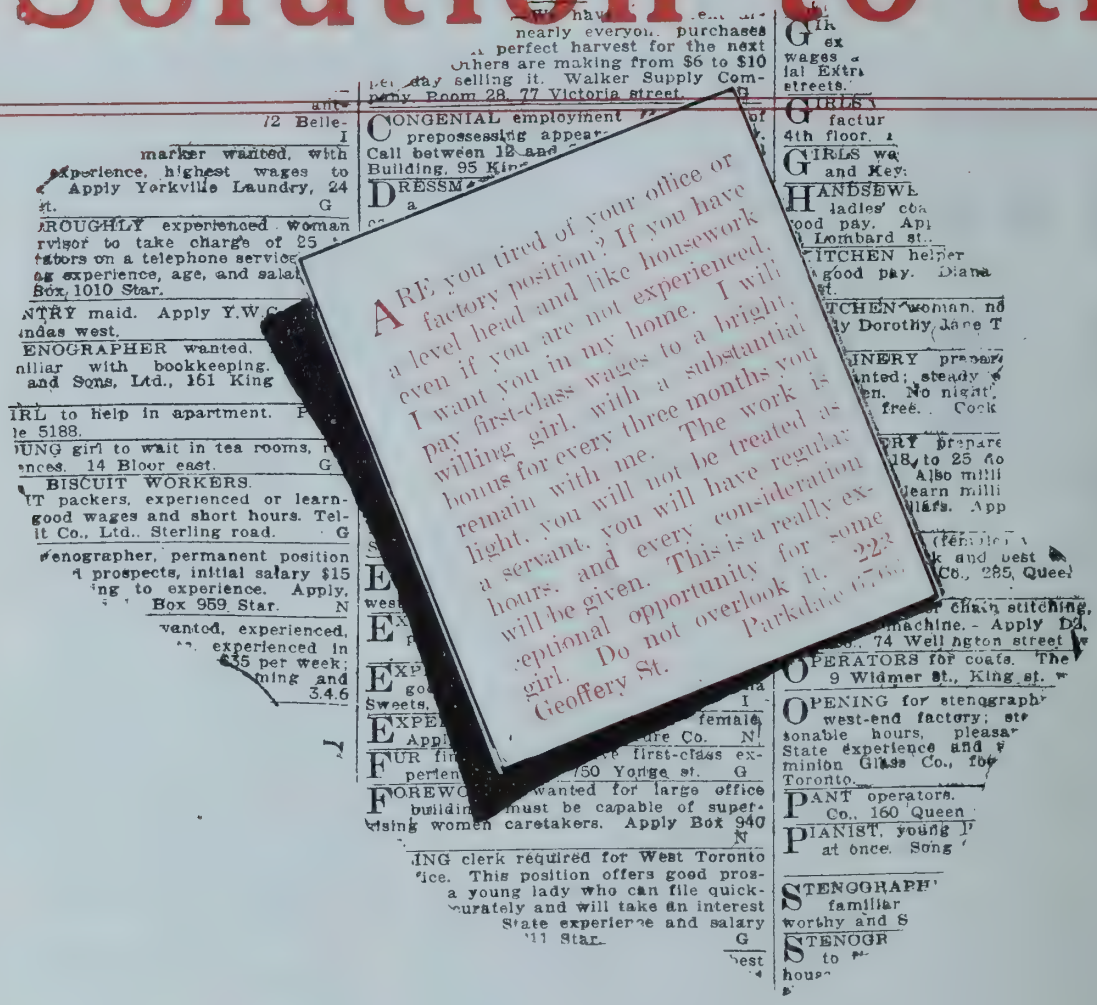
Official figures of fire losses in Ontario during the year 1919, issued by Fire Marshall E. P. Heaton, indicate that the losses were comparatively low during the year. There were some 9,000 fires in the Province during the year with a total loss of $9,490,478, a figure that compares with $15,673,240 in 1918 and $10,365,539 in 1917. The largest fire during the year was the Port Colborne elevator explosion which occurred in August.

Of the total loss $6,301,813 was covered by insurance and $3,188,665 was not insured.

W. J. Elliott Becomes Vice-President

Directors of The Whitman & Barnes Manufacturing Company, following the annual meeting at the general office in Akron, Ohio, elected W. J. Elliott, manager of the St. Catharines, Ont., factory, a vice-president. Mr. Elliott will be in entire charge of the Canadian division of the company's business—selling and manufacturing. Twenty-seven years ago he entered the employment of Whitman & Barnes, in a minor position. Advancement from one position of importance and responsibility followed rapidly, when in January, 1908, he was made manager. His promotion to the official circle of the company is a merited recognition of his excellent services and the confidence in which he is held by the corporation.

Solution to the



ARE you tired of your office or factory position? If you have a level head and like housework even if you are not experienced, I want you in my home. I will pay first-class wages to a bright, willing girl, with a substantial bonus for every three months you remain with me. The work is light, you will not be treated as a servant, you will have regular hours, and every consideration will be given. This is a really exceptional opportunity for some girl. Do not overlook it. 223 Geoffery St. Parkdale 67

There's a field for the plumber to make the home more attractive to domestic labor

Domestic Problem

The home-labor problem will be overcome more quickly when kitchens are equipped with such labor-saving conveniences as the

PORT HOPE SANITARY *"Five in One"* COMBINATION

A glance at the want columns of a daily paper will show you why a determined effort on the part of the housewife must be made to get and hold her home-labor.

You can assist her by fitting her kitchen with such labor-saving equipment as the Five-in-One Combination as here shown.

This combination saves miles of steps in the year, lightens kitchen work to the minimum, adds a zest to the labor of the home and makes it easier for the housewife to compete with the attractive propositions offered by commercial activities.

The "Albert" Combination is shown on page 62 of "For the Home" catalog. Yours for the asking. **Carry it with you.**

Points About Pumps and Injectors

Practical Discussion About Their Operation Which Contains Useful Information to the Men in the Trade—Principles Upon Which These Widely Used Devices Are Constructed and Work

PUMPS may be divided into several classes, reciprocating, rotary, and centrifugal. Those of the reciprocating class which have one or more cylinders are named simple, duplex, triplex, etc., acording to the number of cylinders. Some are single-acting, others double, that is, they either force water into the boiler or discharge pipe during one or both strokes. They may be horizontal or vertical, belt-driven, gear-driven or connected direct to a steam cylinder. Some pumps have pistons, others plungers.

Young men especially will do well to get all the information they can on pumps. The boiler feed pump is one of the most important things in the boiler room, and should be thoroughly understood, not only boiler feed pumps but every kind, suction, lifting, force pumps, etc. Examiners, as a rule, shoot over quite a number of interesting questions in regard to pumps in general.

The Suction Pump

A suction pump is shown in Fig. 1. You will notice that it has a valve of the non-return type in the suction pipe, and one or more similar valves in the piston, or bucket as it is sometimes called.

Do not tell the examiner that a suction pump works by suction unless you understand just what is meant by suction. Webster, in the Collegiate Dictionary, says "Suction is drawing by exhausting the air."

Forms a Vacuum

In the type of pump shown in Fig. 1 the piston with the valves closed on the suction stroke forms a partial vacuum behind it in the cylinder and the pressure of the atmosphere causes the water to rise in the suction pipe through the suction valve into the cylinder. At the end of the stroke the piston starts to descend, closing the suction valve, and forcing the water through the valves in the piston. On the next stroke the water that has passed through the piston is discharged through the discharge pipe. The piston at the same time is now making its second suction stroke, and so on.

An Important Point

An important point to bear in mind is that the pressure of the atmosphere will only sustain a column of water a certain height, hence it follows that the greatest distance that the piston should be (when at the top of its stroke) from the surface of the water is about 28 feet. Though the atmosphere is said to balance a column of water some 33 feet in height, allowance must be made for any air leaking through the valves, the weight of the suction valve, etc.

A Lifting Pump

If it is necessary to raise water from a greater distance, a lifting pump is used, the action of which is the same as the suction pump, with the addition of a non-return valve in the discharge pipe, to prevent the return of the water. The pump itself is located within the 28 feet from the water and the delivery pipe brought up to the height where the water is to be discharged.

Action is the Same

The action of a suction pump and lifting pump are practically the same and are generally considered separate simply because the suction pump discharges at the pump level, and the lifting pump above the level of the pump.

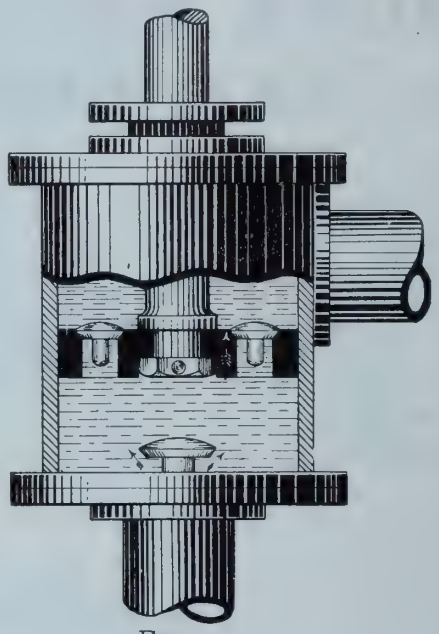

Fig. 1.

Another form of pump is the force pump, Figs. 2 and 3, which has no valves in the piston but on the suction and delivery. A plunger instead of a piston or bucket is used when it is necessary to force water against heavy pressure. This obviates the necessity of keeping a watertight piston, which is difficult to do against high pressure.

Different Designs

The number of different designs and size of pumps on the market are legion and a description of each is not at all necessary, as it is the principle upon which they are all based that is the important point, and though simple, quite a number of important points occur when in operation.

Boiler feed pumps, in the majority of cases, are direct-driven, that is the plunger or piston-rod from the pump is connected on the opposite end to a piston working in a steam cylinder, and may be single cylinder, duplex or multiplex. A duplex pump which is used extensively consists of two steam cylinders and two water cylinders. The steam valves on the one side are operated from the opposite side and vice versa. The suction and delivery pipes are common to both pumps.

Boiler Feed Pumps

The chief points in considering a boiler feed pump are, that they should be large enough, having a capacity of at least 1 cub. foot of water per horsepower per hour, should be quiet in operation, economical in steam consumption, have no dead centres, and as few parts as possible.

If the suction pipe is long it should be provided with a foot valve on the end just above the strainer. Both suction and delivery pipes should be kept as large as the openings in the pump permit, should be free as possible from bends, and all joints well made, especially on the suction pipe, for if these are not airtight, trouble will be the result.

A Good Supply

In fact, providing there is a good supply of water and suffiicient power to move the plunger a pump fails because of one thing only, and that is, there is a leak somehere, either in the suction pipe, in one or more of the valves, or the piston, etc. It is very important that you locate the trouble quickly when your pump fails, by opening the petcock on the side near the bottom of the pump and noticing if water is discharged through it on the discharge stroke only, or both suction and discharge strokes, or on neither suction and discharge.

Valves May be Stuck

If on either stroke your pump is not getting water, either through a leaky suction pipe, leaky piston, suction valves may be stuck, or the supply shut off, or

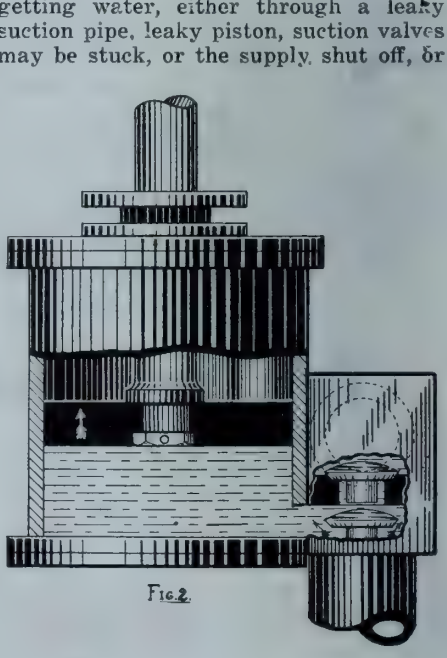

Fig. 2.

water too low in the well. Again, if you get a good force of water at both strokes your check valve and discharge valve may be leaking or prevented from returning to their seats for some reasons, perhaps some foreign substance is lodged on the seat, such as a match stem, chip of wood, piece of old packing, etc.

Steam Bound

If your water is too hot your pump is almost sure to give trouble, if not fail altogether by becoming steam bound, as a pump will not lift hot water but generally pounds badly, and the partial vacuum formed by the plunger is immediately destroyed by the vapor occupying the space.

If it is necessary to pump hot water then have the pump so located that the water will flow into the valve chamber, that is, put the pump below the source of supply.

Suction Air Chamber

A suction air chamber is a useful addition if the suction pipe is long or the pump is running at high speed, as it not only prevents pounding but assists in enabling the pump barrel to fill up when running at high speed.

A suction air chamber can easily be made with a piece of pipe the same size as the suction pipe, about two or three feet long, with a cap on top, attached in an upright position to the suction pipe close to the pump.

Delivery Chamber

The delivery air chamber, which should not be less than about five times the area of the water cylinder, also assists the pump by virtue of the air compressed there in forming a cushion, which acts on the delivery valves and also causes a more steady flow in the discharge.

For good results the velocity of flow

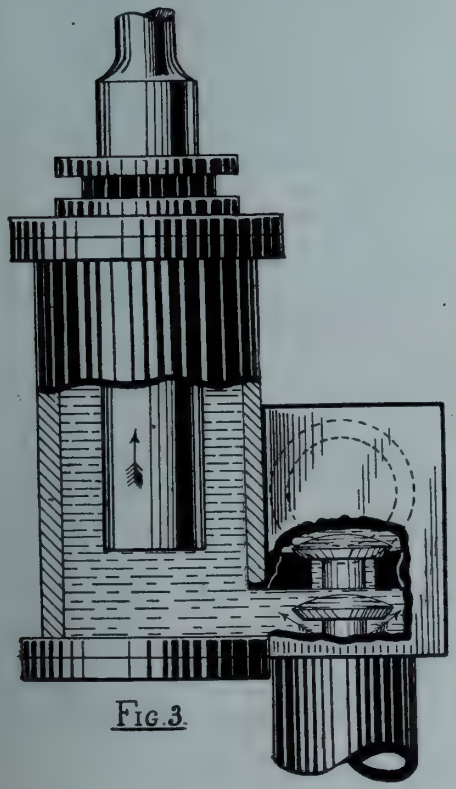

Fig. 3.

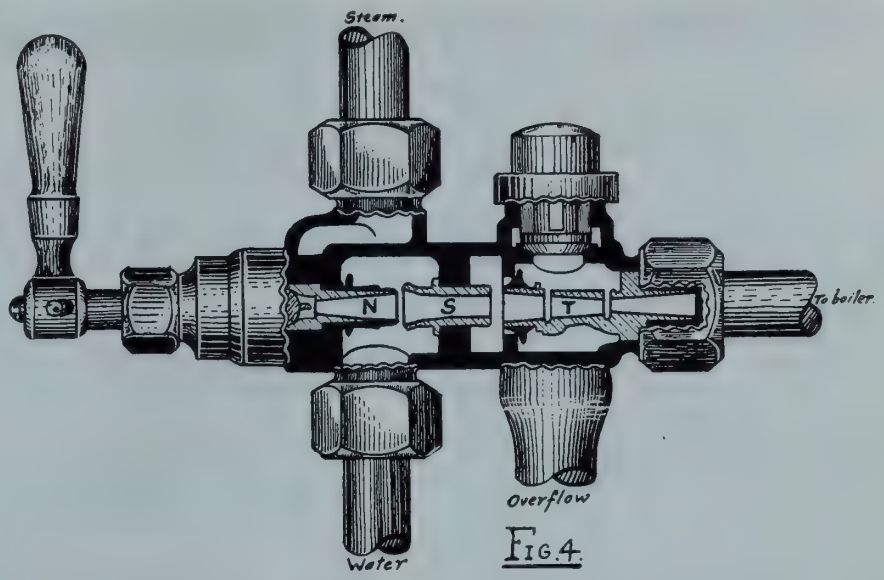

Fig. 4.

in the suction pipes of boiler feed pumps should not exceed about 200 feet per minute for small pumps, 400 feet per minute for single cylinder, and 500 feet per minute for a duplex pump.

Power for Pump

In calculating the power for a pump the number of foot pounds of work to be done by the pump must be considered, the boiler pressure it has to work against, the suction lift, and an allowance made for friction, etc. The suction lift being known, convert the boiler pressure into its equivalent head of water in feet by multiplying it by 2.31 and add to the suction lift, then, with the weight of water to be pumped, the foot pounds of work to be done can easily be calculated. As an example, a boiler has a pressure of 100 pounds per square inch, and the suction lift is 15 feet; you wish to find what horsepower it will take to put in 625 gallons. Then $2.31 \times 100 + 20 = 251$ feet head; 625 Imperial gallons weigh 6,250 pounds, and $251 \times 6,250 = 1,568,750$ foot pounds. One horsepower = 33,000 foot pounds; $1,568,750 \div 33,000 = 47.54$ horsepower nearly; allowing 25 per cent. for friction, etc., $47.54 + 25$ per cent. $= 59.425$ horsepower. That is to do the work in one minute. If one hour is taken to do the work it will require $\frac{1}{60}$ the power, or about 1 horsepower.

To Find the Size

Again, if you wish to find the size of feed pipe required for a boiler when a duplex pump is used, allowing a velocity of 500 feet per minute, divide the velocity, viz., 500 into 19.25 times the number of gallons per minute for U. S. gallons, or 23.1 for Imperial gallons. Thus, to pump 50 U. S. Gallons into a boiler a minute, $19.25 \times 50 \div 500 = 1.925$ sq. inches area of pipe.

And further, to find the number of gallons passing through a pipe in one minute, multiply the velocity in feet per minute by the area of the pipe in square miles and divide by 19.25 or 23.1 as the case may be.

Velocity of Flow

The velocity of flow may be found by multiplying the area of the water piston by its speed and dividing this by the erea of pipe.

In the Province of Ontario it is necessary to have two separate means of supplying feed water (Sec. 121), and the injector is used to such an extent that the student should be cognizant of its general principles. Fig. 4 shows one form which will serve our purpose for the present.

The action of the injector is based on the fact that the amount of work a moving body can do in being brought to rest varies as the square of the velocity. The steam from the boiler in passing through the steam nozzle N has its pressure reduced, first owing to the shape of the nozzle and second by coming in contact with water of a low temperature. This immediately gives the steam a high velocity and great kinetic energy, which creates a partial vacuum in the water space, inducing the water to pass through the suction jet S on to the delivery tube T with sufficient force to overcome the resistance of the boiler pressure in the feed pipe.

Must be Condensed

It is evident that unless the steam is condensed the injector will not work, and much trouble with injectors is caused either by giving the injectors too much steam, especially if the pressure and consequent temperature is high, or, if the feedwater is too hot, unless you throttle the steam a little.

Like pumps, injectors are affected in various ways—a leaky suction, too hot feed water, or the flow retarded by an accumulation of mineral deposit from the feed water.

Size of the Jet

It is important in the operation of an injector that the size of jet remains unaltered, this size is determined in the first place by the manufacturer, and much trouble has been caused by carelessly reaming or scraping the jet to remove the scale deposit, making the jet much too large, thus reducing the efficiency. It is far better to use a solvent to remove the scale such as dilute muriatic acid or some other scale remover.

Gas Companies Urge Adoption of British Thermal Unit

Candle Power Measurement is Condemned and Expert Calls Its Use a Crime

GAS companies operating in New York City are attempting to eliminate the practice of measuring gas quality by "candle power" units. They urge that a more proper measure is the British thermal unit.

In an effort to prove that the candle power standard has ceased to be serviceable to the consumer, an abstract is offered of testimony taken before Special Master Abram S. Gilbert in the company's suit to have the 80 cent law declared unconstitutional. One of the witnesses was Archibald S. B. Little, chief gas engineer of the Illinois Public Utilities Commission, who qualified as an expert, and who stated that he was the pioneer in the substitution of the modern heat unit standard for candle power requirements. He called the old system "a crime."

Questioned by William L. Ransom, counsel for the company, Mr. Little said that the British thermal unit standard had been substituted for the candle power, and then the record shows the following questions and answers:

Q. Is it your judgment that this candle power standard is a wrong standard?

A Certainly.

Q. And it adds greatly to the cost of making gas without corresponding advantage to the consumers?

A. Correct. The consumers cannot get the advantage out of the gas at 22-candle power.

Mr. Little said that his opinion agreed with that of gas engineers generally throughout the United States. Then Mr. Gilbert said:

"I am inclined to say something in my report on that point. I think it is pretty nearly time a stupid standard of that kind is eliminated, if everybody agrees to it."

Mr. Gilbert then asked the witness:

"But there would be an advantage to the public in getting a British thermal unit standard rather than the candle power standard?"

"Yes," was the reply, "it would be more to their advantage in New York City because you cannot make effective use of 22-candle power gas or any other gas at the ridiculously low pressure that this company is forced to carry in its mains."

Following the abstract from the record, the Consolidated says:

"The gas companies operating in New York City are still handicapped by the statutory obligation to work under the old candle power standard. In England, a moderate calorific standard has been in vogue for some years. In the more progressive States and cities in this country the heat unit standard is rapidly receiving the sanction of the public authorities, and it is to be hoped that in the near future a change from a candle power to calorific standard will be authorized for New York."

Want Duties Raised on Architects' Plans

Ottawa.—Members of the council of the Royal Architectural Institute of Canada conferred with the Customs Board, the object being the revision of the basis of appraisal on imported architectural and engineering plans.

The Royal Architectural Institute of Canada is a federation of all the Provincial architectural associations.

The institute claims that the Government can secure a considerable increase in revenue from this source.

A campaign will be inaugurated toward the development of Canadian architecture and engineering in Canada by Canadians.

Plumbers Pay at Hamilton

Hamilton, Ont.—John W. Bruce, international organizer, plumbers' and steam fitters' union, was in Hamilton last week to try and effect a wage settlement between the journeymen and the employers. The men ask 90 cents per hour. The bosses, it is said, won't budge from their offer of 80 cents per hour. The master plumbers will meet to reconsider the wage question. Mr. Bruce says the journeymen refuse to accept less than 90 cents per hour. "There's every probability of the men being on the streets unless 90 cents per hour is conceded," was Mr. Bruce's statement.

JOINS DOMINION RADIATOR STAFF

Parry Sound, Ont.—E. E. Elliot, who has conducted a plumbing business here for some time, has left to take a position with Dominion Radiator Co., of Toronto, as their representative for the territory east of Toronto to Prescott.

Claims Terraced House is Easier to Heat

Central Heating Plan May be Terraced to Advantage, Says Prince Albert Writer—Plan is to be Tried Out in Winnipeg in the Near Future

DISCUSSING editorially the question of terrace housing, which is contemplated in the city of Winnipeg, the "Herald" of Prince Albert, Saskatchewan, says:

The city of Winnipeg is again grappling with the housing problem. The great shortage of houses, due to four or five years of practical stagnation in the matter of building, and the growth of population, has left the city in such a position that a civic housing scheme is necessary, and Winnipeg is one of the few cities in the Dominon to take advantage of the federal housing scheme.

The question of terraced houses is at present occupying the attention of the civic authorities dealing with the matter, and a debate is going on as to the desirability of such houses, and one of the arguments used to their disfavor is the dull and deadly monotony of terraces. It is also said that such houses would only be occupied by the poorer class of tenants from whom rent collecting would not be a sinecure, and that the city would not find the matter profitable.

Such reasoning is weak. It is admitted that terraces may have a monotony that the separate houses do not have, but to hold this as a logical reason against them is much in line with the soldier settler who selected his quarter north of the city, the value of which a soldier settlement land inspector described as unequalled from a scenic standpoint, but worthless for farming purposes. What is needed at present in practically every city in the Dominion is a good supply of houses which can be rented at a reasonable figure. Initial cost is a primary consideration just now, and terraced houses can be built much cheaper than the same number of separate houses. There is, moreover, the valuable desideratum that the terraced house is considerably cheaper to heat than the single house. Heating is a consideration the value of which cannot be over-estimated in Western Canada. A house which is hard to heat is dear at any rental, but an easily heated house is worth living in. The terraced house is easily heated, and when the terraces are of considerable extent or built on a town planning system with twenty or more in proximity, a central heating plant would be a boon and a money-saver to the tenants. As to the dull monotony, a by-law prohibiting terraces on both sides of any one street and opposite each other would prevent that. The Winnipeg discussion is of interest to Prince Albert, because the housing problem is one which the city will have to face very soon, either publicly or by private enterprise.

OFFICIAL PROGRAM

For the Ninth Annual Meeting Ontario Society of Domestic Sanitary and Heating Engineers

APRIL 8th, 9th, and 10th

THURSDAY

10.00 a.m.—Meeting of Executive Committee.

2.30 p.m.—Conference on Welfare and Improvement Plumbing and Heating Industry.

8.00 p.m.—North Enders' Educational Club.

FRIDAY

10.00 a.m.—General Meeting.
President's and Officers' Reports.
General Order of Business of Ontario Society.

2.00 p.m.—Nominations and Election of Officers for 1920.

4.00 p.m.—Addresses on "Business Efficiency," "Provincial Plumbing Regulations."

7.00 p.m.—Banquet, King Edward Hotel.
Speaker, William J. Woolley, Evansville, Indiana, Manager of Trade Extension Bureau of United States Plumbing and Heating Industry.
Entertainer, Jules Brazil.

SATURDAY

10.00 a.m.—Meeting of New Board of Directors and Executive.

2.00 p.m.—Address by William J. Woolley on Trade Extension.

Examination Board—The Directors

London By-laws Criticized

Alderman to Investigate and Report at an Early Date—Recently Appointed Plumbing Inspector Takes Exception to Criticism

LONDON, Ont.—As a result of criticisms which have been directed against the recently passed civic plumbing by-laws, all of which were given in last issue of "Sanitary Engineer," the city council has appointed Alderman Cunningham to investigate the situation fully and make a report at an early date.

The main charge against the new regulations is that they have been formed to protect the men in the plumbing business rather than the general public, especially the average householder. Some of the criticism has been very severe and there has been considerable of it.

Says it is Fair

Plumbing Inspector Young, who was recently appointed, takes strong exception to the criticism. The by-laws, he states, make for better workmanship all around.

"Any plumber who does his work according to the regulations," said Inspector Young, "has nothing whatever to fear. This set of regulations protects everyone, especially the public. If work is not done properly it will not pass inspection and surely that is far greater protection than the householder has ever had before. If people only knew it, or realized it, they will get better work now than ever and they will not be at the mercy of men who do not know the plumbing business and cannot do good work.

Another Complaint

Another complaint that is being directed against the by-laws is that it will put the small sanitary and heating engineer out of business.

"It does not matter to me," said Inspector Young, "whether a man only works by himself, or whether he has 100 men working for him. He will get just the same treatment. The quality of the work is what counts. If it isn't right it is going to made right."

A Case in Point

The question of installing water heaters is a case in point. Formerly many of these were installed by steamfitters or gas fitters. According to the new regulations no water connections can be changed now by anyone but a licensed plumber.

"The by-law," said Inspector Young, "expressly states that no permits shall be granted for any work excepting to a licensed plumber in the employ of a licensed master plumber. The by-law applies to any portion of the drainage, ventilation or water system of any hotel, warehouse or dwelling."

Londoners Object to Outsiders

London, Ont.—A merry row is in progress between some of the master plumbers of this city and the Ontario Society of Domestic Sanitary and Heating Engineers. It has its foundation in the fact that during recent months several "fat" contracts for local jobs have been awarded to Toronto firms, one company having secured contracts that run into many thousands of dollars.

The point about which the local men complain is that the Ontario Society is taking no action to keep Toronto or other sanitary and heating firms at home. The feeling is tense here over the matter.

The local men are going to try to have by-laws passed which will put outside firms under the ruling of the Transient Traders' Act and subject them to a heavy license fee in case they try to come in again.

Building Boom Predicted For London

Notwithstanding the fact that prices of all building materials are high and labor costs are greater than they were last year, there are many indications that the building trades in London this year will have one of the busiest seasons ever experienced. This is the opinion expressed by all contractors and builders and by the architects as well. In fact many contractors already have enough work on hand to keep their men busy all summer.

Factory buildings are likely to figure largely in the building program this year. It is expected that approximately $750,000 will be expended on new manufacturing buildings during the next six months. In addition to this, there is a probability that some of the local manufactures will make considerable expansion during the summer. At the present, plans calling for the total expenditure of $3000,000 are being prepared for some of London's largest manufacturers. It is expected that the major portion of the work planned will be carried out.

Residential construction will also amount to a considerable sum in London during this year. While the number of permits issued to date have not been large, it is known that there are many large houses being planned now. A great number of these will cost in the neighborhood of $15,000 each. L. H. Martyn, one of the large contractors of the city, stated that there is little doubt that quite a number of these houses will be constructed this season.

There is also considerable activity being shown in the erection of a lower-priced house, ranging from $6,000 to $9,000. It is anticipated that many of these will be completed before the year ends.

As an indication of the wealth of the city the number of citizens planning to erect garages may be taken. It is stated that the number of these buildings now being demanded is astonishing. In fact the contractors can hardly see their way clear to accept all of this class of work that is offering. Many prefer to take the larger jobs only.

Conditions Bad in Kingston

Kingston, Ont.—The Board of Health is starting a compaign against landlords who rent unsanitary houses and derive large revenues from them.

A detailed report was given before the board by Sanitary Inspector W. H. Carson regarding certain downtown rooming places which he had been requested to inspect and not one of them fulfilled the law requirements. Some of them are breeders of disease, ill-lighted, unsanitary, overcrowded and general filthy. Notices are to be served upon some owners that they must improve the buildings for habitation or they will be summoned before the police magistrate. Some of the houses will be ordered closed to human occupation unless they are made wholesome. The members of the board intend paying a visit some time to a few of the places which the inspector condemns and seeing how a numer of children are brought up under miserable conditions. In most of the places condemned, coal oil lamps are used for lighting and this practice is considered dangerous. An effort will be made to have the Municipal Act amended so that it will be compulsory for all rooming houses to be lighted by gas or electricity.

The members of the board made it clear that they would stand no trifling on the part of landlords. The legal time limit will be given after service of the notice to improve, and if it is not heeded the board will use the powers given it.

It was decide that the sanitary inspector should be supplied with a uniform as this will aid him greatly in his work. The board also recommend an increase in the salary of Inspector Carson, whose work has increased considerably, and who is giving the city excellent service.

Courtwright Water Supply

Courtright, Ont.—In January a bylaw authorizing the installation of a municipal waterworks system was passed to replace the private systems which have been in existence for some years. Last week the provincial engineer representing the health department in Toronto, the officer from Sarnia, and Mr. McLean, the engineer from Sarnia, met the Town Council and authorized the putting in of filtering tanks and advised the intake pipe being extended farther out in the river to insure the purity of the water supply. It is expected the work will begin as soon as final arrangements are made and the weather permits.

News of Ottawa Craft

THE plumbing trade is the only one in Ottawa which has reached an agreement with its workers so far. The journeymen plumbers presented their demands early in the season, and very little time was lost in reaching a settlement. Under the new agreement, the workers are to receive 75 cents an hour till May 1 this year, after which they will receive 80 cents. There will be no change in the hours of labor.

Two Inspectors

Ottawa has now reached the stage where it has been found necessary to employ two plumbing inspectors. In engaging a new inspector, the Health Department has given the preference to a returned soldier, William T. Carkner, who had considerable experience in the plumbing business before going overseas. Mr. Carkner has been made a permanent employee, at a salary of $1,500 a year.

Building Delayed

New building operations in Ottawa are being delayed pending an agreement between the workers and the employers. Committees of the local branches of the Canadian Association of Building Industries and Building Trades Council spent several days last week negotiating the agreements presented by the different crafts represented in the building trades, calling for increased wage schedules and better conditions. The various offers have been made by the employers, and are now being discussed by the different unions. It is likely all the agreements will be signed before April 1 this year.

Debatable Clause

However, there is one debatable clause in the agreement which may cause trouble. This is the provision for a closed shop, which the workers are insisting upon and which the contractors are strongly opposing.

It was undoubtedly owing to the uncertainty of the situation, as regards the new agreements, that only nine building permits were applied for during the month of February. These represented an outlay of $57,500. One was for an apartment house, at an estimated cost of $20,000. Only one of these permits was for a house, and that a small frame dwelling, to cost $1,800.

Want Improvements

Ottawa's suburbs are showing a keen desire these days to obtain up-to-date systems of sewage disposal. On the west side of the city, Westboro, on the Britannia line, is asking for an extension of the sewage system, to take in 1,400 acres. Surveys are now being made on this proposal. If the scheme is adopted, it will mean the building of an intercepting trunk sewer along the Ottawa river, with subsidiary sewers up through the district.

Then, on the east side of the city, Eastview is planning to build sewers along the Montreal road, with an outlet connection to the trunk sewer draining Ottawa South. From this sewer it is intended to build laterals throughout the village of Eastview.

Designed a System

Commissioner of Works A. F. Macallum has designed a sewage disposal system for the British American Nickel Company, at Deschenes, Que., which is just a few miles from Ottawa. The system comprises creens, tank and secondary treatments. It will be built by the company, and will likely be in operation towards the end of April. The British American Nickel Company will employ six hundred men this summer.

TENDERS

Regina, Sask.—. S. Ryan, Hamilton St., Regina, plans to erect garage costing $50,000.

W. Lessard, 1400 Wellington St., Verdun, contemplates erection of store and residence costing $25,000.

Lac La Biche, Alta.—John Mackriss contemplates erection of hotel this spring.

St. Jean Bte De Rouville, Que.—Stanislas Chabot contemplates erection of store and residence costing $4,000.

Canadian Consolidated Rubber Co., 201 Inspector St., plan to start on erection of factory buildings this spring. Sec'y, W. Binmore.

Montreal, Que.—G. T. Rly., McGill St., plan to purchase old railroad Y. M. C. A. building and to remodel it into offices. President, H. G. Kelly.

London, Ont.—London & Western Trusts Co. contemplate erection of office building. Manager, John S. Moore, 382 Richmond St.

Sherbrooke, Que.—Plans are in progress for warehouse, garage, stables, etc., for Imperial Oil, Ltd., 56 Church St., Toronto. Supt., Mr. Henbert.

Storey & Van Egmond, architects, McCallum Hill Blk., are preparing plans for hotel costing $120,000 for R. H. Williams.

Thetford Mines, Que.—Asbestos Crude & Mineral Corp. will start work in spring on storage shed costing $4,000. Manager, C. Bindmore.

Sudbury, Ont.—P. J. O. Gorman, architect, is preparing plans for general stores and offices costing $30,000 for Chas. Davis.

Thorold, Ont.—The "Semi-Weekly Post," Albert and Ormand Sts., is receiving tenders for installation of hot water heating system.

St. Thomas, Ont.—Elgin Milk Products Co. will have plans prepared for milk factory costing $20,000. Prices wanted on equipment.

G. J. P. Jacques, 5 Medbury Bldg., is preparing plans for business college building costing $40,000 for J. S. McCallum, Auditorium Bldg.

St. Paul De Metis, Alta.—Paul Trudel has plans drawn for hotel costing $25,000. Excavation work will start in spring.

Windsor, Ont.—City plans to erect city hall costing $500,000. Mayor E. Blake Winters. G. J. P. Jacques, 5 Medbury, Blk., is architect.

Timmins, Ont.—P. J. Gorman, architect, Sudbury, is preparing plans for church costing $75,000 for R. C. congregation; priest, Father Mr. Therriault.

Westboro, Ont.—Work will start in June on temple costing $40,000 for Westboro Masonic Temple, Ltd. Interested, F. Heney, D.D.G.M., Richmond Rd.

Winnipeg, Man.—C. J. Brown, city clerk, receives tenders until 3 p.m. March 23 for nurses home costing $300,000 for city. Plans with Bldg. Inspector, corner James and King Sts.

Newmarket, Ont. — Office Specialty Mfg. Co., Timothy St., have purchased site and will erect factory this spring. Managing director, Harry C. Slemin, 97 Wellington St. W., Toronto.

Shelburne, Ont.—Plans are drawn for alterations to bank building for Home Bank, head office, Toronto. Vaux Chadwick, 132 Church St., Toronto, is architect.

Canadian Leather Products, Ltd., 144 Front St. W., Toronto, and Davis Leather Co., Huron St., Newmarket, president, Hon. E. J. Davis, will amalgamate and will erect factory in the spring.

Timmins, Ont.—G. W. Hunt, architect, Confederation Life Bldg., Toronto, is preparing plans for business block to be erected here for J. R. Gordon, 1034 St. Clair Ave. W., Toronto.

Telkwa, B.C.—A. E. Foreman, Victoria, B.C., engineer for Provincial Dept. Public Works, receives tenders until noon March 22 for school. Plans with sec'y. School Bd., P. J. Watkinson, Telkwa, Govt. Agents at Vancouver and Smithers, and Dept. Public Works, Victoria.

Business Changes

Nanton, Alberta.—V. T. Shattock has purchased the plumbing and tinsmithing business of George Rogers.

Contracts Awarded

Moncton, N.B.—William Watson has heating and plumbing contract at $8,000 for the new bank being erected for the Canadian Bank of Commerce.

Bill Blithers Almost Becomes a Chief Engineer

This Little Tale is the First of a Series on the Adventures of Bill in Search of a Higher Education. Although He is Not Successful in This Story, We Still Have Hopes That He Will Succeed

P. O. Box 23,
Reubenville.

To the
VERYBEST CORRESPONDENCE SCHOOL,
Educativetown, Add.

To Whom it May Concern

Deer Sir:

Having notised your ad in the paper as how you can make a common hunkie into a chief engineer, I wish to tell you I want to be one of those as soon as possible. I am sending in the envelope the little coopon which you have in your ad, and have marked an X at the place and job I want to be in. Please tell me how much this is going to cost me and how long it will be before I can be a chief.

I am also sending you the picture that first made me think as ow I'd like to be a chief. The picture in the first part looks just like me, and I work on sewers just as this fellow is doing. I want to be like the other part of the picture, but without the cigar, as my wife don't let me smoke.

Will I have to study hard, or will I be able to read your lessons without much trouble, and what wage will I get in a job you show in the last part of your picture, for you don't say in your ad.

Please answer quick, telling me all particulars, for I've got awful discontented since reading your ad, and seeing what I should have been. With best regards,

Yours,
BILL BLITHERS.

To WILLIAM BLITHERS, ESQ.,
Reubenville, Ill.

My dear Mr. Blithers,

To say we were pleased to receive your recent letter of the 18th is to put it mildly.

We can immediately see that you are fired by that noble spark called ambition, which, once it sets in to work (as it has in your case), means success. SUCCESS the way we should like to write it. May the writer be allowed to get away from the we standpoint, and talk to you rather like a friend than a stranger, for after reading your splendid letter I feel more like a friend than anything else, so for the balance of my letter it will be the I, rather than the we, that shall speak.

First I was pleased to see you had carefully read our advertisement. This is a good sign and denotes caution on your part. You know Mr. Blithers there are so many so-called schools who claim to be ten-day wonders, that one is apt to become confused in trying to separate the bad from the good. In your case, however, I see your keen judgment has stood you in good stead, for you have written to not only one of the best but THE best school in the entire country. As our name implies, we are the Verybest correspondence school.

You have marked your coupon absolutely correctly, and although at present your employment may be of the humble order, there is no reason why before long you cannot even excel the type of gentleman we portrayed in our picture No. 2. It is a pleasure to know that these two pictures impressed you, and it was particularly noteworthy that the individual in picture No. 1 looked somewhat like yourself. This point alone proves that you are the very person who should take up our course, as our pictures were drawn from life, and from an actual example of phenomenal rise in life.

Regarding your question if our lessons are difficult. This is only a natural question, and one which we feel sure we can answer satisfactorily. Your lessons will be far from difficult, for we have simplified each lesson until it has become mere routine.

I enclose a form which you can fill out and send to me by return mail. Kindly see that you send this form properly filled out by the very next mail as I am arranging to have your first lesson sent to you as soon as I receive the form.

Now, Mr. Blithers, regarding the price of our course, does not this seem to you a trivial matter, when your future is at stake? We do not as a rule talk price, for one is apt to think the amount a trifle high at first glance, but we find that by allowing the student to first fill out the form and sending along his first fee of $5 we have, unknown to him, started him on the road to success. However, since you have asked the question I might say that you place a $5 bill with the enclosed form and receive your first lesson at once. Then once a month let us have another $5.00 until the course has been paid. These payments will only go on for a matter of 10 months, which you must admit is not long.

Awaiting your form, and the $5.00.

I am,

Your well-wisher,
I WANT YOUR MONEY.

P.S.—Do not forget to mail the $5.00 with the form, for otherwise I could not hurry through your first lesson.

P. O. Box 23,
Reubenville.

To the
VERYBEST CORRESPONDENCE SCHOOL,
Educativetown, Add.

Mr. Want Your Money,

I beg to inform you that I received your letter, and I am sorry but will not be abel to join your school.

Yours regretfully,
BILL BLITHERS.

Educativetown.

WILLIAM BLITHERS, ESQ.,
Reubenville, Ill.

Dear Sir:

I cannot understand your recent letter. Do you think the price too high? I believe that you were backward at telling me this, so I have tried hard to get you some personal and special consideration,

and have at last succeeded in so doing.

Instead of $50.00, the regular price of our course, we will offer you for 5 days only a special reduction for cash, and believe me, Mr. Blithers, this is a wonderful opportunity.

Whatever you do, don't delay, but accept this splendid offer. In place of $50.00 we offer you this complete course in its entirety for not $40—not $30, but for half the real price, namely, $25.00.

Act quickly before it is too late. Send in your money at once.

I am,
Sincerely yours,
I WANT YOUR MONEY.
Educativetown.

WILLIAM BLITHERS, ESQ.,
Reubenville, Ill.
Dear Sir:

I am surprised at your silence, and your not accepting our generous offer.

Surely you were serious in your ambitions. If I didn't believe so I wouldn't bother writing further, but as I have good news for you I felt that I should write at once. After considerable trouble I have arranged for a space of 2 days only to let you have our course for $10.00. Imagine $10.00 in place of $50.00. You can hardly fail to see the wonderful offer this is, so I expect to see your enrollment in the next mail.

Very truly yours,
I WANT YOUR MONEY.
P. O. Box 23,
Reubenville.

To the
VERYBEST CORRESPONDENCE SCHOOL,
Educativetown, Add.

Dear Sir:

This isn't Bill Blithers speaking, but a better person than he—this is his wife.

Keep your course, and its special offers. My Bill started work on sewers, and knows sewers by heart. Why—he couldn't live without the smell of a sewer, so why tempt him away from it.

Besides, I don't think your blamed school is any good no how, $50.00 to $10.00. Bah.

Can I sell eggs that cost me 50c a dozen for 25c. No, I sell them for $1.00, so I guess according to these figures your course is worth about 25c. Even at that figure I wouldn't let Bill start it. He should by rights be a toolmaker or something like that, although in a way I still think he should still stick to sewers.

Believing this letter will be the last one,

I am,
BILL'S WIFE.

Editor's Note.—It was the last one on the above subject so she got her wish, to a certain extent, but Bill is not done for yet, by any means, and will be heard from at a later date in an entirely new role.

Prices on Enamelware May Advance; New Freight Rates Also a Factor

Raw Materials Very Scarce. Lumber is High, Also Labor—High Rate of Exchange

THE enamelware situation at the present time is in a rather unsettled condition, and present prices are very firmly held. The demand is said to be a very heavy one and manufacturers are busy keeping up with the ever-increasing orders.

About this season last year many of the sanitary engineers, although having an intimation that the demand would be heavy, held back their orders with the idea that prices would come down; this had a considerable effect on the manufacture as manufacturers had no definite idea what quantity would be required. The strike which came in the spring also held up production. On the other hand raw materials instead of getting cheaper were subject to continued advances, with the result that when the large amount of building started in full swing, those in the trade were nearly all demanding quick delivery, with the result that the makers gradually became further behind with their orders.

This may be the reason for the continued demand through what was usually the quiet season of the year. It is believed that at the present season manufacturers have the situation well in hand.

As to higher prices in the near future, some are of the opinion that they can hardly be avoided, and as one manufacturer put it: "According to present conditions prices will not be lower."

One of the main factors for higher prices is the high cost of raw materials. Pig iron, which is one of the basic metals, has scarcely ever been higher. Lumber, which is used in considerable quantities for packing, crating and many other purposes, has advanced, in some cases more than double. The increased cost of labor is not to be overlooked.

Another factor may be the higher freight rates, especially those on the U. S. railroads. Some have it that the U. S. Government lost very heavily at the rates they charged, notwithstanding the fact that it eliminated many offices and branches, as well as competition, being able to ship on the most convenient line. This being the case, it is the opinion of some that the corporations taking over these railroads will find it necessary to considerably advance freight rates, which would ultimately affect the cost of hauling any necessary materials.

Another important feature is the fact that in the manufacture of this commodity great difficulty is experienced in getting the enamel on the metal. Especially does this apply to bath tubs, as manufacturers state they never know whether the whole heat will be successful or whether in the cooling and other processes the enamelled surface will check or chip. This being the case the piece or pieces as the case may be are discarded. While this has nearly always been the case in the manufacture of this commodity, it is said to have a greater bearing on the situation at present, due to the higher prices of materials, coal, labor, and other factors. The high rate of exchange is also to be taken into account.

However, notwithstanding the high prices charged, it is believed the demand for the coming season will be one of the heaviest experienced for some time, as there hardly ever has been such a universal shortage of houses, and it is believed that people must have housing accommodation at any price.

ASK YOURSELF—

Am I hitched up right, or am I a round peg in a square hole?

Do I feel every drop of blood and every fibre in me tugging away at my ambition, saying "Amen" to my work?

Am I backing up my chance in life in every possible way, or am I sliding along the lines of least resistance?

Am I keeping myself fit to do the biggest thing possible to me every day of my life?

Am I working along the line of my talent, or am I getting my living by my weakness instead of my strength?

Am I strengthening my weak points, making my strong points stronger, and eliminating the things which are keeping me back, the enemies of my success?

Do I decide things quickly, finally, or am I forever on the fence, fearing to make definite decisions which I cannot reconsider?

Have I the initiative which begins things without being told to; which does things without waiting for others' instructions?

Do I dare to attempt the thing I instinctively feel capable of doing, and I know that I ought to do?

Have I the courage which dares to branch out in an original way, dares to make mistakes that may humiliate me if I should not happen to succeed?

Do I try to develop that bigger man back of the smaller man I am, by obeying the God-urge that ever bids me up and on to greater endeavor?

If you can answer the above questions in the right way, you will bring out a hundred per cent. of your ability instead of the fifty per cent. that the majority of young men are content to develop; you will attain your ambition and be what you long to be.—"Success."

TRADE NOTES

Good progress is being made on the big store on Bank Street, which is to be the new home of W. G. Edge, Ltd., plumbing and heating contractors. This firm will extend their activities to the sale of sporting goods when they move into their new establishment about the middle of April.

EDITORIAL COMMENT

ATTEND THE CONVENTION

ELSEWHERE in this issue will be found a programme of the convention to be held at Toronto in April. Every member of the craft should do his utmost to attend the meetings and take part in every discussion. There is no place where things can be so thoroughly sifted out and definite conclusions arrived at in regard to policy as at a gathering of this kind. In the past some of the most interesting discussions have taken place in this way and they have been invaluable to the men who were present and heard the various opinions. They have often received pointers which meant real money to them. In many cases they have received information which has led to their making changes in their business methods, which have made conditions much better in every way. It is this interchange of ideas backed by the spirit of co-operation which is always in evidence at such gatherings that makes the sessions valuable. The value of co-operation is becoming more evident every day. It must be quite obvious to all those who are following conditions closely, that close co-operation will be even more necessary and desirable in the future than it ever has been in the past.

PRICES STILL FIRM

ACCORDING to the *Iron Trade Review*, shipments of iron and steel in the United States, also bearing directly on the Canadian situation, are beginning to surmount to various obstacles that have held them back, but the improvement is not sufficiently pronounced to lend much encouragement or confidence. A new factor this week has been the flood conditions in the Pittsburgh, Wheeling and Eastern Pennsylvania districts which has further curtailed mill and furnace operations. Car and fuel shortages still represent the dominating influence on all sides. Stock piles of finished steel in mill yards still are growing as production keeps ahead of transportation. A McKeesport, Pa., plant has 375,000 boxes of tin plate awaiting cars. Another interest has 80,000 boxes. A Pittsburgh wire company has been accumulating over 25 per cent. of its output. The National Tube Co. last week managed to ship all but about 2,000 tons of its production. Mahoning valley plants are operating on a hand-to-mouth basis as respects fuel.

Buyers of steel generally no longer seem so anxious to seize upon tonnage for quick shipment regardless of price such as characterized their movements a few weeks back. This has tended further to free the market of some of its excitable and runaway tendencies and wide price fluctuations. Though under better control, steel prices exhibit no real weakness.

Talk of recessions in pig iron prices appear to be more of rumor than of fact. In this connection the astonishingly large bookings of the merchant furnaces of the country are pertinent. With but a few stacks missing, statistics just compiled by pig iron interests show the unfilled orders in merchant iron as of March 1, were approximately 4,775,000 tons. February's production and shipments by these farmers were slightly in excess of 600,000 tons. At this rate the normal marketable capacity of the country is sold up to Nov. 1. Total sales of iron in February are shown to have been more than 1,000,000 tons. Basic iron continues to demonstrate its true market position at $43 valley. Structural steel awards in February were the largest since June, 1918, and totalled 171,000 tons or 95 per cent. of fabricating capacity. Contracts this month, however, have been running in considerably less amount, indicating that high prices and prolonged deliveries are more effective in holding up work.

An interesting development in the export market is the re-appearance of sizable inquiries for pig iron from Europe, reflecting the shortage abroad. These negotiations now under way at New York involve 15,000 to 30,000 tons for the Continent.

CREDIT ACCOUNTS MUST BE WATCHED

AT present there does not appear to be many indications of lower prices in the majority of foodstuffs and, in fact, in other lines sold by the retail trade.

But sooner or later we come to the peak when there will be a more or less gradual decline to a normal basis. No one considers for a moment that prices will go back to where they were in 1914. As production, however, overcomes demand, as the demand for certain lines slackens there will inevitably be a readjustment.

Retailers for the above reasons should see that their credit accounts are in good standing. They should, in fact, be careful from now on as to who should receive credit and who should not. Customers should not be permitted to get behind with their bills. If a customer cannot keep his bills paid up now he never will be able to. It should be remem-

bered that many people are spending money to-day on things that are not absolutely necessary, and letting their accounts with their merchants go by. By cutting off some of these unnecessary purchases they will be able to keep their bills paid up to date, but if this is not done, they must continue to let some of these bills stand and they as well as the merchants suffer.

By starting right now to see that all bills are paid when they should be, the merchant will have the satisfaction of security whether declines in price take place to-day, to-morrow or six months from now.

A SOUND BUSINESS POLICY

WHEN Marshall Field first got a position in a store he lost it almost immediately. The proprietor of the store where he was working was amazed to see him represent goods for exactly what they were, and then charge only a reasonable profit. "You're a good lad," said the merchant as he paid Field off, "but you have no capacity for business."

Yet upon these very principles Mr. Field laid the foundation of a business that is known the world over and made a princely fortune. The same opportunity exists to-day and the same results will follow. Many men are being tempted as never before, perhaps, to get all they can. Very often they may substitute something just as good. These are steps in the wrong direction. Marshall Field wanted his store to be known as a place of fair dealing, a store to which housewives would know that even a child sent there on an errand would not be imposed on, or given substitutes. Sound dealing was the basis on which he worked and on which he achieved success.

SECURES BIG CONTRACT

IN the face of the keenest competition that perhaps has ever been encountered a British firm has just secured from the Belgian Government the largest order for locomotives that has been placed in the history of the business. American firms made every effort to land the order and reports sent out from Ottawa not long ago stated that it was almost certain that part of the business would come to Canada. The whole matter according to press dispatches centered around price and delivery and on these the British firm was able to make the best proposition. One of the most remarkable things in connection with the whole commercial world to-day is the ability British firms are showing to corral trade and the export and import figures are telling a story that has a significance all its own, especially to those who predicted that it would be years before Britain would be a competitor.

SPRING IS HERE

SPRING is here, and to the average individual it is a little more than welcome. After fourteen weeks of steady winter and severe cold and ice and snow, with hardly a let-up of any kind, most people are glad to see the snowbanks gradually disappearing under the spring sun. From the standpoint of the merchant the business outlook, especially for hardware merchants, was never brighter. People generally never had so much money to spend, factories are busy and there is a call for capacity production. Farmers are preparing for one of the biggest years they have ever had, and it is well to keep in mind that the farmer is the largest purchasing force in the Dominion. He has been a splendid buyer in the past, and indications are that he will be an even larger buyer, because he is putting a percentage of the profits he is making into improvements for his home, his equipment and other things which mean business for the hardware merchants. The worst trouble on the horizon of hardware merchants seems to be the difficulty in obtaining enough merchandise. Just how this situation is going to work out it is impossible to say at the present writing. One thing is apparent, and that is that manufacturers are looking forward to good business. Not even in pre-war days was there such a continuous activity in the way of new companies being organized and existing companies enlarging their capitalization and extending their plants or installing new machinery to take care of more business. Never in the history of the Dominion has there been such a stream of inquiries for the products of Canadian factories as are coming to the Trade and Commerce Department.

JUDGE ROBSON'S RESIGNATION

WITHOUT saying a great deal about the real reasons behind his resignation as Chairman of the Board of Commerce, Judge Robson, in the correspondence that passed between himself and Sir George Foster, frankly states that his short experience with the working of the court had placed him entirely out of sympathy with the working of the Act. Reading between the lines one may fairly infer that Judge Robson has a good deal of sympathy for some of the suggestions that have been coming from the retailers of the Dominion in reference to the working of the Board and for making it of practical assistance to themselves and to the public. It may be that the action of Judge Robson will materially hasten changes in this direction by drawing to the attention of the Government the real state of affairs. There may be considerable significance in what Judge Robson wrote that the Act is fairly effective in reaching the retailers, but not in reaching the manufacturers. He also condemns the Act for removing "the last chance of the consumer to do anything for himself in reducing the cost of living." These statements are brief, but direct, and are characteristic of Judge Robson. It may be that they will prove the handwriting on the wall for those who are shaping the future activities of the Board of Commerce.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

Favors Pipe Line From Niagara River

St. Catharines, Ont.—The Provincial Board of Health will install laboratories at Chippawa and Port Colborne to make comparative analyses of the quality of the waters of Niagara River and Lake Erie at those respective points before any final estimates are made for the proposed pipe line to supply the municipalities in the Niagara district with water.

This statement was made to a meeting of fifty representatives of all the municipalities in the district between Port Dalhousie and Port Colborne and from Stamford and Niagara Falls, by F. A. Dallyn, Provincial Sanitary Engineer, who desired to show the meeting that it was more desirable to take water from the Niagara River at Chippawa than from Lake Erie at Port Colborne, as originally proposed by the Federal Engineers.

Overseas Veteran Purchases Business

Nanton, Alberta.—Owing to ill-health George Rogers has sold his plumbing and tinsmithing business to V. T. Shattock. Mr. Rogers has been engaged in the business in Nanton for the past eight years, part of which time he was with Nixon & Hewer, but the last three or four of which he has been in business for himself. Before coming here he was engaged in the same work in Ontario.

The new proprietor has been employed by Mr. Rogers since returning from overseas last summer. He was a former member of the 56th battalion, and went overseas with the 211th in 1916. Previously to enlisting he was employed in this line of work in Calgary.

May Be Fined $100,000 For Not Obeying Order of the Health Board

Ottawa.—The city of Hull faces the risk of a fine of something like $100,000 owing to its refusal two years ago to instal a mechanical filtration system for the purification of its water supply, which was ordered by the Quebec Provincial Board of Health. This fact was brought to the attention of the city council at a meeting, when the city solicitor, J. W. St. Marie, asked the council, by a letter, as to what action he should take towards defending the action, which, he stated, the Provincial Board of Health had instituted against the city, and which he wrote was to come up in Superior Court shortly.

Mayor Cousineau stated that the city stood in a serious position owing to its refusal to obey the mandate of the Board of Health, and a resolution was passed instructing the city solicitor to proceed to Montreal and ascertain what could be done.

Housing Company is Formed at Galt

Galt, Ont.—Organization of the Galt Industrial Housing Company, Ltd., to be formed under the Ontario Housing Act of 1914, is being proceeded with by the provisional directors appointed by the Board of Trade and the City Council. The company will be capitalized at $100,000; $85,000 to be raised through securities guaranteed by the municipality.

Obituary

The death occurred at Calgary of James E. Wilson, under whose direction the greater portion of the city's waterworks and sewage construction was carried out. He was a resident of Calgary for thirty-five years. The funeral, which was held under I.O.O.F. auspices, was very largely attended.

Trade Notes

H. E. Trafford & Co., plumber, Montreal, have dissolved partnership, and a new firm has been formed under the same style.

The Brown, Boggs Co., Ltd., of Hamilton, Ont., manufacturers of sheet metal goods, are erecting a $25,000 addition to their factory.

Contract Is Let For Waterworks Pumps

Lethbridge, Alta.—The contract for installing the pumping equipment for the city waterworks, as the result of the voting on the by-law, has been granted to the firm of Gorman, Clancey and Grindley, of Calgary. The contract provides for the supply, according to specifications supplied, of one high lift pump and condensor and one low lift pump, each with a capacity of 4,000,000 imperial gallons per day, for the sum of $18,354, duty, freight, exchanges, and all other charges paid, delivered Lethbridge, payable at Calgary.

Other firms tendering were the John Inglis Co., of Toronto; the Taylor Engineering Co., of Vancouver; the Canadian Fairbanks-Morse Co., of Calgary; the Fraser-Chalmers Co., of Canada, Montreal; the Canadian Allis-Chalmers Co., Calgary.

It is expected that the new equipment will be installed by July.

Was in Business in Montreal For 40 Years

Montreal.—Duncan Gordon, of 89 Crescent Street, a member of the firm of Gordon & Egan, master plumbers, passed away at his home from heart disease.

The late Mr. Gordon was born in Dingwall, Rosshire, Scotland in 1845. He came to Canada fifty-two years ago and engaged in the plumbing business at Montreal, where, until twelve years ago, he was in business on his own account. At that time he connected himself with the firm of Gordon & Egan, of which he was and continued to be senior partner.

Mr. Gordon took an interest in other matters besides his chosen vocation, and was a life governor of Montreal General Hospital and of the Western Hospital, and also of the Protestant Hospital for the Insane, of the Homeopathic Hospital and the Protestant House of Refuge. He was connected with St. Andrew's Society and belonged to the Stanley Presbyterian Church.

Mr. Gordon is survived by a widow and brother, William Gordon, of Montreal.

Merchants in Favor of Filtration System

Chatham, Ont.—At a meeting of the Retail Merchants' Association of Chatham, the project to construct an entirely new gravity rapid sand filtration plant in the city of Chatham was endorsed, and the water commissioners were recommended to submit a by-law to the people at the earliest possible date, empowering them to proceed at once with the work.

Says Sewage System Should Be Constructed

Glace Bay, N.S.—Dr. McNeil, medical health officer, in his annual report, refers to one or two things which require the attention of the civic authorities. One is the need of an improved sewerage system; the other is a more effective system of street cleaning. The installation of a modern sewerage system is a pretty

big proposition for Glace Bay, with its extensive area and long street mileage, but it is an undertaking that will have to be tackled sooner or later if sanitary considerations have any force. Dr. McNeil, however, states that while conditions are not as good as they might be they have been better for the past year than during any previous period.

Incorporations

The Purdy Company, Ltd., capital $40,000, head office Oshawa, Ont., plans to manufacture and deal in plumbing, heating and electrical supplies, and also in sheet metal products.

LETTERS TO THE EDITOR

These columns are open to contributions upon any topic of interest to the trade, it being understood that the views expressed are those of the contributors, and do not necessarily imply editorial indorsement. Names of contributors will be withheld, if desired, but name of writer must accompany correspondence as an evidence of good faith.

PLUMBING INSPECTORS

The efficiency of the trade depends on them, and they should be organized, not to advance their wages, but for the mutual benefit of the trade in general. As each one knows a little if they were to meet and talk things over, each one, no matter how clever, could learn something and those whose knowledge is limited would learn so much that they would become intelligent. So all you inspectors, from the Atlantic to the Pacific, get busy; get together and see what can be done. There is to be a Dominion Department of Health, and if the inspectors are to be of any use to it they should be organized. In fact all plumbing inspectors should be under its control, and a Dominion-wide law should be drafted with slight modifications for Nova Scotia, Southern Ontario and British Columbia. Colleges also should be asked to give correspondent courses for the old lads on the subject, and new ones should be appointed according to their merit in taking the course.

I know that Alberta has a course in sanitation, but from their papers I think they do not take up enough plumbing.

Another thing which should be taken up is, that at present we have the cities fairly well looked after, but the rural districts are the limit, and these are the more important as their products find their way into the cities and the way to trace disease is to prevent it, and if the health of the land is worth looking after the inspectors should be organized, and with all their different ideas should be able to help out the Dominion Health Department in many ways.

RATSY.

Commission Appointed to Investigate River Water Supply Project

Government to Secure Full Information Regarding Possibilities of Supply From the South Saskatchewan River

REGINA.—With the appointment of the other two members, the personnel of the commission appointed by the Saskatchewan Government to investigate the feasibility of the South Saskatchewan River water supply project has now been completed, and it is expected that preliminary work will be undertaken in the immediate future.

In addition to Major A. J. McPherson, who was appointed chairman of the commission some time ago, the Government has appointed W. F. MacBean, of Moose Jaw, and Thos. Teare, of Marquis, as the other two members, the Legislation enacted at the last session calling for the appointment of a commission of three.

The commission is now awaiting the appointment by the cities and the railway companies of their representatives who are to form an advisory board before any active steps can be taken, but in the meantime Major McPherson is lining up an organization as a preliminary measure. It is anticipated that the organization meeting of the commission will be held within the next ten days.

W. F. MacBean is a partner of Robinson, MacBean & Co., the largest departmental store in Moose Jaw, and he is recognized as one of the leading business men in Western Canada. Thos. Teare is a well-known agriculturist, who is farming on a large scale at Marquis, and he is also vice-president of the provincial executive of the new national policy movement. Both these men have taken a keen interest in the project, the latter acting largely as spokesman for the interests of the rural communities likely to be benefited if the scheme is eventually adopted.

The commission is not only empowered to investigate the feasibility of the scheme and its probable cost, but also to ascertain what rights have been reserved to this province in the use of the waters of the South Saskatchewan River.

Purchasing Agents Will Insist On 100 Cents for the Canadian Dollar

The Purchasing Agents' Association of Toronto, affiliated with the National Association of Purchasing Agents of New York, and representing a buying power of over $100,000,000, passed the following resolution at their meeting held in the King Edward Hotel:

"That, owing to the abnormal rate of exchange now prevailing between Canada and the United States, the Toronto Purchasing Agents' Association are resolved to favor wherever possible those firms who, appreciating these conditions, agree to relieve the situation by accepting Canadian funds in payment of our purchases."

Copies of this resolution will be sent to the National Headquarters in New York and to United States firms doing business in Canada. Copies will also be sent to the Minister of Finance at Ottawa and to the Bankers' Association. It is expected that the Ottawa and Montreal Associations will take similar action.

Mr. A. B. Kerr, who addressed the meeting, was of the opinion that many United States firms were adopting a policy of thrift. "The exchange situation has reached such serious proportions that it is time for drastic action, and we should do everything within our power to correct an intolerable situation," said Mr. Kerr. "If United States firms are unwilling to accept Canadian funds in payment of our purchases, then we would suggest three alternatives: Let them either open a Canadian bank account, accept payment in war bonds, or take long-term notes.

"A long list of United States firms have signified their willingness to open Canadian bank accounts; others have notified their Canadian customers that they will accept fifty per cent. of the exchange. It is the firms who will not make any concession that must be brought into line by some concerted action."

Mr. W. S. Leckie, of the Government War Purchasing Department at Ottawa, also addressed the meeting, and referred to the present difficulty the Government had in doing business with United States firms owing to the high rate of exchange.

The following officers of the association were nominated for re-election: J. I. Nicholson, Gunns Ltd., president; W. F. Dodd, Canadian Kodak Co., vice-president; G. P. Beswick, secretary; W. McG. Brown, Brown's Copper and Brass Rolling Mills, treasurer.

Adopt Profit-sharing Plan

St. Catharines, Ont.—Lord and Burnham Company has adopted a profit-sharing plan similar to that adopted by the Lord & Burnham Company of Illinois, and the Lord & Burnham Co., Ltd., of New York.

The plan is being printed in pamphlet form for distribution among employees in the three factories of the concern today.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

THE MARKETS AT A GLANCE

HIGHER prices are pending on Vitro closet tanks, present quotations having been withdrawn. The enamelware situation has not improved and raw material is as hard as ever to procure and while there is no immediate change expected, it may be that higher prices will be made if present conditions continue.

Soil pipe in spite of the many predictions for higher prices continues to hold unchanged. Range boilers are firm and manufacturers are shipping as fast as they can be made.

Lead pipe is very firm and advanced prices are expected. This is said to be due to the scarcity of pig lead, a situation which has just recently developed.

The difficulty of freight transportation is a serious setback in some localities. Some state that deliveries are often several weeks behind.

Scarcity of materials is one of the most important features that has to be overcome. Manufacturers state that very often they are forced to turn down large orders because they are unable to secure sufficient raw material to give specified delivery.

Jobbers state that business has seldom been better than at the present time and are extremely well satisfied with prospects.

No one seems to be paying so much attention to the price as they are to securing the stock and many have booked months ahead. Collections are very satisfactory.

TORONTO, March 13.—Owing to the scarcity of raw materials, many important lines are on the verge of higher prices. This applies to Vitro tanks, range boilers, soil pipe, lead pipe, enamel ware, boiler tubes, and other commodities.

This does not look encouraging for future prices on many of these lines, and it is hoped a solution may be found to relieve the present shortage of raw material and more satisfactory transportation conditions be found, in order to keep prices in hand, as no one wishes to see restricted buying.

Jobbers state that business is more than satisfactory, and that they are shipping goods as fast as they can procure them.

Firm prices rule on nearly all commodities.

Prices On Vitro Tanks Have Been Withdrawn

VITRO TANKS.—Prices on Vitro ware have been withdrawn pending higher quotations. This is said to be due to the higher cost of raw materials, labor and other factors.

Wrought Pipe Scarce; Price Remains Unchanged

WROUGHT PIPE.—The scarcity of some of the most common sizes is still prevalent, and manufacturers state they have difficulty in securing supplies of skelp. The freight transportation is also causing some shortage as available supplies are said to be coming forward slowly.

The exchange situation is also a factor it is stated.

The following are the present quotations:

PIPE — WROUGHT

Terms—2% cash discount if paid within 30 days. Approved credit.

Lead Pipe Unsettled; May Go Higher

LEAD AND ZINC PRODUCTS.—The list as shown below are very firmly held, and higher prices may be looked for on lead pipe, it is stated. The basic metals have been very erratic of late, although manufacturers say other factors have a heavy bearing on the situation, that would affect the prices.

The following are the present quotations.

Lead pipe, list, per lb.	$0 16
Lead waste pipe, list, per lb.	0 17
Do., over 8 inches, list, per lb.	0 18
Above subject to discount of 10 per cent.	
Lead traps and bends	add 10%

Cut sheets, ½ to ¾c lb. extra, and cut to size 1c lb. extra.	
Solder, wire, lb.	0 45¾
Solder, strictly, lb.	0 40½
Solder, commercial, lb.	0 38
Zinc sheets, per lb.	0 19
Solder, guaranteed, lb.	0 43¾
Solder, wiping, lb.	0 37¼

Enamelware Firm; Prices May Go Up

ENAMELWARE.—The prices on enamelware are very firm and higher prices in the near future would not be surprising, it is stated. The cost of raw materials, labor and other conditions are said to be such that it may be necessary to advance prices on this line, although manufacturers say they are trying to keep to a low scale rather than restrict the turnover.

The following are the present quotations:

Bath tubs, roll rim, 4. 4½, 5 feet, 24 to 30 in. wide			$37 05
Bath tubs, 5½ ft.			41 20
Lavatories—			
17x10" Apron F139 or P4345			11 05

Conductor Pipe Firm; May Be Scarcity

CONDUCTOR PIPE AND EAVES-TROUGH.—Prices remain unchanged although the situation is a firm one. Manufacturers state that they have difficulty in filling orders and that if galvanized sheets do not come forward in better quantities there may be a scarcity.

The present quotations are as follows:

PIPE (Conductor)

	Plain
2 in., in 10-ft. lengths, list	8 00
3 in., in 10 ft. lengths, list	9 70
4 in., in 10-ft. lengths, list	12 80
5 in., in 10-ft. lengths, list	17 50
6 in., in 10-ft. lengths, list	21 30

TROUGH (Eave)

O. G., Square Bead and half round. Size in girth:

Per 100 ft.		Per 100 ft.
8-in.	$6 90	15-in. $12 50
10-in.	7 70	18-in. 16 00
12-in.	9 10	

F.O.B. Toronto, Oshawa, Ottawa. Add 5% to above list.

Range Boilers Firm; Sales Are Heavy

RANGE BOILERS.—The scarcity of raw materials continues to be an important factor, for firm prices on range boilers. The demand is very heavy and manufacturers state that they are shipping as fast as they can manufacture.

Many are wondering what will be the result when the season for this commodity opens up in full swing, if the demand is not equal to the supply during what is usually a more quiet period.

The following are the quotations current:

Range Boilers—	Standard	Ex. Heavy
30-gallon	$12 00	$14 00
35-gallon	14 00	16 00
40-gallon	16 00	18 00
52-gallon	22 00	25 00
66-gallon	35 00	38 00
82-gallon	40 00	47 00
100-gallon	50 00	58 00
120-gallon	60 00	67 00

Soil Pipe Prices Firm; Prices Remain Unchanged

SOIL PIPE.—The firm situation on soil pipe continues unchanged. Although how long this condition will last is hard to say. Manufacturers claim that if the raw material and labor continues to advance, that higher priced soil pipe is inevitable.

However, manufacturers and jobbers state that business is very satisfactory and in some cases, have more business offered than they can comfortably handle.

The following are the present quotations:

Medium and extra heavy soil pipe, 2, 3 5 and 6 in.	10%
Medium and extra heavy soil pipe, 4 in.	15%
Medium and extra heavy soil pipe fittings, 2 in. to 6 in.	25%
8 in. extra heavy pipe and fittings	5%

Old Iron and Steel Hard to Procure

OLD MATERIALS.—Cast iron and steel of nearly all kinds, are reported to be very scarce, while copper and brass are more or less plentiful and likely to hold. White metal is very dear and is rather scarce. Business continues to hold out at firm prices and the outlook is very bright. A good, heavy buying trade is looked forward to till at least the last of May.

The following are the present quotations:

DEALERS' BUYING PRICES

Pipe scrap	....	11 00
No. 2 busheling	....	13 00
Stove plate, per ton	....	18 50

Tea lead	....	0 04
Heavy lead pipe	....	0 06

Situation Little Changed On Sheets and Plates

SHEETS AND PLATES.—The situation on this commodity shows little change and sheets and plates are as scare and hard as ever to procure, it is stated. In fact, some have it that they are almost harder to get on account of the ever increasing demand with the closer proximity of Spring.

Freight movements seem to be better with the coming of warmer weather. The high rate of exchange is also a factor of higher prices and is causing considerable inconvenience. Some jobbers state that it is necessary for them to pay a premium over current prices for this reason as well as other factors mentioned previously. The prices quoted below are nominal and are as follows:

BLACK SHEETS

14 gauge	....	8 00
16 gauge	....	8 10
18-20 gauge	....	7 45
22-24 gauge	....	7 55
26 gauge	....	7 60
28 gauge	....	7 75
3-16 inch plate	....	....
¼-inch boiler plate	....	....

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

GALVANIZED SHEETS

	Premier		Apollo	
10¾ oz.	$10 00	$10 60	$10 45	$10 75
U. S. 28	9 60	10 20	9 75	10 35
U. S. 26	9 30	9 90	9 40	10 05
22 and 24	9 15	9 75	9 20	9 90
18 and 20	9 00	9 60	9 00	9 75
16	8 35	9 45	8 80	9 60
12 and 14	8 20	8 70	8 55	9 45

Higher Prices Looked For On Boiler Tubes

BOLER TUBES.—Are said to be very scarce and jobbers report very low stocks. The demand continues to be very brisk, and although no change in price has yet taken effect, higher prices may be named.

The shortage of skelp is said to be a big factor for the shortage of the finished product. One jobber stated that he did not expect much relief for maybe six months, and that he would not be surprised if the situation were to become worse. The following are the present quotations:

BOILER TUBES—	Per 100 feet Seamless	Lapweld
1 inch	$28 00	$.....
1¼ inch	30 00	.....
1½ inch	31 50	.....
1¾ inch	33 50	30 00
2 inch	32 00	28 75
2¼ inch	36 00	31 25
2½ inch	45 00	35 75
3½ inch	69 00	48 75
4 inch	96 00	62 50
3 inch	53 00	45 75
3¼ inch	.....	52 50

Pipe Wrenches Have New Prices

WRENCHES.—Both nut and pipe, of the Westcott brand have been advanced. This is said to be in line with prices on other commodities whose basic metals are iron and steel. The following are some of the new quotations:

Adjustable Nut Wrenches—	Doz.
6-inch	$11 75
8-inch	14 50
10-inch	17 40
12-inch	26 10
14-inch	34 75
Adjustable Pipe Wrenches—	**Doz.**
10-inch	18 60
14-inch	37 20

Pig Tin Erratic; Lead Still Scarce

INGOT METALS.—Tin is erratic, lead still continues scarce, the demand for spelter has improved, while antimony is rather quiet. The foreign exchange situation is not without its effects on some metals.

SPELTER.—The demand for spelter is much better, although quotations show no change, and are on a basis of 12 cents per pound.

COPPER. — Remains unchanged, although the demand is quiet. The quotation of 25 cents per pound is still current.

TIN.—The market on tin is erratic. The strengthening of the British exchange situation is having considerable effect on this commodity. The quotations on tin at present are around 73 cents per pound.

ALUMINUM. — Remains quiet, and is quoted at 35 cents per pound.

ANTIMONY.—Prices remain quiet, with no changes showing, the quotation remaining at 14 cents per pound.

LEAD. — The unexpected scarcity which has developed in the lead markets has as yet not been overcome. Stocks are low and it is difficult to secure new supplies; 12 cents per pound is the present quotation.

An Injector with features that close the sales

Morrison

Injectors that offer 40 pounds more field. A reliable, trustworthy injector that sells as well as it operates. Morrison High Pressure Injectors operate successfully on 20 lbs. low to 220 lbs. high steam pressure, from 4 to 300 horse-power, and are made in sizes from ⅜-inch to 2-inch.

These reliable injectors are but one of the popular and satisfying Morrison lines.

To sell them insures satisfied customers and a prestige for your business that maintains the respect of your customers.

TRIMO

The four good points that make TRIMO PIPE WRENCHES superior are the SPIRAL SPRING always in place, STEEL FRAMES that will not break, NUT GUARDS that protect adjustment nut and the INSERTED JAW in handle that can be replaced when worn.

The Trimo Steel Handle Pipe Wrench is also made in the 6", 8" and 10" size with narrow jaws and fine milled teeth, especially adapted for close work.

If BOILER NEVERLEAK Doesn't Stop it Nothing Else Will-

Tests after tests have proved, beyond any question, the absolute superiority of Boiler Neverleak in stopping leaks in steam and hot-water heating boilers. Fitters now realize that if Boiler Neverleak doesn't stop the leak, nothing else will!

Our $1,000,000 Guarantee is the strongest assurance we can give you that Boiler Neverleak will make good. If it doesn't do all and more than we claim for it, your money will be refunded or the goods replaced, free, at your option. You take absolutely no risk, nor does your customer.

Give Boiler Neverleak a trial. Make $50.00 in one hour's time. Write for full particulars or consult your jobber.

This is a "Q" Foot Valve

And it Just *CAN'T* Leak

There are more pump troubles caused by "leaky" valves than from all the wear and tear which occurs in the average life of a pump.

The "Q" valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that JUST CAN'T LEAK.

Made in sizes from 1 to 8-inch.

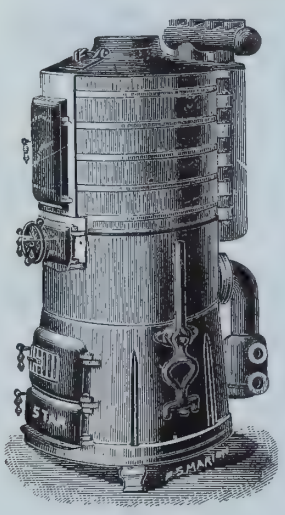
Thousands of Star Boilers in Use requiring repair Parts



It will be a long time before folks forget the coal troubles of the last few seasons.

The principal feature of the Star Boiler is that no other round hot water boiler has any coal-saving improvement not embodied in the "Star."

Then, too, while boiler installation and repair time is here, why not stock up with Star parts, for which O. Belanger has taken over the rights and is now making?

Many thousands of Star Boilers are in use requiring these repair parts hitherto unobtainable.

Write to us at once in time to catch the season's business.

We guarantee prompt deliveries.

O. BELANGER, REG'D.

Is a Straight Line the *Shortest Distance* between two points?

IT'S a strange thing to have a man admit that a thing is true—and then **act** contrary to it!

Everybody knows that "X" Boiler Liquid is the shortest route to a quick job and a good profit. Yet there are still a few fitters who on **every** leaking or cracked boiler job will go the roundabout way—dismantling, waiting for new parts, replacing—take two days for a half an hour job with "X" Boiler Liquid!

These men ought to fall in line with the 28,000 others who have adopted the scientific "X" Liquid process.

They'll soon learn that they can't afford to be without it. In an emergency it is a comfort-maker and often a life-saver to the customer. And always a profit-maker to the fitter.

When the shop is jammed full of big jobs **waiting** to be done, it's a satisfaction to do the leaking or cracked boiler jobs so quickly. Often the helper alone can do the work. "X" is simply poured into the boiler. It works automatically—finding all the leaks or cracks and making **permanent** repairs that stand 2,000 pounds pressure.

Eliminates Rust and Scale

SOME boilers are so clogged with Rust and Scale that they are working at only about 60% of their efficiency. "X" can be sold to customers for **eliminating** this Rust and Scale—and **preventing** new Rust and Scale from forming. This improves the boiler and saves coal.

Get the Genuine!

THE genuine "X" Boiler Liquid is often imitated but it can never be **duplicated.** It is a scientific, patented process—not a cement or meal. Imitations cause **foaming**—"X" **prevents** foaming.

For your own safety get the genuine "X" Boiler Liquid. See that the big "X" is on every can.

Your jobber sells it.

The VitrO Combination

Good Appearance

Plus Guaranteed Service

The VitrO is an All-One-piece tank. The absence of seams and joints renders it absolutely leak-proof.

The white enamel finish makes it a decidedly attractive fixture in the modern bath-room.

The VitrO oak and mahogany combinations are equally attractive.

This variety in design makes it easy to have this tank installed in either the modern or old-fashioned home.

WE guarantee that should a VitrO Tank at any time prove defective through either material or workmanship, a new one will be given to the plumber by the jobber from whom he purchased it. In no case will credit be given to the jobber until the defective tank is returned and examined, and when a tank is returned same must be complete with all fittings; otherwise, credit will be given based only on the value of the goods returned.

Exception

This guarantee does not apply to defects caused by carelessness or abusive wear and practice.

Note

A VitrO Tank must not be returned because of a defective fitting or cover. A defective fitting or cover will be replaced at once; however, the defective one must be returned for examination.

When tanks are broken in transit, claim must be made against the Railroad Company.

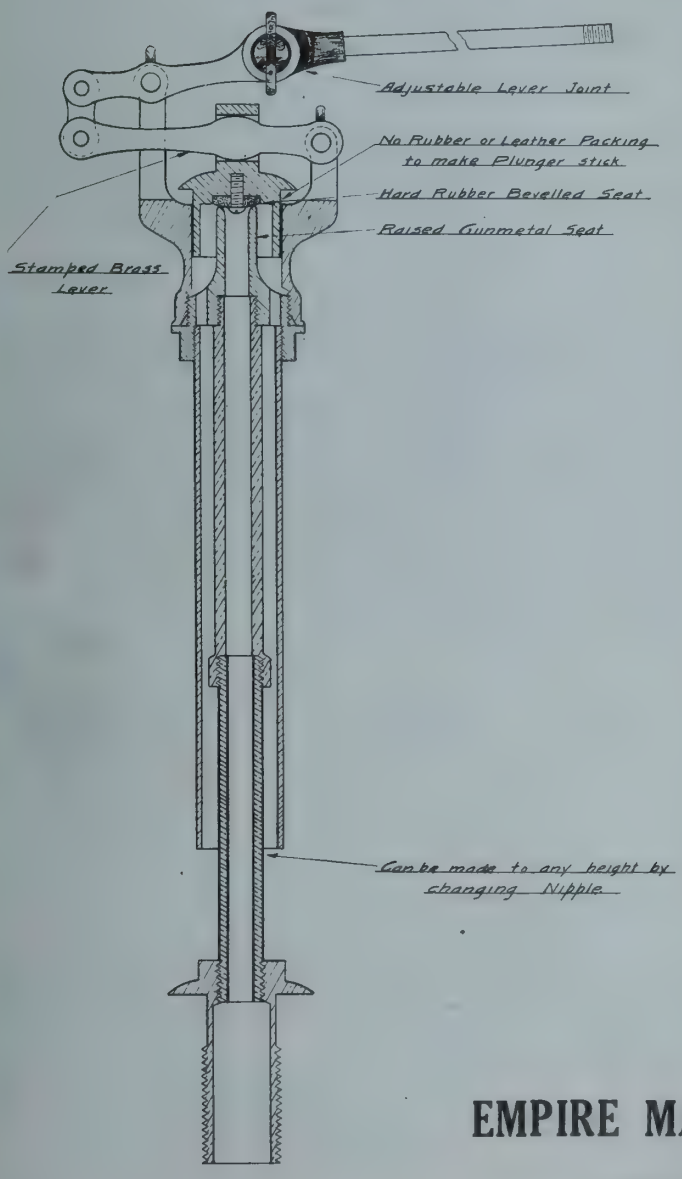
Introducing the New Empire "Victory" Ball Cock



Adjustable Lever Joint
No Rubber or Leather Packing to make Plunger stick
Hard Rubber Bevelled Seat
Raised Gunmetal Seat
Stamped Brass Lever
Can be made to any height by changing Nipple

THERE are many points in the design and construction of this new Empire fixture that make it the most efficient ever put on the market.

An admirable feature is the adjustable lever joint which allows for the quick adjustment of the float rod to meet any requirement of height or depth.

The plunger, unencumbered by rubber or leather packing, operates freely and smoothly, thus ensuring instant action.

Note the hard rubber bevelled seat, the raised gun-metal seat and the stamped brass levers.

The "Victory" Ball Cock can be adjusted to any size tank by means of different length nipples.

The best class of workmanship and the finest materials are used in its construction and every part of it is thoroughly tested before leaving our factory backed by the Empire guarantee of efficiency.

Our facilities are at your disposal. Write for our catalogue—specify your needs—we can be of infinite service to sanitary and heating engineers. Prompt delivery guaranteed.

Ventilators

To remove foul air—
To supply fresh air!

A man may live without food for a month, without water for a week—but without air only a few moments.

So—why not have

PLENTY OF FRESH AIR?

Air is one of the few necessities of life which is still cheap and plentiful.

Ventilators are universally made of Galvanized Sheets and for this work the material must be FLAT, TOUGH, WELL COATED—which is only another way of saying—

PREMIER GALVANIZED SHEETS.

K K

Fills a Recognized Requirement

What it does and why it sells so well

K. K. is a powdered, chemical compound scientifically prepared. Its purpose is to remove the objectionable stains of uric acid, etc., from the bowls of closets, traps and urinals that are made of Vitreous ware only. K. K. will keep the bowl clean and sanitary with no unpleasant labor. It will not injure bowls, pipes or plumbing connection. K. K. is free from odor, dirt, and gives off no fumes.

Its marked success and ready sale are due to its efficiency and the need of a prompt, easily applied substance to do this work without unpleasant labor for the housekeeper.

Specifications cannot command but—

WHEN the Dunham Radiator Trap is specified there is only one legitimate reason why you may hesitate to use it; its extra cost.

The measure of value of the Dunham Radiator Trap is not its first cost, but its perfect service, long life and absence of repair charges. Without superior merit, the Dunham Radiator Trap could not continue to be specified and used regardless of its extra cost. Use it always: it has been standard since 1903.

Sanitary and Heating Engineers

Attention!

NINTH ANNUAL MEETING

OF

The Ontario Society of Domestic Sanitary and Heating Engineers

will be held in

Toronto

22 COLLEGE STREET

Thursday, Friday, Saturday, April 8, 9 & 10, 1920

Provincial Plumbing and Heating Regulations,

Apprenticeship Regulations,

Improved Accounting and Bookkeeping Systems, and

Bigger Business Methods

are a few of the features to be presented on this occasion.

Every plumbing and heating operator in Ontario is invited to attend this convention, when William J. Woolley, manager of the Trade Extension Bureau of the Plumbing and Heating Industry in the United States, will assist us to place the plumbing and heating industry on the map, in Ontario.

This is the opportunity of the craft in Ontario to get together and secure for themselves suitable trade conditions through a united organization. Join the Ontario Society of Domestic Sanitary and Heating Engineers now, by sending your application to Garrett F. Frankland, Secretary, Room 303, 22 College Street, Toronto, Ontario.

Beaver Tools

Pipe Cutters and Die Stocks

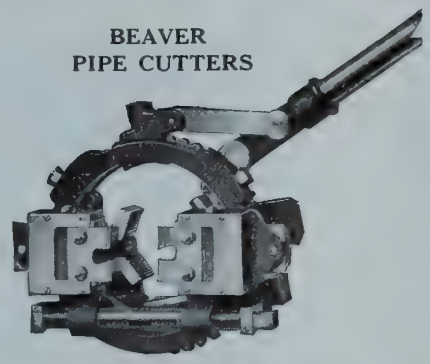
Showing burred edge of pipe cut with ordinary wheel cutter.

These square-end pipe cutters meet the demand for a real pipe cutter and have in the last five years won over 100,000 users. They come in four styles and sizes as follows:

1	5	10	15
⅛ to 1	½ to 2	2½ to 4	2½ to 6

Cuts pipe quickly without a burr, knives feed automatically, no hand feeding necessary.

BEAVER PIPE CUTTERS



Showing the clean cut edge of pipe when Beaver cutter is used. Note rings cut from pipe. No burred edge to reduce the opening.

BEAVER DIE STOCKS

They're the easy-working die stocks—efficient, quick working. The dies are narrow and receding, moving outward as the thread advances. 2-inch pipe is threaded easily with one hand. 4 to 12 inch pipe threaded by one man. Beaver dies will thread several sizes of pipe without changes.

Phillips High-Speed Drilling Machine.

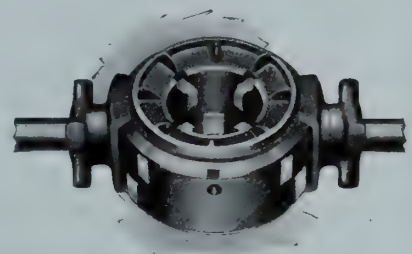
PHILLIPS SPRING HAMMERS, DRILLING MACHINE.

(Shown above) is the first and original high-speed hand-drilling machine—built to stand up to the wear and tear and hard knocks of every-day drilling.

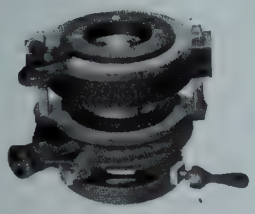
No. 6 Beaverette. Sizes ¼ to ¾ inch in changing of dies or loose bushings.

OHIO DIE STOCK (non-receding) —the "Improved Ohio," made in the following sizes—right or left—

No. 53—¼ to 1¼ inches.
No. 54—1 to 2 inches.
No. 55—½ to 2 inches.
No. 56—1¾ to 3 inches.
No. 57—1 to 3 inches.
No. 58—2¼ to 4 inches.



Improved Ohio, ½ to 2 inches

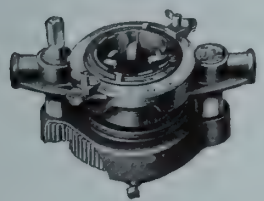


No. 25 Plain
No. 26 Ratchet
1 to 2 inch.

BEAVER JUNIOR DIE STOCKS
No. 3

(Ratchet), right or left. Made to accommodate six heads, ⅛, ¼, ⅜, ½, ¾, 1 inch. May be bought separately or in complete set.

Beaver, Jr., Ratchet, ⅛ to 1 inch.



Geared
No. 41—2½ to 4 inch.
No. 61—2½ to 6 inch.
No. 80—4½ to 8 inch.
No. 90—9 to 12 inch.

Booster Binx
His First Appearance

Sure as preaching, I am neither a preacher nor a descendant of George Washington, of truth-telling fame.

However, be that as it may, you wise fellers aren't going to catch me in any falsifications, otherwise known in plain English, as just plain "lies." Which fact accounts for my being here and being introduced by my old pal Jim.

You see, it's like this:

Both of us have been having our hand in the making of Burnham Boilers for more years than most folks have buttons (some haven't any, so 'tis said).

Just natural like, therefore, I have been guilty of ever and anon telling somebody the truth about the boilers. Told it so often; and hammered my fist so hard when I did, that first thing you know, everybody from that fresh-alec office boy Ned, up to the big chief himself, was calling me Booster.

Then, for some unknown reason, they added the name Binx. It's been explained to me since that Binx is Swedish for "man-with-hat-on-back-of-head." So I promptly accepted the name, because one could not help but have a profound respect for **one word** that meant seven. It has 3-in-1 oil beaten a mile.

But to get back to this first appearance of mine as an Ad. smith.

You see, having done so much boost talking, the big chief said to me one day, just before the big snow: "Say, Booster, put some of that boiler talk of yours down on paper. Want to use them for Ads."

Most Ads, being mostly a pack of lies, and I being so truthful, wasn't keen at first to have what I wrote associate with such company. After which, thought better of it. So here I am, being introduced first by my pal Jim and afterwards by my own true self.

And now I give you fair warning that herewith and hereafter (both) I am, every so often (maybe oftener), going to say some things on this page.

Furthermore, don't let me catch you reading any of them or our lifelong friendship will be automatically ended.

IT'S A "DAISY"

LONG SERVICE

ABSOLUTE SATISFACTION

Daisy Boiler No. 6

Those selling "Daisy" Hot Water Boilers will find that they are meeting with the needs of the most discriminating customers. The quality of these boilers is reflected partly in their strong construction, as they are built to give long service and the most value for the amount of money expended—altogether absolute satisfaction.

Fifty years on the market is sufficient to testify as to their reliability and eliminates all sales experimenting.

"Daisy" Boilers are supplied in 22 sizes that will handle from 200 to 4,000 feet of radiation.

Their reputation is sufficient to increase your own established and steadily increasing business.

GOOD-BYE—

CANADIAN BRASS GALT ONT

To the unsanitary, unclean, germ-collecting wood strip seat, and let it remain an error of the past. This date we announce to the trade and public in general our decision not to offer this fixture for sale, in fact it is off the market. Our action is supported by Health Boards and physicians throughout the Dominion and we know the Sanitary Engineer is with us in the move, in fact, scores have asked us to eliminate this construction.

A Worthy Substitute

No. 201 Round Seat and Cover, full 1¼" stock in either golden oak or imitation mahogany, fitted with heavy Bar Post Hinges, N.P., having sufficient clearance between the bar and top of bowl to allow cleansing with a rag. It looks better, is better, lasts longer, and above all is sanitary. Wood doweled front and back of the seat opening, straight grained and will not split. Same features apply to Horse Shoe and Blanco Seats.

Yours for efficiency and service

HOW TO MEET the Labor Shortage

A Method Now Being Successfully Used by Plumbers and Steamfitters

IRON CEMENT

Repairs Large Leaks

A metallic paste for sealing holes too large to be bridged by a liquid; hardens quickly, forming a permanent metallic repair. Used with Boiler Se-Ment-Ol (which seals any remaining crevices or small leaks) the result is an absolutely leak-proof repair.

TRADE MARK REG. U.S. PAT. OFF.
REPAIRS LEAKS IN HEATING SYSTEMS QUICKLY AND PERMANENTLY
FINDS THE LEAK AND FIXES IT

Now that the big shortage of labor has compelled plumbers and steamfitters to do more work with a smaller working force, new time-saving methods are being used everywhere.

Now, for example, instead of wasting valuable time searching for the leaks that develop in new installations, and tearing down the heating system to repair these leaks, leading plumbers and steamfitters simply add the necessary quantity of BOILER SE-MENT-OL to the water after firing up and cleaning out the boiler—just exactly as you have been applying it in old, leaking boilers.

BOILER SE-MENT-OL finds **all** leaks in the heating system **quickly**—repairs them **surely** and **permanently,** thus saving you hours of time and eliminating needless expense. Causes no foaming and leaves no disagreeable odor.

Sold everywhere in handy cone-topped cans that reach most awkward places without wastage or spilling.

If you are one of the few plumbers or steamfitters who has not used BOILER SE-MENT-OL, send coupon below for profitable information.

Plumbing Repairs Will Be Cash

Ten Brantford Firms Co-operate in Putting Plumbing Repairs on a Cash Basis—Result of Co-operation

IN THE olden days it was said that competition was the life of trade. The more modern saying is that co-operative competition is the life of trade. At any rate, ten Brantford, Ont., firms apparently believed in the modern version, for they have joined together in a co-operative account collecting plan, which is outlined in the accompanying reproduction of their newspaper announcement. This advertisement appeared in large space in Brantford newspapers, advising the public that owing to the abnormal conditions which have developed within the last few years the firms named have found it necessary to endeavor to put the repair business as nearly on a cash basis as possible.

Why It Is Necessary

Three splendid reasons are given in the advertisement: First—"Because we have to pay cash for wages every Saturday noon."

Second—"Because we have to pay for our goods in ten days if we want the best prices."

Third — "Because the high cost of labor and material keeps too much money tied up in our books under the old system of indefinite credit."

How They Propose to Do It

The advertisement goes on to explain how the plan will be worked out as follows:

"In order to accomplish this with the least expense and to save our customers the inconvenience of coming down town to pay the bill we will engage one man to make collection for all of us.

"Accounts will be rendered and sent to the customer as soon as the work is completed, and the collector will call for the amount a day or two later."

A diplomatic explanation precedes the signatures of the ten firms working under the new plan. It follows:

"We wish to assure our customers that their business is appreciated—and that positively no offense is intended in asking for payment when the work is completed. We would also appreciate it very much if customers will be prepared for the collector when he calls."

Following this explanation are the names of ten firms as shown in the reproduction of the advertisement.

The advertisement is a most effective one, explaining the plan in a nice practical manner which would not give offense to customers. The result of the plan will be watched with interest.

PLUMBING REPAIRS

Will Be Cash!

OWING to the abnormal conditions which have developed within the last few years, we, the undersigned firms engaged in the plumbing and heating business, have found it necessary to endeavor to put our repair business, as nearly on a cash basis as possible.

Why It is Necessary

Because we have to pay cash for wages every Saturday noon.

• • •

Because we have to pay for our goods in ten days if we want the best price.

• • •

Because the high cost of labor and material keeps too much money tied up in our books under the old system of indefinite credit.

How We Propose to Do it

In order to accomplish this with the least expense and to save our customers the inconvenience of coming down town to pay the bill we will engage one man to make collections for all of us.

• • •

Accounts will be rendered and sent to the customer as soon as the work is completed, and the collector will call for the amount a day or two later.

We wish to assure our customers that their business is appreciated—and that positively no offense is intended in asking for payment when the work is completed. We would also appreciate it very much if customers will be prepared for the collector when he calls.

Part of display room of Brousseau & Frere, Quebec, Que.

Right on the Job---Get Business

Quebec Firm of Brousseau & Frere Began With Two Hundred Dollars and Determination to Succeed—Last Year Did Over One Hundred Thousand Annual Business

THE age of the old-time store has long since gone into discard. The "visitor" may come in to speak in friendly terms with the proprietor, but he does not have the old-time opportunity of recalling the yarns of his youthful days, relieving himself betimes of an over accumulation of juicy nectars into a remote nail keg; he makes his friendly call, rather, in a modern and well-appointed office, where the owner, surrounded by modern equipment, is able and glad to discuss with him the problems of a go-forward, busy world.

Gaudiose Brousseau and his brother, Edgar, have passed down the various avenues of business growth, from the very smallest of beginnings to the time when each can and does occupy his own well-appointed office, each engage in his own chosen department affairs, and the direction of which activities are carried forward with smoothness and ultimate profit. As with the great business institutions of to-day a proper division of duties makes for efficiency, and the development and forward strides made by Brousseau and Frere, located for the past eighteen years at 320-322 Rue St. Paul, Palais, Quebec, is a tribute, among other things, to the wisdom of such division of duties.

Initial Capital $200

In the year 1902 the Brousseau Freres, talking matters over, decided on the business venture which has developed so greatly. At that time money was not easily obtainable, but the hope which springs eternal in a real man's breast prevailed, and with the $200 cash that had been saved the present premises—rather a very small portion of the property, was fitted up for the purpose of retailing hardware, gas fitting, tinsmithing, plumbing, etc. "One hundred and fifty dollars of that amount," said Mr. E. G. Brousseau to SANITARY ENGINEER, "was spent for altering the old house which he secured at 320 St. Paul Street, and the balance was spent for stock. When we had the store opened we were in debt $50, and even that was quite an amount in those days.

"The first store—opened on the ground floor of the old house, was a small affair, in fact so small that when the stove and the necessary stove pipe for carrying off the smoke were in place, and the small stock was installed, there was not an inch of waste room. The size of this store was 20 by 20 feet.

"To accommodate the goods we used old cigar boxes, and these were sampled the best we could, in those days. Above, we had a workshop 12 by 18 feet, and this answered us very well until we had a shop staff of twelve men. Later, this was vacated that a proper fitter's shop might be afforded to give room for the larger and more important work which was contracted for and where new machinery could be installed."

Important Mile Posts

With the modest beginning just described the first year in business was found to reveal a turnover of $6,000. That was eighteen years ago, and while not a large aggregate of sales were so represented, that amount was more, in

those days of beginning, than when such milestones had been passed. The second year saw a relatively large increase in the turnover, $10,000 worth of business having been transacted. The third year business was excellent, and a momentum had been attained, the sales barometer registering $34,000. This was outdistanced the following year, and relatively large increases came, year after year, until last year more than $100,000 business was done. The year just entered bids fair to outdistance anything yet accomplished.

Just how much of this progress is maintained, and records broken, cannot better be illustrated than by repeating the remark of Mr. E. G. Brousseau: "I am right on the job, when I learn of a contract, until we get it."

Go, Talk It Over

This was aptly illustrated when he recalled a recent occasion on which it appeared certain they had lost out on a contract for a heating job, located some distance from Quebec. Tenders had been called for, and, among others, the firm had put in a bid. In due time, word was received that the contract had been let. "I was disappointed, and took the next train to see the party," said Mr. Brousseau. "After I had reached the nearest station I had to take the stage, and when I got to the place, I had a long talk with the man who wanted the work done. 'Yes, so-and-so has the contract,' he said. 'Did he see the plans?' I asked. 'No, but he is coming down here.'

"I then went into the matter more fully, and finally convinced this party that the work could not be done for the price that had been given. In the end, I came away with the contract, and, strange to say, when I got back to the station the next day, who should I meet but the man who thought he had the contract. I knew him, and explained the whole matter to him, outlining how he could not have done the work for the bid he had put in. If it is a big job that is to be let, I get right out after it myself."

"Another thing; we always make a plan for all the work we do, so that we know every fitting that is required." The element of "chance" is thus eliminated, and in contract work particularly, this is the only plan to follow. Of course, Mr. Brousseau has theoretical, as well as practical training, having qualified many years ago in mechanical drawing, and taken his standing. This proved to be the very best of training, in that he was able to apply, as he studied, the very plans on which he was, from month to month, working. In the earlier days, when he had no foreman in his shop, he was able to do all this work himself; now, when he has foremen, he can continue to check over their work, and the element of chance and haphazard may therefore be eliminated.

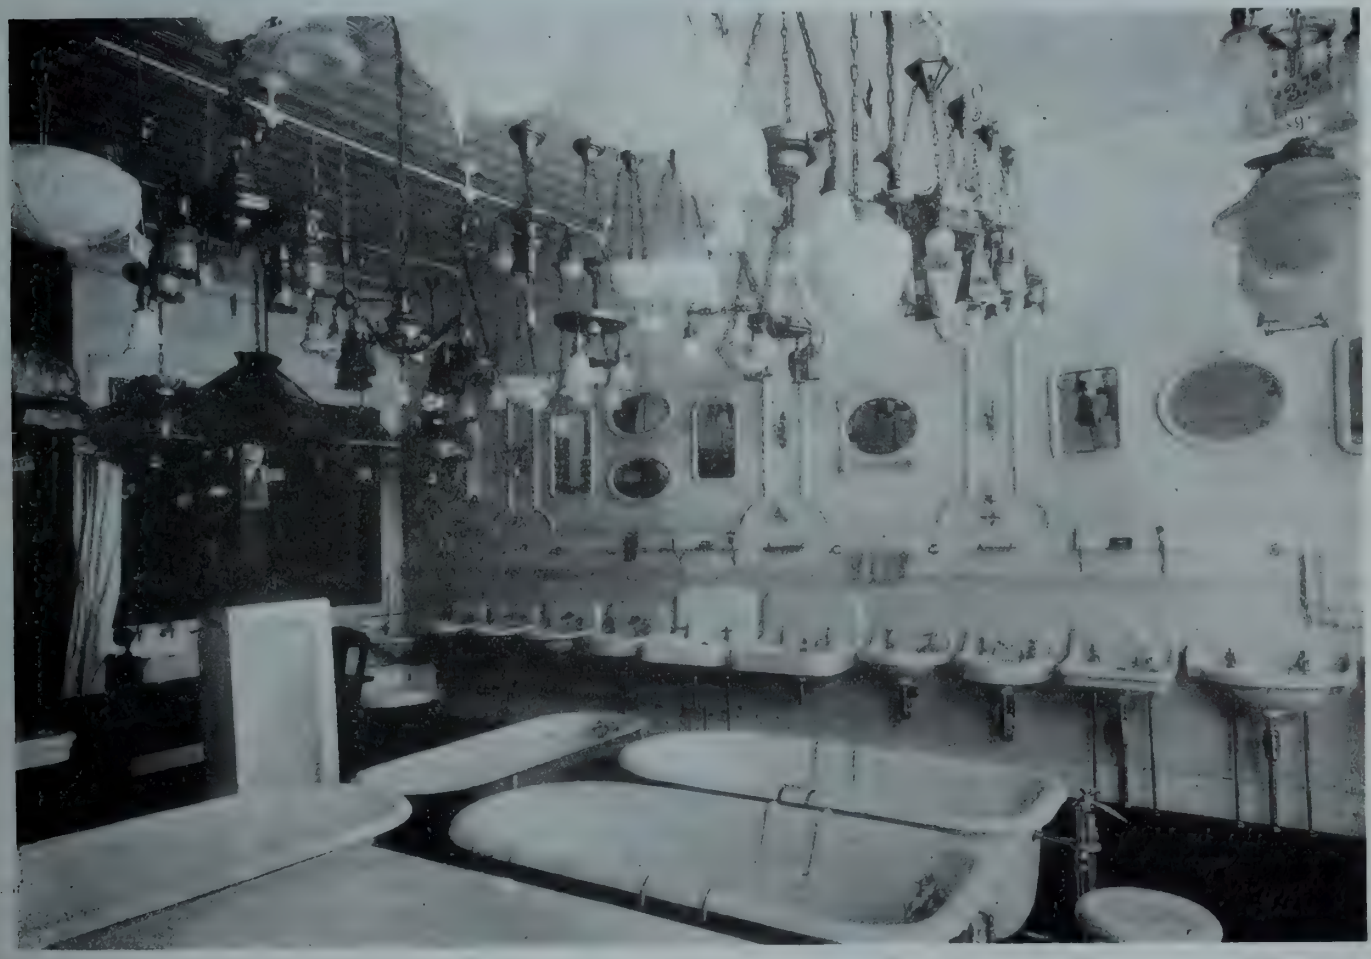
A New Development

Recently—to be explicit, during 1919, the heating, plumbing and electrical departments, having outgrown the crowded quarters into which they had so long been squeezed, were provided a new abode, and this was made possible by the acquirement of what had, for many years, served as a bar-room. It adjoined the Brousseau store, and was thus ideally located for the new department it had been decided to create, or rather expand. Tearing the old fixtures out of this place, it was thoroughly renovated, a new hardwood floor put in, and metal ceiling and walls, together with a patent "metile" wainscoting, the whole effect, when tinted, making a decidedly bright and suitable display room of about 20 by 20 feet, with additional room for three offices, one of these general, and two private.

The new display store was occupied in the early summer of 1919. Sales have increased, assuring the firm that does pay to show goods in so attractive a manner as to almost decide the buyer to make a purchase. This has many times been proven, since the opening of the new department.

All Fixtures Connected

It will be noted, from the accompanying photographs, that a most varied and excellent showing of electrical fixtures is carried in stock for immediate sale. As a matter of fact, in all, there are about



Another view in display rooms of Brousseau & Frere, Quebec, Que.

125 samples. These are suspended from regular electric wire conduits. That the effect to be secured from a given fixture may be indicated to the prospective buyer, a switchboard with ten controls or separate switches, and a master switch at the top, affords salesmen the required means of fully outlining the advantages, through practical demonstration, of a given fixture.

Fifteen styles of electric domes are shown—a good variety indeed. From the plainest wall bracket, to the most elaborate dome for living room or dining room, prices run all the way from $2 to $100 each.

All fixtures are ticketed, and marked in plain figures. For instance, fixtures, with glassware, are priced according to the pattern of shade desired. Extra glassware is carried in stock, and may be bought separately if desired. This surplus stock is carried upstairs—above the hardware department. Six rows are suspended from the ceiling, and the effects are very excellent, particularly so at night. All fixtures are sold wired, but they are not installed unless an extra charge is made. That the buyer may be satisfied in the kind of glassware wanted, different shades are used, and on a given fixture quoted accordingly.

Particular People May Choose

The showing of plumbing fixtures, as is so clearly indicated in the accompanying photos, is such that even the most particular person may make a selection to please his fancy. From the 25 cent tumbler holder to one costing $1.50 or more, sponge baskets from 60 cents to $2.50, nickelled and glass towel bars from 25 cents to $7 each, there is variety, and to spare.

Of cast iron enamelled basins there is a fine display. Fifteen samples are attached to the wall, and fitted with nickelled traps, they show up to the best possible advantage. From $19.75 each to $100, even the King's taste might well be gratified. Baths from $22 each to $200, in five and five-and-a-half foot lengths, are regularly stocked and ready for installation. The display of mirrors is a fine one, 25 designs and sizes being placed on the walls, and ranging from $3.25 to $15 each.

Slop sinks, single and double, wash tubs in all cast enamel, together with a barber's centre lavatory, with latest heavily-plated nickelled trimmings, are also displayed. With artificial palms interspersed here and there, the whole effect is quite as excellent as it could well be made, and facing two full sheets of plate glass, the amount of light secured makes this department very bright and attractive.

Three Good Offices

Special attention was given the matter of office accommodation, a general office for the bookkeeping and stenographic department being immediately to the rear of the display room at the right side, and two private offices—one on either side of the central division. One of these may be utilized for laying out plans, and it is well to have such arrangement; it is always a pleasure not to be cramped for office accommodation. From Mr. Brousseau's private office, he may, at will, communicate by private telephone with any department of the store or shop, eight separate inter-office phones being available. He may also get long-distance connection from here.

It is worthy of note that credits are closely watched, and Mr. Brousseau, while stating that they had necessarily to sustain some losses, the aggregate of these, as related to turnover, is very small.

View of one of the entrances to Brousseau & Frere, Quebec.

Uses Modern Equipment

In the march of twentieth century development, the plumber, steamfitter, and the electrician are carried along on a plane of advancement which would have frightened even our fathers, ten years ago, to say nothing of the maze it would have thrown around our grandfathers.

Recently, a new pipe cutting and threading machine was installed in the Brousseau and Frere workshop. This is of the power type, and cost many hundreds of dollars. It is but an indication of the march of events and this machine is but one of the many labor-saving devices that have been installed here, within the last few years.

Gasoline power, in a sense, has given way to electric, and an agency was recently taken by the firm for a rural lighting plant. Mr. Brousseau stated that they would probably use this plant to light the workshop and run the power cutting and threading machine. Thus, they can make use of the plant, while having it always ready for demonstrating to farmer customers who may be interested in lighting their own country premises.

Generous-sized bins are afforded for the stocking of all kinds and sizes of pipe fittings, while the pipe stock is carried in a separate warehouse. Seven hundred bins are employed to hold the fittings. In all fifty-four men are employed, and these are directed by several foremen.

Hardware Well Displayed

While the store is narrow, the best advantage is taken of the length of the store to show all lines of hardware which are sold. The display windows are narrow, but these are cleaned frequently, and the goods marked in plain figures. Tickets are prepared by one of the salesmen, and they are used generously, on the various goods shown.

Flashlights have grown greatly in demand. These are sold in both a retail and a jobbing way. A full window of these was being shown when the writer called, and some novel features had been worked out by the window dresser, depicting a lighthouse scene to enlist the interest of pedestrians. Electrical goods, as already explained, are carried in the special department before outlined.

Saskatchewan Convention Report

Second Annual Convention of Saskatchewan Society of Sanitary and Heating Engineers Held at Saskatoon

THE second annual convention of the Saskatchewan Society of Sanitary and Heating Engineers was opened with an address of welcome by President N. B. Roantree, of Swift Current, Sask., who welcomed the members and touched briefly on the work done durng the past year. Mr. Roantree asked the members not to expect too much from a baby organization scarcely a year old, but he assured them that the child's lungs were good and would soon make it heard and that the members would all be proud to be associated one with the other in the years to come.

When the meeting was called to order the following firms were represented:

Roantree & O'Neil, Swift Current; Hutchinson & Morrison, Swift Current; Northern Plumbing Co., Saskatoon;

N. B. ROANTREE

Swift Current, Sask., retiring President Saskatchewan Society of Sanitary and Heating Engineers.

Nutana Plumbing Co., Saskatoon; H. D. Wheeler, Saskatoon; Beaton & Brady, Saskatoon; R. G. Godfrey, Saskatoon; James Brandon, Saskatoon; Wm. McAdam, Saskatoon; Ross & Parnell, Saskatoon; Cornish & Co., Saskatoon; Wm. Gibson, Saskatoon; A. I. Kracenski, Melfort; W. L. Powers, Rosetown; Alexander & Baird, Moose Jaw; Moose Jaw Hardware Co., Moose Jaw; T. P. Baylis, Moose Jaw; J. E. Yates Co., Brandon, Man.; A. L. McKay, Semans; S. J. Kirkland, Wilkie; A. Rankin, Keppel; D. B. Bryant, Yorkton; Yorkton Plum. & Heat. Co., Yorkton; Paulin & Swayze, Regina; James Adam, Regina; Vagg, Wilson & Co., Regina; Potts & Smith, Regina; Regina Plum. & Heat. Co., Regina.

Secretary-Treasurer's Report

Report of the secretary-treasurer for Engineers:the year ending March 2, 1920:

Mr. President and Members of the Saskatchewan Society of Sanitary and Heating Engineers:

Gentlemen: I hereby submit the following report as to standing and financial condition of this society:

Total membership 29

Receipts and Expenditures

Cash for Dues rec., Feb. 12, 1919.....	$220.00
Cash for Dues since Feb. 12, 1919.....	70.00
	$290.00
Expenditures	$132.00
Balance on hand	158.00
	$290.00
Price Books, 20 books at $12.....	$240.00
Expenditure in connection with same..	119.50
Balance on hand	120.00
	$240.00
Balance Membership	$158.00
Balance Price Books	120.50
Total Cash on hand	$278.50

Amount of mail handled was 250 pieces; 190 out-going 60 having been received.

In conclusion I wish to thank each and every member for their patience and kindness, also the Regina Society for their valuable assistance.

Respectfully submitted,

JAMES ADAM,
Secretary-Treasurer.

It was moved by J. Brandon, seconded by T. J. Alexander, that the secretary-treasurer's report be received and referred to Audit Committee, to be appointed by the president. Carried.

President appointed C. A. Green and C. A. Clarke.

Reading minutes. Minutes of first convention, Feb. 12-13, 1919, were read, and on motion by N. Beaton, seconded by T. Baylis, same were declared adopted as read.

Admitting New Members

There being ten new firms present for admission to membership, they were approved by executive. It was moved by E. P. Paulin, seconded by A. Rankin, that they be received as members of the society. Carried.

Reading correspondence. Moved by T. J. Alexander, seconded by J. Brandon, that correspondence read be received and filed. Carried.

Moved by E. P. Paulin, seconded by T. J. Alexander, that price book balance be transferred to general account. Carried.

Moved by N. Beaton, seconded by J. Brandon, that membership be continued in Dominion Society, Sanitary and Heating Engineers. Carried.

Moved by J. Brandon, seconded by Kracenski, that matter of sending delegate to Dominion S. D. S. & H. Engineers be left with executive. Carried.

Moved by J. Brandon, seconded by T. Baylis, that secretary write Dominion Society as to whether it is customary or possible for each member of our society to receive copy of Dominion Society convention. Carried.

Moved by T. J. Alexander, seconded by A. I. Kracenski, that secretary inform Edmonton Master Plumbers' Association that we will take up the subject of their letter with the wholesalers. Carried.

Nomination of officers.

Moved by C. A. Green, seconded by S. Robertson, that nomination committee be appointed by chairman.

E. P. Paulin, C. A. Clarke, N. Beaton appointed.

Auditors' Report

We, your audit committee, beg to report that we have carefully examined

T. J. ALEXANDER

Moose Jaw, Sask., who as announced in last issue was elected President of Saskatchewan Society of Sanitary and Heating Engineers.

the books of secretary-treasurer and find them correct.

(Signed) C. A. GREEN.
C. A. CLARKE.

Moved by C. A. Green, seconded by C. A. Clarke, that secretary-treasurer's report be adopted and a vote of thanks given to him for the efficient manner in which the books had been handled. Carried.

Nomination Committee

We, your nomination committee, suggest the following names:

President, N. B. Roantree, T. J. Alexander; vice-president, J. Brandon;

secretary-treasurer, T. P. Baylis, J. Adam.

No further nominations, a ballot was taken and resulted in the election of the following officers:

President, T. J. Alexander; vice-president James Brandon; secretary-treasurer, James Adam.

Executive committee, E. P. Paulin, C. A. Green, J. E. Yates, G. Walker, A. L. McKay. Moved by A. I. Kracenski and seconded by R. G. Godfrey that the above constitute the executive committee. Carried.

Moved by J. Brandon, seconded by T. J. Alexander, that secretary-treasurer and E. P. Paulin sign cheques for the ensuing year. Carried.

Moved by E. P. Paulin, seconded by J. Brandon, that executive set amount of remuneration for secretary-treasurer. Carried.

Moose Jaw Invitation Accepted

T. J. Alexander, on behalf of Moose Jaw Society Sanitary and Heating Engineers, invited the association to hold next convention in Moose Jaw. Moved by S. Robertson, seconded by Bob Vagg, that we accept the invitation of Moose Jaw Society. Carried.

Moved by J. E.Yates, seconded by C. A. Clarke, that secretary procure membership certificates. Carried.

Moved by E. P. Palin, seconded by J. E. Yates, that certificates be issued in name of firms represented in our association.

Moved by S. Robertson, seconded by T. J. Alexander, that representatives of wholesale houses be permitted to attend the p. m. session. Motion lost.

Relation of sub-contractor to general contractor. Discussion by T. J. Alexander, S. Robertson, J. Brandon, N. Beaton, C. A. Green. Moved by F. Cornish, seconded by E. P. Paulin, that we take up separate contracts with Provincial Architects' Association, and, if necessary, president and secretary-treasurer attend Provincial Architects' convention and place this subject before that body. Carried.

Address on Business Methods

The address on business methods, pricing and collections, by C. A. Green, proved an interesting address and dealt with overhead expense, which averaged 17 per cent. Leakages, such as material left on work, lost and broken tools, checking invoices, etc. Time and material sheets should be o.k'd by customer or janitor and checked before being sent to customer. Also advised having an up-to-date set of books started by competent accountant. A good discussion followed the address.

Moved by C. A. Green seconded by Mr. Morrison, that the secretary write Dominion Society re Order-in-Council relating to plumbing and heating supplies as necessities of life and calling for persons engaged in that business to make returns of cost and resale prices. Carried.

Construction of Buildings

In his address on the construction of buildings in their relation to the heating contractor, J. E. Yates brought out many important defects in construction and the remedies, and illustrated same on blackboard.

Report Committee on Price Book

The committee recommended that price book be continued and have cost and resale price, and that we engage someone qualified to handle this and have it revised monthly. Moved by Paulin, seconded by Beaton, that report of committee be adopted. Moved by Paulin, seconded by Baylis, that price book remuneration be handled by executive. Moved by Braton, seconded by McAdam, vote of thanks to the members of Regina society for the efficient manner in which they had compiled price book. Carried.

To Affiliate With Retail Merchants' Association

F. E. Raymond, Saskatoon, Sask., on behalf of Retail Merchants' Association, addressed the association on benefits which their association would be to our members if a trade section was formed and affiliated with the Provincial Retail Merchants' Association. Moved by Roantree, seconded by Kracenski that we affiliate with the Retail Merchants' Association as a trade section. Carried.

Contracts and Credits

The address by Mr. N. Beaton on contracts and credits appears elsewhere in this issue of "Sanitary Engineer."

Septic Tanks

The discussion on septic tanks, introduced by E. P. Paulin, created considerable discussion. Remarks by various speakers brought out the facts that while in a good many cases where they had frost trouble, it was because tank or field was not covered, but when thawed and covered they worked o.k.

It was pointed out that tanks should be constructed by competent men and not left to owner who may not have ability to do so. It was moved by Mr. Pauline, seconded by Mr. Parnell, that the association appoint an inspector to work in conjunction with Provincial inspector upon his request and notify department of the association's action.

Mr. Wilson, of Anthes Foundry Co., gave a short talk on septic tank literature his firm was sending to farmers. Mr. Taylor, on behalf of Mr. Whiteford, expressed his regrets at not being able to be present.

Inspection Not Improved

G. G. Taylor, Saskatoon sanitary inspector, delivered an address, bringing out the need of thorough inspection and stating that inspection had not improved much in the past year, particularly in rural districts; also that returned soldiers' vocational school had requested the Saskatoon City Council to place a practical returned man with the sanitary inspector for six months' course, which was done.

Inspections

In his address, T. Watson, Provincial sanitary inspector, dealt with requests from the society and told of the progress which was being made, also that the Government was intending to inspect septic tank installations when weather was favorable and invited the association to send a representative along with them. Remarks by Kracenski re lack of inspection in his district was answered by Mr. Watson who said that there were only 185 permits granted, of which 135 were inspected, and he questioned if there were not double that amount of work done and if permits were not taken out the fault lay with the master plumber.

Wholesale Houses and Methods

The balance of session was devoted to wholesale houses and methods. The subject was introduced by C. A. Green, who refered to reason they thought it necessary to draw out a plan for persons not engaged in the trade, also reason for change of discount. In reply, Mr. Taylor, of Gurney Foundry Co., said it was difficult to say who should get any stated discount. He thought it better to have one discount only and let firms look after their percentage of profit. Their policy was to quote 25 per cent. to outsiders, but they discouraged this practice as much as possible. Uniform price from wholesalers to trade open to all. Remarks along these lines were made by Messrs. McKee, Browne, Hepburn, Woodrow. Mr. Woodrow stated his firm would be glad to have any complaints referred direct to them.

John Stevens, of John Stevens Company, said they had always tried to sell to legitimate trade but often found that they had to sell to hardware and tinsmiths who required pipe, valves, etc. He naturally supposed that if material sold to such firms the plumbing regulations would compel them to engage competent men. Cited Eaton's as a comparison. His company did not care to quote outside trade but when they do they protected the trade as far as possible. Jobbers, as a whole preferred to do business with the trade.

Harry Dart, "The Smooth Guy," said he was pleased to be with the boys and thought that this was the place to air grievances and bring jobbers and trade together.

Alex. Brown, known as Spit-Fire Brown, said hesaw no reason why jobbers Brown, said he saw no reason why jobbers in unison with members of the society, that they were dropping the practice of drawing plans and there would not be much chance for complaints in future. Also he thought that the trade did not have a clean bill of health when they tried to get another 5 per cent. off by saying the other fellow was giving it, etc.

G. A. Hawley, of Engineers and Plumbers' Supply Company, said he was a new member and strange to the trade but he never took a back seat yet. "Hawley is my name," said he. "look me over."

Mr. Armstrong, of J. H. Ashdown Co., stated that the legitimate trade has been hard to define but policy of his firm is to sell well to that trade. Similar remarks were made by Mr. Rees and Mr. Berlon.

CONTRACTS AND CREDITS

Financial End of Business of Equal Importance to Mechanical Details—Precautions Should be Taken in Entering Into Agreements and Contracts

Address delivered by Neil Beaton, of Beaton & Brady, Heating and Sanitary Engineers, Saskatoon, Sask., before Saskatchewan Association Convention, held at Saskatoon.

"I FEEL that this subject of 'Contracts and Credits,' which I will attempt to discuss in my feeble way, is worthy of the attention of a master mind, trained in the intricacies of commercial laws and practices. Unfortunately, my training has been largely along the mechanical end of our chosen profession.

"I believe that I may state without any fear of successful contradiction that the financial end of this business is of equal, if not greater, importance than the purely mechanical details. While we who have graduated from the ranks of the great army of mechanics have had a thorough training in the theory and practice of the trade, yet we lack the commercial and business training so essential to the successful pursuit of our calling.

"My purpose is not to enter into a long discourse on this subject before this assembly, among whom are many that have behind them years of experience, some maybe not altogether happy ones, but enough at least to enable them to avoid the pitfalls that unfailingly appear in the path of the untrained beginner.

"I wish to call your attention for a moment to a practice that is sadly prevalent among the craft, that is, of entering into agreements and contracts without taking the precaution of first ascertaining the financial status of the other party to the contract.

"I maintain we may employ all our knowledge in estimating sanely and accurately, display ability in buying our material and ingenuity in installing it, and yet if our contract is not bombproof, and we are unable to collect the agreed remuneration, we are on the road to bankruptcy.

"My experience has been that the vast majority of men in commercial life are inherently honest. Their inability to pay may be traced to any one of several causes: With an owner starting a job without sufficient capital to carry him through; failure to obtain a loan; death may come—any one of which will necessitate some one going without his money, and that one is inevitably the man that installed the plumbing and heating. Who of us has not had unhappy experiences with the lien laws, or has not had the experience of being able to collect all the payments as they came due but the last one? Yet, that is the important one. You have paid all your labor and material bills; the last payment is your profit; you go unpaid, and as sure and death and taaxes, you cannot hope to continue in business without profit. Many seemingly impossible tasks have been completed, but this one awaits a wonder worker.

"It, therefore, behooves us to scrutinize with infinite care any and all contracts presented for our signature. The contract form used by the Builders' Exchange in this city is good as far as it goes, but it does not give the contractor the protection he should have. Our local organization, therefore, discussed the matter of contract forms this past year, and finally appointed a committee to deal with the matter. To C. A. Green, our able secretary, I give the credit of fathering the idea, which we eventually had set in form by a local solicitor, who assured us that if we can get the contracting parties' signatures on this agreement we have no chance to lose. I have here a copy of this agreement, which you may peruse at your leisure.

"To give a brief summary of its contents, I may say that the chief and outstanding feature is the fact that it leaves title and ownership of plumbing fixtures, pipes, radiators, boilers, etc., in the possession of the contractor until paid for, with the right to possess and remove same, to sell same, either at auction or private sale, to satisfy his claim in whole or in part, and this agreement constitutes a claim in the nature of a lien note, which may be registered as Schedule A.

"In Schedule B the agreement takes care of the labor at a stated sum, for which a lien may be filed under the Mechanics Lien Act.

"We believe with this agreement that the difficulty of collecting the last payment will be overcome.

"In closing, gentlemen, I wish to impress on you the necessity of using discretion in extending credit, prompt rendering of bills when due, a sustained and earnest effort in your collections, as the nature of our business precludes the possibility of collecting in advance with almost insurmountable obstacles in repossessing goods after they have passed out of your control. I thank you."

IT CAME IN HANDY

When the representative of the Health Board called to remove the quarantine sign which had been put on the house to warn people of influenza there, he was met by the lady-of-the-house, a negro mammy.

"Doan yo' take that down—they ain't been no collectahs roun' heah sence that went up."

RIGHT ON THE JOB—GET BUSINESS

Continued from page 18

In all, ten men are employed in the hardware end of the business, several of these being in the office under the direction of Mr. G. Brousseau, who also has the hardware department under his direct care. Window displays are altered, and the arrangement is frequently changed—generally once a week. This being under the direct care of one man, he is able to arrange displays ahead of time, and carry on his display work on a certain day of the week. Surplus stocks are carried on the floors above.

More Improvements To Come

Plans have already been laid for excavating and providing a full-sized basement. This, when completed, will afford an additional storage space for needed stock, of seventy feet length and twenty-four width. The depth will be seven feet, affording a good clearance.

Among the important contracts secured last year was that of the heating and plumbing, as well as other work for the new St. Patrick's School at Quebec, and which work has just been finished at a cost of $35,000. This afforded a large staff of men many months' work, while other contracts for heating and plumbing in churches, halls, business blocks, etc., are secured, both in Quebec and in distant towns and cities.

To accommodate heavy goods being moved from the basement and ground floors, an elevator is being installed at a cost of $1,000. This spring an auto truck of two-ton capacity will be purchased to transport the heavy materials necessary to complete work which has been contracted for.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

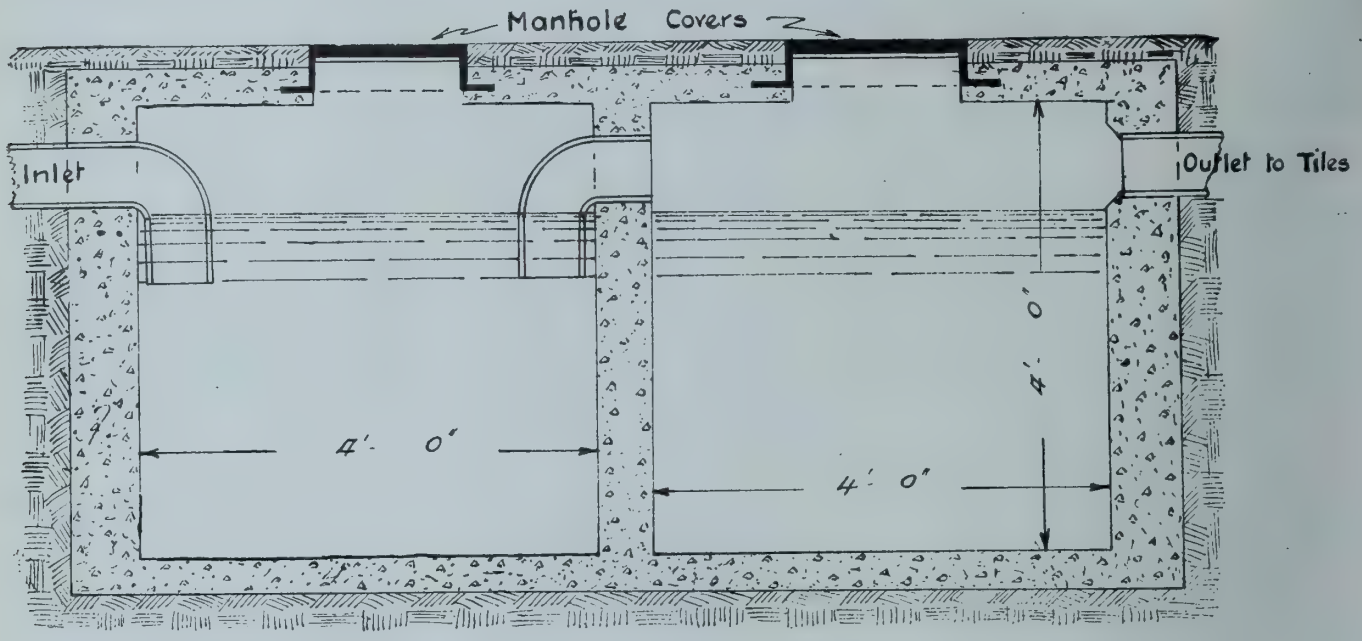

FIG 7.

Fig. 7 shows the section of a very simple double chamber septic tank, which was one of the first double chamber tanks installed. The sketch fully explains the construction and working operations of same, which have many defective points and cannot be classed as a modern septic tank owing to the rapid stride of improvements made in the design of septic tanks. This type of tank can be utilized in level ground, but with the exception of most of the sludge being retained in the first compartment it is very little better in design than a single chamber septic tank and possesses most of the objections already described in single tank construction.

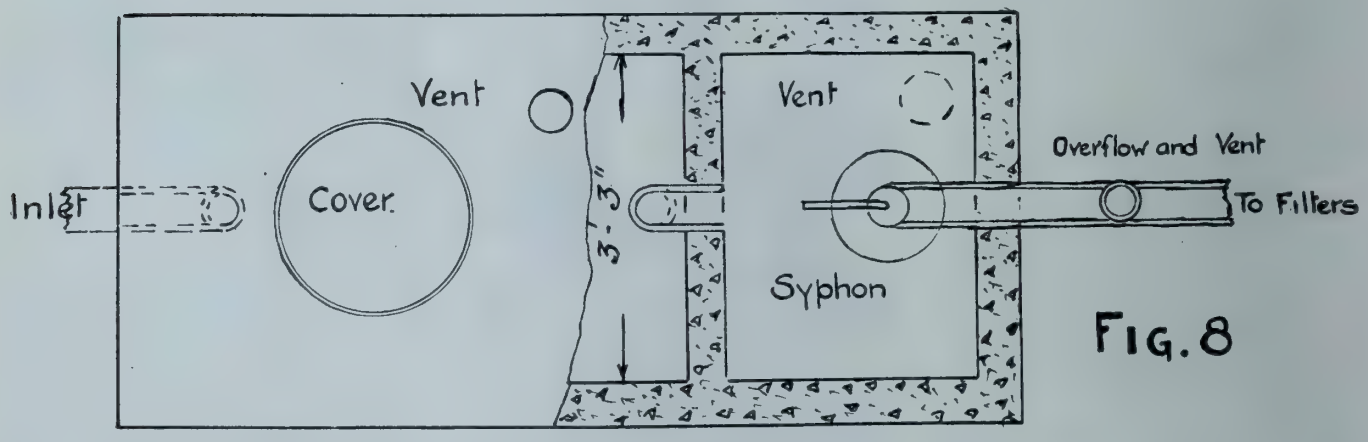

FIG. 8

Figs. 8 and 9 show the plan and section of a more modern and better designed double chamber septic tank. The sewage enters the liquefying chamber where the solids in the sewage are deposited and liquefied, whilst the clear liquid passes into the second chamber by means of a central pipe, as shown in sketch, which is carried below the surface of the liquid and scum level in order to make a water seal between the two tank connections. In the second chamber is installed an automatic syphon connected to the tile

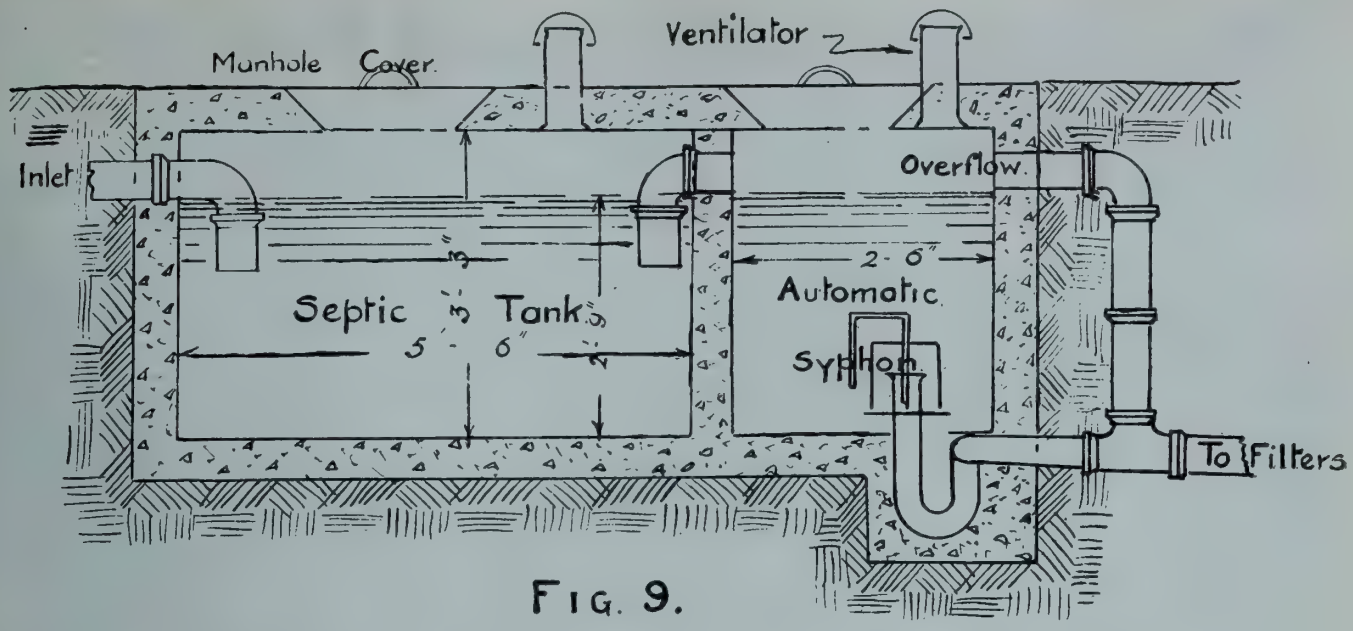

FIG. 9.

drains feeding the filtration area. An overflow connection is installed and connected as shown in sketch with the tile pipes. Both chambers should be ventilated as shown in sketches and cast iron inspection covers should be placed in the centre of each chamber.

SASKATCHEWAN CONVENTION

Continued from page 20

In a reply by Mr. Roantree to the wholesalers, he said that last year complaints had been made against all jobbers. He thought association should send list of members to wholesalers and get a return list of whom they consider legitimate trade.

Mr. Taylor stated that they had no control of actions of persons stating they were tradesmen; twenty-five years ago only hardwaremen in the business who employed plumbers and fitters were permitted to install work.

Mr. Stevens: "We should not worry if we are told by prospective customer that he has a price about 10 per cent. better. Take the attitude of friend Yates from Brandon and let him place the business with the other fellow and not meet the cut price. They cannot continue to do business long on too close a margin." Thus ended the discussion.

Secretary Adam reported a long distance message from D. L. Hoover, North Battleford, saying sickness in family prevented his attendance. Moved by Mr. Cornish, seconded by Mr. Roantree, that secretary send letter of sympathy to Mr. Hoover. Carried.

Adjourned. Next convention to be held at Moose Jaw, March, 1921. Date to be announced later.

Through the kindness of the Saskatoon Society and the wholesale houses, the members were royally entertained, consisting of a theatre party to the opera "Arcadians," where the president and Jimmy Yates found the well of truth. Humidifiers were operating satisfactorily; the grand finale taking place in the hotel Baldwin, where a splendid banquet was served, the Mayor and Architects being guests.

Toast list: Tost master, J. Brandon.

Toasts: "The King", His Worship the Mayor; "Our Visitors," Chas. A. Green and John Stevens; "Visiting Members," Neil Beaton and Tom Alexander; "Our Provincial Association," E. P. Paulin and N. B. Roantree.

The entertainment was provided by local talent and the party broke up singly "Till We Meet Again."

DEATH OF WM. GENEREAUX

Following an illness extending over some months the death occurred at London, Ont., of William Genereaux, who, for the past thirty-five years, had been engaged in the plumbing business. He was 57 years old.

—Cluff in the Rochester Herald.

Luring Them On

Ventilation and Exhaust Systems

Sanitation and Ventilation—Definition of Ventilation System—Exhaust System—Types of Systems—Unlimited Possibilities

Address delivered by C. W. Keniston, Sanitary Engineer, Industrial Commission of Wisconsin, at recent convention held at Milwaukee.

MY friends, this is a subject which is opportune and vital to the interests of the public and industrial health. The success of any movement or campaign depends on the cooperative spirit and punch of each individual, and when I received your valued invitation to address you at this convention, I thought that the desire to co-operate in this general movement for industrial health lived within your organization. But when I saw the definition of your watchword on this program, "Everybody is dependent on somebody for something" and "Everybody must work with somebody to secure the best results," then I knew what I wanted to talk to you about, and so I will tell you my impressions of how you can best help and be helped by the work on ventilation and exhaust.

Beginnings of Industrial Health Movement

The present industrial health movement began in England with the beginning of the use of machinery, a little more than one hundred years ago. The movement dealt first with children, then women, and now includes all industries and workers. The industrial health campaign is now recognized in our state laws by the occupational disease amendment to the Compensation Act whereby occupational diseases are made compensatable. Nor is Wisconsin the only state in this progressive movement. Massachusetts, Connecticut, California and North Dakota have similar occupational disease laws and New York, Ohio, Illinois, and Pennsylvania follow close seconds in their work to prevent industrial disease.

Industrial Disease

Let me define what is meant by this term. Industrial diseases are any diseases or disturbances of health the causative factors of which can be found to exist in the conditions of employment the patient had been exposed to. The state is now engaged in an active campaign for the elimination and prevention of these diseases. This will be a lasting campaign because industrial health is a national as well as a community asset. Our ability to compete with other nations depends on the health of all our people working in industries.

Best Cure Is Preventive

Prevention is the best cure for industrial disease and using this as a principle it will be the policy of the Sanitation Department of the Industrial Commission, working with your cooperation, to better those conditions of employment which may be considered as industrial disease hazards and to which occupational disease may be directly traced. These conditions may be divided into the following eight general classifications: (1) Dust, gas, and fume; (2) Dirt; (3) Darkness; (4) Dampness, cold or heat; (5) Bad air; (6) fatigue; (7) Poisons; (8) Infections.

Sanitation and Ventilation

The general methods employed to better these conditions are sanitation and ventilation. Ventilation, the method in which you are vitally interested, applies to six of these eight general hazardous conditions. The design and installation of these health safe-guarding systems is your work. This part of your industry is rapidly growing and is bound to increase with the advance of our Nation in the use of preventive measures against disease. Gentlemen, the point is you are now interested and vitally concerned in clearing from industry such hazards as dust, gas, fumes, dirt, dampness, cold, heat, bad air, fatigue, and poisons. In following the work of the Sanitation Department you will be called on to design and install ventilation and exhaust systems which actually will prevent disease. I am going to define to you these systems perhaps in a little different way than you are accustomed to; because these systems can not be merely considered as so many pieces of metal.

Defines Ventilation System

A ventilation system is composed of movements of the atmosphere, so regulated and controlled by any machinery or equipment that persons or materials within certain defined boundaries (such as rooms, factories, buildings, and other places of employment or local places within these areas) may be supplied with pure, fresh and clean air, for the purposes of breathing, purification and protection. Fresh air is both stimulating and refreshing to breathe and does not contain noxious gases, dusts, fumes, vapors or other material in such quantities as to be injurious to the health.

Ventilation When and Where Required

Ventilation systems are required in all places of employment or parts thereof.

(a) Whenever smoke, gas, dust, fumes, vapors, foul or vitiated air are present in sufficient quantities to obstruct the vision or to be irritating or obnoxious or injurious to the health.

(b) Whenever any industrial poisons are used or stored or handled in such quantities or manner that they may be or may become irritating or obnoxious, or injurious to the health.

(c) Whenever there is not available a sufficient amount of space per person.

Defines Exhaust Systems

An exhaust system is composed of movements of the atmosphere so regulated and controlled by any machinery or equipment that air contaminated with gases, dusts, fumes, poisons, vapors or other material injurious to the health may be removed from certain defined boundaries such as rooms, factories, buildings, and other places of employment or local places within or without these areas.

An exhaust system may be so designed and operated that it can also serve as a ventilating system.

Local exhaust systems are required in all places of employment or parts thereof whenever there is in operation any process, machine, equipment or present any materials in transit, use or storage, that can or does produce conditions which may require a ventilating system.

Systems Are Interchangeable

Ventilation and exhaust systems may be so designed, constructed and operated that either one can serve for the other or both. In other words, a ventilation system can be made to serve the purposes of an exhaust system; and an exhaust system can be made to serve the purposes of a ventilation system. Local exhaust systems are used to remove the hazard at or as near as possible to the hazard's point of origin. Some of the places where local exhaust systems may be especially applicable are belts, drums, rolls, discs or other equipment used for grinding, buffing, polishing or sanding; paint and enameling departments; sand blasts, tumbling barrels and rattlers, vats, tanks, pumps, sinks, baths, furnaces, salamanders, forges, pits, tunnels, and dust or gas producing machines or materials.

Emphasizes Policy of Protection

It is to be the policy of the Sanitation Department to ask that plans and specifications of all ventilation and exhaust systems be filed with the Commission. This, gentlemen, is a new departure. You ask, "Why are plans wanted by the State?" PROTECTION for employer in getting the best system for his requirements; PROTECTION to the employee in best saving his health which is his capital; PROTECTION for you, gentlemen, in helping you to give the best results by bringing to you the various types and principles that have given the best satisfaction elsewhere.

Importance of Prevention

PREVENTION of the violation of the fundamental principle which may be a

cause for the ultimate failure of a system, to the detriment of the contractor's reputation, or which might cause serious results, like expplosions. AN AID for the Sanitation Department more efficiently and intelligently to carry on the work it is charged with; that is, to promote the industrial health of the State and prevent occupational diseases. All for the purpose of helping and guiding the growth of this industry along the very best lines; and promoting better co-operation between the contractor State, employer and employee. This is going to put each one of you on an equal footing with the other. This means the elimination of cutting a hole in the ceiling or the installation of a wall or window fan and calling it a ventilation system. The POINT I WANT TO PUT ACROSS TO YOU is that YOU, whose work is the installation of these systems, NEED AN ENGINEERING DEPARTMENT or the use of one.

Factors of Installation.

The installation of a system does not only mean putting in the sheet metal work. It means, after the system is installed, that the conditions of employment must be safe for health, and the factors which govern the design, installation and operation of these systems should be shown on the plans. Some of these factors are included in the following items:

- General surroundings;
- Plans and elevations;
- Location of windows, roofs, partitions, exits;
- Location of equipment and character of the work performed;
- Number of persons employed and their distribution;
- Available cubic feet of air space (total space less than taken up by equipment and materials);
- Location of proposed ventilation and exhaust machinery;
- Location and sizes of air inlets and outlets;
- Location, size and shape of ducts and pipes;
- Location, size and type of fans, motive power or ventilator;
- Materials used in construction of fans, ducts and buildings;
- Cubic feet of air moved per hour;
- Velocity of air per minute produced at the throat of the hoods of exhaust systems;
- Any proposed heating, cooling or purification apparatus used in connection with the system;
- Any apparatus used to take care of the discharge of the system.

It is not necessary that all of these items show on every plan, but these factors must be used as a guide in the design of systems. Approval of plans is not required before work is begun unless the party for whom you are working insists that such approval be given.

Sizes of Systems

The plans in showing these items will enable this department more intelligently to co-operate with you. Where two or more firms are bidding on any contract, in no case will the plans of one be passed on to the other. The department will only specify minimum requirements; anything beyond these is a matter strictly between you and the interested party. The Sanitation Department does not intend to control details of construction and design; except only certain definite fundamental requirements. I believe that the policy extended towards these details should stimulate a desire on the part of your industry to always make better systems every time you take a contract. The regulation of details does not help this creative spirit. Publication of the designs and practice which have given the best satisfaction will serve as a guide, and when made available to all will promote the welfare of the industry.

Exhaust systems may be constructed using the following velocities applied at the point of origin:

1000-2000 feet per minute for most light dusts, gases, vapors, fumes and foul air which are produced evenly.

2000-2500 feet per minute for most light dusts, gases, vapors, fumes, foul air and smoke, which are produced unevenly or periodically.

2500-3500 feet per minute for medium weight dusts, wood, or sawdusts and sand blasts.

3500-4500 plus feet per minute for heavy dusts, bark, chips and other heavy material.

Types of Systems

The natural system, most commonly heard of and most thoroughly abused, you are but slightly concerned with, except as you change it to some other kind. You are dealing with the forced ventilation system, air blown into the plant and allowed to find its way out (or aided by auxiliary exhaust); the exhaust ventilation system, air exhausted out of the plant and allowed to come in through positive inlets (or aided by auxiliary system forcing some air in); and the combination system, where both ventilation or exhaust may be used to protect local hazards and at the same time ventilate the place of employment.

Forced Draft System

One important feature about the design of any mechanical or forced draft system is that the air currents produced are not governed by the old natural law. "Hot air rises and cold air settles." Hot air currents are controlled by the velocities and motions produced by equipment. The two most necessary requirements are positive inlet and outlet. The only time when doors, windows, cracks, elevator shafts and skylights can safely be used is when the air is forced into the enclosure to find its own way out.

The Final Test of All Systems

The size and types of systems are controlled by the items I have previously mentioned, which should appear on the plans. The details of the system can be fairly well gauged from these conditions also. The effects of materials used in process or construction of building come into play. The processes of manufacture can either use up the moisture in the air or fill the atmosphere with moisture, and this has to be considered when designing a system. Also it may be well to consider the fact that some systems must be constructed out of metal; when this is the case the proper material should be used because it only leaves a black spot on your record as a first class concern if a system fails in operation because of this mistake. There are many complicated technical questions attached to the proper design of some systems. THE FINAL TEST OF ALL SYSTEMS is the quality of the air used for breathing purposes. Not a U tube test, not a velocity test, but, gentlemen, the air must be pure enough so it can be considered safe for health. This all relays back to a previous statement; an engineering department or the use of such a department is needed and is a proposition which your industry would do well to consider.

Possibilities Are Unlimited

The amount of work in sight is almost unlimited. It divides itself into two kinds, that of new installation and that required to be installed in existing plants. New installation is, of course, to the liking of some, the best business; but the man who has to put in a system where work is being carried on, in the presence of all kinds of obstacles as shafts, floors, walls, machinery and equipment, that man sure must have some Yankee ingenuity. However, his problem is definite, while new construction is designed to take care of future conditions, and in this respect the collection of data from all systems and publication of the best results obtained under various conditions will be a valuable asset to this industry and the State. It is impossible to estimate the total valuation of the work connected with the installation of ventilation and exhaust systems. My recent work in the Wisconsin industries show me that your field of endeavor is unlimited. The real valuation can only be estimated as the sum of the profits saved to business because of fewer compensation claims, and the increased production caused thereby; together with the great saving to our working people by the conservation of their health. You have not made a scratch on the surface compared to the work which will be done throughout the state and the rest of the United States. Co-operation is the real thing needed. When I go to a plant which needs improvements, the very first thing these proposed changes or improvements must do to be worth while is to cause a greateer balance on the profit side of the ledger; if it does that it will cause a greater profit for the employee which is his health, doing both it is a salable idea, otherwise useless and undesirable. Then, gentlemen, the first thing, the very first thing, asked me is this; and I have had it asked repeatedly, "Who

Continued on page 32

Test Yourself With These Questions

Answer Each One of Them and Then Check Up the Results—You May be Surprised to Find That There Are Weak Points in Your Business That You Have Never Considered—Stop All Leaks and Conserve Your Profits

(All rights reserved. Wm. A. Hersey, Robt. H. Ingersoll & Bro.)

PERHAPS *there isn't a single screw loose in your business.*

The question is—are you sure there isn't? Your position toward your business should be the same as that of a doctor towards his patient. A doctor examines his patient and finds out what is wrong and then prescribes a remedy. You, on the other hand, should examine your business—every so often—from an impartial viewpoint. Try to find your weak points and when you find there is anything wrong, or that there is anything that you are not doing that you should do—then do all you can to remedy it.

The following list of questions was made up after a long and careful study of the failings of many merchants. Ask yourself each one of these questions. Check those to which you cannot answer "yes." After you have completed the list, begin immediately to remedy the points on which you are lacking. Remember, by ignoring your weak points you are not harming anyone but yourself. It is just the same as if you would go to a doctor and then ignore the remedy he prescribes.

BUYING AND SELLING

1 Do you allow your personal tastes to influence you too much in your buying? .....
You should analyze your customers' wants and not your own preferences. People in each community have certain likes and dislikes which must be taken into consideration if you wish to secure all their patronage.

* * *

2 Do you overcome sales resistance by pushing nationally advertised goods? .....
Advertised lines are easier to sell than non-advertised lines. And it is the easier selling lines which help you to turn your stock oftener.

* * *

3 Have you studied all the goods you handle to know the selling points of them? .....
To secure selling points of the lines you handle, it is a good idea to read the manufacturers' literature on them—trade newspapers—newspaper articles, etc. These are but a few of the sources of information.

* * *

4 Have you carefully planned the interior arrangement of your store, that is, the arrangement of your different departments? .....
Quite often you can get good ideas for the arrangement of your store by studying the arrangement of other stores, especially the large and successful stores.

* * *

5 Have you a good lighting system to show your goods to the best advantage? .....

* * *

6 Is your stock clean and well arranged? Does it invite inspection? .....

* * *

7 Do you ever look at your store from the viewpoint of a customer? .....
If you will look at your store as a customer does, that is, casually pass your windows—go into your store as if you did not know anything about it, it will often help you make it more attractive.

* * *

8 Have you tried changing around the arrangements of your departments, to see which is the most profitable? .....
Quite often, by changing the departments from one part of the store to another, you will find it will enable you to sell more goods. The same is true of all other departments, and also all lines.

* * *

9 Do your clerks render prompt and courteous service? .....

* * *

10 Do you keep a record of your sales by departments, so that you can tell which departments are falling behind? .....

* * *

10a Do your records show you which articles and lines are not selling as quickly as they should, and have you a system of watching your records so that the slow sellers will not be in stock too long? .....

* * *

11 Can you tell each day the cost of the goods that you sell each day, so that you will know whether or not you are making a profit on the goods that you sell? .....

* * *

12 Do you keep a record of your sales by clerks, so that you know which clerks are earning a profit and which are not?

* * *

13 Are all of your goods marked in plain figures, so as to impress upon your customers that you do business on a one-price basis? .....

* * *

14 Do you put special efforts on certain departments because that department appeals to you more than others do? .....

* * *

15 Have you a system for securing names and addresses of new prospective customers, and facts pertaining to them? And do you also keep a record for securing of information that will help you make more sales among your customers, such as keeping a record of wedding anniversaries, birthdays, etc?

* * *

16 Have you tried to enlarge your selling territory in outlying districts, either through solicitation—or advertising?

* * *

17 Do you advertise through your local paper? .....

* * *

18 When you do get up advertisements, do you get them up because it is a job that must be done, or do you make them carefully? .....

* * *

19 Do you advertise seasonable goods? .....

* * *

20 Do you make a study of the advertisements used by other merchants, that is, not only those used by other stores in your line, but of other kinds of stores as well? .....

* * *

21 Do you make a study of manufacturers' advertisements of lines that you handle to get ideas for your own advertisements? .....

* * *

22 Do you use the cut service and other advertising helps supplied by manufacturers? .....

* * *

23 Have you a mailing list? .....

* * *

24 Do you keep your mailing list up to date? .....

* * *

25 Do you use your mailing list? .....

* * *

26 Are you able to tell from your records whether your advertising does actually increase your sales for the articles or lines advertised? .....

Some advertisements, such as advertising special sales, should bring immediate results, but unless you have the right sort of records, you cannot tell just how much good your advertising does.

* * *

27 Do you set aside an appropriation at the beginning of each year for advertising for the coming year? .....

That is, do you set aside a certain amount of money for the ensuing year, based on your expectation of the volume of business you expect during that year?

* * *

28 Do your records show what percentage you spend for advertising, that is, the amount you spend for advertising compared to your gross sales, and also, the amount you spend for advertising compared with your total overhead expenses? .....

* * *

WINDOW DISPLAY

29 Do you carefully plan your window displays, or do you just use your windows as show windows, and not as sales windows? .....

* * *

30 Do you display seasonable goods? .....

* * *

31 Do you keep your windows clean? .....

* * *

32 Do you try to have your windows better looking than the windows of your competitors? .....

* * *

33 Do you use manufacturers' display material? .....

* * *

34 Do you watch for manufacturers' advertising campaigns and plan window displays to connect up with those campaigns? .....

* * *

35 Do you have price tickets on most of the goods displayed? .....

* * *

36 Can you tell from your records whether your displays actually increase the sales of articles that you display? .....

Unless you keep a record of your sales by lines and departments, you cannot tell which displays pay the best.

* * *

GENERAL MANAGEMENT

37 Have you a good system of records that enables you to manage your business on facts, or do you manage it on guesswork? .....

* * *

38 Do you know how often you turn your stock in each department? .....

* * *

39 Do you know, beyond the possibility of a doubt, that the selling prices on everything that you handle are based on the proper mark-up? .....

* * *

40 Do you know exactly what your expenses are and whether or not they could be trimmed in any way? .....

If you merely keep a record of your expenses as money paid out, you cannot tell whether they are high or low, but you should keep them on an account basis, enabling you to know just what you are spending your money for. In every well-organized business, the manager should be able to tell at a glance what his expenses were for any particular time, for any particular class of expense.

* * *

41 Do you know how much you have to sell at the beginning of each month to meet your expenses for the coming month, and to make a profit? .....

* * *

42 Do you know what your net profit and expenses are for each month? .....

43 Do you know exactly how much money you have tied up in stock by departments? .....

* * *

44 Do you know how your expenses for any given month compare with those of a month, six months previous, or a year previous? .....

* * *

45 Do you know how large an investment your fixtures and your store represent, and do you charge off 10 per cent. for depreciation each year? .....

* * *

46 Do you have considerable trouble in making out your Income Tax Report, or are your records in such shape that you can make it out in a comparatively short time? .....

* * *

47 Do you charge off the right amount each year for loss through theft, or other reasons, that is, do you base your charges on facts, instead of guesswork? .....

* * * *

48 Do you know whether you have any lines that are eating up the profits you make on other lines? .....

* * *

49 Do you keep an accounts receivable ledger? That is—a record of all goods sold on credit, so that you know exactly who owes you and how much? .....

* * *

50 Do you use every effort possible to keep accounts receivable down to a minimum? .....

* * *

51 Are you careful in extending credit? .....

* * *

52 Do you know exactly how much money you owe to manufacturers, jobbers and others? .....

* * *

53 Do your clerks like their boss? .....

* * *

54 Do you try to educate your clerks to get the most out of them, or do you let them shift for themselves? .....

* * *

55 Does your treatment of employees inspire respect, loyalty and energy? .....

* * *

56 Do you pay your clerks on a salary and bonus basis, making it worth their while to increase their sales? .....

* * *

57 Do you discount your bills? .....

* * *

58 Do you belong to a local, provincial or national association, and do you attend their meetings? .....

* * *

59 Do you read trade newspapers? .....

* * *

60 Do you use your own and your clerks' time according to relative value, that is, do you reserve your time for executive work and plan to let your minor help take care of your minor work? .....

* * *

61 Are you open to suggestions, or are you set in your ways? .....

* * *

62 Do you like your work? .....

* * *

63 Do you take a vacation every year? .....

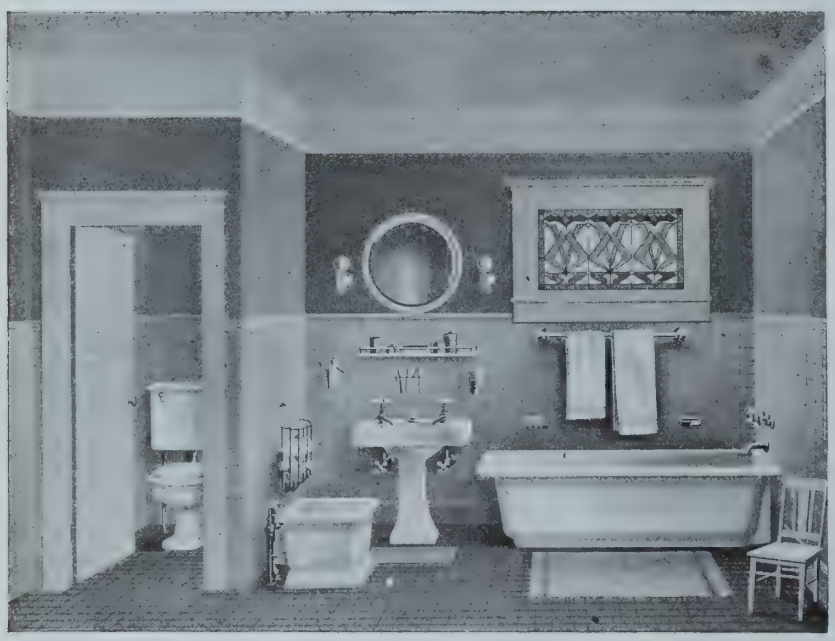
* * *

64 Do you take an annual inventory?—do you compare it with your permanent stock record to see whether or not you are short any goods? .....

* * *

65 Do you make immediate and satisfactory adjustments of all complaints, so that your customers are satisfied? .....

The Motor Car Links the Raises the Standard of



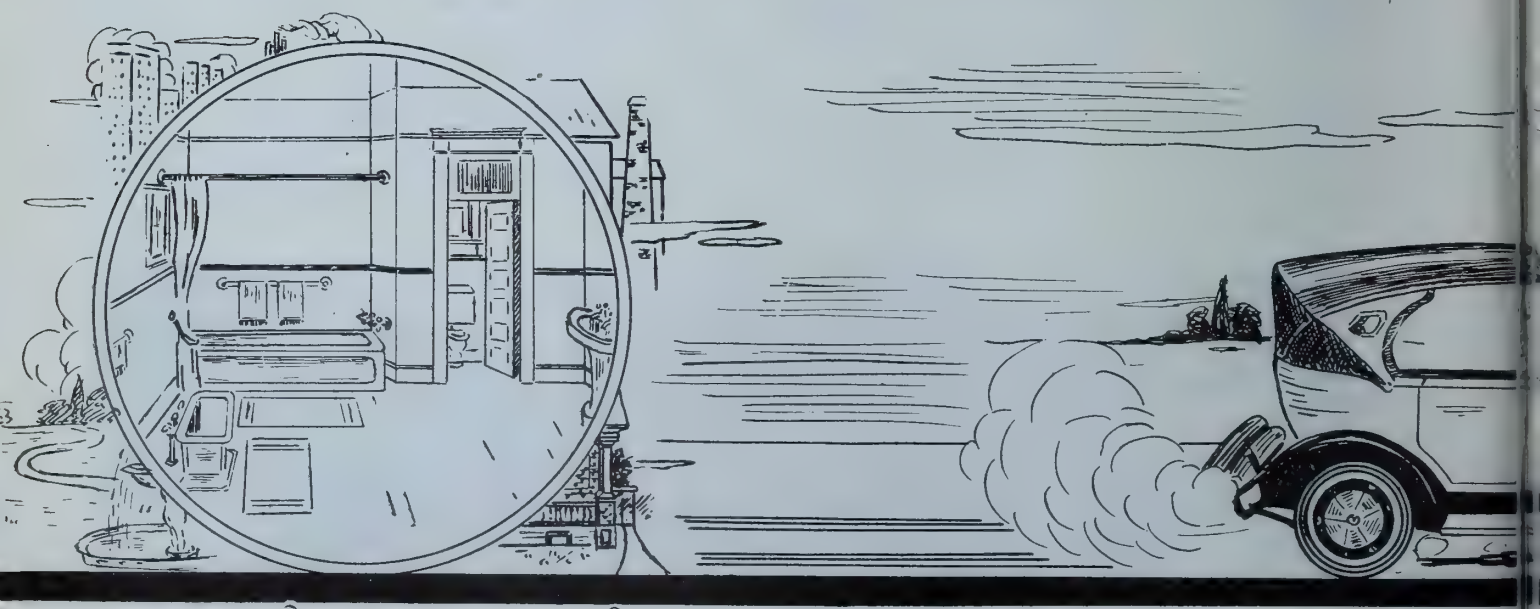
Bath Room—Plate "B"
A handsome installation for the better home

RURAL Canada was long isolated, as it were, from modern ideas of living, but has, through the motor car, come very closely in touch with the higher standard of living.

The motor car is the farmer's friend, and is creating a desire for comfort and convenience in the rural districts of Canada, which will result in thousands of our Canadian homes being modernized with Sanitary Equipment, Water and Sewage Disposal Systems.

Port Hope Sanita

Factory: PORT HOPE, ONTARIO
TORONTO SHOW ROOMS: 119 King St. East
WINNIPEG OFFICE: 405 Tribune Bldg.

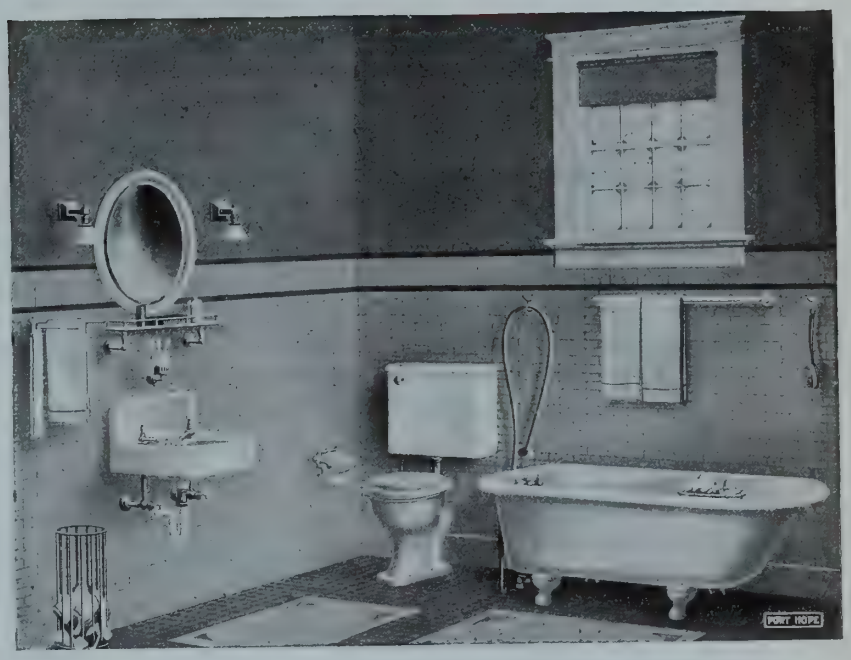


City and Country and Rural Plumbing Comforts

Will you get this business? It is worth thinking about and planning for.

Perhaps we can help you, or perhaps we can help each other, and in these days of "Drives" it would be the proper thing for the manufacturer, distributor and plumber to get together and have a "Drive" with the objective of "A Bathroom in Every Farm House."

In the meantime, if we can help you with catalogues or illustrations of Enameled Iron Fixtures, write us. They are yours for the asking.



Bath Room—Plate "H"
Especially suitable for the moderate-priced home

Rumor of a Tax on Sales in Canada

Outline of Workings of a Tax Which It is Rumored May Become Effective in Canada—Suggestion of 1 Per Cent. Tax on Sales

ALTHOUGH it has been intimated that the budget speech may not be expected before May 1, there are many men in the business world who are wondering just what the Canadian Finance Minister will propose in the way of taxation. It is well known that present methods of taxation have been faced with considerable criticism. Hardware merchants throughout Canada have been interested in rumors which have been circulating to the effect that a tax on sales may form the basis of a new method of taxation in Canada. Many inquiries have been made as to just how this tax could be applied and with what result. It has been rumored that the tax, if made effective, would be on the basis of 1 per cent. on sales. Thus an article of hardware passing from the raw material stage to the manufacturer, thence to the wholesaler, later to the retailer, and finally to the public, would be subject to a tax of 1 per cent. on four or more occasions.

A special edition of the "Bache Review" covers the question from several angles. While the Review urges a tax on sales as an economic tax which should be substituted for the present methods of business taxation in the United States, the points covered are equally as interesting to the Canadian business man as to the business man of the United States. After referring to the present methods of taxation in the United States as a destructive tax system, the Review outlines the proposed tax on sales as follows:

An Economic Tax Should Be Substituted

"There is only one way to escape this, and that is through a tax on sales, in which every citizen of the United States, as well as any foreigner who may live within our shores, will pay equally toward the expenses of the Government and have his stake in the country.

"A small tax, say 1 per cent., on sales, while it would produce in the aggregate an amount large enough to make it unnecessary to keep the excess profits tax in force, might be large enough even to reduce the surtax on income and would bear so lightly upon the individual that its existence would be scarcely perceptible.

"It would be, in effect, a flat percentage of 1 per cent. against volume of business, to be paid monthly by every corporation, partnership, association or individual in business.

"In the case of banks, brokers, jobbers or commission men, the percentage should apply on 'Gross Income' before payment of operating expenses, rather than against gross volume of business handled.

"The turnover in the United States for the year 1919 is estimated by a competent financial authority at between 1,400 and 1,500 billions of dollars. These figures have been arrived at by using a method employed by Prof. Irving Fisher. Mr. Fisher estimates the circulation of money and of checks, adds the two, and obtains a figure for the value of goods bought. His 1918 figures showed a total of 1,269 billions of dollars. The same method shows an approximation of 1,484 billions for 1919.

"From this amount must be deducted the turnover on the various exchanges — grain, cotton, stock, the sale of securities, municipal, corporation and others — but we do not think that these amount altogether to more than 500 billions of dollars. This would leave 1,000 billions of dollars to be taxed, but if we reduce this by half, if it should develop that duplication in the figures amounts to any such percentage, we would still raise 5 billions of dollars by this tax.

"That is, a tax of 1 per cent. on sales of 500 billions of dollars would produce revenue of 5 billions of dollars a year.

Advantages of a Tax on Sales

"The analyses appearing herewith show the tax of 1 per cent. on sales worked out for three of the important products of the country, and while this shows that the tax is duplicated several times during the progress of these commodities through business channels, the tax falls only once upon the same class of business men.

"In the case of the loaf of bread, the ultimate purchasers do not have to pay more for their loaf, and the tax would be absorbed by the seller in the various movements which the wheat makes until it reaches the ultimate consumer. On beef, the maximum would be 1 cent per pound, and the same rates would apply to hog products.

"The advantages of this tax would be that it would be equally paid by everybody in the country, and might lead, perhaps, to thrift, since those who wish to avoid paying taxes would only have to decrease their expenditures.

"If any such amount can be raised as would appear probable, predicated on the figures submitted, all income taxes on incomes of $5,000 or less would become unnecessary, and a nominal income tax on all other incomes would be sufficient. To-day an income of $5,000 pays between $120 and $160. Under the new tax, if it is expended in toto for the purchase of commodities, the income of $5,000 would pay a tax of $50, assuming that every article purchased has had the tax added and the consumer has had to pay it. But on many articles the tax is so small that it is absorbed or paid by the seller out of his normal profits and not added to the purchase price.

"This tax can only be consistently levied and collected if paid by the seller, and should be evidenced in the working out of the tax by stamps on receipts, where books are not kept, or by charges against turnover as shown by merchants' books less any allowance for stamps given on receipts. It would be the simplest tax that could be collected, and there need never be any dispute as to the amounts of individual taxes, as now arise in a multitude of cases under the present tax laws. It will require a very much smaller staff to collect, and practically no expert service. It will materially reduce the expenses of the Government in collecting taxes, and the yield can be very closely figured, and cannot materially shrink or increase by temporary developments in values or the volume of trade, since the turnover in the volume of the country's business rarely fluctuates more than 10 per cent. in a year.

"Realizing that this tax is such a radical departure from any other system of taxation now in use in this country, a campaign of education becomes an important essential. We are taking the liberty of putting this before you with a view of enlisting your interest in the movement and your aid in spreading the doctrine in your locality, bringing all the influence possible to bear on legislative bodies in Washington, so that full consideration may be given it."

APPLICATION OF THIS TAX

ON BREAD

In estimating the effect on the price of a loaf of bread, the tax would be levied first when the wheat leaves the producer; second, when it leaves the miller; and, third, when it leaves the retail grocer or the baker. Prices and taxes would be as follows:

When It Leaves the Farm

	Price	Tax
One bushel of wheat would be sold for, say..	$2.00	$0.02

When It Leaves the Miller

4½ bushels of wheat to the barrel, with flour averaging $12 per barrel, would make one bushel of wheat in flour, worth.....	2.67	.0267

When It Leaves the Baker

A barrel of flour makes from 260 to 270 loaves of bread. One bushel of wheat is two-ninths of a barrel of flour. This would make 60 loaves to a bushel of wheat. Figuring these 60 loaves at an average of 8c to 9c per loaf, price would be	5.10	.0510
This would make the total tax on all sales of a bushel of wheat, from wheat, to flour, to bread		$0.0977

This tax thus far — approximately 10c — is the total price to be added to the 60 loaves of bread on account of the 1 per cent. tax on sales progressively from the farm to the consumer.

This total tax, if passed along, is so small, amounting to less than one-sixth of a cent per loaf, that it could not be added to the price per loaf to the consumer. It would probably be passed on by the miller and be paid by the baker; but would be such an infinitesimal reduction from his profits that he would be almost totally unaffected.

These calculations are based on only three sales, from farmer to consumer; but if one or two more sales of the wheat take place it would still leave the tax at a small fraction of a cent to the loaf.

Further than this, it is stated that bakers do not bake half the bread used. Many domestic users buy flour from grocers and make their own bread. This further reduces the individual tax.

CALCULATIONS OF THE TAX ON BEEF

In the same way the tax-result on beef may be estimated as follows (result on steer killed July 17, 1919, lot 301):

Cost of Live Animal and Expense in Killing and Disposing of Resulting Products

Live weight, 1,202 lbs. @ 16.34 per cwt.....	$196.41
Expense and labor, buying, killing, driving, yarding, feeding, refrigeration, etc.	8.85
Cost of selling (branch house expense) 86c per 100 lbs.	6.10
Freight to branch house 710 lbs. @ 69c.....	4.90
Total cost	$214.26

Amounts Received for Products Sold

Fats—85.8 lbs. @ 18.81 per 100 lbs.....	$16.14
Hide—78 lbs. @ 32.71 per 100 lbs.....	25.51
Offal—Edible and inedible @ 41c per cwt (live weight)	4.93
Dressed beef—720 lbs. less shrink 10 lbs.—net 710 @ 23.99 cwt.....	170.33
Total selling price	$216.91

How the Tax Would Affect the Consumer

	Price	Tax
If we analyze these figures, we find that the cost to the packer of one steer would be	$196.41	
The tax of 1 per cent., to be paid by the farmer or the seller, would accordingly be		$1.96
Following up the 720 lbs. (net 710 lbs.) of dressed beef, the selling price of this would be	170.33	
On which the tax paid by the packer would be		1.70
The total tax which might be added to the beef, first by the farmer and then by the packer, would thus be, when the beef reached the retailing butcher....		$3.66—
Dividing this tax up among the net 710 lbs. of dressed beef, we find that the tax on each lb. would be.....		$0.005+
If the butcher sold the beef at, say, an average, all cuts, of 40c per lb., his tax would be four-tenths of a cent per lb. — or two-fifths of a cent		.004
The total tax thus far, if added to the price to be paid by the consumer, would thus amount to		$0.009

which is a little less than 1 cent a pound on beef. This includes all taxes from the farm, to the packer, to the butcher and to the consumer.

CALCULATIONS OF THE TAX ON HOG PRODUCTS

We have obtained, also from official sources, figures on the cost of hogs and hog products, and have estimated the tax which, under this plan, would be levied from the time the animal was sold by the farmer until the various products reached the consumer.

Result on Hog — October 17, 1919

Live weight, 306 lbs. @ 14.3c.....	$43.76	
Expense and labor, buying, yarding, driving, killing, feeding, refrigeration, etc.	4.59	
Total cost		$48.35

Value of Products Resulting from Hog

	Live weight	lbs.		
Hams	14%	42.84	@ 20½c	$8.78
Bacon and fat backs...	31%	94.86	@ 21¼c	20.16
Shoulders	12½%	38.25	@ 22½c	8.61
Lard	8%	24.48	@ 29c	7.10
Leaf lard	3%	9.18	@ 29½c	2.71
Other products	4.02%			1.44
	72.52%			$48.80

72.52 is the per cent. of marketable products to live weight

How the Tax on Sales Would Affect the Consumer

	Price	Tax
If we analyze these figures, we find the cost to the packer of one hog would be	$43.76	
The tax of 1 per cent. to be paid by the farmer or the seller, would accordingly be		$0.44
Following up the approximate 217 lbs. of consumable products of one hog, the selling price of this would be.....	48.80	
On which the tax paid by the packer in selling this would be		.488
The total tax which might be added thus far, first by the farmer and then by the packer, would be, when the hog reached the retailing butcher		$0.928
Dividing this tax through the 217 lbs. of consumable products we find a tax on each lb. of		$0.0043
The tax thus far on the 217 lbs. of consumable products is, as we have seen, about 93c, or at the rate of less than one-half of 1c on each lb. If the butcher sold the pork products at retail prices, he would receive about $107, on which his tax would be about one-half of 1c per lb., namely.....		.0049
The total tax, if added to the price to be paid by the consumer would, in all, amount per lb. to		$0.0092

which is a little less than 1 cent a pound on pork and pork products.

Montreal Permits Denote Building Boom

Figures Are Growing as Spring Season Nears—Return to Normal Will Necessarily be Gradual —Million and Half is Total First Quarter

WHAT is taken to mean a very satisfactory showing in point of prospective building in the City of Montreal, is revealed by the figures compiled at the City Hall, which, to March 31st, have totaled nearly a million and a half. This amount, while not large for normal times, indicates a real state of improvement, as borne out in the comparative figures. For the first three months of 1919 the building permit totals were $440,102, while those to March 30th, 1920, were $1,461,237, or well over a three-fold increase.

Expects Good Year

As far as the plumbing trade is concerned, a brisk season is anticipated. "There is quite a lot of work projected," said President Dan A. Bethune to SANITARY ENGINEER, in discussing the outlook. "Quite a number of contracts are in sight, among them a large school. I think the prospects are good for a busy season."

Of course there are difficulties in the way, for a return to normal, from conditions which have been provoked by the war, cannot come in a day, a month, or even in a year. Among these difficulties that of getting necessary materials has been a great and a growing one. But the trade is better pleased with the outlook, and radiators, lead products, basins and other fixtures, while much higher in price, are to be had in fair quantities. "We can get them, but we have to pay much more for them," said Capt. Bethune.

Then, next this problem, labor is one of the hardest nuts the craft has had to crack. Wages have advanced. "We are paying 75 cents an hour, on an eight-hour day basis, and in some parts of the city the scale is only 60 to 65 cents," further observed the Montreal president. This question, with a fair "give and take" principle adhered to by both employers and employees, will be reasonably solved.

Building Trade President Speaks

Montreal has its own problem, and labor leaders as well as employers realize the difficulties, and are trying to meet them. A recent statement of John W. Bruce, chairman of the General Conference Board, is of interest at this time. He said:

"I believe that if efforts were made to bring the Builders' Exchange and the Building Trades' Council together, some arrangements could be made to ensure the building operations so necessary at the present time and which could proceed without interruption."

Referring to the suggestion of the president of the Association of Montreal Building and Construction Industries, W. M. Irving, and which was to the effect that an earnest effort should be made to meet the men in the building trades by arranged conferences, Mr. Bruce stated further that, as far as the men were concerned, the object of such conferences as they had been holding was to promote and further a better spirit of understanding and co-operation.

VENTILATION AND EXHAUST SYSTEMS

Continued from page 25

can I get to do this?" Can you appreciate my position? I must not recommend any one particular firm. I should recommend the Wisconsin firms first. I should recommend the firms nearest the vicinity of the plant. You can readily see that if provided with the proper personnel or grouping of your industry that you and the Sanitation Department could help each other much better and the movement for Industrial Health would be materially helped.

Cooperation First and Last

For your consideration I am leaving these thoughts: CO-OPERATION: First, last and all the time; PREVENTION OF DISEASE: By ventilation and exhaust systems so designed, installed and operated that conditions of employment are safe for health. AN UNLIMITED FIELD OF WORK: which is increasing each day and calling for the man with the foresight and the nerve to make this business of to-day the big corporation of to-morrow.

Ottawa News

It looks now as though the Overland Water Supply Pipe System will not be completed until next year. Commissioner of Works Macallum has recommended that the finishing work be undertaken this year at a cost of approximately $125,000. The system, when completed, will consist of two 51 in. pipes from the Lemieux Island pumping station to the city distribution system. At present the twin pipes, each 51 in. in diameter, are carried from the pumping station to the east end of the Wellington street viaduct. From that point to the distribution system at Bronson avenue there is only one pipe.

Mr. Macallum has recommended that the other pipe be erected along a lower level, where it could be connected up with the standby station, known as the Queen Street Pumping Station. This pipe, at the Lemieux Island end, would also be connected with the low lift pumps, so that in the event of an accident happening, the low lift pumps will carry a supply through to the Queen street station, thus eliminating the dangerous system of pumping under Nepean Bay, which has an established reputation of being constantly polluted.

These recommendations are at present under consideration by the Board of Control, but it is not likely any action will be taken until next year.

Building permits issued during the month of March totalled 44, and represented an outlay of $102,775. The February figures were 9 permits at a total cost of $57,500. The March permits included: Private garages, 7; commercial garage, 1; stores and shops, 4; solid brick residences, 2; brick veneer and stucco residences, 11; stucco residences, 2; frame houses, 4; alterations to houses, 9; alterations to apartments, 2; alterations to stores, 1; warehouse, 1.

The Ottawa Housing Commission reports that since the first of February it has received 10 applications for loans, by individual lot owners. These represent a total outlay of $38,000. Eight of these applications are for loans of $4,000 each, to be applied to the erection of solid brick houses, while the other two are for loans of $3,000 each, one for a brick veneer and the other for a frame construction.

It has not been possible to grant loans in these cases, as the Commission's money for individual lot purposes has been exhausted. It is thought, however, that the Ontario Government's housing policy for this year will be determined very shortly, and that the Commission will be able to find money for these applicants.

There is considerable uncertainty as regards the prospects of an amicable settlement in the wage disputes in the various building trades in Ottawa. One day it is reported that the chance of a peaceful settlement is bright, and the next day there are rumors of a general strike. It is understood that some of the trades are willing to accept the offers, but others are more determined to hold out for the increased demands. The carpenters, for instance, have positively decided to refuse a sliding wage scale, and the asbestos workers are remaining firm in their demand for 45c an hour. The carpenters, at present, are receiving a flat rate of 60c an hour and are now asking for a fiat rate of 85c an hour. The builders have offered to settle on a sliding scale basis, running from 70c to 85c per hour.

A wage dispute between the corporation and its employees has been settled. The matter went to a Board of Arbitration and resulted in the city agreeing to a wage schedule, providing for the payment of 58c an hour to civic laborers. This class formerly received 45 to 50c an hour. The new schedule also provides for increases ranging from 10c to 15c an hour in the salaries of all other civic workers, outside of those employed in the various departments in the City Hall.

Chief Plumbing Inspector S. Daughtry was a delegate to the Provincial Plumbing Inspectors' convention in Toronto last week.

Montreal Craft Sees Encouragement

Increase of Membership One Hundred Per Cent.—With Effective Organization Great Future is in Prospect—Much New Work

THE membership of the Montreal Master Plumbers' Association has doubled within the past twelve months. So says Capt. Dan Bethune, the enthusiastic president, who, to SANITARY ENGINEER, expressed his confidence that the present season would record a big increase in the number of master plumbers who will come in. It is in this way that the association hopes to revive old, and stimulate new interest in the affairs of the craft. President Bethune, a tried veteran of the late war, is lining his men up for the next engagements, which are bound to come. There are enemies to be fought —enemies of progress, and these will be combated by the battalions of organized, business-like energetic committees. This does not imply that there will be open warfare as between the masters and the jorneymen. It does mean, in a nutshell, that the masters want to lift the craft up to that higher plane of appreciation of the important role sanitary engineers fill in community life today, which they have so much failed to realize and appreciate. And properly conducted association effort will accomplish this.

Combating An Evil

At its last regular meeting, the association dealt with an old grievance which has been up for consideration before; that of some jobbers and manufacturers selling at retail. It is, in Montreal, considered a great evil, in that, while many of the jobbers and manufacturers observe the rights of the plumber and steamfitter, some do not.

"Manufacturers realize that we are not organized well," said President Bethune, in discussing this matter, "and while some of them have been very fair in the matter, it has been difficult to get what we wish. Many are selling indiscriminatingly to whoever may wish to buy."

Much of this evil, SANITARY ENGINEER understands, has arisen from consumers being supplied with what they require at wholesale prices. Not only so, but in other instances those who have no license to purchase various fixtures, being in no way qualified to instal them, secure such fixtures as they want, and the plumber is cheated, as a consequence, out of a margin of profit which is justly his. If he is to instal the fixture, as, in accordance with by-laws he must, then he, and he alone, is entitled to supply the fixtures at a price to be decided upon by the owner. Such, at least, is the contention of many, and this seems very sound reasoning. Jobbers are willing, SANITARY ENGINEER is informed, to protect the plumbers, as fully as is possible.

Meetings Well Attended

During the past six months or more meetings have been well attended. Interest has, of course, centred around the new civic plumbing by-laws, which have been held in abeyance so long. As a matter of fact, some have wearied of the delays that have occurred, and deferred hope, verily, has made the heart of many ardent master plumbers sick. It was the consideration of these proposed by-laws, and particularly the consideration of amendments to them as proposed by the masters, and asked for by the Civic Administration of the City of Montreal, that brought members out. A hearty interest was taken in the proposals which are now in the hands of the civic authorities for consideration.

One of the interesting phases of association work in Montreal is that of the dual interest which is manifest on the part of both French and English-speaking members of the craft. A good spirit of comradeship prevails, and with this continuing, and with both sides interested in the increasing of membership, better days lie ahead for the association. Nought but good can come from the discussion of various problems.

Ready To "Go Over The Top"

Good leadership is essential, yea, it is vital. "We are ready, now, to go over the top," was the characteristic way President Bethune referred to the manner of the "attack" which the association is determined to make this year on various phases of the program. First of all, and perhaps of primary importance, it will be the endeavor of the masters to reach a sane and happy solution of any differences that may exist with regard to remuneration, hours, advancement, etc.

"The association point of view is a good one," continued Capt. Bethune, in referring to the matter of organization. "An effort is being made to effect a Canadian National Union, and probably this would be a good thing."

There always has been, SANITARY ENGINEER understands, a willingness on the part of the masters to meet the men fairly, and to pay them such wages as their work merited. This is the view of Past President Alex Charette of the Canadian Society of Domestic Sanitary and Heating Engineers. "We want to pay a man what he is worth," said Mr. Charette to SANITARY ENGINEER, "and are glad when a journeyman can do good work; we will pay him accordingly. We always prefer to have the man who can do good work and earn the higher wages. But the man who comes along and says: I am a Union man, what are you paying?' and who cannot deliver good work is not fair. We will pay, and pay well, for the plumber who can do better work; we are glad, always, to get these men."

Need Provincial By-Law

Mr. Charette believes that the lack of a proper Provincial By-Law for the guidance and protection of plumbers in smaller centres throughout the Province of Quebec is a sore need at the present time. He has long advocated, and hoped for a good working law that would ensure better plumbing, and a better understanding. It would work to the benefit of both the master and the journeyman, and, as well, to the ultimate satisfaction and protection of the owner. A uniform law could, Mr. Charette thinks, be evolved, which, if operative all over the Province, would ensure better conditions. "As it now is," he said, "there is little or nothing for the guidance of the craft. We need a good workable by-law such as is in use in Ontario."

BUILDING TRADES ELECT NEW OFFICERS

Officers to hold office for the year 1920, as representative of the Montreal Building and Construction Industries, were selected as follows among whom it will be noted, several master plumbers have been included:

Mr. W. M. Irving was re-elected president for the ensuing year, and the following other officers were elected without contest: First vice-president, K. D. Church: second vice-president, F. J. Parsons; third vice-president, Jas. K. McNutt; hon. secretary, John C. Watson; hon. treasurer, J. E. Walsh.

Directors—W. C. Munn, J. P. Anglin, John Quinlan, C. M. Morssen, Douglas Bremner, T. Latourelle, J. J. Roberts, Fred. B. Locker, A. W. Bremner, A. T. Alexander, Wm. McNally, J. M. G. Lockerby and John Grieve.

EX-PRESIDENT CHARETTE BETTER

After an illness of several weeks, ex-President Alex. Charette, of the Canadian Society of Domestic Sanitary and Heating Engineers, is about his duties again, "feeling like a boy again," as he says. Mr. Charette is "on the job" early and late, and believes that if one is to make his work tell this is the best principle to follow.

"THOUGHTS"—By Napoleon Hill

SELF-CONFIDENCE

IF you are a failure, if you are unhappy and despondent, you may see the person who is most to blame by stepping to the looking-glass!

It's sad, but true!

When you begin to succeed you may put it down as a sure thing that you have commenced to believe in yourself.

Through the principle of Auto-Suggestion you are constantly urging yourself on to greater achievement or defeating your aims, to the extent that you have faith in yourself or lack it.

Wrapped up in that wonderful brain of yours you have all the potential ability which you need with which to succeed in any undertaking that is **possible of accomplishment.**

You are the only person on earth who can cut the fetters which bind that force and withhold it from use.

The thoughts which you hold in your own mind are being constantly registered in the minds of those with whom you come in contact. This is a scientifically proven fact. Can you not see, then, how necessary it is for you to think well of yourself? Can you not see why you ought to believe in your ability to accomplish all that you undertake?

The line which marks the difference between the successful and the unsuccessful man is definite and easily removed. One believes he can do all that he undertakes and goes ahead and does it; the other one believes he cannot accomplish anything, so he never begins!

If you want to witness a marvellous transformation in yourself, commence now and for ten days stand before a mirror for ten minutes each day, look yourself squarely in the eyes and say—"I believe in you; you can finish everything you start; you can induce people to like you; you can get people to favor you by first favoring them; you can win people's confidence by placing your confidence in them." The result will be startling.

SELF-CONTROL

YOU can never become a great leader nor a person of influence in the cause of justice until you have developed great self-control.

Before you can be of great service to your fellowmen in any capacity you must master the common human tendency of anger, intolerance and cynicism.

When you permit another person to make you angry you are allowing that person to dominate you and drag you down to his level.

To develop self-control you must make liberal and systematic use of the Golden Rule philosophy; you must acquire the habit of forgiving those who annoy and arouse you to anger.

Intolerance and selfishness make very poor bed-fellows for self-control. These qualities always clash when you try to house them together. One or the other must get out.

The first thing the shrewd lawyer usually does when he starts to cross-examine a witness is to make the witness angry and thereby cause him to lose his self-control.

Anger is a state of insanity!

The well-balanced person is a person who is slow at anger and who always remains cool and calculating in his procedure. He remains calm and deliberate under all conditions.

Such a person can succeed in all legitimate undertakings! To master conditions you must first master self! A person who exercises great self-control never slanders his neighbor. His tendency is to build up and not to tear down. Are you a person of self-control? If not why do you not develop this great virtue?

A DEFINITE AIM IN LIFE!

CAREFUL analysis of more than ten thousand people disclosed a remarkable weakness which ninety-five per cent. of them had in common—

—they had no **definite** aim in life!

Another notable fact disclosed by these ten thousand analyses was that those who were financially successfully **had a definite aim** and a well-formulated plan for achieving it.

As far as this writer has ever been able to ascertain, there are two steps which every successful person must take; first, he must formulate a very definite aim as an objective for which to strive, and secondly, he must reduce that aim to a concrete plan.

If you wish to witness a miracle which will equal anything that happened during Biblical days, write out on paper a clear, concise statement of your aim in life, then memorize that which you have written.

Each night, just before you go to sleep, repeat your definite aim aloud several times, then, during the day, do everything within your power to further the achievement of that aim. In a short time the forces of the whole universe will seem to conspire to the end that you may realize your aim. Try it, doubting brother, try it.

ENTHUSIASM

ENTHUSIASM is one of the most desirable of qualities! It attracts people to you and causes them to co-operate with you.

Euthusiasm is the spark which touches off that dormant power which is housed in your brain and puts it into action.

Enthusiasm is a sure antidote for laziness and procrastination; it is the main-spring which keeps your mental machinery in action.

Enthusiasm overcomes despondency and. generates hope, self-confidence and courage. Enthusiasm stirs up you liver and puts it to work, thereby helping it carry on its vital function of cleansing your blood.

Enthusiasm arouses your whole being and causes you to transform your dreams into reality!

If you are not enthusiastic over your work you do not love it, therefore you are trying to perform work for which you are not fitted.

Enthusiasm is contagious! Unconsciously you pass it on to those with whom you come in contact and it arouses them to act and think as you do.

An enthusiastic person, when guided by a sense of justice toward others, is usually a great asset in any organization, business, family or community.

Are you a person of enthusiasm?

THE LAW OF RETALIATION

LIKE attracts like!

We see concrete evidence of this principle in every act and in every thought. Failure attracts failure, while success attracts success.

All down the ages the philosophers, seers and prophets have told us of this law, but generally they have stated it in axiomatic terms which have seemed to us abstract and more or less in the nature of preachments.

If you want evidence that such a law really exists, criticize the preacher, the lawyer, the doctor or the average layman and see whether he retaliates in kind or not.

Reverse the rule and speak in complimentary terms of one of these and see whether or not he responds in kind.

Building Active During February

Permits to Value of $4,568,074 Issued Last Month—A Large Increase—Total for the Corresponding Month a Year Ago Was $1,864,597—Building Conditions Unfavorable

Compiled by FINANCIAL POST

THE opening months of the year give promise of a revival of building activity throughout the Dominion on a scale that has not been attained since before the war. Returns of building permits issued during the month of February indicate that the totals for the previous month have been surpassed and the volume of building for the corresponding month a year ago, has been more than doubled. The total value of permits issued during the last month for the thirty-eight cities of the Dominion reached a total of $4,568,074, as compared with $1,864,597 for February, 1919, and $3,731,267 for the month of January. This may be regarded as a creditable showing in the face of unprecedented difficulties encountered by the building trades. The cost of labor has risen to an excessive degree, and the condition of the market for all forms of building materials shows no sign of improvement. The severity of the present winter has also had a tendency to interfere with operations.

The returns of practically all cities show a substantial increase for the month. As usual the twenty-four Eastern cities lead with a total value of $3,388,348 of permits issued, as against a total of $1,179,726 for the fourteen cities in Western Canada. Toronto again leads with a total of $1,462,768, a large increase over the total for the same month a year ago of $676,185. As in January, the city of Windsor was her nearest rival with permits to the value of $492,000. Montreal again fell far behind, although at $386,335 there was a considerable improvement over the total of $151,740 for February, 1919. In the West, Vancouver leads with permits to the value of $298,799, against $65,810 for the same month a year ago. Regina is a close second at $237,250; and Winnipeg has a total of $119,950 against $20,650 a year ago. The severity of the winter in the Prairie Provinces has had a depressing effect on building, and it is expected that genuine activity will develop in the spring. Halifax was one of the few cities whose totals for the month have declined, standing at $182,160 as compared with $250,248 a year ago. Stratford, St. Thomas and St. Catharines also report declines.

The gain for the first two months of the year is $5,274,560, the total standing at $8,299,341, as against $3,024,781 for the previous year. In the early months of 1919 the future outlook was beclouded in uncertainty and as a consequence construction was delayed. This year there are other difficulties, but the condition of the country is reflected in the increased totals reported. The totals will undoubtedly increase as the more favorable months for building approach.

The following are among the permits issued during the past month: Toronto, Baldwin's, Limited, factory, $200,000; Adams Limited, store, $300,000; M. Loew Limited, theatre, $275,000; York Township, schoolhouse, $121,000; Brantford, Brantford Roofing Co., $8,000; Hamilton, factory addition for Hamilton Cotton Co., $30,000; and factory addition for Brown, Boggs Co., $30,000; Peterborough, factory of Canadian Aladdin Co., $12,000; Windsor, Allan Theatre, $195,000; Burroughs Adding Machine Co., factory, $200,000; Woodstock, factory for McKinney Lumber Co., $20,000; Winnipeg, church, $50,000; Calgary, new wing to Yale Hotel, $50,000; Edmonton, Carroll Wilson Co., $30,000; C. P. R. building, $60,000, and extension to freight sheds, $20,000; Regina, Regina Trading Co., store, $125,000; H. G. Smith & Co., warehouse, $40,000; Vancouver D. Spencer, Limited, store, $100,000; Empress Manufacturing Co., factory, $20,000; Vancouver Knitting Co., factory, $10,000.

EDITORIAL COMMENT

SUCCESS AND PROFITEERING

BARON LEVERHULME, of Sunlight Soap fame, in a recent address referred to the prevailing habit of branding the successful business man as a profiteer. The spirit of to-day is one of cupidity and jealousy, he said, adding, "A feeling is running through the country that the primary sin of a business man is success. The man who has the ability to create, develop, organize and produce is considered as one who must be specially curbed, checked and controlled.

"Our war debts have to be paid by the persistent efforts of all to build up an enormous home and an enormous export trade. Taxation of wealth only means taking money out of one pocket and putting it back into another.

"The greatest disservice we can do the nation is to preach the doctrine that success is profiteering. There should be no interference with the enjoyment of the fruits of industry during the life of their producers."

There are many highly successful business men who have never been in the profiteering class, and there undoubtedly has been in Canada, as well as in England, a popular habit of describing as a "profiteer" almost every business man who, during recent years, has made a success of his business.

UNDER-PRODUCTION AND OVER-PRODUCTION

THE Mechanics and Metals National Bank of New York, under the above heading in a recent letter, treats the question of production in a rather interesting manner.

The distinctive feature of the present situation, states the letter, continues to be the extraordinary shortage of goods. Even in their personal expenditures people daily encounter the fact that not only are prices high, but that, more striking still, manufacturers are far behind in their orders, so that goods, if obtainable at all, are only to be had with difficulty or after long delays. It is asserted that so long as this condition of under-production exists, there cannot be any let-up in the present pace of business. Depression will not come, it is said, until output has been so increased as to overtake demand and "over-production" sets in. But it is difficult to see how the maintenance of American prosperity is to depend upon our continuing to produce fewer goods than are wanted. "Over-production" cannot mean the existence of more goods than are desired; we cannot turn out too much wealth. Yet it is not impossible, particularly if, presently, a foreign outlet for goods is barred through Europe's inability to secure credit, and if caution is not taken, that in certain lines more goods may be turned out than can be sold at a profit; and this is certainly not out of the question when costs of production are so high.

However, for the moment, the tendency toward declining prices is not sharply defined, and, generally speaking, the market for commodities is very firm.

INCREASING SALES

"THE best time to increase sales is before you have to." The foregoing remark, credited to a remarkably successful business man, emphasizes a point which is kept clearly to the forefront in the mind of the merchant at this season of the year. There is no good reason for pessimism of any kind at the present time. The outlook for the balance of 1920 is exceedingly bright. At the same time it is advisable to "cash in" right now on all the business that is available. There are very few merchants or salesmen who cannot, by a little extra effort, greatly increase the sales volume during the spring months. Extra effort exerted at this time in selling and collecting will enable a merchant to build up a reserve which is bound to come in useful later on.

TURNOVER TAX

ELSEWHERE in this issue an article refers at some length to the "Rumored Turnover Tax for Canada" A rumor is circulating to the effect that the present federal taxation of excess profits will be discontinued, and in its place a turnover tax will be adopted. This new tax would affect all businesses regardless of profits. In the hardware trade, as in other businesses, it frequently happens that a hardware merchant with a turnover of say $75,000 per year, makes a greater profit than another merchant who has a much larger turnover.

Nevertheless, the merchant making the smaller profit would pay the greater tax. There are many interesting phases to this subject and SANITARY ENGINEER in the next issue will publish the views of merchants and wholesalers. We also ask our readers, after reading the article, to write to us expressing their views on the new proposed form of taxation. Names will be withheld if desired when views are published in SANITARY ENGINEER. SANITARY ENGINEER'S representative at Saskatoon advises us that the Saskatchewan Retailers' Association is opposed to the suggested tax. The advice states "That the proposed tax on retailers of one per cent. or one-half per cent. by the Dominion Government would tend to increase prices of the necessities of life still more, is the opinion of Saskatchewan retailers, as represented by their provincial association, according to protests which are pouring into the headquarters from branches all over the province. The determined effort of the association, it is said, is to keep prices down, but this will force them higher and is therefore strongly opposed. It is termed an 'unfair measure' and an 'imposition.'" In our next issue we hope to give views of manufacturers, wholesalers and retailers.

CAUSES OF INFLATION

FOLLOWING Frank A. Vanderlip's address before the Canadian Club in Toronto a short time ago, there were many who expressed the opinion that he was altogether too pessimistic. However, it is noteworthy that several of the predictions which he made at that time have since been fulfilled. In a more recent address, Mr. Vanderlip, who was formerly president of the National City Bank, New York, stated that in his opinion the inflation of United States currency and of bank credit has, more than anything else, been responsible for the per cent. rise in prices in the last six years.

"There are three things upon which real prosperity must be based," he said. "These are ample capital, efficient labor and an application of sound economic principles. We are prosperous to-day in face of all three fundamentals, and our prosperity is false as well as dangerous.

"Incomes to-day are larger than ever before. Profits are larger. Yet fresh capital for business enterprise is less available than ever before. The chief reason for this is the Government taxes.

"But even were taxes reduced the situation would not be sound. The contention is that labor is only 60 per cent. efficient. There is no non-employment to-day. And yet, despite this fact, our productivity is lower than it has ever been."

Canadians are awaiting the Budget speech of the Finance Minister, at Ottawa, as a great deal of interest has been aroused as a result of rumors that changes will be made in taxation methods. Regarding the inefficiency of labor, Canadian manufacturers have also experienced lower productivity, despite constantly advancing wages.

ARE YOU INSURED ?

THE subject of fire insurance is one that every merchant should give a great deal of thought to. Every merchant, for his own protection, should carry fire insurance to at least eighty-five per cent. of the value of his stock and fixtures. The value of the merchandise is greatly increased by the amount of stock that is now being carried in the average grocery store. The merchant owes it to himself, his family, and wholesales to carry sufficient insurance that will amply cover any loss that may occur by the misfortune of a fire. Many grocers are carrying co-insurance. This is a form of insurance that the retail grocer should beware of. The plan of co-insurance is that you must carry at all times insurance to the amount of eighty per cent. of the value of your stock. For example, if you carry a ten thousand dollar stock you must have at least eight thousand dollars' worth of insurance, otherwise, in case of fire, the amount of insurance paid would be in proportion to the amount of stock carried. At the present time co-insurance for the retail grocer is rather risky. The increase in the amount of stock carried and daily fluctuations in prices, which are always upwards, make it so.

IT IS very easy to figure out that prices cannot possibly go any higher, only to come down in the morning and find announcement of 'steen lines that have hopped over night.

* * *

IF A metal workers' strike becomes generally effective in Canada on May first, it will further complicate matters and intensify manufacturing and delivery problems which are now sufficiently numerous.

* * *

THAT the farmers of Canada have contributed only $389,011 out of $83,768,110 collected during the four years the income tax has been in operation, was the statement of T. B. Patton, income tax adjuster and adviser in an address before the Kiwanis Club, at Regina. Even with a Farmers' Government in power, they could hardly contribute less than the small amount above stated. There must be something pretty rotten with the system when the farmers who have rolled up wealth during the past four years can get off with less than $100,000 per year income taxes.

News from Here and There

Trade Notes

The Draper Manufacturing Company of Port Huron, Michigan, has purchased a factory building at Petrolea, Ont., which will be remodelled at once and work commenced as soon as possible on making brass valves, plumbing goods and supplies.

Smith Bros. have leased premises on Wortley Road, London, Ont., and plan to open a plumbing shop about April 15.

Catalogues and Booklets

Ontario Wind Engine and Pump Co., Ltd.

Ontario Wind Engine and Pump Co. have issued a very interesting and unique wall calendar which should prove very convenient and useful, both as a calendar and as a reference for the different lines the above firm manufacture.

The above firm have also issued a well-illustrated catalogue containing twenty-four pages, which describes and illustrates their line of farm engines. Also showing parts such as crank shafts, connecting rods, piston rod assemblies, ignition, carburetor assemblies, etc., as well as types of mounted and stationary engines.

A line of pulleys, pump drilling outfits, etc., are also shown. Those desiring copies may have same on request.

Who is in Authority?

London, Ont.—Sanitary and heating engineers of London and district are watching with keen interest the outcome of the action of the city council, which, at its meeting on Monday evening, decided to suspend for three weeks the recently-passed plumbing regulations, which were printed in a previous issue of SANITARY ENGINEER. Immediately after the council's action, Chairman John Saunders of the Board of Health instructed City Plumbing Inspector Young to proceed with his duties as usual and make all inspections. The point to be decided is who is in authority.

Inspector is Busy

In the meantime, Inspector Young is continuing his inspections and seeing to it that all installations are made according to the provisions of the by-laws. Sanitary and heating engineers claim that this is absolutely necessary in the interests of public health. They are not all, however, unanimous regarding all of the provisions of the by-law and it is planned to make amendments to the clauses. These will make changes which are less drastic. The revision of the by-laws is now in progress and will be presented to the city council next week for approval.

New Clause in Montreal

A very important clause, added to the Montreal new plumbing by-laws, will require that a plumber hereafter, procure a license from the city, together with a certificate of competence, as to his qualifications as a certified plumber. In addition to this, it will be compulsory, on the part of masters engaging men, to furnish the city with the names of those plumbers in their employ. The new clause, added to By-law No. 318, and inserted after Section 2, reads:

"No master plumber shall employ a journeyman plumber, who has not obtained a license from the city, as well as a certificate of competence from the examining board of plumbers, according to section 5 of the present by-law.

"Every master plumber must furnish the city without delay the name and the address of each journeyman plumber in his employ on the demand by an official in the health department or of the license department."

GAS CONVENTION AT OTTAWA

The thirteenth annual convention of the Canadian Gas Association will be held at Ottawa, Canada, on Friday and Saturday, August 27 and 28. A cordial invitation is extended to all gas men. Hotel reservations can be made through the secretary, G. W. Allen, 19 Toronto Street, Toronto, who will supply all information on application.

Ottawa Notes

At the suggestion of the Ottawa Board of Trade, Mayor Fisher has issued a proclamation providing that daylight saving start on Sunday, May 2, instead of May 1, and end on Sunday, October 3, instead of October 1. The idea of the Board of Trade was that there would be less confusion if the change were made on Sunday instead of a business day.

The C.P.R. will be urged to establish a station in the west end of the city. The nearest stop to this end of the city at present is Britannia, a distance of about five miles.

Claims Mass Production Will Have Bad Effect

Under the heading "Mass Production and the Craftsman," the "Ironmonger" states that whatever mass production may do in the way of increasing output and reducing working costs, it has one serious disadvantage which has been somewhat overlooked in the general booming of the system. One of the fundamental principles of mass production is the sub-division of work so that the individual workman is concerned only with one particular operation, and, provided he is skilled in that, nothing more is required of him. Under this system, therefore, a group of workmen, none of whom could be described as a skilled mechanic, could construct a highly complex machine, provided the parts were standardized and there was efficient technical control over the erection. The type of work evolved by this system is well illustrated by Mr. H. Tipper in an address to the American Society of Automotive Engineers. Mr. Tipper went into the factory of the Western Electric Co. and saw a white-haired man standing by a punching machine. The man was pushing steel plates into the machine, punching them and passing them on to another workman. Mr. Tipper asked him, "What is that plate?" and the following conversation ensued: "That is P-X-111."

"You don't get me; what do they use it for?"

"I don't know."

"How long have you been on this job."

"Twelve years."

No doubt, this is an extreme case, but it is the inevitable tendency of a system which, while it may bring immediate profit, will later have a harmful effect on the craftsmanship which is the foundation of British engineering. Its influence on the training of engineers will be bad, for they will not have the same opportunities of acquiring an all-round knowledge as under the old methods. Mechanical engineers often maintain that the best training is got in the small shops, where there is a greater variety of work.

Market Conditions and Tendencies

Continued from page 42

Boiler Tubes Scarce; Firm Price Still Holds

BOILER TUBES —Jobbers state that shipments of boiler tubes are not coming any better and that in most cases it is almost necessary to send buyers to the mills in order to get any satisfaction whatever, and in many cases they state it is necessary for them to pay premiums in order to get prompt deliveries.

The shortage of skelp continues to be one of the main factors which is due, it is stated, to the previous strike of 1919. The demand is very good and were jobbers able to procure these stocks a record business would be handled, according to the present indication.

Boiler tubes are being quoted as follows, although in many cases the prices are nominal, as it is often necessary for premiums to be paid in order to secure immediate delivery.

BOILER TUBES—	Per 100 feet Seamless	Lapweld
1 inch	$28 00	$.....
1¼ inch	30 00	.....
1½ inch	31 50	.....
1¾ inch	33 50	30 00
2 inch	32 00	28 75
2¼ inch	36 00	31 25
2½ inch	45 00	35 75
3½ inch	69 00	48 75
4 inch	96 00	62 50
3 inch	53 00	45 75
3¼ inch	.....	52 50

Sheets and Plates Firm; Warehouse Stocks Nil

SHEETS AND PLATES.—Although this line has been scarce for some time, many have been looking forward to better deliveries. Jobbers state that deliveries have slightly improved and are hopeful of securing sufficient quantities for their needs.

The warmer weather seems to have brought about considerable increased demand and building activities are beginning to get under way, although it is the opinion of many that the anticipated building boom may be somewhat restricted owing to some deciding to wait till such a time as building materials would be much cheaper. However, it remains to be seen just what the season will bring forth. In the meantime, prices on sheets are very firm and are still hard to procure. The following prices are nominal and are as follows:

BLACK SHEETS

14 gauge	8 00
1 6gauge	8 10
18-20 gauge	7 95
22-24 gauge	8 00
26 gauge	8 05
28 gauge	8 15
3-16 inch plate	....
¼-inch boiler plate	....

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

GALVANIZED SHEETS

	Premier		Apollo	
10¾ oz.	$10 00	$10 60	$10 45	$10 75
U. S. 28	9 60	10 20	9 75	10 35
U. S. 26	9 30	9 90	9 40	10 05
22 and 24	9 15	9 75	9 20	9 90
18 and 20	9 00	9 60	9 00	9 75
16	8 85	9 45	8 80	9 60
12 and 14	8 20	8 70	8 55	9 45

An extra is now charged on galvanized sheets, 10¾ oz. and 2 8ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

Tin Some Weaker; Other Ingots Show Little Change

INGOT METALS.—The tin markets have shown some irregular prices, but is causing little comment owing to the strengthening of the English pound and other conditions which are continually developing. Other ingots on the list are practically unchanged, and the same conditions governing.

COPPER remains unchanged, showing fair demand. The present price is 24 cents per pound.

SPELTER continues to show a good demand, although the price is unchanged and is quoted at 17 cents per pound.

ANTIMONY is in fair demand and is being quoted at 15 cents per pound.

TIN.—The markets on tin are unsteady, chiefly on account of the European conditions. The present quotation is 72 cents per pound.

LEAD continues notably scarce and local stocks are light. The present quotation remains at 12 cents per pound.

Corrugated Sheets Firm; Big Demand, Low Stock

CORRUGATED SHEETS.—The demand for corrugated sheets continues to be very heavy and manufacturers are having difficulty procuring sufficient stocks of flat sheets to make up.

The warmer weather seems to have opened up new channels and the demand is continually becoming more persistent, although it is believed that this is more on account of the manufacturer not securing sufficient stocks in order to make the finished products, and some are of the opinion that the demand would be normal providing the manufacturers could secure sufficient stock to catch up with orders.

The following are the present quotations:

CORRUGATED SHEETS—	Per 100 sq. feet Galv'd	Painted
No. 28-gauge	$ 9 25	$ 7 75
No. 26-gauge	10 00	8 75
No. 24-gauge	15 00	11 00
No. 22-gauge	17 50	13 75
No. 20-gauge	21 00	17 50
No. 18-gauge	26 50	21 50

On shipments of 300 lbs. and over, freight is allowed south and east of and including North Bay; also several western counties in Quebec Province. Places north and west of North Bay, the freight is equalized on North Bay. For Quebec and Maritime Provinces, freight is equalized on Montreal.

Ad 5% to above list.

Cotton Waste Prices Firm; Unchanged

COTTON WASTE continues to hold at firm prices, the tendency being for higher prices, although no immediate changes are expected. Jobbers state that the present demand is brisk and a large amount of business is being handled.

The following are the present quotations:

The Vacant Chair

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

THE MARKETS AT A GLANCE

IMPORTANT advances in prices have been made on numerous sanitary and plumbing supplies. The new VitrO tank prices have been issued and are about 10 per cent. higher. Syphon valves have been marked up as well as high and low tank ball cocks. Prices on closet seats have considerably stiffened, while laundry trays and sinks also have higher prices. Some lines of coils are among the list of advanced prices. Pipe fittings have been revised upwards, cast and malleable both being affected. Lead pipe and other lead products all have new higher quotations.

Nearly all in the trade are enjoying a very busy period which compares very favorably with some of the best years recorded. Collections have stiffened up to some extent, it is stated. This is said to be due to the situation which has developed in placing of loans by financial concerns, in order to hold in check speculative building and transfers, etc. However, this may work out more beneficial to all concerned, it is believed.

Many are wondering what will be the outcome of the proposed strike in the metal trades. The new proposed freight rates may also be a factor for higher prices.

TORONTO, March 30.—Higher and advanced prices are still the order amongst commodities whose basic material is of metal. This issue records important higher quotations on many lines. While other lines, although unchanged, are holding at firm prices and should the proposed strike become effective, as well as the higher freight rates and other factors, there seems little doubt but some of these lines will advance. However, in spite of the high prices being charged there are many who are force dto build, and incidentally the demand is a heavy one.

Some of the most important lines affected are Vitro tanks, syphon valves, high and low tank ball cocks, closet seats, laundry trays and sinks, some lines of coils, pipe fittings, lead pipe and other lead products.

Collections have stiffened to some exextent, although nothing of a serious nature, it is stated. This is attributed to some of the financial concerns tightening up on loans in order to discourage speculative building and transfers, it is believed.

New Vitro Tank Prices Now Being Quoted

VITRO TANKS.—As recorded in last issue of SANITARY ENGINEER, Vitro tank prices had been withdrawn. The new prices have now been announced, and, needless to say, are at an advance over former quotations. The new prices are as follows:

White Vitro tank, with wood strip seat, $22.50 each; white Vitro tank, with P.H. mahogany seat, $23.50 each; white Vitro tank, with P. H. oak seat, $23.25 each; oak Vitro tank, with wood strip seat, $20.25 each; oak Vitro tank, with P.H. seat, $21.00 each; mahogany Vitro tank, with mahogany post seat, $23.75 each. Inside fittings, seat, flush, elbow and supply are included in the above prices.

Douglas Syphon Valves Quoted at $2.75 Each

DOUGLAS SYPHON VALVES have been revised upwards, the new price being quoted at $2.75 each.

Ball Cocks Also Have Higher Quotations

BALL COCKS are now being quoted at new and higher prices. The ball cocks for the low-down tank are now selling at $3.00 each, net, while those for the high-up tank are quoted at $2.50 each.

Prices on Closet Seats Have Been Revised

CLOSET SEATS. — New prices have been made on closet seats, and in line with the general tendency of the wood market the revision is upwards. The wood strip is now being quoted at $3.30 each; the post hinge, $4.25 each; while the post hinge mahogany seat now sells for $4.75 each.

1 and 2-piece Laundry Trays Have Advanced

LAUNDRY TRAYS—Advanced prices are now effective to the trade on laundry tubs. The two-section laundry tray is now being quoted at $39.75. The sink and tray combined are also quoted at $39.75, while the one-piece sink is quoted at $19.85.

Coils; Some Lines Have Higher Prices

COILS.—Some lines of coils have been marked up to higher prices. This is said to be the result of the present shortage of raw materials, higher cost of labor, and other factors. Some of the new prices are: Number 10x9½ inches, $2.67 each; Number 15x13 inches, $3.50 each; Number 20x12 inches, $3.50 each; Number 50x15 inches, $6.33 each.

Range Boilers Unchanged; Have Big Demand

RANGE BOILERS continue to hold at unchanged prices. The scarcity of raw material continues to cause manufacturers some inconvenience. The demand so far this season has been of a heavy nature and manufacturers state they are shipping as fast as they can complete the manufactured article.

This may be an intimation of future business for the coming season, which usually becomes heavier as the season advances.

The following are the present quotations:

Range Boilers—	Standard	Ex. Heavy
30-gallon	$12 00	$14 00
35-gallon	14 00	16 00
40-gallon	16 00	18 00
52-gallon	22 00	25 00
66-gallon	35 00	38 00
82-gallon	40 00	47 00
100-gallon	50 00	58 00
120-gallon	60 00	67 00

Conductor Pipe Firm; No Higher Prices Made

CONDUCTOR PIPE AND EAVESTROUGH.—Prices on this commodity continue to hold, no changes having recently been made. Manufacturers have had to contend with the acute shortage

Add 5% to the above list.

Pipe Fitting Prices Reach Higher Levels

PIPE FITTINGS.—Higher revisions in prices have been made on many lines of pipe fittings. Cast iron fittings are now quoted at net list. Plugs are advanced to 15 per cent. off the list; unions are also higher.

Class A, B, and C malleable fittings are also marked up. This is said to be due to the higher cost of manufacture. The new prices are firm and no further changes are being looked for for some time to come.

The following are the new prices:

PIPE FITTINGS

Cast iron fittings	Net list
Plugs	15%
Bushings	17½%
Unions, ¼-in. to 2½-in.	32½%
Do., ⅛-in. to 3-in. and larger	25%

MALLEABLE FITTINGS

Class A	0 65	0 80
Class B	0 28	0 38
Class C	0 19	0 28

Wrought Pipe Scarce; Price Remains Unchanged

WROUGHT PIPE.—Prices are unchanged, and some of the best selling sizes are scarce, it is stated. Manufacturers say they still have difficulty in securing skelp from the mills. The freight transportation is also causing some shortage, as supplies are said to be moving slowly.

Some have it that with the decline of the exchange rate that a slight reduction may be made in the list prices. To a certain extent the high rate of exchange was the chief factor for the last advance, it is believed. The present quotations are as follows:

PIPE — WROUGHT
Price List No. 43 — Feb. 3, 1920
STANDARD BUTTWELD S/C

Approved credit.

Lead Pipe and Waste Up; Solder Also Higher

LEAD AND ZINC PRODUCTS.—New and higher prices have been made on this commodity. Lead pipe at 18½ cents per pound, while lead traps and bends are now quoted at an advance of 30 per cent. to the list.

This is said to be due to the situation which has developed in pig lead, it being very difficult to secure supplies, owing to the scarcity. The new quotations are as follows:

Lead pipe, list, per lb.	0 17½
Lead waste pipe, list, per lb.	0 18½
Do., over 8 inches, list, per lb.	0 19½
Above subject to discount of 10 per cent.	
Lead traps and bends	add 30%
Lead wool, lb.	0 16

Solder, strictly, lb.	0 43
Solder, commercial, lb.	0 40
Zinc sheets, per lb.	0 19
Solder, guaranteed, lb.	0 43¾
Solder, wiping, lb.	0 40

Stove Plate and Cast Iron; Present Prices Erratic

OLD MATERIALS. — The list, as shown below, continues to be very quiet, although dealers expect a heavy buying movement to take place very shortly, as every indication points to heavy demand for all kinds of old materials. Cast iron and stove plate continue to be scarce. The demand is about regular with normal times, but the supply is not coming forward, and any supplies that do come to hand are quickly bought up. It is stated that some heavy premiums have been charged and this may be the reason that so many prices are current, as some are charging anywhere from $18 to $30 per ton at present. The following are the quotations:

DEALERS' BUYING PRICES

Pipe scrap	....	11 00
No. 2 busheling	....	13 00
Stove plate, per ton	....	....

Old rubbers, boots and shoes	....	0 06
Overshoes, lumbermen's rubber boots	....	0 04
Bicycle tires	....	0 01½
Automobile tires	....	0 03
Tea lead	....	0 04
Heavy lead pipe	....	0 06

Enamelware Prices Firm; Situation Unchanged

ENAMELWARE.—Prices remain unchanged, although present quotations are on a firm basis. The demand is heavy and manufacturers state that nearly all in the trade are carrying heavy stocks this year, with the belief that the firm that has the goods to sell will get the business regardless of price.

It is hard to say what will be the situation in the near future. Some have it that with the impending strike, also advanced freight rates and other factors, that higher prices may be made; however, this remains to be seen, and manufacturers and jobbers all down the line are well satisfied with the business that is being offered.

Some of the better known lines are quoted as follows:

Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide			$37 05
Bath tubs, 5½ ft.			41 20
Lavatories—			
17x10" Apron F139 or P4345			11 05
18x24" Apron F154 or P3845 or P3847			17 00

18x21" Roll rim F197, F199 or P4655-6			11 10
17x19" Roll rim F241 or P4345			9.05
Sinks, roll rim, 18 x 30 in.			16 60
Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$5 40	$5 35	$5 30
18 x 30	6 20	6 50	6 10
20 x 30	7 10	7 05	7 00

Soil Pipe Prices Remain Unchanged

SOIL PIPE continues to hold at a firm price, no higher quotations being made. The present demand is heavy for this season of the year, it is stated, and indications are that a large volume will be handled during the coming season.

Stocks are coming forward with little difficulty and no higher prices are immediately looked for, unless raw materials or labor advance, it is stated.

The following are the present quotations:

Medium and extra heavy soil pipe, 2, 3 5 and 6 in.	10%
Medium and extra heavy soil pipe, 4 in.	15%
Medium and extra heavy soil pipe fittings, 2 in. to 6 in.	25%
8 in. extra heavy pipe and fittings	5%

Plumbers' Compression Work Firm; Unchanged

PLUMBERS' COMPRESSION WORK continues to hold at firm prices. Manufacturers and jobbers state that business is very brisk and a good volume of stock is moving. The present price, though firm, seems steady and no immediate change is predicted.

The following are the present quotations on some of the better known lines:

Compression work, standard	25%
Fuller work, standard	30%
Bath cocks, compression	25%
Bath cocks, Fuller	28-30%
Flatway stop and waste cocks, standard	25%
Roundaway stop and waste cocks, standard	25%
Brass steam cocks, standard	add 10%

Business Dry? Not Much!

DON'T you remember wondering, when you were a little Tad, what fun those great big chaps of twenty or so had? They didn't go "bobbing"—they didn't spin tops. Then you remember, perhaps, how, at twenty or so you rather pitied the old fellows of thirty-five or fifty who didn't dance (in those days) or do anything much.

But now, at thirty-five, fifty, or even sixty, you find there is plenty of interest in life. The form of fun may change, perhaps the ideas of what constitutes fun—but fun, interest, there still is.

Business is Rightly Called a Game

Business is the interest—the fun—for many of us. We enjoy playing ourselves and we enjoy reading about the play of others.

This is why THE FINANCIAL POST, dealing with business, is bright, entertaining, a welcome week-end guest in some eight thousand homes.

Consider some of the articles in a recent issue:

A sketch of George Sumner, the newly appointed head of Montreal's Board of Trade—a man who is at work every day at 8 a.m., but who has found time to become an expert photographer and art critic. Peter McArthur's new suit—dealing with the farmer writer's boasted purchase of an all wool suit for $45; speaking of the comparative value of this with one he could have bought prior to the war, and showing what he would have to pay for each in eggs and wheat.

A $4,000,000 stock offering coming for new movie chain.

Canada proposes to pick and choose her immigrants.

The Financial Post Editorials Have a Kick Behind Them

"Marse" Henry Watterson, the famous Democrat Editor, tells in his reminiscences of being criticized for himself criticizing the Democrat party. Marse Henry replied in his paper by quoting:

"Things have come to a hell of a pass when a man can't wallop his own jackass."

THE FINANCIAL POST is willing to wallop anything—but it doesn't wallop just for the fun of walloping. It wallops to achieve something.

Consider Some Recent Editorials:

"Give Drury a Chance"

An editorial describing the "sniping" by the daily press at the farmer Government—admitting certain mistakes of inexperience but calling for fair play; instancing how J. K. L. Ross, heir to many millions, was put, by his father, in a position where he could make mistakes in order that he might win through to success.

"Foolish Defiance of Canadian Law"

A scoring of the Fort Francis Pulp & Paper Company for refusal to admit the sheriff, and in other ways prejudicing the public against the pulp and paper industry as a whole.

S. R. Parsons Now Butts Into Insurance

An editorial telling of the Canadian Manufacturers' Association's mutual insurance schemes which went wrong, and pleading for a big man to manage the C.M.A. "The most useful and necessary institution in all Canada."

There's life in each issue of THE FINANCIAL POST. It will help you keep informed on important financial and business matters. It is a paper for the leaders of thought in each community, be they rich or not. Fill in and send to us the attached coupon. Annual Subscription $3.00.

SUBSCRIPTION PRICE $3.00 PER YEAR (52 ISSUES)

The Uncrowned King of Canada

IS Hon. James Calder the power behind the throne at the present time in Ottawa? The master politician who plans out all the moves in the political game?

Will Sir Thomas White shortly slip into the place of Sir Robert Borden and keep the Unionist Government in power until 1923?

These are predictions that J. K. Munro makes in the course of a witty, informative article on the political situation in the April 1st issue of MACLEAN'S MAGAZINE. J. K. Munro is writing the best political articles appearing in the whole of Canada.

Are we Playing into Germany's Hands?

"IF GREAT BRITAIN and the United States drift into subconscious antagonism now, Germany will have won in peace what she could not win in war," writes Agnes C. Laut in April 1st MACLEAN'S. She declares emphatically that for Canadians to create ill-will with the American people would be playing German's game in addition to losing—

1. Splendid trade opportunities.
2. Fully 100,000 families a year who will come over to Canada to escape agricultural difficulties in the States.

Miss Laut is saying things that will run contrary to the ideas of many people, but it is all the more worth while reading.

BINDING THE WEST WITH BANDS OF STEEL

The first of a series of articles telling the early story of M. J. Haney, who helped build the C. P. R. through the Canadian West.

A BIG NOVEL BY A YOUNG CANADIAN

In this issue will also be found the first instalment of a powerful and cleverly written new novel by a young Canadian author, Arthur Beverley Baxter. Do not miss "The Parts Men Play."

EIGHT MONTHS ADRIFT IN THE ARCTIC

The second and concluding instalment of Storker Storkersen's remarkable story of his long drift on a floating island of ice off the Northern coast of Canada.

"The Wistaria Arbor"— a short story. By Robert W. Chambers.

"Storm Along, John!"— a lacrosse story. By C. W. Stephens.

"Gentlemen of the Long Robe"— an article on the legal profession in Canada. By the Honourable W. R. Riddell.

"The Thread of Flame"— a powerful novel. By Basil King.

One Hundred Magazines in One

All magazines and periodicals published are read carefully and the best articles found are reprinted in part in the Review of Reviews section of MACLEAN'S. Here are a few in this issue:

The Strangest Tale of the War
The Red Hand Reaches Far East
The Triangle in the Pacific
The Rising Tide in Japan
Was Mrs. Wilson the Real President?
When the Giant Hand Falls
The Agitators in Washington
Civil War Possible in America
Romantic History of the "Chasers"
A German View of Canada
Commercializing the Coyotes
Praise and Criticism of Canadian Troops

Dependable and Satisfactory

ANTHES SYPHONS

Years of advertising and practical application have made ANTHES the by-word of the sanitary engineer. He thinks of ANTHES and syphons simultaneously.

ANTHES Syphons are made seamless and in one piece, which means there are no joints to open; it has no moving parts to get out of order and operates on natural laws. This makes ANTHES Syphon the very heart of sewage disposal systems, assuring dependable and satisfactory service. We will be pleased to supply you with Sewage Disposal Blueprints on request.

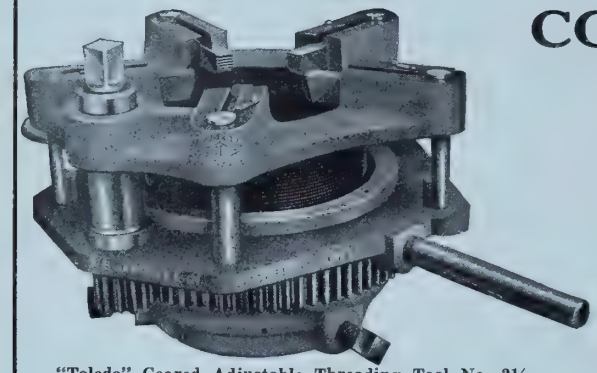
"Jardine" and "Toledo" Pipe-Threading Tools

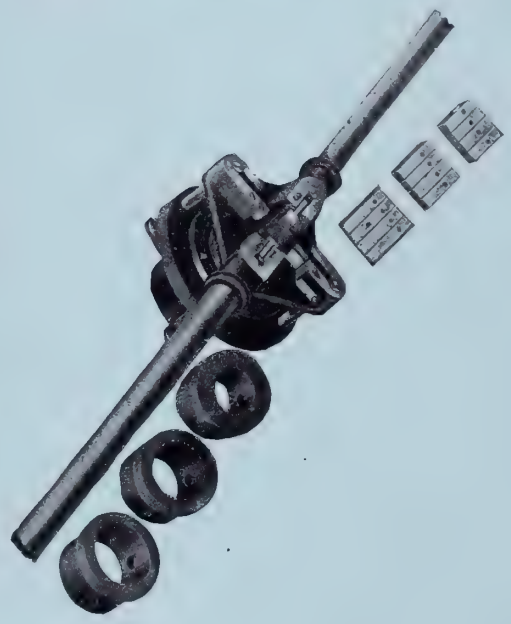
DO PERFECT WORK
and make
SATISFIED CUSTOMERS
and
CONTENTED EMPLOYEES

WHY?



"Toledo" Geared Adjustable Threading Tool No. 2½. Capacity 2½ to 6 in. inclusive. Weight, 120 lbs.

"Toledo" Adjustable Ratchet Tool No. 1A. Capacity, 1 to 2 in., inclusive.



"Toledo" Adjustable Threading Tool No. 1. Capacity, 1 to 2 in., inclusive.

Work easier than any other.
One man does the work of two.
Make perfect threads of perfect taper.
All threads finished at one cut.
Have lead screw insuring perfect pitch.
Are adjustable for variation in size of fittings.
Have no flimsy parts, they stand up to the work and cost little for repairs.
Cutters are interchangeable. Single cutters can be procured to match up with the balance of a set, should one cutter be lost or broken.
Strength, durability and simplicity of design are important features.
Imitation is the most sincere form of recommendation. We have a host of imitators.

Jenkins Valves

JENKINS BRASS "WHISTLE" VALVES

STOP WATER WASTE

At bakeries, in the departments where fruits are washed and prepared, Jenkins Brass "Whistle" Valves are installed on hot and cold water supply lines to stop water waste. A pull of the lever instantly permits a free full flow of water which is automatically shut off by means of a spring as soon as the lever is released.

Jenkins Brass "Whistle" Valves are extensively used in bath houses, garages, restaurants and factories, and, doubtless, numerous other uses will occur to you for these substantial, quick opening valves.

Know Jenkins Valves by the Jenkins "Diamond Mark"

"It Works So Easy"

Bill is demonstrating—and Bill doesn't make a practice of showing off tools—but he is so enthusiastic about the good qualities of the

Greenfield Ratchet Receding Pipe Threader

that he just can't help himself.

Easy cutting—ratchet action
Direct pull—no twisting strain
No unwinding on the pipe or off

10 Good Reasons

1 Quick Releasing
2 Quick Resetting
3 Adjustable Chuck
4 Replaceable Lead Screw
5 Replaceable Lead Nut
6 Chip Proof
7 Adjustable Chuck
8 Frictionless
9 Cuts Close Nipples
10 No Stripping

Cuts from one to two-inches

TRY THE TRIO

For smaller sizes Bill swears by the Trio Die Stock. 3 dies in one stock ready for use—no lost dies. Saves time and temper. Dies reversible—bushings removable.

"WELLS" PIPE WRENCHES

Dropped forged handle and jaws—holds like an electric magnet when the power is on—releases as quickly when the pull is off—strongest by actual test.

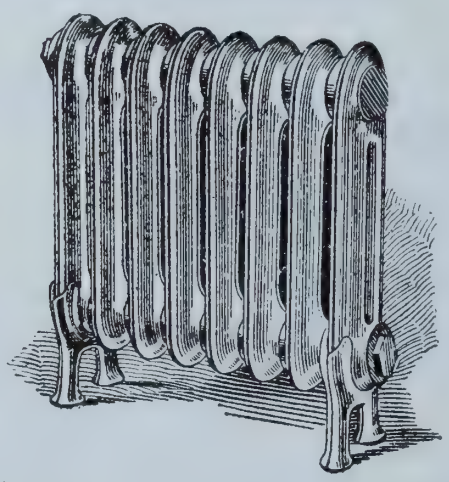
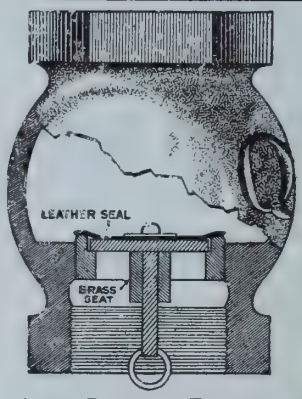
A Rad Snap

One size only—Steam and Hot Water Radiators



Radiators made by American Pressweld Co. of Detroit. Press steel and welded standard steam or water radiators, eight section, 18 inches high, single column, ⅛ inch air vent opening. These are absolutely new and guaranteed perfect. Wholesale price laid down in Canada, $9.50. **Must be cleared at once. Write and make an offer.**

Salisbury Electric Co., Limited
615 Yonge St., Toronto



This is a "Q" Foot Valve

And it Just *CAN'T* Leak

There are more pump troubles caused by "leaky" valves than from all the wear and tear which occurs in the average life of a pump.

The "Q" valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that JUST CAN'T LEAK.

Made in sizes from 1 to 8-inch.

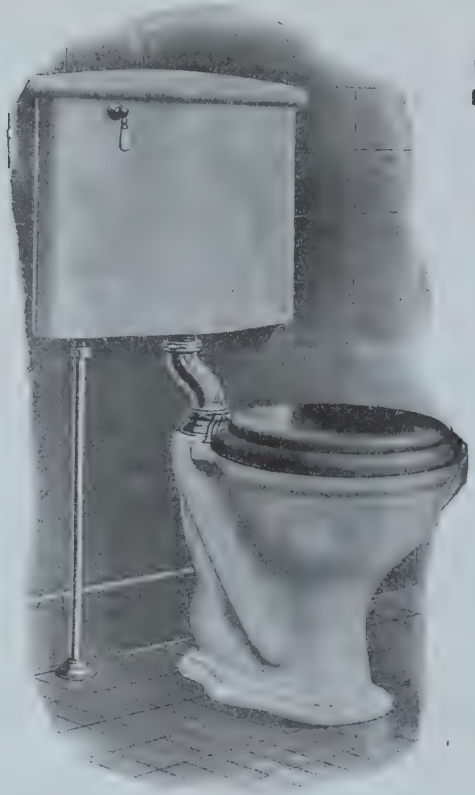
Stocking VitrO One-Piece Tanks

MEANS

Speeding the Turnover



Satisfaction alone increases the repeat orders from all jobbers for VitrO one-piece tanks.

Service and appearance have never been more cleverly combined than in this particular VitrO tank.

Every fitting is tested by mechanical experts, and the whole tank is absolutely guaranteed. If it fails to give satisfactory service it will be replaced by a new one immediately.

GUARANTEE

WE guarantee that should a VitrO Tank at any time prove defective through either material or workmanship, a new one will be given to the plumber by the jobber from whom he purchased it. In no case will credit be given to the jobber until the defective tank is returned and examined, and when a tank is returned same must be complete with all fittings; otherwise, credit will be given based only on the value of the goods returned.

Exception

This guarantee does not apply to defects caused by carelessness or abusive wear and practice.

Note

A VitrO Tank must not be returned because of a defective fitting or cover. A defective fitting or cover will be replaced at once; however, the defective one must be returned for examination.

When tanks are broken in transit, claim must be made against the Railroad Company.

EVERY TANK GUARANTEED

Have you studied the VitrO catalog? We manufacture the highest grade of brass goods in Canada. Why not help Canadian manufacturers keep Canadian money in Canada? Descriptive literature sent on request.

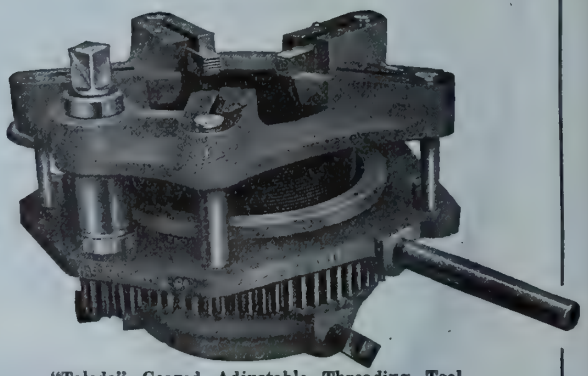
JARDINE and TOLEDO PIPE THREADING TOOLS



"Toledo" Geared Adjustable Threading Tool, No. 2½. Capacity 2½ to ½ in. inclusive. Weight 120 lbs.

THE ratchet feature of Jardine and Toledo Tools permits their being used to thread pipe which is already in place, no matter how awkward it may be to reach. The Jardine and Toledo has no cams or jim cracks to get out of order; and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

TRADE B.O.T. MARK

GOOD-BYE–

CANADIAN BRASS GALT ONT

To the unsanitary, unclean, germ-collecting wood strip seat, and let it remain an error of the past. This date we announce to the trade and public in general our decision not to offer this fixture for sale, in fact it is off the market. Our action is supported by Health Boards and physicians throughout the Dominion and we know the Sanitary Engineer is with us in the move, in fact, scores have asked us to eliminate this construction.

A Worthy Substitute

No. 201 Round Seat and Cover, full 1¼" stock in either golden oak or imitation mahogany, fitted with heavy Bar Post Hinges, N.P., having sufficient clearance between the bar and top of bowl to allow cleansing with a rag. It looks better, is better, lasts longer, and above all is sanitary. Wood doweled front and back of the seat opening, straight grained and will not split. Same features apply to Horse Shoe and Blanco Seats.

Yours for efficiency and service

BRANCH OFFICE: 136 SIMCOE ST., TORONTO

Twice a Month

"The Face in the Target"

The first of a series of mystery stories by the famous English author, **Gilbert K. Chesterton,** appears in the April 15th issue of MACLEAN'S.

Chesterton has created a new character in fiction—Horne Fisher who solves the mystery presented in each of the eight stories in the series: Fisher is greater than Chesteron's "Father Brown," more original even than Sherlock Holmes. This series promises to set a new mark in the fiction of mystery and crime detection. **MACLEAN'S MAGAZINE** is most fortunate indeed in being able to offer Horne Fisher and his exploits as a regular feature.

Canada Wants No Navy

A poll of press opinion shows that Canada does not favor the launching of plans for a navy at the present time. In this issue appears a careful summary of newspaper opinion on the question demonstrating that the editors of the Dominion—Liberal, Conservative, Unionist, Agrarian, whatever they may be—are almost unanimously against such a step. In every issue MACLEAN'S takes the problem uppermost in the public mind and, by summarizing newspaper opinion presents what is probably the consensus of opinion—the voice of Canada.

Entertaining Fiction

In addition to the Chesterton story which, by the way, is one of the important events of the year in the realm of fiction, there appears a splendid list of stories in this number, including serials by—

Basil King—The Thread of Flame.

Arthur Beverley Baxter—The Parts Men Play, and short stories by—

Robert W. Chambers—Pasque Florida.

Edith G. Bayne—Light of Morning.

Great Men of the Key

By Floyd S. Chalmers

An article on the successful men in Canada who started in life as telegraph operators, and why they succeeded. It is a surprisingly long list.

Binding the West With Bands of Steel

By J. L. Rutledge

The story of M. J. Haney, who built several sections of the C. P. R. through the West — a record of the days when men fought against great odds — nature and time and the unscrupulousness of other men. It is both a thrilling and entertaining tale of how great difficulties were met and overcome, with sidelights on the characters of the big men who figured at the time, including Strathcona and Van Horne.

One Hundred Magazines in One

In the Review of Reviews section, which is made up of reprints of the best articles appearing in all magazines and periodicals the world over, are the following:—

The Facts About Fiume.
Will Tories and Liberals Unite?
Milk the Absolute Essential
Has Morgan Ousted the Rothschilds?
Do Most Men Dislike Their Wives?
Britain Dominates Commercial Brazil.
Who Shall Control the Dardanelles?
The Krupp Works in Peace.

Electric Weld

RANGE BOILERS

Made in Canada

NO RIVETS NO LEAKS

The Electric Weld Principle

The strength of a Range Boiler is in the thickness of the shell and the character of the seams. The Electric Weld Quality Range Boiler is the best ever built: strong, rugged, durable and capable of withstanding the severest conditions. Rivets, solder, laps and unnecessary materials are not needed to "bolster up" the Electric Weld.

Chimney skedaddles— How to prevent them— A prescription

By Booster Binx

You thought I wouldn't do it, didn't you.
For your especial benefit, just let me tell you, that's just the reason I **am** doing it.

Furthermore, you said that, "All I know about boilers, could be put in a thimble and still be some room left."

For which kind and courteous remark, allow me to thank you heartily. If there is any one thing I like more than another, it's your particular kind of frankness. It has sort of a soothing effect on me. If you keep on saying things like that, I'm liable, to become good humored.
Rather than have such a calamitous thing happen, let's get back to chimney skedaddles.

There's one thing you and I agree on without argument.
Too much heat goes up chimneys.
Too little goes into radiators.

Whenever I see a chimney, to me they are always on the dead run, running away with heat.
They always remind me how most boilers are mostly made wrong.
Even you admit that fact.

Their fire travel is too short.
No sooner do the gases get started on their journey, than it's the end of the line and they have to get off and skedaddle up the chimney.

Then again, there are some boilers that are like the Erie Railroad, take so long to get there, that they seldom really arrive.
Such boilers have wrongly proportioned flues.
The draft is sluggish.

To overcome it, you open up the drafts, and force it.
When you force a boiler, you not only force the boiler, but you force heat up chimney.
The gases travel so fast, the boiler doesn't have a chance to grab the heat.
If you slow them down, they stall just like some autos.

Along about March, 1900, the Big Chief said to me one day—"It's the Burnham's long fire travel that makes its short coal bill."

Which thought is the thought I am going to leave with you right here and now.

Next time I catch you hanging around this cigar store, I'll give you a good talking to about "How to Put a Crimp Into That Auxiliary Bunk," for that's the title of my next talk.

WHY DOES MANUFACTURER RESEARCH DETERMINE CONTRACTOR SUCCESS?

Have you ever been disappointed with your heating and ventilating jobs because volumes and capacities of fans failed to meet your specifications?

Engineers and contractors do experience such situations and usually it is because they have specified or bought apparatus minus — manufacturer research and engineering.

Assurance of the success of a job rests in constant research and attention to manufacturing detail. Any amount of effort exerted by the engineer or contractor cannot overcome errors made in manufacture. It is apparent, therefore, that installation success is the outcome of constant research plus well-made apparatus, the real merit of which is proven by year-in-and-year-out performance.

In all classes of buildings and under all conditions of operation Sturtevant systems prove successful. We manufacture heating and ventilating equipment suitable for dairy lunch or skyscraper with equal attention to the requirements of either.

Consult any one of our sales-engineering branches or write to Hyde Park for literature, stating the class of building you are interested in.

Sanitary Engineers in Convention

Ontario Society of Domestic Sanitary and Heating Engineers Hold 9th Convention—Co-operation With Manufacturers to Elevate Trade Conditions—Good Progress Reported—Inspect Installations at Hart House

AT the first morning of the ninth annual convention of the Ontario Society Sanitary and Domestic Heating Engineers, Alderman Maxwell, President of the Canadian Society outlined details of a recent interview of a number of association members with Premier E. C. Drury, Attorney-General Raney and Minister of Labor Rollo, in regard to the Workmen's Compensation Tax. Ald. Maxwell stated that it was planned to increase compensation to workmen and widows, pointing out that under the present regulations fifty-five cents goes to the workman for eighty cents paid by the employers. It was pointed out that in Winnipeg workmen are paid at the rate of 66 2-3 cents. It was also planned to increase allowance to widows by about $5 per month.

Ald. Maxwell drew attention to the recommendation recently passed in London making it incumbent upon employers to give compensation to workmen for time wasted during unavoidable delays such as would be caused by inclement weather. Mention was also made of the proposal to appoint two scaffolding inspectors in Ontario, and it was felt that the necessity of waiting for an inspection of scaffolds would cause great delay and inconvenience.

An important matter further outlined by Ald. Maxwell dealt with the suggestion to form an Accident Preventative Society to work in conjunction with the Workmen's Board and have for its object the minimizing of accidents, and thereby eventually reduce the tax required for this purpose. It was pointed out that for the time there would be a small increase in the taxation in order to meet the cost, but this was said to be an increase of only about 75 cents on each $100 of present taxes. Ald. Maxwell has instructions to form a constitution and proceed with organization, all expenses being paid by the Compensation Board.

Ald. Maxwell stated to the convention that he had written the directors of the Canadian Society and suggested that something be done to co-ordinate the work of the parent and provincial organizations so that the Ontario society would progress more rapidly.

"I am broken-hearted over the Canadian Society and I believe it is a waste of energy to spend any more money on

Photograph showing delegates present at the annual banquet in connection with the Ninth Annual Convention of the Ontario Society Domestic Sanitary and Heating Enginers. G. Clapperton, Toronto, was chairman and others noted at the head table include representatives of the manufacturers, Wm. J. Woolley, of the U.S. Trade Extension Bureau, and prominent members of the society. A good representation of plumbers from all parts of Ontario were on hand.

the master plumbers. We should spend all our energy in Ontario."

The forming of district associations in Ontario was advocated.

"We cannot finance the parent organization on $1 per capita tax, yet it is impossible to ask any more" said Ald. Maxwell. "We will have to increase our membership."

Co-operate With Manufacturers

The question of closer co-operation between manufacturers and jobbers on the one hand and the trade on the other was discussed from the standpoint of elevating the trade in general and increasing the sale of sanitary supplies. Ald. Maxwell was a sponsor for the suggestion to take manufacturers and jobbers into the association, pointing out that they were allowed membership in the Builders' Exchange. It was felt that the co-operation of manufacturers and jobbers would be a help insofar as educating the trade along salesmanship and financial lines was concerned. It was decided to meet the representatives of the manufacturers and jobbers during the season.

The point was brought up that under the charter governing the Ontario Society, manufacturers and jobbers would not be allowed to be members of the society. The suggestion was then advanced that they should join the Canadian Society whose charter could not be affected and they would then have their support in the Ontario Society. Details of the meeting of the manufacturers with the trade appear herewith.

The Executive Committee went fully into all matters on the first day and all committee reports and recommendations received full consideration subsequently, at the hands of the general convention. These reports are reproduced in complete form in this issue.

Civilians on Local Health Boards

The discussion of resolutions put forward by the resolutions committee touched upon a number of matters of interest to the trade. The practice of municipal councils in appointing civilians to local boards of health was taken up, and a motion was adopted to commend the Journeymen's association on steps they are taking to see that experienced plumbers get these positions.

A recommendation was put forward to secure greater co-operation between the Journey's association and the Ontario Society. President Minnes thought much unnecessary trouble could be eliminated by such steps. Another members indicated that insofar as the city of Toronto was concerned the Industrial Council could handle any difficulties arising between the two organizations, and suggested that the Ontario members outside Toronto deal with it. J. H. Cunningham thought the organization would not be able to take action regarding wages as the building trades council had a blanket agreement in most cities regarding wages. G. Clapperton did not think it right that a committee of five men in Toronto should meet the labor committee to make laws. He thought the committee should be representative of Ontario, and pointed out that such a committee would have difficulty arranging meetings. F. J. Sylvester, Stratford, stated that there was a plan on foot in his city to increase wages from 65 to 85 cents per hour and suggested that there should be an organization to look into such matters. Hereupon A. Paddon, Windsor, pointed out that in Windsor they were paying $1.08 per hour and drew attention to the difference in scales, suggesting that a committee could perhaps bring about a uniform rate for the province. On the motion of J. H. Cunningham the matter was referred to the incoming executive.

General Contractor Was Entitled to Membership

A communication from J. Sainsbury, Weston, withdrawing membership because of his entering into the general contracting business was placed on file as a precedent covering such cases.

OFFICERS FOR 1920

President, T. J. Minnes, Brantford (re-elected); Vice-President, J. H. Cunningham, Welland; Treasurer, F. Maxwell, Toronto; Chairman Sanitary Committee, John Wright, Toronto; Chairman Heating Committee, R. Fitzsimmons, Hamilton; Chairman Arbitration Committee, A. White, Windsor; Chairman Legislation Committee, N. Swanston, Toronto; Chairman Apprenticeship Committee, G. Clapperton, Toronto; Chairman Education Committee, J. Haas, Waterloo.

Re Board of Commerce Ruling

Geo. Grinyer, Guelph, asked information regarding returns made on the forms provided by the Board of Commerce covering the point that all trades shall file reports. G. Clapperton replied that the Toronto men had discussed the matter and decided that as they were contractors, the ruling was not applicable to them as a class.

The annual banquet on Friday evening was a happy culmination of a hard day's work in open convention, and the visiting delegates spared no effort to show their appreciation of the entertainment provided by the Toronto association.

The head table seated G. Clapperton as chairman, F. Armstrong and H. S. Wallace representing the manufacturers, J. W. Bruce, Wm. J. Woolley, President Minnes, H. Mahoney, F. R. Maxwell and others prominent in the work of the society. There was a strong representation of delegates from all parts of the province in attendance and a very enjoyable and helpful evening was spent. Details of addresses by Mr. Armstrong, and Mr. W. J. Woolley appear elsewhere in this issue. It remains to be said that one of the notable and outstanding features was the spirit of kinship which had developed between the manufacturers and the trade since their initial meeting of the convention on the previous afternoon.

Visit Hart House

Though there were various reports of the early hour at which the members attending the banquet were dispersed, there was a good representation on hand on Saturday morning to visit Hart House where an inspection was made of the plumbing and heating installations. Under the direction of G. Clapperton who had charge of the work in Hart House, the inspection proved highly interesting.

On Saturday afternoon Wm. J. Woolley gave a very detailed address found on another page of this issue.

Plumbing Business On Cash Basis

Plumbers Urged to Get Cash and Take Discounts—Banks May Soon Curtail Credit

Geo. Gringer, retiring vice-president of the association, gave a brief address to the convention on the subject of collections.

"We should try to get a cash business adopted among the craft," said Mr. Gringer. "In a short time I understand the banks will be closing down on credit and it will be necessary to institute a vigorous campaign of collecting."

Attention was drawn to the plan outlined in the last issue of SANITARY ENGINEER wherein a number of merchants hand their accounts to a collector.

"An account is rendered two days after the work is completed, and the collection fee is very small, at the same time the collector is enabled to make a good living, as he collects for a number of merchants. We get good results under this system in Guelph and we are enabled to take advantage of cash discounts. Each merchant pays $2 per week and 2 per cent. on collections."

Referring further to the plan, President Minnes stated that in Brantford the collecting was done on this basis and all accounts of from $50 to $75 were handled in this way.

"Getting these accounts paid gives us money to use, instead of having to borrow at high rates of interest," said Mr. Minnes. "On handing out old accounts we find the same name is on the books of different business, so we make a ruling that the first account owing is first to be paid."

Reorganize Three Ontario Cities

President T. J. Minnes Recommends Reorganization of Kitchener, Hamilton and St. Catharines—Membership Strengthened by Calls at Provincial Points—Appreciation of Trade Journals—Co-operation is Extended

Report of PRESIDENT T. J. MINNES, before Ninth Convention Ontario Society Domestic Sanitary and Heating Engineers

IT is a year since I have assumed the office of president of your association, which position I have always felt it an honor to hold, and throughout the year have endeavored to maintain the dignity and responsibility that the office is worthy of. Upon accepting the presidency I have resolved, that which had been in my mind for a number of years, namely, that before our Society could take the position or have the influence necessary to make it a success we first must have a membership aggregating a fair average of the best men throughout the province. With this in mind I, with the other directors including our Secretary, entered upon a campaign of reorganization. This we carried out systematically and to a great degree of success.

Your directors have held meetings at the following cities and as well as taking care of Society business, we had open meetings with the operators in view of organizing and bringing them into our society.

On May 12th your directors had a meeting in Hamilton in the afternoon and in the evening met the Hamilton operators. We must confess that these men showed a keen interest in what we had to say and seemed to appreciate and understand our meaning, but did not see fit to join our Society. It may be that the men we met were to a great extent of the old-fashioned plumber type and it is possibly hard for them to modernize their ways. However I would recommend that the incoming executive pay particular attention to Hamilton for it should be one of the best cities in Canada. At the Hamilton meeting the executive endorsed the Henderson Business Service.

Meetings Throughout the Province

Also in May last we visited Guelph and found the operators there in a receptive mood. They not needing any re-organization, we left them a word of confidence

On May 26 a meeting of the directors was held in Kitchener, your president unavoidably being absent. I would recommend that your new directors also give Kitchener a little more attention and encouragement.

On Aug. 14 a directors meeting was held in Brantford. In the evening the directors met the Brantford operators and the visit is now bearing fruit.

On Sept. 25 the directors met in Welland in the afternoon and we had a long session with the operators from Niagara Falls, Port Colborne, Welland, Thorold and Bridgeburg. We were successful in getting applications from nearly every man present.

On Oct. 2nd. the president visited the Toronto Society at a social evening and explained what your directors were doing and gave encouragement to the efforts of those present.

On Oct. 23 your directors visited Chatham in the afternoon and Windsor in the evening. We were reinforced on this

T. J. MINNES, President

occasion by the presence of Mr. Kenneth Allison, of Toronto, and Mr. Russel, of London. The results in these two cities being most gratifying.

On Nov. 26 your directors met the operators on the Highway and laid the foundation for a good district organization. The meeting was at Oakville.

On Feb. 6, Mr. Maxwell, President of the Canadian Society, Secretary Frankland, and myself attended the Ontario convention of the United Association of Plumbers and Steamfitters at the Labor Temple, Toronto. Addresses were delivered by the three above mentioned and I believe that it will be the means of creating a better feeling and a closer understanding in future between employer and employee.

The net results of the above visits and efforts has been some 65 additional members in Toronto and some 45 additional members throughout the province. So by the above you will readily see that our organization is beginning to come into its own. I am satisfied that if your new directors follow out the program along similar lines as your retiring directors, that by our next convention you will have a most excellent organization, and one that will command respect.

The following suggestion that were handed over to the executive for attention have been taken care of as follows :

A Bumper Convention; this convention is the effort and shows the result in this regard.

Re-arrangement of fees on a sliding scale to include manufacturers, jobbers, and contractors; this has been discussed, but to date nothing definite has been done, nor should it be attempted until we have a stronger organization.

The adoption of a standard set of books. There has been nothing accomplished in this regard.

Adopt better cash discounts. We have made no attempt in this matter until our society should be of sufficient strength to handle same.

Standard apprentices working rules. The apprentice committee has handled this in satisfactory manner.

Standard specifications. Nothing has been done.

Pipe manufacturers to adopt standard re-sale price list for pipe. The vice-president took this matter up in Guelph with the Page Hersey people and was unable to get any satisfaction. Your president made an investigation in this regard while in Montreal at the Canadian Convention and was given to understand that nothing could be accomplished, one reason being that there was more pipe sold outside the plumbing trade than in it.

The central office. Nothing further has been done in this regard other than consideration being given it by the Toronto branch of the society.

Restriction of the plumbing trade through legitimate channels—Manufacturer to Jobber to Consumer. The executive have been endeavoring to get a joint conference with regard to this. As it is of very recent date and on account of our lack of strength until now there has been little progress made.

Standard re-sale price on all plumbing goods and standard guarantee. No progress made yet.

A forceful advertising campaign. This matter is under consideration at the present moment.

The open price system. This is in force in a few localities, and we believe is proving quite satisfactory but it is a thing that requires confidence which

Continued on page 26

Garnishee Law is Satisfactory Only on a Percentage Basis, Weekly or Monthly

Retail Merchants' Association Objects to Amendment Providing That the Amount of Wages Exempt From Seizure be Increased From $25 to $50 — Merchants Express Opinions on Suggested Changes in Garnishee Law

THE proposed amendment to the Wages Act has been brought before the Ontario Legislative Assembly by R. L. Brackin, M.P.P. for Kent County. This bill will have such amendments before it reaches its last reading that the context will likely be entirely changed. The original amendment as introduced by the member from Kent provided that the amount of wages exempt from seizure or attachment be increased from twenty-five to fifty dollars. This was objected to by the Retail Merchants' Association which, together with a suggestion by another member of Parliament, further amendments have been suggested.

As the Act stands, a man drawing his pay weekly has at the best little above $25 to be seized, whereas the man with a monthly salary of the same amount per week has three times the amount liable to attachment in event of his being unable or unwilling to meet his honest debts. This is considered unfair, both to the creditor and to the man who is paid monthly.

What the Sponsor Says

SANITARY ENGINEER interviewed R. L. Brackin, the sponsor of the Bill. who said: "The bill is at the present time before a committee and I believe I am safe in saying that before it comes before the House again, its context will be radically changed. I am confident that the section in question will read similar to the same clause in the Michigan State Wages Act, that is, a percentage basis will be determined instead of any fixed sum. In consequence everyone is on an equal footing and the merchant is legally entitled to something in cases where he could get nothing previously. The percentage system will be based on the amount of the wage, the number of the family and the amount of indebtedness. Therefore, according to the final proposed amendment, a man may be forced by law to pay weekly a certain proportion of his income until his account is cleared."

SANITARY ENGINEER interviewed a number of merchants in regard to the matter. E. F. Mason, proprietor of two grocery stores in Peterboro, when asked for his comment on the amendment, pointed out that it would not be very hard to make an improvement on the present law. The grocer is the one tradesman, he said, who is most affected by credit systems. His business is to supply the daily necessities of life and his very goodness often leads him into losses that are easily foreseen. We sometimes cannot bear to see a man's family starve, even though we know our chances for getting our returns are very poor. Every year we allow for certain bad accounts which are no more than charity.

Very Seldom Refuses Credit

"If a man is sick or out of work, few grocers would refuse to give him enough credit to keep his family from want and yet we invariably find that the man who has nothing laid aside for a rainy day is the man who when working catches up on his account, and he goes to another grocer and pays cash rather than face the merchant to whom he owes both money and gratuity. So we lose both our money and our customers. Another thing we frequently find is the man who can least afford to carry a heavy account is the one who is most extravagant in his buying. This requires a great deal of tact on the part of the merchant so that he will not offend and at the same time protect himself and his customer from heavy loss and an embarrassing account. Only on very rare occasions do we resort to legal proceedings, although we are rightfully entitled to it. It is too expensive a procedure to be undertaken every time we wish to extract what little over twenty-five dollars a week a man earns. In my opinion, if the new amendment is adopted it will not only be in justice to the retailer—hardware merchants especially—but it will be justice to the working man, in that it puts every man on an even basis. It will also have the effect, to some extent, of making the merchant less fearful of his accounts. As a result some really deserving of consideration will not be refused because of the heavy risks the dispensers of the vital necessities of life have to take when they favor their customers with credit.

"The great trouble in general business has been that the merchant's good nature gets the better of his business principles and his cash register suffers too severely on account of this charity. The retailer is more exposed to this than perhaps any other business man."

Provincial Secretary R. M. A. Dubious

When the first amendment to the present Act was proposed by R. L. Brackin, it met with opposition and disfavor from the Retail Merchants' Association, represented by W. C. Miller, the provincial secretary. Apparently as a result of this representation, the second amendment has been brought forward by the member from Kent County.

"From my knowledge of the present Legislative Assembly," W. C. Miller remarked to "Sanitary Engineer" on the proposed amendment, "I cannot readily believe that they will be particularly looking after the welfare of the retail merchants. The present Act has remained unrevised on the statutes for twenty-seven years. The original amendment would have been very unjust to the merchants who in times of stress have been bankers to the people. If, however, the Government would be prepared to give us legislation that would allow us a garnishee on a percentage basis that would be automatic, weekly or monthly, until the account was liquidated, it would relieve matters for the merchant to a great extent.

"The present law requires the outlay of five dollars for every writ issued and in many cases the returns are hardly worth while. Besides this, it is a very easy matter for a dishonest debtor to evade even a writ of garnishee. My personal opinion is that as a result of the first proposal, we can hardly expect any amendment that would concede so much to the retailer."

Continued on page 40

MAKE GARNISHEE LAW OF REAL BENEFIT

The discussion in the Legislature of Ontario of the Garnishee Law will be of interest to the grocers of the Province, as possibly more than any other class of merchant the grocer is vitally affected by the Garnishee Act. That the original amendment providing that the amount of wages exempt from seizure or attachment be increased from $25 to $50 does not meet with much favor by the Retail Merchants' Association is evident, in the expression of opinion by W. C. Miller, secretary of the Ontario branch. It would have been very unjust to the merchants, it is pointed out, who in times of stress have been bankers to the people. Legislation that will allow merchants a garnishee on a percentage basis that will be automatic, weekly or monthly, until the account is liquidated, will be welcomed by the Retail Merchants' Association. Making use of the present law by the average grocer is too expensive an operation to be used frequently. In most cases the returns are hardly worth while.

Education Eliminates 80 Per Cent. of Troubles

Report of K. B. Allison, Chairman of Education Committee at Annual Convention—Volume of Plumbers' Work Decreased by Householders' Efforts and Factory Workmen

Report of K. B. ALLISON, Chairman of Education Committee, before Ninth Convention Ontario Society Domestic Sanitary and Heating Engineers

AT practically all organization meetings held during this term, throughout the western part of the province, educational work by means of Overhead and Business Charts Talks on Selling etc., have formed a goodly part of the program. Then the good work of the price services has been appreciated. Your chairman has also given several weekly trips around the province and in contact with all has attempted to faithfully preach the doctrine of improvement of business methods. More noticeable has been the result in Toronto, where meetings were held two or three times weekly at each of which was a good speaker who brought home some phase of better conditions, and the possibilities of education. I want to place on record the statement that education will remove eighty per cent of trade troubles and urge that any association will find its strongest footing when conducted along those lines.

Practically all associations are formed with the true desire of helping, but soon a feeling seems prevalent to set prices or some such feeling of control, and, I say with all sincerity that when education ceases to be the paramount aim of any association, then that association is positively destined to failure. It is essential that we organizations must either eliminate or else lift up all those who are not capable of earning their just recompense for their labors, but to do so by ruling or commanding means failure, whilst on the other hand to do so by education, even though the way proves longer, is to insure lasting success. In this I speak in a general way. I have seen and heard the troubles of so many associations and all are virtually a result of lack of evenly balanced coordinated thought on money values.

I would suggest that in place of thinking that all work in our lines should be done by licensed or professed mechanics, and often times to the detriment of the broadest thought for public welfare, it would be better to eliminate those, who operating as master mechanics under and by reason of the protection afforded by the established responsible merchant, do work that carries no protection for the public. True, when Mr. Householder does work about his own house he decreases the volume of work and the earning power of those engaged in that particular line. True, too, the factory owner who has plumbing and heating repairs or other work done about his factory by men who are employed for that purpose as part of his staff, he likewise reduces the earning power of all those, legally engaged to operate in that particular line; but these losses are dwarfed in comparison with the man, who having no other obligation to fill than be a resident of a city, by tenancy, pass an examination as to practical knowledge and then purchase the smallest kit of tools possible and take up business. By being really only a journeyman his overhead expenses are taken care of in his hourly wages, and in this way he is able to increase, under the guise of a master's license, so that those who establish themselves and attempt to carry on business, as it should be carried on, are handicapped to the extent of an overhead item based on selling price, of from fifteen to thirty per cent. This other man with no responsibility, has nothing at stake. If the work he does causes an epidemic of sickness, he has nothing to lose, if his carelessness causes fire or water damage, he cannot be forced to pay his just debts. Here then, is the man who creates unfair competition and by such competition instils in the public mind a damnable and unjust prejudice as to the profits made by the legitimate operator. Here is the man who is just a plain floater and it is against this type of man I would aim my legislation and educational work, feeling assured that any such endeavors to protect the trade in this way will, because of its true worth, merit eventually the support of the public.

The platform outlined below is the one which I have tried to link hand in hand with my first efforts:

1. A central office from which trade expansion work would be controlled and launched and carrying with it,

a. Simple bookkeeping and monthly trade audits.

b. Statistical work as an aid to Standardization or Apprenticeship problems.

c. Trade extension or bigger business building, also good-will, advertising, finance.

d. Window trimming and show-room layout for those so operating. Stock lay-out and suggestions for those operating show-rooms.

e. Supplying of speakers or lecturers to trade organizations for the purpose of educating the Craft in salesmanship and also safe business methods.

f. Improved trade stationery, business forms for proper distribution of costs, standard forms that protect all from the present lax methods of charging.

Reminiscences by F. Armstrong

FRIENDLY FEELING OF INTERCOURSE BETWEEN SUPPLY HOUSES AND SANITARY ENGINEERS

Some interesting reminiscences were recalled by Mr. Fred Armstrong, Manager Port Hope Sanitary Manufacturing Co., in replying (on behalf of the supply houses) to the toast to "The Guests" at the annual banquet. Mr. Armstrong quoted some instances of a humorous nature concerning his apprenticeship days, especially in conjunction with work on The Mail and Empire in Toronto where he once became so interested in a newspaper that consciousness of his responsibility did not return until the solder and iron, the heating of which he was awaiting, had entirely disappeared.

Reference to the early days of the Association was made by Mr. Armstrong, pointing out that at the time the 118 master plumbers of the city were all members. The history concerning the subsequent disruption of the organization over a small detail and on to recent events concerning the bringing about of better relations between the supply houses and the trade, was traced.

"We now know the master plumbers want a square deal. What we want is a thorough understanding, the greatest freedom of intercourse and all price considerations on equal parity," said Mr. Armstrong, pointing out that the supply houses were circumscribed by certain business conditions which rendered it impossible for any outsider to dictate a policy (for them) but that they were open to consider any suggestions made at any time from the master plumbers.

Substantial Membership Increase

New Members of Association Number 110 Over Last Year—Total Membership Now 224—Secretary Recommends Co-operation to Make Further Increase—Initiation Fee is to be Charged—Amended Application Form

Report of SECRETARY G. FRANKLAND before Ninth Convention Ontario Society of Domestic Sanitary and Heating Engineers

I wish to briefly enumerate our present membership, which shows an increase of 110 over this time one year ago, and which numbered on April 1, 1920—224. This membership is resident in 44 different municipalities throughout the province and 143 are members of the Toronto committee.

The balance of membership, with the exception of 7, are located in the western part of the province, and thus you will see that the Eastern and Northern portions of the province are practically unorganized. I am more convinced than ever the majority of operators engaged in our trade will never avail themselves of organizations of their own accord, and only by extensive educational methods and the continued holding of local and district meetings between those engaged in the business and the officers of the society, will the desired confidence be created and co-operation secured to weld the Craft into a united organization. That in times of adversity humanity seeks comfort from their fellow creatures, is a fact that repeats itself in history, and so you find it with those engaged in our industry, that when demands are made on them for new agreements, they flock together for mutual protection. Now, if co-operative methods are good at these times, would it not seem right and proper that these same efforts are necessary on the part of all continually to bring about conditions more desirable and perfect than those under which the Craft work at present. That the average operator seems to be content to go along and put up with everything that confronts them, and make no effort to improve or change the existing conditions is to be deplored, because if they would only realize the importance our calling carries with it and how essential it is to the every day life of every community and the absolute necessity of it from a health standpoint, I surely believe they would do more to protect their interests, if not for themselves, then for those who are to follow us in carrying on the science of Sanitation and Ventilation.

I have become convinced that until the Craft commence to seriously give consideration to the question of Province-wide regulations, both as to by-laws in connection with the style of installation and also as to uniformity of wage scale, for properly qualified and efficient Journeymen, with proper apprenticeship regulations, and a central board of examiners to cover the province, both for plumbers and steamfitters in the issuing of licenses, we are not going to create ideal conditions in the industry.

I cannot refrain at this time from saying that I am sure one of the real reasons why the plumbing and heating industry has not taken its proper place in the business world is for no other reason than the utter lack of business knowledge on the part of those engaged in the business, and we shall not create a healthy condition of affairs until such time as every sanitary and heating engineer operates his business from a commercial standpoint, instead of a mechanical one, as do the majority in our business to-day; until he adopts proper accounting and cost records and learns from figures of his own making what constitutes cost and where profit comes in. It is utter folly to think that a man can leave the ranks of the Journeyman without any business education and be expected to successfully operate our business or any other. It therefore behooves us to consider some means whereby certain standards shall be set as necessary before anyone would be recognized as an operator. I cannot conceive of why any person or persons should be permitted to upset an industry and cause monetary loss that must then be borne by the entire industry through ignorance, whether innocent or otherwise.

All delegates appointed at the last annual meeting to attend the Canadian Society convention in Montreal during June 1919, did so with the exception of Mr. Geo. Clapperton who appointed Vice-President Grinyer to act in his stead. Your delegates took a most active part in the convention and were accorded the honor of having our Mr. F. R. Maxwell elected as President and Mr. Harry Mahoney as Vice-President and G. Frankland as Secretary-treasurer. Messrs. John Wright and Geo. Clapperton were elected as Chairmen of Committees, our own President being appointed provincial Vice-President for Ontario. The Convention for 1920 was awarded to Toronto and will be held on June 8th, 9th and 10th.

A suggestion for the discussion of the advisability of appointing Directors for a three year period, and also the question of compiling a directory of membership were asked to be considered.

In the subsequent discussion a recommendation that the directors be elected for a period of three years instead of one was deferred until the convention of 1921. A recommendation that an initiation fee be charged in addition to the annual fee of $10 on the basis of an amended form of application was adopted on the motion of W. Mahoney, Guelph, J. H. Cunnigham, Welland, being the seconder.

OPPOSE AMENDING PLUMBING BY-LAW

Montreal, Que.—At the last meeting of the Chamber of Commerce the committee on municipal affairs reporting in regard to an amendment to by-law No. 318, which modifies plumbing requirements in building, pointed out that in the opinion of the committee, this new amendment would have the effect of further augmenting the cost of building and of repairs by necessitating the taking out of a license by every plumber as well as a certificate of competence, and in view of the fact that, in their opinion, the public is protected sufficiently by existing regulations, it was recommended that the City Council be requested not to adopt this amendment to the by-law in question. The recommendation was adopted.

CRITICIZE KINGSTON HOSPITAL SEWAGE DISPOSAL

Kingston, Ont.—Representations are being made to the Dominion Government regarding questions of proper sewage disposal at Sydenham Hospital for returned soldiers. It appears that the sewage from this institution has been emptied into the harbor since last Fall without being treated in a septic tank. The Board of Works gave the Dominion Public Works Department permission to empty the sewage into the harbor on condition that it be first treated. It appears, however, that this condition was not carried out, the disposal plant never having been completed, and the health authorities want to know why.

SCHOOL FOR OUTREMONT

Montreal, Que.—At a meeting of the Board of Protestant School Trustees of Outremont, a resolution was passed authorizing the borrowing of $275,000 for the purpose of building a new school on De L'Epee Avenue.

BIG BUILDING YEAR FORECAST FOR KITCHENER

Kitchener, Ont.—Despite the high cost of building the coming season promises to be a bumper one. The total value of new buildings for which permits were issued during the month of March is $319,690; for the same month of last year the total was $21,880.

WATERWORKS SYSTEM FOR SCARBORO TOWNSHIP

The Railway Board has approved plans for the Scarboro Waterworks as submitted to the council at the last meeting. This announcement was made at the last meeting of the Scarboro Township Council.

Big Sanitary Extensions Planned

Provincial Sanitary Engineer. F. A. Dallyn, C.E., Outlines Work of Health Board—Extensions Valued at $5,500,000 Planned This Year—Immigration and Industrial Development Demand Better Sanitation—Typhoid Mortality Reduction Saves Province Four Million Dollars Annually

F. A. DALLYN, C.E., Provincial Sanitary Engineer, delivered an instructive address to the convention on the work of the Provincial Board of Health.

"In 1911 the Legislature saw fit to give very extensive powers to the Provincial Board of Health," said Mr. Dallyn. The Board was given these power to enquire into the sanitary needs of Ontario municipalities and recommend improvements. If the municipality was lax, the Board had the power to force matters. These powers were with special reference to the installation of sewer extension and waterworks. The Board holds the whip hand and its powers have been widely used.

"Since 1913 the Board has employed the full time of a Provincial Sanitary Engineer. Since that time the Board has surveyed boundary waters in Ontario as to their suitability for water supplies. This plan has given us information as to where the danger areas are.

"Since 1912 the work of the Board has resulted in a reduction of typhoid mortality from 25 per 100,000 to 8 per 100,000. This record is better than in the registration area of the United States. The typhoid rate in the Province of Quebec is from 25-30 per 100,000, though they are taking similar steps to reduce this.

"Field laboratories and branch laboratories have been established to improve the supervision of different centres. In 1914 the Provincial Board had authority to appoint seven district officers of health to visit all municipalities, and make recommendations for improvements. As result there has been a marked improvement in sanitation in the smaller towns.

The Fly Nuisance

"There has been a marked decrease in the fly nuisance since active measures have been taken by the Board. Sanitary conditions in schools and slaughter houses have also been improved. Sanitation lately has become more professional, our ideas with reference to the control of disease have changed very much in the last five years. The information gathered has given us an appreciation of the particular routes through which contagion is carried, and we can therefore control it and thereby reduce the mortality.

"Housing programs initiated in the past three years have opened the eyes of the Government to the fact that housing to-day requires improved sanitation over houses of a few years ago. Various efforts have been made to improve the type of closets and decrease the fly nuisance. It is agreed that the only way to handle the housing problem, from the standpoint of sanitation is to give them water and sewerage facilities.

Big Extensions for Municipalities

"Ontario municipalities are requesting extensions of water connections to the value of $5,500,000.00 this year, and a small proportion of this is for Toronto city.

"Some years ago the Provincial Board was approached with regard to the possibilities of making uniform regulations for plumbing throughout the province, but no definite action was taken until two years ago, at which time we set to work and drafted regulations to meet the situation and then invited the consideration of members of your Ontario association.

"It is the duty of your association to advise the Provincial Board re plumbing matter and to suggest amendments to the regulations. These regulations are now in the hands of the Government and they will be very seriously considered. The particular advantage of such regulations will be to make it much easier to bid on work in the municipalities. Assistance will also be given manufacturers to standardize equipment. The attitude of the Provincial Board regarding sanitation is that we cannot do too much. The intention this year is to send out field parties to determine the number of unconnected premises in the various municipalities and enforce the regulations. An amendment has been suggested permitting villages to order people to put in sanitary facilities.

Immigration and Industrial Department

"In the extension of immigration and the development of industry we are going to experience a desire for better living conditions, and there seems to be a tendency for industries to go into smaller places and these municipalities are finding out that their water systems have to be extended. This is resulting in great activity. In those centres where we feel there is danger from water supply systems, we are pushing the municipalities to put in improvements. Municipalities on the Ottawa River—Renfrew, Arnprior, Hawkesbury, etc.—all have their purification plants to-day and we are trying to get Brockville, Kingston, Sault Ste. Marie, and other cities, to undertake these improvements.

When local improvements are thought necessary, Mr. Dallyn urged the sanitary engineers to secure action through the citizens or townspeople, as this process would be more effective than merely drawing the attention of the Government to the condition.

Speaking further regarding typhoid mortality, Mr. Dallyn outlined that the efforts of the Board had reduced the number of deaths from this cause by 400 per annum. He pointed out that the victims generally died when at their most productive age when their value is figured by statisticians at $5,000 each. Figuring that there are fifteen cases of typhoid to one death, the Board figures that this saving is equal to a monetary saving of $4,000,000 per annum to the province.

$12 PER DAY FOR PLUMBERS

A report from Birmingham, Alabama, states that journeymen plumbers there have served notice that they will demand $12 per day, with double pay for overtime, Sundays and holidays. The master plumbers say the demand will be met, and the additional cost passed on to the public.

The more skeptical may have their doubts but, coming from Alabama, it is at least a good "coon" story.

CONVENTION DELEGATES

Among those present at the annual convention of the Ontario Society Domestic Sanitary and Heating Engineers were the following :

President, T. J. Minnes, Brantford ; Vice-President, G. E. Grinyer, Guelph ; Ald. F. R. Maxwell, President of the Canadian Society; Treasurer, T. Maxwell, Toronto; Secretary, G. Frankland, Toronto; A. Purdy, Toronto; F. Gentle, Toronto; Mr. Bloom, Hamilton; J. H. Cunningham, Welland; A. Paddon, Windsor; H. Mahoney, Guelph; G. Clapperton, Toronto; J. Wright, Toronto; F. Sylvester, Stratford; K. B. Allison, Toronto; G. Stewart, Hamilton; Chas.Avery, Hamilton; Mr. Arthur, of Drake Avery Co., Hamilton; R. E. Belyea, Toronto; C. R. Hagen, Guelph; W. H. Booth, Toronto; H. White, Brantford; R. W. Chapman, Toronto; J. Ingram, New Toronto; J. Hainsworth, Kitchener; Mr. Wilkinson, Ft. Erie.

No Loss From Lack of New Building

Work of U.S. Trade Extension Bureau Outlined by Authority—Developing Business From Existing Buildings—Craft Needs Salesmanship to Build New Business — Contractor is the Only Weak-Kneed Man in His Shop—Sanitary Engineer is Not a "Thief"—Give Facts Concerning High Prices

WILLIAM J. Woolley, representing the United States Trade Extension Bureau, with an international reputation on subjects pertaining to trade matters among sanitary engineers, gave an outline of the work of the Bureau at the annual banquet.

As demonstrating the position to which the plumbing business in the United States has been elevated, Mr. Woolley introduced his address by reciting the following incident, which happened in Detroit the other day: "A journeyman came into a sanitary engineer's shop and asked for a job," said Mr. Woolley. "He said he was a thoroughly experienced mechanic and was offered $1.50 an hour. This he refused and went out to the street to look the shop over from the outside. He shortly returned, stating that his wife needed a new fur coat, so guessed he would take the job temporarily. His chief objection was that there was no convenient place to park his car. After looking him over, the master plumber said: "You stated you were an experienced mechanic, but you are just a dub. Our men have chauffeurs to bring them to work and call for them at night.'"

Trade Suffers From Lack of Building

Continuing his address, Mr. Woolley stated that at the outset of the war the craft had suffered a great deal, because of the lack of building. "Manufacturers, jobbers and contractors had a conference in Chicago to devise means to keep the industry going. Our whole thought turned to the possibilities of business from existing building. We prepared a programme and on its completion we were called to Washington and told that there was 'nothing doing,' as they had to build battleships and needed the materials we would require. After two or three months we started a propaganda. Our trade was unprepared, however, because we were not salesman and not qualified in the art necessary to build business. We worked out a plan to teach contractors how to build business for the future. We found great possibilities and the greatest difficulty was to find a place to stop, for every day new angles developed and we required much extra help in our office. The Bureau is a clearing house, through which the ideas of the men in the trade can be gathered and the better ones sent out as printed information. We received, in this way, 200 different kinds of bookkeeping systems used by plumbers in the United States, who number 23,500. These forms we went into carefully and have compiled a bookkeeping system that gives the information the plumber needs. No bookkeeper can cheat with this set of books. He cannot fix the figures, because it works several ways to prove the balance. We have taken all phases of business and worked out the best forms for estimating radiation, heat loss, etc. There are four steps in our efficiency course—overhead cost, plumbing estimates, heating estimates, accounting. We sell these forms at cost to the contractor. It is our purpose to show the contractor how to build an organization within his shop. The contractor is the only weak-kneeed man in his office. We are going to make him money."

Charting System for Credit

"At the present time we are starting the charting system, charting out what credit means and how to protect it. This has developed within the last four years and the only way to show how to develop business in the right way.

"In preparing the various books we have sent out re overhead costs we got all the information the Government had and read up 186 authorities on the question. We have reproduced figures from 1,496 shops re overhead expenses. We issue a monthly service bulletin to inject pep into the trade. This deals with lines that might be sold during the coming month, showing windows, advertising copy, circular letters, etc. There are ten people in our organization and we have a mailing list of 14,000. The Bureau is financed by manufacturers and jobbers, who pay one-tenth of one per cent. of sales. We plan to put out field men to work in closer co-operation with the trade. Next year we are going to give the journeymen a line of propaganda. The public has a false idea of the contractor and we are largely responsible for this."

Argument re Higher Prices

Referring to prevailing high prices, Mr. Woolley pointed out that the tradesman should show their real position to customers and not let the impression go out that they are thieves. He indicated that in many cases a tradesman was only working half time, taking the year as a whole and that therefore if he was getting $1.00 an hour it would only be the equivalent of $4.00 a day.

"The public will have to be educated," said Mr. Woolley, "and we are trying to show the journeyman how to deal with these questions."

London Pot Still Boiling

Unqualified Plumbers Afraid of Regulations—Work Being Held Up Pending Settlement—Sanitary Inspector Young Maintains He is Right—Anxious for Test Case

LONDON, Ont.—"As nearly as I can size the situation up the whole trouble that has arisen in connection with the city plumbing by-laws may be laid at the back door of the men in the trade," said Plumbing Inspector James Young to SANITARY ENGINEER. "There are a number of men who are not fully qualified sanitary and heating engineers and they are afraid of the regulations."

In the meantime the plumbing inspector is in a most awkward position, and so are the men in the trade. Since the council suspended the plumbing by-laws only four permits have been issued by the inspector. This does not mean that plumbing work has been suspended because some of the men who are opposed to the by-laws are going ahead with all kinds of jobs. In a number of cases the larger plumbing firms are refusing to proceed with work until some decision is arrived at regarding the by-laws. They will undertake no work, they say, until they know where they are at, as expensive alterations might be required if installations were made and then found not to be in accord with the law. The other plumbers declare they are willing to take a chance on this, and if rumors are correct many installations are being made of the kind that took place before there was any plumbing by-law. These may all have to be torn out shortly.

Chairman Saunders, of the Board of Health, who ordered Plumbing Inspector James Young to proceed as usual with his duties the morning after the council had suspended the plumbing by-laws, still maintains that he is absolutely right. To SANITARY ENGINEER he gave it as his opinion that Inspector Young is responsible to the Board of Health and the Board of Health is responsible to the Provincial Board of Health.

In the meantime the situation is

Plumbers' Misdeeds Built Competition

Big Possibilities for Trade Outlined by Wm. J. Woolley at Convention—Manufacturers Should Fully Appreciate Importance of the Trade—Stop Hiding From Business and Organize—Standardizing Brass Goods, Soil Pipe, Etc., in States for Quicker Turnover

GOING more into detail in regard to the work of the U.S. Trade Extension Bureau, and pointing out how its findings could be applied to the trade in Canada, Mr. Wm. J. Woolley addressed the convention on the closing day of the session. The address is replete with facts and definite information which will be of great value and is therefore reproduced in full as follows:

"In view of your steps to act together with the manufacturers, our trade extension ideas will be timely. Our people in the United States realize that anything that can be done to help the contractor is going to help everyone in the business because it makes no difference what kind of an organization the manufacturers have, what salaries they draw, what money has been spent for advertising, after all there is one link which is most important and that is the weakest or strongest link, and the chain is no stronger than the contractor because he must sell the goods. He comes into contact with the public and he must get rid of the goods.

"In a survey we made recently, information was secured that the Electrical Society by following trade extension ideas has during the past two years made three thousand electrical shops into merchants. Their efforts have increased the price of electrical appliances more than $300,000,000 of which $90,000,000 was on residences alone. There are 23,500,000 homes in the United States, and less than 5,000,000 homes had plumbing in them when recently investigated. We determined that it would take all the master plumbers in the United States 10½ years to figure the job alone. It would take 28½ years to make the installations if every journeyman in the United States worked on the job.

Much Work in Existing Buildings

"There is much work to be done in present buildings in which the plumbing needs to be altered, and this would mean five times as much work as we can possibly do if no new buildings were constructed. How are we going to supply the demand we create. Competition takes up a great deal of time and costs money. We figure we can produce thirty to forty million dollars of sales a year if the master plumbers get away from competitive work. Jobbers let four or five men figure a job. We should get them to develop new business by advertising, circularizing, etc., to get away from competitive work. Too many men fool themselves into the belief that they have low overhead costs when they really have no established percentage which will allow them a fair profit. This is one of the reasons for the need of trade extension."

A plan outlined by Mr. Woolley, as adopted by the Bureau on information from the trade was follows: The management of the business was divided into four sub-heads of Finances, Stockman, Salesman, Production. Each in turn was sub-divided into a number of sub-heads which will be taken up individually.

"Financing is the first step in business," said Mr. Woolley. "Before you can handle finances you must have a definite plan. With most contractors the definite plan adopted is not broad enough. The field is there and will have to be developed according to the extent of his plan. He should know the possibilities, and just how he is going to attack the plumbing business. Under this heading is Personal Standing, and this is always taken in consideration by anyone extending credit. Friendship should be built at all times because it is a valuable asset. I often find travelling men lying around stores. This is not the way to build friendship. The traveller has a territory to cover and if you really want to build up friendship send him along on his way. He can do you many favors and his friendship is valuable, but you are adding to the cost of the goods and tearing down of efficiency by delaying him unnecessarily.

Business Judgment and Possibilities

"Business Judgment:—This is one of the most important things in borrowing money. In the past credit houses have granted credit out of all proportion. In the next two or three years credit will be harder to get. If your business judgment has been bad in the past you will have to show it has improved. Business Possibilities:—You ask two-thirds of the contractors as to possibilities and nine of ten will tell you if they had a dozen sons none of them would go into the plumbing business. On the other hand there are so many possibilities that not a contractor in the world need figure in competition with another."

Develops Farm Business

" I visited a shop in a town of 2200 in Iowa recently. A plumber in that town worked sixty-eight journeymen and I was interested to see where he got his business. The building occupied by this man stands out prominently, being the only one of that height in the town. He did not depend on the town for business but went into the country. He had left a large city to go after the farm business. During the first two years he nearly starved but afterwards he sold the farmers on the idea of plumbing and heating and he gets a very good price for his service to the farmers. Of one type of water system alone he sold 688 during last year. Possibilities are every place and any place.

Work Your Cash

"Cash—Work your cash. The average contractor has too much money invested in his business. This should not be any greater than we showed in our overhead costs book. The remainder of his money should be invested in other things, and should be scattered so his eggs will not be all in one basket. You should have some money borrowed at all times. You can borrow it at 7 per cent. and put it out at returns of 10 per cent. This is the way to develop business and make money.

Location

"Location:—This has everything to do with borrowing money. I know one case where a man got $10,000 loan on the lease of a prominent location for business. On moving to a side street the bank withdrew the loan because the possibilities were not there. Do not hide from the public. To-day the plumber in any city is generally found on the side street hiding from business. When in Wichita recently, I stopped eighty-three people on the street, the majority of whom had lived there all their lives. None of them knew where a plumbing shop was located. This is a city of 50,000 population, a good business centre, with lots of money, but the plumbers were hiding from business. That is why there was $90,000,000 more in phonograph records sold last year than the total sales of plumbing and heating material. There are more auto' lines sold by over three hundred millions of dollars than of plumbing materials. They are advertising, use show windows, etc. It is a case of exposing oneself. The president of the United Typewriter Company tells a story explaining what is meant. A man was working a certain city for the company and had gone stale on the job. The president told him he was going to fire him and re-hire him again at a salary and commission paying him five cents for every call he made. The salesmen immediately went to one of the biggest office buildings and merely put his head in at each office door and

Resolved by Canadian Society of Domestic

Retailers Should Be

THERE are master merchants the same as master mechanics—the men who know their business and who put their knowledge into practice in serving the public.

The master merchant studies the requirements of his customers and endeavors to meet them ; not alone for his immediate gain, but in the interests of the plumbing trade in general. He realizes that his future business depends largely on the attitude of the public to himself and to the plumbing trade.

Efficient, painstaking service, together with goods which he is able to stand back of, will obtain the desired results.

Quality Always Pleases.

The Port Hope Sanitary Means Efficiency.

Sanitary and Heating Engineers that

Master Merchants

AT THE recent convention of Sanitary and Heating Engineers in Toronto it was urged that retailers become Master Merchants—that they use better business methods in their accounting, book-keeping and selling.

Add to these the handling of quality goods and you make a strong combination which *will lead to success.*

Port Hope Sanitary Enamelware

meets public approval—goods which you can stand behind with your personal guarantee of quality and service.

Our "Roughing-in" booklet which we have prepared is most complete in every detail and will be of great assistance to you when estimating and installing.

It's Yours for the Asking.

asked if they wanted to buy a typewriter. At the end of the month he had sold eight machines. His success was due to exposing himself. We can do the same in the plumbing business

Financial Rating Important

"Ability to pay:—Our bankers and friends want to know this. If the banker figures you will not bring the money back you will not get it. "Financial rating. Too many master plumbers refuse to give proper rating so that his standing may be known. The man who formerly ignored a rating is now at a point where he cannot get material because they are paying attention to the man who has discounted his bills. Ten per cent. of the contractors in larger cities have been forced out of business because they cannot get materials.

"Collection. This is the next consideration after selling. The Bureau has a law proof contract wherein materials supplied are made personal and movable property enabling it to be held as rental and therefore subject to collection. But without proper accounting you cannot hope to make proper collections. The quicker you get your bill out to the customer the quicker you will get your money.

"Cash Discounts: Many contractors come to the conclusion that cash discounts is the way to get the money in. We give 5 per cent. discount for cash paid into the store but this should not apply to cheques. We make them pay us cash and come in with it, so it is 5 per cent spent on advertising.

Buying—Quality and Quantity

"Buying. The first thing in buying is quality, not quantity. If you are unable to fix in your mind how an article shapes up you are not a good buyer. In regard to quantity it is regrettable that nine of every ten contractors overbuy and do not get the proper turnover in the year. Markets:—I believe most contractors are reasonably familiar with markets. The average plumber is a good buyer when it comes to price. Turnover:—If you cannot get the proper turn over your business is not going to pay as it should.

Selling—Display

"Selling:—Display is the important factor. The eye has 40,00 sensations and through it you can sell more than in any other way. People seldom buy from hearsay or pictures. You are teaching the customer to buy from mail order houses when you teach him to buy from pictures and catalogs. Showrooms are a thing given little consideration by the master plumbers as compared with years ago when good showrooms were operated. Twenty years ago the showroom idea was condemned and many got away from it. The trouble was the plumbers of those days filled beautiful showrooms with good stock and then sat down to wait for business. That condition represents a good tool lying idle.

"When the public receives your bill and you have not a proper place of business they feel you are only rendering a certain service of labor and are not justified in charging a high rate per hour. They do not figure you have any overhead costs because you do not operate a showroom."

At this point Mr. Woolley recalled his first days in the plumbing trade at which time his competitor had a remarkable outfit worth about $50. Mr. Woolley pointed out that the men in the trade at that time had no visible assets and that it was too easy for others to get into the business. His competitor had a rubber tired buggy and Woolley's ambition had been to get a buggy too, not necessarily to make a successful plumbing business.

"Others will not be so desirous of getting into the business if they see it takes some big visible assets to do it," said Mr. Woolley. "The jobbers have showrooms and make them pay. When you take a customer to the jobber's showroom you act as a salesman for the jobber without compensation because the jobber will get the order whether you get it or not. The result is that the customer has the idea you and the jobber have got your heads together. Mystery confronts him and he calls up a second plumber and that one cuts the price because he knows he is not the first one approached. A third one is called and each quotes a little lower than the other. You have taught the owner to go out and build up competition for you and he has done what you told him to do. Do business from your own place. Be your own master and you are going to get somewhere.

"Advertising:—John Wanamaker said advertising was no game for a quitter. It is like firing the furnace at home. When you quit firing the temperature goes down. Advertising does pay and is necessary to sell more goods. Circular letters should be used, but they are not worth anything unless your mailing list is up-to-date.

REORGANIZE CANADIAN CITIES

Continued from page 17

must be established before this can be a real success.

Resignation of London Members

An unfortunate occurrence has happened in our society which should be dealt with at this convention and if possible have our members use more judgment in professional etiquette. Through the invasion of London by a certain Toronto firm, without the courtesy of extending any professional etiquette whatever, we have had the unpleasantness of receiving the resignation of our London members. I do not wish to pass judgment on this matter in my report, but think this question should be brought out on the floor of the convention.

Your executive saw fit to endorse the Henderson retail business service, and that it should be fitting also to endorse ALLPRISER as a cost service. The trade has reaped wonderful benefits from these two systems and the gentlemen who have inaugurated them are to be congratulated as they have done a wonderful service.

Sub-Directorate

In looking over the conditions as they exist in the province and knowing the needs of the trade, I believe it advisable to establish sub-committees or directors as you wish to call them, in different sections of the province. Or, in other words, in different sections get your membership into groups that could meet periodically, exchange views, ideas, suggestions, create good will and a better feeling. As a suggestion you might take the Niagara Peninsula as one section. Toronto-Hamilton Highway as another; Brantford, Galt, Preston, Kitchener, Guelph, Stratford in another; London, Windsor, Sarnia, as another. This idea has appealed to me very strongly and should be formulated by your incoming directors.

Extend Appreciation to Trade Journals

Your executive from time to time has contributed articles to SANITARY ENGINEER and other trade journals with an endeavor to reach the ear of the trade. We are very thankful to these journals for their kindness and co-operative spirit shown for the welfare of our society. It might not be out of order right here to suggest that these journals rearrange their mailing list so that their respective journals would reach the home of the subscriber rather than his place of business.

The President's report concluded with an expression of appreciation to the officers of the past year for their co-operation in the work of the society.

Subsequent discussion of this report resulted in a resolution being adopted on the motion of J. H. Cunningham, Welland, to take steps to re-organize Kitchener, Hamilton and St. Catharines.

W. Mahoney, Guelph, moved that emphasis be laid on the fact that after July 1, 1920, the laws demand that all firms keep a complete set of books.

Regret was expressed at the action of the London members of the Association who have withdrawn their membership because of the fact that certain Toronto firms went to London and engaged in business without displaying sufficient professional etiquette to consider the situation in conjunction with the London members.

Drastic Reform to Elevate Trade

Manufacturers to Co-operate With Plumbers—Important Decision at Convention—Manufacturers Had a Plan — Committees Will Decide on Further Steps

WHAT is perhaps the most important and far reaching accomplishment of the 9th convention, is the establishment of a feeling of necessity for co-operation between manufacturers and supply houses on the one hand and the Craft. In the interests of the trade a number of leading manufacturers and supply house men were invited to a special meeting during the convention and the whole question was gone into very thoroughly. Among those who met the Ontario Society were: Mr. Fred Armstrong, manager of the Port Hope Sanitary Mfg. Co.; H. S. Wallace, Standard Sanitary Mfg. Co.; E. E. Ratz, Forwell Foundry Co., Kitchener; F. McLaren, Galt Brass Co.; F. M. Wilks, Cluff Bros.; M. J. Quinn, National Equipment Co.; E. J. Stevens, Empire Mfg. Co.; C. L. Rook, Page-Hersey Co.; H. S. Harwood, James Robertson Co., Ltd.; Geo. Fisher, Canadian Brass Co.; J. E. Hutchinson, The Mott Co., Montreal.

Introducing the subject, President Minnes stated that the idea of the trade was that a bigger demand could be created for the lines manufactured by the firms represented and that the manufacturers were not being backed by the best retail salesmen the manufacturers could get, namely the master plumbers. Mr. Minnes offered the best co-operation of the trade to elevate business conditions and by encouraging plumbers to put in good displays, to encourage a greater sale of better quality goods than in the past.

"To-day," said Mr. Minnes, "the plumber is not so interested in the quality or class of goods he sells as he is of getting a turnover."

F. R. Maxwell, President of the Canadian Society, stated that he had felt for years there should be this co-operation. "We are looking for a forward movement. To-day we have a better class of men in the association than before and these would make splendid salesmen for the jobbers. No longer can individual master plumbers put forward individual propositions — to-day everyone must benefit."

W. Mahoney, Guelph, assured the manufacturers that the trade had no selfish interest in calling the meeting. "We want the plumbing fraternity to encourage the sale of better quality goods, and every jobber's representative should have equal prices."

Not a Shock to Manufacturers

Mr. H. S. Wallace was the first speaker to reply for the manufacturers and he assured the convention that the matter had not come as a shock to the manufacturers because they had some months ago drawn up propaganda with the same idea in view.

Mr. Fred Armstrong took up the cudgels and referred further to the plans formerly outlined. "The calibre of the members of the association has improved," said Mr. Armstrong complimenting the association on the fact, "we believe it would be a good thing for the jobbers to live up to established prices. We knew we could not get better salesmen than the master plumbers for you have a knowledge of the goods. However, it would be difficult to follow out the program suggested among the manufacturers as they were not full developed and might obscure the idea in mind."

Mr. Armstrong gave information concerning the plan which had been formulated, in which provision was made for the expenditure of $25,000 during the first six months. If the campaign were successful it had been planned to spend $100,000.

Hereupon Mr. Fisher stated that at the time the propaganda was outlined the manufacturers did not expect to get the co-operation of the master plumbers. "We will heartily support any movement to elevate the appreciation of the goods we make," said Mr. Fisher on behalf of the company he represents.

President Minnes pointed out that the manufacturers were overlooking their best sales force, and in reference to the question of financial assistance in proportion on the part of the trade, mentiond that as there were many operators in the province who were not members of the society, that no provision could be made for financial assistance, suggesting that the manufacturers were the ones to benefit most and they could charge the expense to advertising and overhead.

"Suppose we raised the money for an advertising propaganda, what would you do in the absence of financing?" asked Mr. Armstrong.

Educational Campaign

"With your assistance we would carry on an educational campaign to instil into the trade the idea of being merchant plumbers. To-day we have insufficient qualified mechanics. If we could use our men to put in new goods instead of repairs we could overcome the shortage of labor. It is a false economy to repair, and this is one of the most important phases of the question," replied Mr. Minnes.

"Plumbers are not business men as a class" added Mr. Maxwell, " and educating the Craft, will enable the manufacturer and jobber to get their money more regularly."

Mr. Wallace assured the trade that a financial contribution was not sought, but suggested that they could use their energy in forwarding circulars and making use of other publicity suggestions such as lantern slides, etc.

An outline of the plan discussed some time ago by the manufacturers was outlined by Mr. Fisher. This included the stirring up of new business from rural districts and farmers, enlisting the support of the plumber and making him a salesman, developing of business from old buildings in the absence of new building. Mr. Fisher remarked that the plan was not carried out because of the absence of support from the master plumbers and also from the fact that there was not sufficient enthusiasm to raise the fund required.

Manufacturers Had a Plan

"It was our intention to pool the advertising appropriation and use copy not mentioning names. It was planned to use the trade papers and best newspapers. A weekly distribution of literature through the master plumbers was also planned, the plumber being asked to supply envelopes, postage, etc. There was much discussion regarding the methods to be adopted, and it was decided to publish books giving educational matter. The plumbers thought there was some deep laid scheme when approached on the matter," said Mr. Armstrong. "There would be no use advertising unless the kind of goods and the price could be mentioned. There are several prices used by the plumbers, the repair man has one price and the man tendering on a house has another. Secrecy will have to give way to publicity."

In reply President Minnes declared that there was less trouble regarding prices to-day than ever before and declared the society's willingness to meet the manufacturers and decide on prices providing for a reasonable overhead and reasonable profit. It was suggested that through organization a standard cost sheet might be compiled.

The question of legality in regard to the price discussion was brought up and it was agreed that the matter would have to be handled diplomatically to avoid any illegality.

The discussion was terminated by a decision to appoint a committee of six representing each side and to give them a free hand in deciding upon the best means to bring about the desired co-operation. Election showed the members of the committee appointed by the convention to consist of the following: T. J. Minnes, Brantford; J. H. Cunningham, Welland; A. Paddon, Windsor; H. Mahoney, Guelph; F. Maxwell, Toronto; G. Clapperton, Toronto.

Plumbing Legislation Reviewed

Extensive Survey of Provincial Sewers Necessary—Health Bodies Should Have Control of Plumbing—Should Not Appoint Aldermen to Local Boards of Health—Discourage Flat Plumbing Rate for Apartments—Licensing and Regulating of Steamfitters—London's Action re Plumbing By-law

Report of J. WRIGHT, Chairman of Sanitary and Legislation Committee to Annual Ninth Convention Ontario Society Domestic Sanitary and Heating Engineers

"AS chairman of the Sanitary Legislation Committee of your Toronto committee, and being in direct touch with provincial authorities, regarding the enactment of our proposed plumbing regulations for the province in amendment of Schedule B of the Public Health Act, I beg to report progress.

"For your information I include the following extract from the report of the Provincial Sanitary Engineer, Mr. F. A. Dallyn:

"The requirements of the Housing Commission with reference to the Government loan has directed the attention of many of the smaller municipalities to the need of sewers, and this in turn has shown to the Board the great need for an extensive survey of the province to determine to what extent municipal sewers are being taken advantage of and in what way portions of the municipalities can be improved by such services. It would appear that the smaller municipalities and housing generally cannot be better served than by the Board assisting them very directly by engineering services and in the consideration of their drainage and water supply problems.

Need For General Plumbing Regulation

"This also appears to be a question. It is the question of plumbing. There is very decided need for a general regulation respecting plumbing for the whole province, subject to amendment by the municipalities now having regulations in force, such as the city of Toronto. The rural areas and many of the smaller towns are being very much exploited by unscrupulous supply houses and the character of the work is so inferior that its replacement is only a matter of a few years. A provincial regulation would overcome a great many of the difficulties now experienced and would insure a satisfactory type of equipment and fittings for the rural as well as the whole organized urban municipalities. Plumbing has until very recently been considered one of the paramount health problems. Lately there appears to be a tendency to relegate it to other departments of municipal affairs than that of the department of health. It is rather interesting to note that the plumbers are not in sympathy with this movement and that there seems to be a tendency to request the health bodies to again take over supervision of this matter.

A Few Out of Town Enquiries

"One was from a city, which I think is amending its plumbing by-law. They wanted to know why it was necessary to ventilate W. C. bends under floors when we know it is not possible to syphon some of our later-made water closets.

"They were informed that the reason for venting these connections in Toronto are as follows:

"To equalize the atmospheric pressure throughout the whole system of waste pipes, so that no dead ends may be allowed through the system, where the non-action of pure oxygen would allow the pipes to deteriorate, and the wiped joint on bend in particular to corrode and eventually cause a leak. You will readily see that with fresh air inlet on your drain, and fresh passage through the soil and waste lines of the outside air will prevent deterioration in metals contained in same.

"Another one from out of town was in reference to local Board of Health. Was it legal for aldermen to sit on the Board?

"In taking the above up with the law clerk in charge of the Municipal Act, and his opinion is that the amendment to the Act, 1919, Chapter 46, Section 2, when read in with the amendment of the year previous, makes it very clear that as the act stands now a member of the council may sit on the local Board of Health.

"This amendment was put through the house, which I think is all wrong, for my own view is similar to my friends. The local Board of Health is composed of the Mayor, Medical Health Officer, and three ratepayers, is directly responsible to the Provincial Board of Health and was so designed that it may not be dominated or controlled by the city council, its factions, politics and other evils, but shall remain free to do its work wholly for the public health, apparently the appointment of aldermen or others holding similar positions, defeats the very object and intent of placing it under the Provincial Board.

Flat Plumbing Rate on Apartments

"Had a call from a large real estate company in connection with co-operation with other real estate companys in reference to creating a plumbing service for repairs of so much per week in connection with some of their large apartment houses. The above I strongly would discourage, as I can see the thin edge of the wedge in view in allowing the handy man in these buildings to work in conjunction in creating a deception under the above conditions which we have done so much to stop.

Licensing and Regulating of Steam Fitters

"As regards steam boilers and their installation: They, it is true, properly come under regulations as to construction and inspection by the Hon. Minister of Public Works, but, if it is the heating of buildings which is under discussion—which comes under 'Public Health Generally'—it should be taken care of by the Department of Public Health, who should take advice from the Provincial Board of Health—according to the Public Health Act, Section 6 (b)—and under a by-law similar to that on Plumbing and Drainage, (as the Heating is done by a Master Plumber in the majority of cases outside of Hot Air Furnaces) and if a simple and practical Regulation were drafted, as above indicated, so as to thereby make our dwellings fool-proof against accidents (from which Toronto has already suffered), I feel quite certain the public would be satisfied, for the City could issue separate licenses, if thought desirable, for the same.

London Plumbing By-Law

"In reference to London and their new Plumbing By-law which was passed in open Council the 24th day of November, 1919. We are surprised that on March 29th, 1920, that the City Council suspended for two weeks the recently enacted Plumbing By-Law and appointed a special committee to revise the same measures without delay. On the 30th of March, notwithstanding the fact the Council the night before suspended the new Plumbing By-Law until it had been revised and drastically modified, Chairman J. R. Saunders, of the local Board of Health, instructed Plumbing Inspector Young to continue his duties. The Inspector is temporarily without authority to take any action, but he will keep in touch with progressing work and will attempt to use pressure later.

"Now, in my opinion, I do not think the council had the power to do what they did, because previous to the old plumbing by-law of London they were working under Schedule B of the Public Health Act of Ontario, therefore, when they created a local plumbing by-law they were making an amendment to Schedule B, but under the sanction of the Provincial Board of Health, which

you will find under a statutory by-law, page 46, Section 115, and, in my opinion, there are but two things to it that if they had a legal plumbing by-law the Provincial Board of Health was a party to same, and before they can suspend or revise, it should legally be done before the Provincial Board of Health, on which, I think, their city solicitor could have enlightened them, for, in the Public Health Act of Ontario, Chapter 218, R.S.O., page 46, Section 115, you will find under clauses 1, 2, 3, the following:

Statutory By-Law

"115.—(1). The by-law set out in Schedule B, hereafter called the statutory by-law, and every amendment thereof, shall be in force in every municipality as if enacted by the council thereof, and the council of every municipality shall have authority to pass by-laws with the approval of the Provincial Board for making additional requirements in respect to any of the matters dealt with by the statutory by-law.

"(2). The board may permit the council of any municipality to amend the statutory by-law so as to conform to the requirements of the municipality or to meet such special circumstances as in the opinion of the Board may warrant such amendment.

2 Geo. V. C. 58, s. 114.

"(3). The by-law set out in Schedule B, and any amendment thereof approved by the Provincial Board shall have the same force and authority as a regulation made under this act by the Provincial Board.

Plumbing Conditions Far From Ideal

"While people to-day know that disease may be prevented and death averted, yet most of us at heart firmly believe that we are in the hands of a merciful Providence, who over-rules all for our good. We lose sight of the fact that the same wise Providence has laid down laws for our guidance—you will find the books of the Old Testament teeming with 'helps to health.' True, they were written for the Jew many thousand years ago, but no sanitary code was ever compiled. The result is quite evident from history, the world being devastated with plagues and pestilences and I believe this would have been prevented had the hygienic laws of the Old Testament been preached and practised by the Church. It is, therefore, through the saving power of hygiene and the plumbing regulations in which we hope for improvement, in the present generation, by bettering our inherited endowments—the existing conditions are far from ideal and they might be easily and speedily righted if we worked along proper lines; even so far as the present generation is concerned, the saving power of hygiene is possible of great achievements.

National Government's Part in Campaign

"In respect to the part to be played by the National Government in this campaign, there may be legal limitations within which the federal authorities can work, and these will have to be respected, but there can be no doubt that health is a question of national moment, and any legislation which prevents or hinders the National Government from exercising its due prerogative in the matter is faulty and should be amended. If, however, the field is limited, then the responsibilities for engagement in good active work are the greater. In this country the effect of a well-organized and equipped federal department of health would do much to strengthen the hands of the various provincial health authorities, and would firmly establish public health with all that it means of blessings to the people of every class, there would be such a marked advance all over Canada as would surprise us all.

"The many problems of federal, provincial and municipal sanitation are all so intimately associated and interwoven that to begin the enumeration of the functions of any one of them is to at once get in touch with the other two. There are, however, some duties and powers which are more peculiarly suited to each, and yet for their efficient performance require that authority should be centralized, and when it is remembered that unless health measures are efficiently performed they are worthless, for they do not secure the desired end. Hence, we are more and more realizing in this country that health is of national importance, and the Federal Government should devote more attention to all matters having for their object the betterment of the health of the people than it has during the past forty-five years.

"The ideal conditions for health comprise a pure atmosphere in which to live and work, pure food, pure water, protection from infection and accident, and a proper adjustment of work, rest and amusement—together with the all-important one of proper housing.

"The methods of securing improvement in health may be considered for all practical purposes under three groups:

"(a) Government hygiene.

"(b) Social hygiene.

"(c) Personal hygiene.

"The first group refers to the health activities of governments whether federal, or provincial, or municipal.

"The second includes all the work that may be carried on by domestic sanitary and heating engineers, medical men, by social workers and semi-public bodies. The third deals with the life of the family and the individual.

"It is the duty of every domestic sanitary and heating engineer, so far as it relates to this question of health, to study, investigate and recommend to the Governments of Canada how this can be best accomplished, especially since it concerns the health of each member of a household.

"In the past the Governments have been as extravagant and unsaving of human life as they have been in wasting the resources of the country.

"We leave too much to Providence and forget that God helps those who help themselves, and we have yet to realize as domestic sanitary and heating engineers that we must individually know more and practise more of public health principles."

MISDEEDS BUILT COMPETITION

Continued from page 26

More Service Should be Sold Not Given Away.

Service:—"More service should be sold to the public, not given to them. The public should know that labor is a service for which they must pay. Do not blame anything and everything for the price of labor, but have a good plausible reason. The way to arrive at this is to share your business.

Price:—"This is the most prominent of all considerations and the one thing that should be withheld in selling as long as possible. Factors entering into price are merchandise labor, overhead and profit.

Reputation:—"Every man has a reputation he values, but he is inclined to put too much odds on this. He thinks the public know as much about him as he knows himself.

Personality:—"Sell personality but do not allow your business to depend on personality alone because when you pass away there will be nothing left if you do."

Speaking of plumbing and heating in estimating, Mr. Woolley pointed out that in his own business no one estimator handles all phases of estimating so that no one of them knows what the total estimate will be. For that reason the business is not a one man proposition. "If you don't follow this plan and delegate some of the work you will be at it all your life," said Mr. Woolley.

Scaring the Public no Longer Effective.

Labor:—"This is a thing we must consider more than in the past. The trouble with this business is that there are too many secrets that are not secrets. No one ever attended the funeral of a man who died from sewer gas. This thing of trying to scare the people was practised back in the dark ages but to-day you have to talk to them along constructive lines."

Stenographer as Sales Girl.

Mr. Woolley outlined a plan for building up a non-competitive business and added to the former outline a suggestion to put in a stenographer, with the idea of her developing into a sales girl. "Have her produce a certain amount of business to justify her salary," said Mr. Woolley, "and increase her salary as sales increase. It gives an incentive to work. One of the best sales plans we ever had was that whenever we installed a job we found out the names of ladies attending the same clubs as the lady of the house in which the job was done. To these we sent a letter telling them about the fittings installed in the first home.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

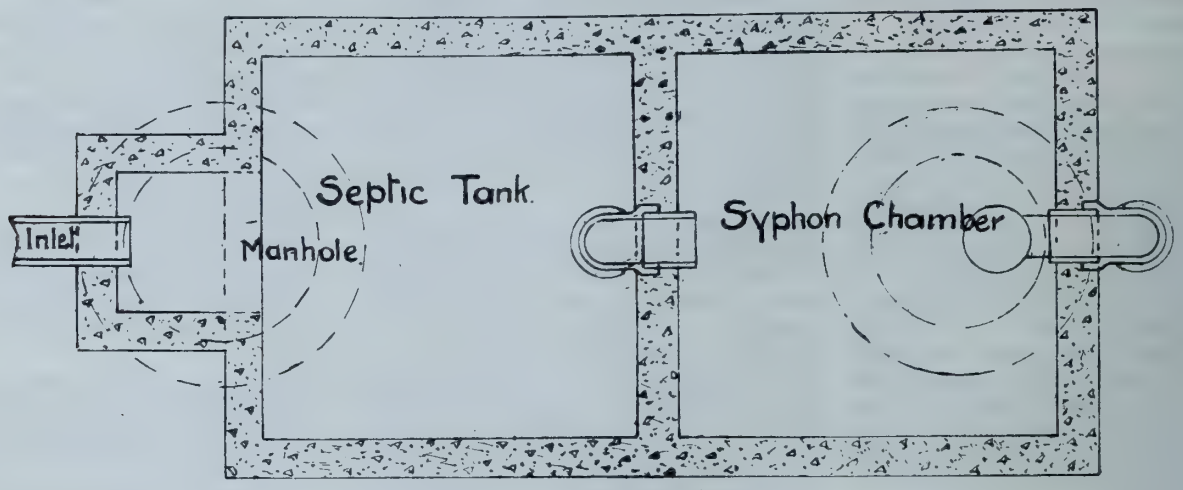

FIG. 10

Article No. 6 of the Series

ANOTHER well-designed form of septic tank suitable for constructing in high ground is shown in Figs. 10 and 11 and is constructed on different lines to the usual type of double chamber septic tank, as in this case there is practically two large, and one small compartment. The sewage enters the tank well above the water line and discharges into the small comliquefying chamber where the sludge is deposited; the sewage passes over the weir into the liquifying chamber where the sludge is deposited and the liquid run off by the sealed central pipe connection into the automatic syphon chamber, where it is discharged periodically into the filtration area for secondary purification.

Overflows and inspection manholes should be constructed as shown in sketch.

This type of tank is designed for solid ground as the outlet pipe from the ping is at such a low elevation that the tanks for filtration area would be far too low for pipes on level ground construction.

In designing septic tanks in level ground, the second chamber should be designed of shallower depth than the first compartment, and the length should always be extended until the required capacity of approximately 12 hours' supply is always retained before the automatic discharge of the syphon. The depth in such cases should never be greater than that required for the efficient working of the syphon.

R.M.A. OPPOSES EIGHT HOUR DAY

In view of the fact that the eight-hour business day question is now receiving much public attention, the action taken by the Dominion Board of the Retail Merchants' Association of Canada at the last meeting regarding this matter is of interest.

The stand taken by the Association was that experience with the present system has proved that it is a perfectly fair and sound one and quite in keeping with good democratic government. The Association therefore went on record as being satisfied with the present system of determining the hours of labor as far as the retail merchants were concerned, and asked that in any legislation being planned the merchants be exempted so as to allow them to continue as at present under provincial legislation.

GRAVITY FILTRATION PLANT FOR CHATHAM

Chatham, Ont.—The Chatham Waterworks Commission has adopted report of the city engineer in which he recommends a new rapid sand gravity filtration system as the solution of the local water problem.

The proposed system will necessitate the scrapping of the old plant and building an entirely new system, with the intake pipe located several miles up stream at an estimated cost of $371,000.

The city engineer was instructed to prepare plans and specifications, to be approved by expert waterworks engineers. He estimates that construction can be commenced in three months' time. The usual money by-law will be submitted to the ratepayers at a convenient date.

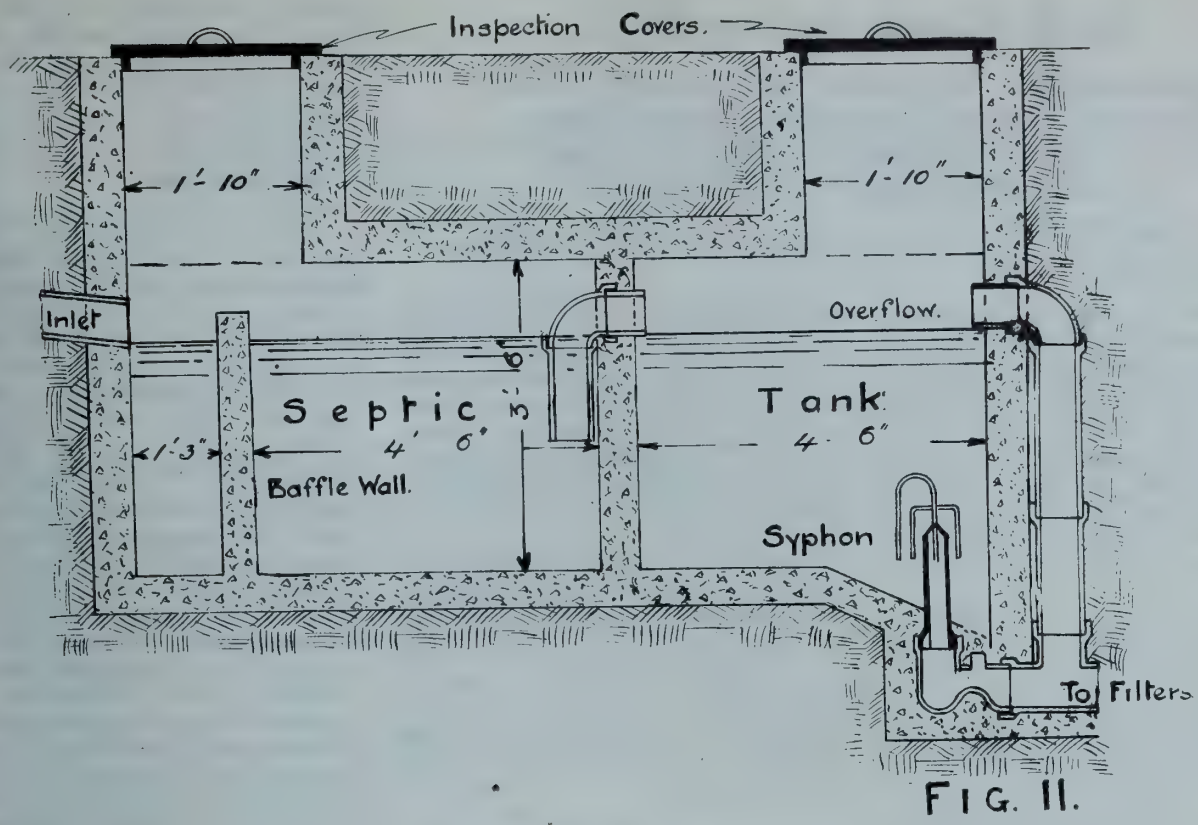

FIG. 11.

Legislation Affecting Manitoba Merchants

Amendments to the Shops Act and the Transient Traders' Act—Proposals re Extracts and Essences

The Shops Act in the Province of Manitoba has been amended to permit rural municipalities, villages, and towns to pass by-laws making Thursday afternoon from 12 o'clock noon a half holiday for the whole or any part of the year. Cities may pass by-laws making such day or days half holidays during the whole or any part of the year as are determined by the class or classes of trade desiring the same.

The Retail Merchants' Association opposed the registration of the assignment of book debts which called for the registration in the office of County Clerks of every assignment of book debts by every retail trader within thirty days from the date such assignment was made. Under this Bill, retail merchants were to be subjected to special treatment. In other words, it was class legislation. Mr. Edwin Loftus, K.C., and Mr. Horace Chevrier represented our Association. The Bill was killed when it reached the Law Amendments Committee.

During the present session of the Manitoba Legislature an amendment to the Transient Traders' Act was passed. Now all distributors who are peddlers or transient traders will first have to obtain a provincial license, then a municipal license before trading in any locality. The peddler or agent must wear a badge. Penalties are fixed for those who do not comply with the law and report to the proper local officers before soliciting business.

In the proposed amendments to the Temperance Act, reference is made to the handling of extracts and essences. Every dealer is required to keep a record of every sale of every 2½ ounce bottle of flavoring extract or essence. Strong opposition was registered against such a proposal by the Retail Merchants' Association, and the following provision was agreed: Great care should be exercised in selling extracts or essences, as many cases have been reported indicating that these extracts or essences have been used for improper purposes.

PROVINCE BUYS SEWER PIPE

At a recent sitting of the Ontario Legislature Mr. Gray enquired as to whether the Department of Highways had purchased any vitrified or glazed sewer pipe since Nov. 13th, 1919; for what purpose it was to be used; what quantity of each size was purchased and at what price; and as to what was the quality of the pipe.

Reply was made by the Minister of Public Works to the effect that such pipe had been purchased since the date mentioned, and it was to be used on side roads and entrances. Quantities and prices of pipe purchased were as follows:—8 inch tile, 800 feet at 18 cents per foot; 12 inch tile, 2,286 feet at 36 cents per foot; 15 inch tile, 2,848 feet at 51 cents per foot; 18 inch tile 1,016 feet at 75 cents per foot; 24 inch tile, 20 feet at $1.29 per foot; 30 inch tile, 30 feet at $3.24 per foot. The first five sizes mentioned were of No. 2 quality; the last one mentioned being No. 1 quality.

RE-ARGUMENT GRANTED IN BOARD OF COMMERCE CASE

Ottawa, April 6.—A re-argument has been granted by the Supreme Court of the application to test the jurisdiction of the Board of Commerce and the constitutionality of Section 17 of the Combines and Fair Prices Act, under which the Board of Commerce is given powers as a price-fixing tribunal. A rehearing will take place in the Supreme Court on May 4 next.

The application was brought on March 15 by counsel for the Retail Merchants' Association, the Canadian Manufacturers' Association, the Attorney-General of Alberta, and others, to question the intro vires of the act in forbidding hoarding of commodities, in appointing the Board of Commerce to impose penalties for offences against the act and require Provincial courts to enforce them, in giving the Board power to decide unfair profits in purely provincial transactions, and in prohibiting export of commodities from Canada.

When the Supreme Court sat to-day to read judgments at the end of the term, no judgment was handed down in this particular case, and it is understood that no judgment will be given until after the rehearing of the case.

Much Unrest Among Boys

Apprenticeship Committee Recommends Good Wages be Paid to Attract Best Type of Boys—Night Classes Organized—Plumbers Should Give More Attention to Apprentices

Report of G. CLAPPERTON, Chairman of Apprenticeship Committee, before Ninth Convention Ontario Society Domestic Sanitary and Heating Engineers

"IN presenting to you our Apprenticeship Report for 1919 we have much pleasure in stating that considerable improvement has developed during the past year, though the problem is far from being the condition to be desired. There is a great deal of unrest among the boys between the ages of fourteen to seventeen and it seems almost impossible to get boys of the proper calibre for learning the trade at the present time.

"We, in Toronto, have been working on this problem more or less all year and have been fortunate in having a class formed at the Technical School where we have about seventy boys taking Mechanical Drawing, Mathematics and Physics, and we believe we have started in the right direction to improve our trade as a whole. Three of the larger operators in our city subscribed sufficient money to form an Endowment Fund whereby the interest could be taken for scholarships. It is our purpose to give four Scholarships each year. We felt we had to do this as an inducement for the boys to persevere and take the proper interest in this course of education. We would strongly advise the members of our trade throughout Ontario to arrange in some way to give the boys this Technical Education, as we think it is a step in the right direction.

"We had a talk with Dr. Mercer, Government Inspector for Technical Education. He told us how ready the Government would be to help along Technical Education in any part of Ontario, but believed that night classes should be arranged in all cities of Ontario and also the larger towns, and classes especially conducted for boys actually engaged in the business. Their masters could give them practical knowledge and it was thought that possibly some of the High School teachers could be induced to give the boys Mechanical Drawing, Mathematics and Physics. Our boys in Toronto attend these classes two nights each week and we intend to make the rule that if a boy will not attend the classes we consider him not interested enough in the business to remain at same, but as we have explained it is very difficult at the present time to make hard and fast rules for the boys as we find we cannot supply the demand. Your committee feels that good wages will have to be offered these boys and that we should if possible take on no boys who have not had a common school education and of good moral character. We believe these boys could be got if proper inducements were offered. The parents of all boys should be communicated with and asked to co-operate with the masters and encourage their boys to attend these night classes when formed so that the coming generation of Sanitary and Heating Engineers will not only be good mechanics and good business men, but will be citizens interested in the city's welfare.

"We would strongly recommend that all Sanitary and Heating Engineers in the Province of Ontario give more time and attention to the boys whom they take on to learn the trade, give them a chance to get Technical Education. If this is done we feel sure the problem we face to-day will be greatly improved in the coming year, in regard to our apprentices."

MISDEEDS BUILT COMPETITION

Continued from page 29

We generally found that some of them would want even something better.

"A bookkeeper on the same plan can sell a lot of goods. A salesman or two can be added later and a foreman could be employed but not until three-quarters of his time is productive. If more than that amount had to be included in overhead I would discharge him. A stockman cannot usually be used to advantage in shops doing less than $100,000 of business per year.

Applying Charting System

"A chart should be made of what each employee is to do. The possibilities should be also figured. The men in this business are a good bunch of fellows but they try to be a jack of all trades. If other businesses did this there would be a great many more failures. The only reason the trade is where it is to-day is because of its lack of organization. When you get organization others see there is something required to go into it and undesirable and unlikely persons are kept out. In our town there has only been one new competitor commence business in eleven years because we have built up our organization. None of the business houses in the town have less than five people in the office and they have an established reputation. We do not pay any attention to architect's specifications, the customer comes to our store to buy their installations."

Bookkeeping System

Mr. Woolley went into details concerning the bookkeeping system adopted by the Bureau for use by plumbers. "The object of the system is to show what you are really doing," said Mr. Woolley. "It is free from red tape. We figure costs before the bill is sent out. You cannot make out your bill till you do know your costs. Even if an extra employee is required to figure costs it is well worth while.

"In the United States the original entry must be in bound form. This is posted to the Sales Journal subdividing the work under Plumbing, Heating, Contracting, etc. This is the key of the whole system, and it cannot be tampered with because by adding each column diagonally the same total is obtained and each column would have to be changed to make any total difference. The Purchasing Journal enumerates overhead costs. To take care of cash there is the Cash Book, petty cash account and monthly summary. The Ledger is divided into Customers' Ledger Accounts Payable and General Ledger.

"When this system has been applied to the business of small and large plumbing shops the results have been surprising," added Mr. Woolley.

Other forms printed and supplied by the Bureau included Workmen's Reports, Records Sheets for plumbing and heating, Request for Quotations to Jobbers; Estimate Sheets; Heating Chart, this being a quick method of finding steam radiation required to heat a building; Estimate blanks; Service bulletin containing outlines of showrooms, advertising copy, bonus plans, etc.

Mr. Woolley pointed out that the United States Bureau was taking steps to standardize brass goods, soil pipe, etc, in order to bring about a quicker turnover.

"Our manufacturers and jobbers appreciate that unless there is co-operation we are not going to get very far and that is the big thing in trade extension to-day. Our manufacturers will put up $100,000 this year. This will assist in developing sales. From the standpoint of credit assistance will be rendered to the manufacturers because if we can show the plumber how to be financially successful the manufacturer too will be successful. Within the next eight or ten years the plumbing industry will have a different viewpoint entirely."

Following this address questions were asked by President Minnes and F. R. Maxwell, as to the possibility of securing the set of books and other literature for the trade in Canada. Mr. Woolley throught there would be no difficulty in this matter and promised to take it up with the directors of the Bureau.

Mathewson Hardware Ltd., has been incorporated with head office in Toronto to deal in general hardware and furnaces and to manufacture galvanized ironware.

Youngblood Electric Heater Co. has been incorporated with head office in Toronto to make and deal in electrical goods and appliances.

Shall We Divide Canada

IN 1867 our fathers consummated at great price a union of all the provinces and interest of Canada. For over half a century the provinces of Canada have developed together, each the complement of the other.

Canada must be bound together as it is to-day, not so much by the machinery of government as by ideas held in common by all and freely exchanged, so that all sections sympathize with each other. This result has been accomplished primarily by the press, particularly the weekly and monthly periodicals and business papers.

They have no local or sectional bias. They go to all parts of the Dominion. They serve all parts alike. Their service is in bringing all provinces close together into one great nation through one common understanding.

Canada must not be split into a half-dozen sections—weak with the evils of sectionalism, disastrous in the extreme—overflowing with narrow provincialism.

Emanating from we know not whither, comes an idea that will rip asunder all the good done in over half a century of patient building.

It is proposed to tax the very thing that has bound Canada into one—to place on the nation-binding press a zone postal tax which would increase the postal charge upon national periodicals as high as 800 per cent. It means loss to you personally and a loss to your country. It will weaken, cripple and in some cases destroy Canadian national periodicals. You will be deprived of papers that have kept you informed on yoru country's problems, your business problems, that have helped you in your work, and such magazines as do survive will cost you much more.

The publishers are not trying to evade fair taxation. They will gladly accept any fair tax upon their profits.

But is it fair that you should be taxed out of getting journals, papers and magazines that have helped you build your business and in turn built the business of the country?

If you believe in national ideals and national periodicals, sign attached form.

Tear off and mail to-day

SANITARY ENGINEER,
153 University Ave., Toronto, Canada.

I am opposed to any zone postal law which would mean charging higher subscription rates to subscribers, according to distance from office of publication.

EDITORIAL COMMENT

SUCCESSFUL CONVENTION OF SANITARY ENGINEERS

WHAT is perhaps one of the most outstanding achievements in connection with the work of the Ontario Society Domestic Sanitary and Heating Engineers, which has just completed its ninth annual convention, is the step taken to bring about a better understanding of conditions existing between the manufacturers and supply houses on the one hand and the craft on the other. The activity of the officers of the society in bringing about an opportunity for a full discussion of the matter on the floor of the convention, with representative manufacturers in attendance, is to be commended.

As result of the deliberations on the subject at the convention, it is to-day the general feeling among those who were present that a new era is dawning for the plumbing trade in Ontario. The great possibilities for trade were outlined and the most effective manner in which the plumber can take advantage of these possibilities received much attention, with expert advice being offered by Wm. J. Woolley, of the United States Trade Extension Bureau. In view of the lack of new building, emphasis was laid on the necessity of developing bigger business from existing buildings. Educational work to indicate the advantages of installing new equipment instead of constantly repairing was felt to be very necessary, particularly insofar as alleviating the present shortage of help is concerned.

A distinct feeling of kinship has taken root between the manufacturers and the trade, and as the former have some definite plans on which to work, the viewpoint of the trade should be considerably elevated within the next few years.

SWITCHMEN'S STRIKE WORSE THAN STEEL AND COAL STRIKES

NEARLY half the steel industry is at a standstill because of the railroad strike, according to the "Iron Age," and if the tie-up lasts for any length of time the shutdown of steel works and rolling mills will be nearly complete. This difficulty comes just at the time when car and fuel difficulties were being overcome and production was getting into a new record stride.

"Demoralized to a degree far beyond that brought about during either the steel and coal strikes of last fall, iron and steel operations virtually have been paralyzed by the first few days of the nation-wide strike of railroad switchmen," says the "Iron Trade Review." "No such threat of complete stagnation has been faced by the manufacturers in many years, if ever. Coming as a climax to the prolonged period of car and fuel shortages, the strike has caught the industry in a highly vulnerable position with raw material stocks at a low point and plant yards congested with unshipped product. Scarcely a ton of freight now is moving in and out of works yards, many mills and furnaces have been forced to suspend and others will follow quickly as supplies on hand are worked up or the limited storage space remaining is filled with finished tonnage. The loss of production promises to be large. Practically all producers have withdrawn as sellers and for the moment it may be said no iron and steel market exists."

THE ONTARIO BUDGET

THE Ontario Provincial Budget presented by the new Provincial Treasurer indicates that the Drury Government does not plan to stint expenditure on the main objects of sound public policy. For the past fiscal year expenditures amounted to $21,464,574, including war tax receipts of $1,491,722. For this year the expenditure is estimated at $17,932,830. This figure is considerably less than the outlay for the past year, but it is significant that the estimated outlay for this year on education, agriculture, colonization and immigration and good roads is to be increased. Total receipts last year were $19,904,772, including revenue raised from war taxes of $2,085,497. This is revenue which is no longer available.

The estimated receipts for this year are $20,211,378. This includes nearly $600,000 more from the Hydro-Electric Commission than was received last year. Larger returns from other principal sources of revenue are also expected. These sources comprise lands, forests and mines, corporation tax, succession duties, etc. It is

also noted that tax on racing is expected to yield $750,000. Other new sources of revenue foreshadowed in the budget are additional taxes on banks and insurance companies. A new policy is to be followed in dealing with timber licenses.

In summing up, the Treasurer pointed out that there had been a deficit of $1,564,000 last year and that this year he estimated receipts at $20,211,000 and expenditures at $17,932,000, which, if estimated approximately correct, will leave a favorable balance.

STERLING EXCHANGE GETTING BACK TO NORMAL

THE return of the English pound sterling to the four-dollar mark has caused rejoicing in business and financial circles in England and in Canada. The rapid scaling of the 90 cent stretch since sterling reached the low level of $3.13 in United States currency is an indication of the financial stability of the British Empire.

While recent shipments of gold to the United States from Great Britain have undoubtedly influenced the situation to some extent, there have been other more important influences at work. The British spirit has triumphed in its dogged determination to bring back the leadership of the financial world to its former seat. British exports to the United States are relatively small, but exports to foreign markets have been growing in volume, and throughout the whole process this has tended to strengthen British trade in the markets of the world. It is significant that at no time did the high exchange on sterling in the United States cause much apprehension among British manufacturers, but undoubtedly a return to more normal conditions of exchange will be a big help to trading conditions between America and Europe.

The United States price on Canadian money is increasing, and this has, no doubt, been assisted by the adjustment of sterling exchange. The recent movement into Western Canada of settlers from across the border has resulted in transferring much wealth and credit from the American to the Canadian side of the line. Then, too, there has been response in Canada to the appeal for rigid economy and the cutting down of trade in luxury lines. The condition tends to give confidence in regard to the outlook for business tax."

CAUSES OF INFLATION

FOLLOWING Frank A. Vanderlip's address before the Canadian Club in Toronto a short time ago, there were many who expressed the opinion that he was altogether too pessimistic. However it is noteworthy that several of the predictions which he made at that time have since been fulfilled. In a more recent address, Mr. Vanderlip, who was formerly president of the National City Bank, New York, stated that in his opinion the inflation of United States currency and of bank credit has, more than anything else, been responsible for the per cent. rise in prices in the last six years.

"There are three things upon which real prosperity must be based," he said. "These are ample capital, efficient labor and an application of sound economic principles. We are prosperous to-day in face of all three fundamentals, and our prosperity is false as well as dangerous.

"Incomes to-day are larger than ever before. The chief reason for this is the Government taxes.

"But even were taxes reduced the situation would not be sound. The contention is that labor is only 60 per cent. efficient. There is no non-employment to-day. And yet, despite the fact, our productivity is lower than it has ever been."

Canadians are awaiting the Budget speech of the Finance Minister, at Ottawa, as a great deal of interest has been aroused as a result of rumors that changes will be made in taxation methods. Regarding the inefficiency of labor, Canadian manufacturers have also experienced lower productivity, despite constantly advancing wages.

SERVICE THAT COUNTS

THE March 15th issue of SANITARY ENGINEER gave the result of the election of officers at the Saskatchewan Convention held in Saskatoon. The April 1st issue of SANITARY ENGINEER gave the convention report in detail. We have heard many favorable comments on this service, due particularly to the fact that we have published this information far in advance of any other papers. This is in line with the regular policy of SANITARY ENGINEER to give the best possible service and to give news when it is news. We are giving in this issue a report of the Ontario Convention which has just closed in Toronto and we feel sure that the promptness with which this report is presented to our readers will further emphasize the fact that SANITARY ENGINEER is a paper that is right on the job when it comes to giving news to its readers.

THE ENTRY lists for the Canadian Industries Exhibition, to be held in London, England, in June, will remain open but a few weeks longer. A large number of Canadian manufacturers have availed themselves of the privilege of displaying their products to British buyers for the purpose of developing overseas trade. Exhibitors who have secured space are already getting their shipments ready, preparatory to sending them to London.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Uxbridge, Ont.—Slatter Bros. have purchased the tin stock and shop of the Uxbridge Hardware Co., and will commence the installation of plumbing, etc.

Fergus, Ont.—Messrs. Brooks & Graham, plumbers and tinsmiths, have purchased from the Michie Estate the store on St. Andrew street, occupied lately by Mr. C. O. Simmons.

Woodstock, Ont.—Two well known Woodstock young men, Tom Harvey and Art. Wilson have formed a partnership and are now in business, as electricians and plumbers, under the firm name of Harvey & Wilson.

OBITUARY

Moose Jaw, Sask.—John Hawke, founder of the Moose Jaw Heating and Plumbing Company, died recently at the age of 70 years. His surviving son, W. B. Hawke, will have charge of the business.

PERSONAL

Vancouver, B.C.—A. McCulloch, having received the largest number of marks on a written examination on practical points in the trade, has been appointed assistant plumbing inspector.

INCORPORATIONS

V. O. Phillips & Sons, Ltd., has been incorporated to manufacture and deal in boiler compounds, steam packings, etc.

GRIMSBY BRICK AND TILE WORKS SOLD

Messrs. Phin Brothers, of London, Ont., have purchased the Grimsby Brick and Tile Works from the former owners, Reeve C. T. Farrell and R. S. Crain. The new owners have had former experience in the manufacture of brick and tile.

NEW WATER SCHEME FOR ETOBICOKE, ONT.

Long Branch, Ont.—At a recent meeting of the Etobicoke Council, a by-law making provision for a waterworks area between New Toronto and the Etobicoke River was given its first reading. This is a similar scheme to the Islington area and will be carried out under the provisions of the bill secured by Etobicoke in 1917. This will make it possible for all the properties in Etobicoke south of the G. T. R. tracks to receive water.

WILL SELL LOTS FOR BUILDING ONLY—NO SPECULATION

Kitchener, Ont.—The Kitchener Construction Company has appointed committees to deal with the construction of eleven houses to be erected immediately. The company plans to offer thirty-three lots to purchasers who intend building houses this year. No lots will be sold for speculation in order to encourage building.

ACTIVE BUILDING FORECAST

Regina, Sask.—Building permits issued during the month of March amounted to the sum of $260,550, which brings the total for the first three months of the year to more than half a million dollars. Twenty-five new dwelling houses were included in the March figures.

PLUMBERS MUST HAVE LICENSES

Montreal.—The power given the city at the last session of the Legislature to protect citizens against uncertificated plumbers by forbidding master plumbers from employing journeymen plumbers who have not obtained a license and a certificate of competency, has been incorporated in a by-law providing that every master plumber must furnish the city without delay the name and address of each journeyman plumber in his employ on demand of an official of the health or license department.

REVAMPING LONDON BY-LAWS

London, Ont.—A joint committee composed of a number of members of the City Council, contractors, plumbers and others interested, have commenced the task of revamping the city plumbing by-law, which was summarily suspended by the City Council a week ago upon presentation of evidence that it is unreasonable and a contributor to extortionate charges.

The committee will probably have a modified by-law ready for next session of the council, and if its provisions aim purely to insure sanitary installations it will not be objected to.

RECOMMEND SANITARY INSPECTOR FOR HAMILTON

Hamilton, Ont.—F. Thornley, an ex-citizen of Winnipeg, will be asked to state the salary he will require to become chief sanitary inspector and smoke inspector. The Board of Health has recommended his appointment. There was some discussion as to whether the plumbing inspector should be under the jurisdiction of the Board of Health. It was decided that the Board of Health should have the jurisdiction.

MAY ESTABLISH CENTRAL HEATING PLANT

Moose Jaw, Sask.—The Light and Power Committee is considering a proposal to install a central heating system in this city. Economy and the elimination of the smoke nuisance are claimed among the principal benefits of the central heating system. Brandon, Man., is the only city in Western Canada at the present time with such a system.

ELECTRICITY TO PUMP WATER IN BRANDON

Brandon, Man., March 19.—Another recommendation has been made to the city council suggesting electrical power to run the pumping of the city water. G. L. Guy, one of the consulting engineers with the public utilities commission, in a letter addressed to the City Council, stated that the Canada Gas and Electric Company are willing to supply the power to the city at the rate of 2.8 cents per kilowatt hour. Mr. Guy said that the installation of electric power in the pumping of water would save the city $12,000 per year.

NIEDECKEN MIXING VALVE TO BE MANUFACTURED IN CANADA

Arrangements have been concluded by the patentee of the Niedecken Mixing Valve for the exclusive rights to manufacture the valve in Canada. These valves are to a large extent specified by architects in Canada for installation in public buildings, hotels and private homes. The line will be handled by H. Mueller Mfg. Co., Ltd., Sarnia, Ont.

MEAFORD CONSIDERS ARTESIAN WELL SCHEME

Meaford, Ont.—The question of increasing the town's water supply has been discussed by the Town Council. Herbert Johnston, C.E., of Kitchener, who made a survey of the water system of the town, reported to the council that he felt confident a good supply of water could be secured from artesian wells, which he had reason to believe can be located by boring near the present water basin. The cost of sinking the wells will not, it is thought, exceed the sum of five hundred dollars, which would be much cheaper than running an intake pipe out into the lake. The matter was referred to the Waterworks Committee to report at the next meeting.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

THE MARKETS AT A GLANCE

HIGHER prices have again been made on important lines which will affect nearly all in the trade. Wrought iron and steel pipe has been marked up and prices on range boilers and soil pipe have been withdrawn. Wrought washers, wall and floor thimbles, screw plates, brass valves, closet seats, high-up tanks, closet combinations, VitrO closet tanks, as well as sheets and plates, all have new prices.

Trade in nearly all lines is very brisk. Spring commodities are being demanded and all in the trade are preparing to handle the season's business. Prices are very firm and the scarcity of supplies is becoming a great inconvenience to all.

The proposed strike in the metal trades is causing considerable comment and some uncertainty. The new proposed freight rates may be a factor for higher prices if effective. Collections are fair, although some are temporarily held up owing to the situation the financial concerns have created, by cutting down the amount of loan on property. This, however, is believed to be a very wise procedure, as this will have a tendency to keep speculative building, etc., in check, it is stated.

TORONTO, April 13.—Important changes in prices have been made on numerous sanitary and plumbing supplies, wrought pipe being one of the features. Prices on soil pipe, also range boilers, have been withdrawn. Galvanized and black sheets are much higher in price and are still very scarce. Wrought washers, O. K. wall and floor thimbles, Reece's screw plates, brass valves, closet seats, high-up tanks, closet combination and Vitro closet tanks, all have new prices. Many are wondering what will be the outcome of the proposed strike of the metal trades workers. The situation which is developing on the railroads is also causing considerable comment. Higher freight rates or a tie-up of the railroads would undoubtedly be the cause for higher prices, it is stated.

Collections are fair. Nearly all in the trade are enjoying a very busy period, which compares very favorably with some of the best years recorded. The prices on nearly all commodities are holding very firm, and the tendencies in nearly all cases are upward. Scarcity of raw material is also causing some inconvenience.

10% Lower Discount Advances Washers

WROUGHT WASHERS. — New and higher prices have been made on wrought washers. This is said to be due to the situation which has developed in iron and steel. The higher cost of labor is also a factor, it is stated. The new discount is now being quoted at 30 per cent. off the list in place of the former 40 per cent.

O.K. Wall and Floor Thimbles Now Cost More

WALL THIMBLES, O. K. brand, have been marked up to higher prices, the 7 inch now being quoted at $7.20 per dozen. The O. K. floor thimble is now quoted at $8.10 per dozen for 7 inch.

Reece's Screw Plates Have Been Advanced

SCREW PLATES. — Reece's screw plates have been marked up and are now quoted at: No. C or CC, $24.10 per set, while the No. EE is quoted at $36.25 per set.

Brass Valve Prices Marked Up; Some Lower

BRASS VALVES.—Prices have again been revised on some lines of brass valves. It is interesting to note that some lines are a trifle lower, while others are a shade higher. Some of the new prices are: Standard Empire, net list; Penberthy, net list; Mueller (A 2990-2), net list; Kerr, 12A, add 5 per cent .to list; J.M.T., type "C," 5 per cent. discount; J.M.T., add 5 per cent. to list; Jenkins, add 3½ per cent. to list; Jenkins, disc Empire, net list; Kerr, gate valve, 5 per cent. discount from list.

Closet Seat Prices Have Been Revised

CLOSET SEATS—A revision of prices have been made. Nearly all lines whose principal material is wood are unsettled and many changes in prices have been made and in some cases others are pending. Some of the new prices are: Golden oak or cherry finish, with cover, $3.25; nickel plated post hinge, plain oak, $4.00; quarter cut oak, $4.25; birch mahogany, $4.25.

High Up Tanks' New Prices Are 10% Higher

HIGH-UP TANKS.—New and higher prices have been made on high up tanks. This, it is stated, is partly due to the situation which has developed in lumber and wood of nearly all kinds. The 8x17x10 oak high-up tank is now being quoted at $10.50; the 9x20x10 is quoted at $12.50; while the 11x22x10 is marked up to $14.50.

Closet Combinations Have Been Marked Up

CLOSET COMBINATIONS.—Higher prices have been made on this commodity, although not of a heavy nature. The oak wood tank, with oak wood strip seat cover, is quoted at $30.00; oak wood tank, with oak post hinge seat and cover, $30.50; Vitreous China tank, with oak or mahogany post hinge, $33.50; enamel iron tank, oak or mahogany, post hinge seat and cover, $32.50.

Vitro Closet Tank Prices Have Again Advanced

VITRO CLOSET TANKS again have new prices. This is said to be more of a revision. Some of the new prices are: Oak Vitro closet tanks, $17.00 each; white Vitro closet tank, $19.25; mahogany, white Vitro tank, $19.50; enamelled iron, $19.25; Vitreous China-English, $2.25; Vitreous China Bellemeade, $20.25; Vitreous China-Canadian, $20.25.

Enamelware Situation Unchanged; Prices Firm

ENAMELLED WARE. — Prices are quoted from a firm basis, and no lower prices are looked for, in fact it is the belief of many that higher prices will be made before the year is over. Jobbers have fairly large stocks this year, it is believed, and manufacturers are working hard to keep up their end, which continues to be the heavy one.

Many are surmising what the future situation will be. Some are concerned over the proposed new freight rates. The impending strike may be a cause for higher prices, if effective.

Bath tubs, roll rim, 4. 4½, 5 feet, 24 to 30 in. wide	$37 05
Bath tubs, 5½ ft.	41 20
Lavatories—

Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$5 40	$5 35	$5 30
18 x 30	6 20	6 50	6 10
20 x 30	7 10	7 05	7 00

Sheets and Plates Scarce; Have New Higher Prices

SHEETS AND PLATES.—Although the shortage which has prevailed for some time past continues to be very great, jobbers state that shipments are coming in in much larger quantities and some state that if nothing seriously happens that they will have some considerably larger tonnage than they had expected some few months ago.

It is hard to say just what the situation in regards to this commodity will be in the near future. It may be that the mills will be able to clear up their old orders and take on bookings for the second half of the present year, although it is stated that premium buyers are still in the market. Especially is this true of the automobile manufacturers.

The following quotations are being quoted by some, although they are more or less nominal owing to the great scarcity, and it is believed that very few have complete list of sizes in stock at present:

BLACK SHEETS

14 gauge	8 00
16 gauge	8 10
18-20 gauge	7 95
22-24 gauge	8 00
26 gauge	8 05
28 gauge	8 15
3-16 inch plate	....
¼-inch boiler plate	....

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

GALVANIZED SHEETS

	Premier		Apollo	
10¾ oz.	$10 00	$11 50	$10 75	$12 00
U.S. 28	10 20	11 70	10 35	11 45
U.S. 26	9 90	11 40	10 05	11 15
22 and 24	9 75	11 25	9 90	11 00
18 and 20	9 60	11 10	9 75	10 85
16	9 45	10 95	9 60	10 70
12 and 14	8 70	10 20	9 45	10 55

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

Conductor Pipe and Eavestrough Moving

EAVESTROUGH AND CONDUCTOR PIPE are beginning to show great activity with the warm weather and many are demanding their booked orders, which are going out in good volume. The following prices are current for this commodity:

PIPE (Conductor)

Plain

2 in., in 10-ft. lengths, list	8 00
3 in., in 10 ft. lengths, list	9 70
4 in., in 10-ft. lengths, list	12 80

F.O.B. Toronto, Oshawa, Ottawa.
Add 5% to the above list.

Little Change Shown on Lead and Zinc Products

LEAD AND ZINC PRODUCTS. — Little change is noted in the situation of lead and zinc products this week. The pig metal is holding very firm and steady, which is the situation all throughout the products. Some have it that the situation may improve and that supplies of raw material will be more available, although it is not expected that lower prices will take place at least immediately, in fact present prices are quoted on a very firm basis, and are as follows:

Lead pipe, list, per lb.	0 17½
Lead waste pipe, list, per lb.	0 18½
Do., over 8 inches, list, per lb.	0 19½
Above subject to discount of 10 per cent.	
Lead traps and bends	add 30%
Lead wool, lb.	0 16
Lead sheets, 4 to 6 lbs. sq. ft., in rolls. per lb.	0 14
Cut sheets, ½ to ¾c lb. extra, and cut to size 1c lb. extra.	
Solder, wire, lb.	0 45¾
Solder, strictly, lb.	0 43
Solder, commercial, lb.	0 40
Zinc sheets, per lb.	0 19
Solder, guaranteed, lb.	0 43¾
Solder, wiping, lb.	0 40

Corrugated Sheets Firm; Situation Unchanged

CORRUGATED SHEETS. — The demand for corrugated sheets continues to be heavy, and manufacturers still have difficulty in supplying the demand. This is said to be entirely on account of the existing scarcity of flat sheets, although manufacturers claim that shipments are coming better than they have for some time, although in many cases they are very erratic, the manufacturer receiving one or two cars probably on one day and then not be able to procure any more for some time afterwards.

The following are the present quotations:

CORRUGATED SHEETS—	Per 100 sq. feet Galv'd	Painted
No. 28-gauge	$ 9 25	$ 7 75
No. 26-gauge	10 00	8 75
No. 24-gauge	15 00	11 00
No. 22-gauge	17 50	13 75
No. 20-gauge	21 00	17 50
No. 18-gauge	26 50	21 50

On shipments of 300 lbs. and over, freight is allowed south and east of and including North Bay; also several western counties in Quebec Province. Places north and west of North Bay, the freight is equalized on North Bay. For Quebec and Maritime Provinces, freight is equalized on Montreal.

Ad 5% to above list.

Scarcity of Cast Iron and Stove Plate Still Prevails

OLD MATERIALS.—Stove scrap and cast iron continue to be in great demand and dealers have great difficulty in coping with it. To-day's price on stove scraps is high, mostly being quoted at $32.00 per ton, while cast iron number 1 has reached the high water mark of $38.00 per ton. However, nearly all other commodities on the list remain unchanged and have a tendency to be rather quiet, although it is the belief of many dealers that it is only a matter of a short while before the demand will become very brisk for the other commodities and a good volume will be handled. The following are the present quotations:

DEALERS' BUYING PRICES

Pipe scrap	....	11 00
No. 2 busheling	....	13 00

Boiler Tubes Still Scarce; Price Firm

BOILER TUBES.—Many jobbers are still in a quandary as to the future situation of boiler tubes. While some few have stocks, it is stated, the general situation is none too bright. Jobbers state that stocks have often to be picked up at premiums and in many cases it is necessary to have a man right at the mills in order to obtain any satisfactory supplies whatever.

This is said to be directly due to the steel situation and the shortage of skelp. However, one favorable factor is the lowering rate of exchange, and while the mills could advance their prices probably 5 per cent. the drop in exchange would even matters up to some extent. The following are the present quotations:

BOILER TUBES—	Per 100 feet Seamless	Lapweld
1 inch	$28 00	$.....
1¼ inch	30 00	.....
1½ inch	31 50	.....
1¾ inch	33 50	30 00

Plumbers' Compression Work Hold Unchanged

PLUMBERS' COMPRESSION WORK.—Notwithstanding the recent changes made on valves, compression work remains at unchanged prices. Business is seasonably good and a fair volume is moving. Some are looking forward to a big year and are preparing accordingly, it is stated. The following quotations are at present current:

Compression work, standard	25%
Fuller work, standard	30%
Bath cocks, compression	25%
Bath cocks, Fuller	28-30%
Flatway stop and waste cocks, standard	25%
Roundaway stop and waste cocks, standard	25%
Brass steam cocks, standard	add 10%
Globe, angle and check valves, standard	Net
J.M.T.	plus 5%
J.M.T. C	less 5%
Radiator valves, standard	23%
Do., removable disc	38%
Basin Cocks—	
No. 1 and 1, Fuller pattern	30%
Compression	16%
Quick opening	28%

Prices on Pipe Fittings Remain Unchanged

PIPE FITTINGS.—The new price recently made on this commodity is holding unchanged although the price is a firm one, and if anything the tendency is upwards. Business continues brisk and jobbers and manufacturers state they have difficulty in supplying some of the most popular sizes. The following are the present quotations:

PIPE FITTINGS

Cast iron fittings	Net list
Plugs	15%
Bushings	17½%
Unions, ¼-in. to 2½-in.	32½%
Do., ⅛-in. to 3-in. and larger	25%
Dart unions, ¼-in. to 2-in.	17½%
Do., 2½-in. and larger	9¼%
Nipples, up to 4-in.	60%
Do., 4½-in. and larger	50%
Do., running thread, 4-in. and under	30%
Couplings, 4-in. and under	30%

MALLEABLE FITTINGS

Class A	0 65	0 80
Class B	0 28	0 38
Class C	0 19	0 28

Soil Pipe Quotations Have Been Withdrawn

SOIL PIPE prices have been withdrawn and higher quotations are looked for. Previous issues have been predicting higher quotations on this commodity for some time back and some have been surprised that the old quotations remained as long as they did. Manufacturers state that owing to so many factors that influence the manufacture of this commodity no one set of factors govern the situation. The higher cost of coke may be a great influence, however. The present demand is said to be a heavy one and manufacturers are turning out a large volume. However, it is believed that during the period of war so many stocks were exhausted that considerable will be required before stocks get back to normal, it is stated. The new prices have as yet not been issued; the following are shown merely as a guide:

Medium and extra heavy soil pipe, 2, 3 5 and 6 in.	10%
Medium and extra heavy soil pipe, 4 in.	15%
Medium and extra heavy soil pipe fittings, 2 in. to 6 in.	25%
8 in. extra heavy pipe and fittings	5%

Range Boiler Prices Have Been Withdrawn

RANGE BOILERS.—As intimated in recent issues of SANITARY ENGINEER the prices on range boilers were very unsettled and that some were expecting higher prices. The prices on this commodity have been withdrawn and new prices are pending. The demand so far this season has been of a heavy nature and shipments are going out as soon as manufacturers are able to complete the product. The scarcity of raw material continues to be a factor for higher prices. The advanced price of coke and other essentials in the manufacture are also to be counted. The following are the old prices:

Range Boilers—	Standard	Ex. Heavy
30-gallon	$12 00	$14 00
35-gallon	14 00	16 00
40-gallon	16 00	18 00
52-gallon	22 00	25 00
66-gallon	35 00	38 00
82-gallon	40 00	47 00
100-gallon	50 00	58 00
120-gallon	60 00	67 00

Ingot Metals Stocks Light, Fair Demand

INGOT METALS.—Spelter shows a lower price, although present quotations are firm. Tin is a few points higher, quoting at 75 cents per pound. Fair demand is current for all lines and stock generally are light.

TIN.—A few points stronger is noted in the tin market and prices are being quoted at 75 cents per pound.

LEAD.—Stocks are none too plentiful and the situation is unsettled; 12 cents per pound is the price being quoted.

COPPER is in fair demand, stocks being rather light. The present price is 24 cents per pound.

SPELTER is holding at a firm price, the present quotation being 15 cents per pound, although this is somewhat lower than quoted in last issue.

ALUMINUM.—Prices are quoted around 36 to 37 cents per pound, the movement being quiet.

ANTIMONY.—Stocks are none too heavy, a fair demand offering; 15 cents per pound is the present quotation.

GARNISHEE LAW SATISFACTORY

Continued from page 18

"In my opinion," said D. W. Clark, Avenue Road, Toronto, "no amendment that can be brought up is worth the paper it is written on unless it makes the garnishee automatic weekly or monthly until the account is cleared. As it stands, the writ is far too expensive, both to the merchant and the creditor, to be worth the trouble when you consider the small amount obtainable on each writ. Why should a law defend a man who systematically works to defraud one who has given him credit? No grocer would enter a claim for garnishment unless he has given his debtor every reasonable chance to deal fairly."

"We would be satisfied," said Wm. Cole, 246 Avenue Road, Toronto, to SANITARY ENGINEER, "with even a small percentage rate of garnishment if the law provided that the account be settled before the writ is invalid. At the present time we have to be able to collect five dollars on writ before we have one cent for ourselves. It therefore doesn't even pay us for our trouble and in the majority of cases we stand to lose even the five dollars. The present law is not worth anything to the merchant nor would any amendment be satisfactory unless it provides that the writ is valid until the account is liquidated."

LONDON POT STILL BOILING

Continued from page 22

steadily becoming more acute and there are many citizens and sanitary and heating engineers also who are anxious to see a test case made and the matter settled once for all.

The matter of revising the plumbing by-laws is proceeding slowly. At the last meeting it was urged that all venting be eliminated, and it was claimed that by doing this the cost to the house owner could be reduced by $100 on an ordinary dwelling. The committee, it might be mentioned, does not include a single practical plumber, but is made up of men in various trades and professions. The chairman, Ald. Cunningham, is a dentist. Five of the best sanitary and heating engineers in the city are strong in their stand that the by-laws should remain in effect. They are outnumbered, however, by the committee.

To make matters worse from the standpoint of the inspector and also of the by-laws, is the opposition from small men in the trade. The old cry against "the ring" is being raised, and all kinds of representations are being made to the general public that the by-laws are aimed to put the small man out of business and throw everything into the hands of "the ring."

TRADE MARK J.M.T. REGISTERED A GUARANTEE OF QUALITY

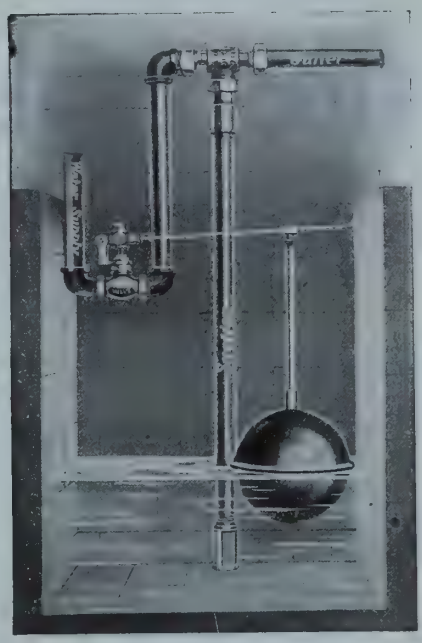
For You or Your Customer

It Saves Money

In the Winter, Spring or any other time the Morrison Automatic Cellar Drainer will keep cellars dry.

The saving in stock previously damaged or deteriorating in damp storage soon pays for this efficient drainer.

The Morrison operates entirely automatically at 10 lbs., or higher, water pressure. Simple—nothing to get out of order. It's money for you whether you sell it or use it yourself.



The James Morrison Brass Mfg. Co., Ltd.

93-97 Adelaide St. W., Toronto, Ont.

Will Not Corrode ANTHES SYPHONS

are an opportunity for the rural plumber. The farmers, and rural men generally, were never so prosperous as to-day. It is not lack of means, but natural obstacles that often keep the rural home behind the times.

Grasp this great rural chance. Install Anthes. Its satisfactory service builds future business for you. Anthes operates on natural laws, is made seamless in one piece, and has no moving parts to get out of order.

We will furnish you with Sewage Disposal Blueprints on request.

This is a "Q" Foot Valve

And it Just *CAN'T* Leak

There are more pump troubles caused by "leaky" valves than from all the wear and tear which occurs in the average life of a pump.

The "Q" valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that JUST CAN'T LEAK.

Made in sizes from 1 to 8-inch.

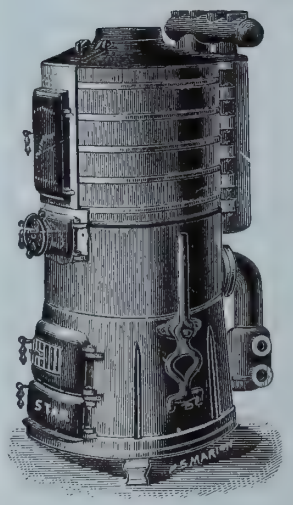
Thousands of Star Boilers in Use requiring repair Parts



It will be a long time before folks forget the coal troubles of the last few seasons.

The principal feature of the Star Boiler is that no other round hot water boiler has any coal-saving improvement not embodied in the "Star."

Then, too, while boiler installation and repair time is here, why not stock up with Star parts, for which O. Belanger has taken over the rights and is now making?

Many thousands of Star Boilers are in use requiring these repair parts hitherto unobtainable.

Write to us at once in time to catch the season's business.

We guarantee prompt deliveries.

O. BELANGER, REG'D.

"X" Laboratories..... 47

Of Course There Are Good Reasons

Why Over 28,000 Plumbers and Fitters Stick to "X" Boiler Liquid!

A HARD headed bunch are the plumbers and fitters. They don't part with their money so easily—nor for any sentimental reasons.

When they buy a product they must know that it *delivers the goods!*

The 28,000 or more men who buy and use "X" Liquid know that it *makes good* with a remarkable degree of regularity.

They know that "X" Boiler Liquid will repair leaks or cracks as permanently as welding—in a small part of the time welding takes—at a small part of the cost of welding or replacing—and at a *greater profit,* all things considered.

They know, furthermore, that "X" Boiler Liquid in addition to making permanent repairs that stand 2,000 pounds pressure, will clean out Rust and Scale in any part of the system where the water circulates. And "X" Boiler Liquid will prevent new Rust or Scale from forming.

Properly used, "X" Boiler Liquid will add as much as $1,000 extra to a man's yearly profits.

The fact that "X" is the original Boiler Liquid and is now the biggest selling product, simply emphasizes that its leadership is founded upon merit.

Beware of Imitations!

It's an old story—every excellent product that is a *leader* has a lot of "me-too" products trailing along. That's why it's safe for the busy plumber or fitter to write his order plainly—"X" Boiler Liquid. And to be sure you're not getting a cement, or meal, but a *scientific process that prevents foaming* look for the "X" on every can before it is sent to the job. That's the *surest* way to avoid disappointment.

Every good jobber sells "X" Liquid, 99 out of every 100 manufacturers of boilers and radiators recommend, use and sell it.

TANKS

VitrO--Prestige

Not only because it is the original no-trouble tank, but because it has held *first place* since the day it was placed on the market.

There are engineers who insist on a VitrO being installed because they know it will give satisfactory service. It will not rot with dampness, is an all-one-piece tank, and cannot leak. Every fitting is tested and the manufacturer's guarantee stands behind each one. If the tank does not give service a new one will be installed at once.

GUARANTEE

WE guarantee that should a VitrO Tank at any time prove defective through either material or workmanship, a new one will be given to the plumber by the jobber from whom he purchased it. In no case will credit be given to the jobber until the defective tank is returned and examined, and when a tank is returned same must be complete with all fittings; otherwise, credit will be given based only on the value of the goods returned.

Exception

This guarantee does not apply to defects caused by carelessness or abusive wear and practice.

Note

A VitrO Tank must not be returned because of a defective fitting or cover. A defective fitting or cover will be replaced at once; however, the defective one must be returned for examination.

When tanks are broken in transit, claim must be made against the Railroad Company.

Stocking VitrO One-piece Tanks means Speeding the Turn-over.

Dealers—your field is VitrO Tanks. Have you consulted a VitrO catalog? Write us.

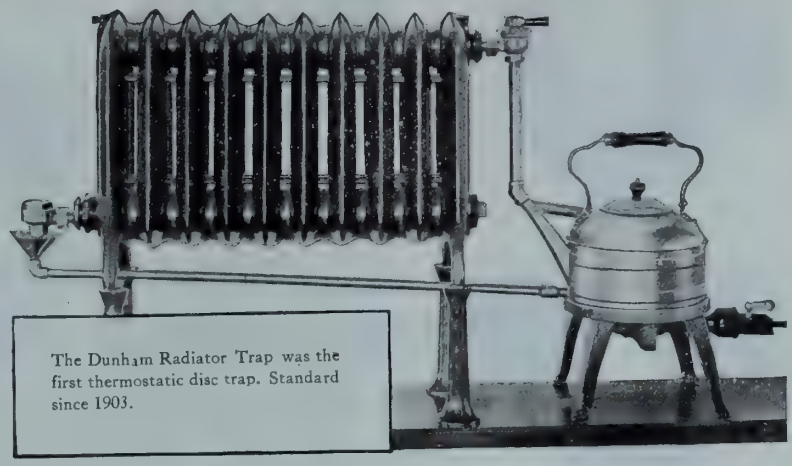
"MADE IN CANADA"

Heating a radiator with a teakettle

It was done at the Ottawa Technical School before a group of engineers who were amazed at the demonstration. It proved beyond question that low pressure steam will quickly heat a radiator to 100% efficiency if the trap is right. It undisputably proved that the Dunham Radiator Trap functions perfectly.

Since 1903 the Dunham Radiator Trap has been eliminating any chance of trap trouble in thousands of installations. It was the first thermostatic disc trap. Think of this when you think of traps, and remember that the Dunham Trap is only one element in Dunham Heating Service. The entire service offers much to the man who plans, sells and installs the heating system — and more to him who pays the bills.

If you welcome suggestions that do not obligate you, get in touch with our nearest office. Four authoritative information, write for booklet, "Data on Dunham Heating."



The Dunham Radiator Trap was the first thermostatic disc trap. Standard since 1903.

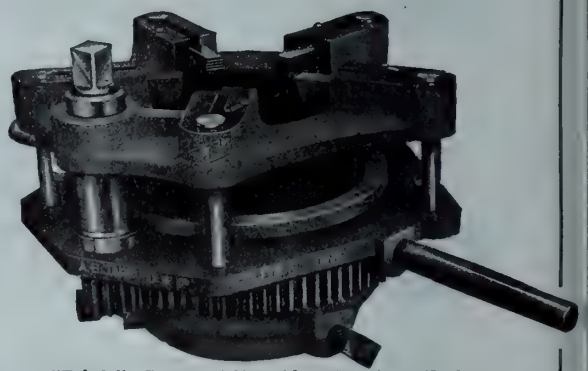
JARDINE and TOLEDO PIPE THREADING TOOLS



"Toledo" Geared Adjustable Threading Tool, No. 2½. Capacity 2½ to ½ in. inclusive. Weight 120 lbs.

THE ratchet feature of Jardine and Toledo Tools permits their being used to thread pipe which is already in place, no matter how awkward it may be to reach. The Jardine and Toledo has no cams or jim cracks to get out of order; and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

TRADE B.O.T. MARK

GOOD-BYE–

CANADIAN BRASS GALT ONT

To the unsanitary, unclean, germ-collecting wood strip seat, and let it remain an error of the past. This date we announce to the trade and public in general our decision not to offer this fixture for sale, in fact it is off the market. Our action is supported by Health Boards and physicians throughout the Dominion and we know the Sanitary Engineer is with us in the move, in fact, scores have asked us to eliminate this construction.

A Worthy Substitute

No. 201 Round Seat and Cover, full 1¼" stock in either golden oak or imitation mahogany, fitted with heavy Bar Post Hinges, N.P., having sufficient clearance between the bar and top of bowl to allow cleansing with a rag. It looks better, is better, lasts longer, and above all is sanitary. Wood doweled front and back of the seat opening straight grained and will not split. Same features apply to Horse Shoe and Blanco Seats.

Yours for efficiency and service

A New Way to Prevent Leaks

LEAKS, as you know are apt to occur in new installations in spite of the most careful work.

Now, however, it is no longer necessary to waste valuable time tearing down your new installations to locate and repair the leaking threads, gaskets, valves or sand holes.

On your next installation, after firing up and cleaning out the system, add to the water the same quantity of Boiler SE-MENT-OL you have always used to repair leaks in old boilers. It will find all leaks at once and seal them quickly, without causing foaming or leaving a disagreeable odor. Figure in this SE-MENT-OL as *insurance* of a *Leak-proof job.*

Boiler SE-MENT-OL is sold everywhere in handy, cone-topped quart and gallon cans which reach the most awkward places without spilling. No funnel needed.

There's a coupon below

Iron Cement for Large Leaks

A metallic paste for sealing holes too large to be bridged by a liquid. Hardens quickly, forming a permanent metallic repair. Used with Boiler Se-Ment-Ol, which seals the smaller openings and crevices around the hole, it makes an absolutely leakproof repair.

London By-law Revisions Go to Board of Works; Both By-laws and Revisions Invalid, Says Prov. Sanitary Engineer

Board of Works Said to Have Instructions to Eliminate Objectionable Regulations—To be Strictly Sanitary Measure—Approval of Provincial Board of Health Not Been Sought Yet, Says F. A. Dallyn, C.E.

LONDON, Ont.—The much discussed plumbing by-law of this city is now in the hands of the Board of Works, to whom the recommendations of the special committee deputed to revise the by-law, was passed for further consideration. The members of the Board of Works are said to be under instructions to eliminate objectional regulations respecting elaborate and costly venting systems and provisions that added to the cost of tiling and drainage installations. It is the opinion that when the by-law comes back to the City Council it will be a strictly sanitary measure. Pending the reenactment of a satisfactory ordinance the Council has issued instructions that the installation of plumbing be permitted under the old Provincial Headth regulations.

In carrying out the revision of the by-law, Ald. E. R. Seabrook, Chairman, with the aid of the committee made the following changes before sending on the revised draft to the City Council. It was decided that water works fixtures and installations should no longer be under the inspection supervision of the Medical Health Officer directly. That repairs to fixtures could be made by the householder or authorized plumber without securing a permit.

Cast-Iron Pipes.

Cast-iron pipes under buildings were approved at the meeting, as it already existed in the by-law. Such material was generally conceded to be better than tile pipes, but those having tile already installed were specifically allowed to continue their use, when repairs had to be made, if the public health was not affected.

Private garage drains were not to be included in the regulations covering the draining of public garages. Double houses may have one outside sewer connection serving both houses, but each house is required to have a separate sewer service.

HARD TO ENFORCE GOOD BY-LAW WHERE EARLY PLUMBING WAS DONE BY TINSMITHS

That the new plumbing by-law of the City of London and the proposed revisions now being considered, are both invalid because neither have been approved by the Provincial Board of Health, was the statement to SANITARY ENGINEER of F. A. Dallyn, C.E., Provincial Sanitary Engineer.

Asked as to the significance of the situation Mr. Dallyn pointed out that the London City Council had evidently not consulted legal advice in regard to the matter. "It is much better for a municipality to have the approval of the Provincial Board because they can then pass to the Board any responsibility in connection with complaints," said Mr. Dallyn, also pointing out that when working on an invalid by-law the municipality cannot issue debentures for the raising of funds because the banks will not lend on such security.

When the point was raised that a number of plumbers in London were taking definite objection to the so-called "frills" necessitating elaborate and costly installations, Mr. Dallyn remarked that it was "difficult to enforce a good plumbing by-law in a municipality where the early plumbing was all done by tinsmiths."

"Under those conditions a requirement for back venting alone is enough to completely upset them," added Mr. Dallyn. "A good plumbing-by-law does not necessarily increase the cost of plumbing but rather tends to decrease the total expense."

Elaborate construction that could be installed in a simpler manner and more economically was condemned in many instances. Weight of iron pipes up to seven inches in diameter was to be classified as "medium." It developed that such pipe could not be obtained in the extra heavy grade and the whole matter was found to be a mistake in reading of the Provincial by-law.

The committee consisted of the following: Aldermen Bridge, Cunningham, Drake, Seabrook. Messers. E. Hayman, R. G. Wilson, C. P. Wright, Jack Eggett, H. C. McBride, Ben Noble, J. R. Hazlett, E. H. Russell, George Hyatt, George Irons, T. Hodkinson and J. E. Charlton.

Regulation Under Which Plumbers Are Working

Pending the adoption of the new plumbing by-law, the regulations under which plumbers in London are working are as follows:

A permit shall be taken out for all work except necessary minor repairs, and a plan of same filed in this office.

A water test shall be required on all roughing in, but the smoke test on the finished work may be dispensed with.

Material to be used as follows: Soil pipe, medium up to and including 6-inch above, and below ground 7-inch, and over to be extra heavy.

Lead bends, traps and waste pipe to be equal in thickness to 8-pound sheet lead.

Brass ferrules, soldering nipples, thimbles and tubing shall be regular by-law material.

No fixture shall be required to be vented except it is more than eight feet distant from the soil stack to which it is connected.

Permits must be taken out for laying all tile drains, and plans must be left with the plumbing inspector. There will

Promote Interests of Industrial Peace

Ontario Society of Sanitary Engineers Holds Important Conference in Hamilton—Committee to Consider Prevention of Strikes and Lockouts

A MEETING of the Directors of the Ontario Society of Domestic Sanitary and Heating Engineers with representatives from various centres from Niagara Falls to Stratford and Toronto, was held in Hamilton to consider the existing industrial conditions in the plumbing and heating industry.

Secretary G. Frankland stated to SANITARY ENGINEER that the underlying idea of the meeting was an endeavor to insure industrial peace, particularly in view of the threatened labor unrest said to be contemplated for May 1.

The meeting decided to appoint a committee to confer with a like committee from the United Association of Journeymen Plumbers and Steam Fitters in the Province of Ontario for the purpose of considering ways and means of preventing strikes and lockouts, and to facilitate peaceful adjustments of all grievances. and disputes arising between the employers and employees in the plumbing and heating industry throughout the Province, as well as to maintain industrial peace and advance and promote the best interests of the plumbing and steam and hot water heating industry.

Electricity Dearer Than Coal for Heating Houses

Engineer Sifton, of Hamilton, Says Electric Heating Found to be Impracticable

THAT the heating of houses by electricity has recently been investigated throughout Canada and the United States, and has been found impracticable, is the statement of Engineer E. I. Sifton, Hamilton, Ont. He states that the electricity needed to heat a house would cost more than three times the price of coal.

With the price of coal soaring and the natural gas supply dwindling, the question of using electricity for heating purposes is again receiving much attention.

"To heat a six-room house it would cost more than three times as much to do it by means of electricity as with coal, even with the present high prices of the latter commodity," says Mr. Sifton, adding that at present any plans to heat houses by electricity would be against all common sense. There are many better methods of using the current than for heating purposes. The power was not doing the maximum amount of work of which it was capable when it was being used for warming a house.

To heat a six-roomed dwelling it would probably require about six or seven horse-power, Mr. Sifton said. When it was taken into consideration that there were 20,000 homes in Hamilton, the futility of such a project could be easily seen. To heat all the homes, it would take approximately 120,000 horsepower. Hamilton's present consumption was just 18,000. If the city were supplied with the tremendous horsepower necessary to heat all the homes, special rates would have to be charged, as the "juice" would only be used for about seven months in the year. The other five months, the consumption of power would be just about the usual eighteen thousand horsepower. The Hydro commission would be faced with the problem of a hundred thousand horsepower during the summer season, when the loads were the lightest.

PLUMBER BEEN MADE THE BUTT OF THE CHEAP WITS

A London, Ont., daily, taking up editorially the cudgels of the plumbers in connection with the differences over the plumbing by-law of that city states in part as follows:

"In justice to the trade it must be said that the plumbers ridicule the assertions made at the last Council meeting, and it may be as well to wait until the committee's report has been presented before passing judgment. The plumber has long been made the butt of the cheap wits. He has been pictured as the haughty millionaire, the man whom nobody but the wealthy can afford to employ, and all that sort of thing, whereas what we really know of him is that as a rule he is a good citizen and that what money he possesses has been earned by good hard work. Meantime, if the by-law can be made of real value by amendment, let it be amended; if it is proven to be unnecessary and to work hardship on anybody, then let it be repealed.

HEALTH AUTHORITIES THREATEN CHATHAM

Chatham.—It is predicted by Dr. T. L. McRitchie, Medical Officer of Health, that if definite steps are not taken within a reasonable time to solve the water problem drastic action might be taken by the health authorities.

Asked as to what this action might be, the doctor intimated it might mean the shutting off of water to the local industries. This would relieve the present plant, which is now overloaded, so that it would be in a position to supply water for domestic use at all seasons.

The water situation is in a deadlock. In January two by-laws were submitted. The people voted in favor of the Thames River as the source of supply instead of Lake Erie. But the by-law authorizing the expenditure of $371,000 for the erection of a new plant on the river was defeated. The present plant is inadequate to supply both the domestic and the industrial consumers.

PRODUCTION OF STRUCTURAL MATERIALS IN CANADA FOR 1919

Production of structural materials in Canada for 1919 was to the approximate value of $173,000,000, according to a preliminary report issued by the Department of Mines, Ottawa. The principal items included in this report were as follows: Portland cement, 4,991,340 barrels, $9,783,393; common brick, $3,723,033; pressed brick, $1,257,833; fireproofing, $359,882; hollow building blocks, $63,275; kaolin, $13,744; pottery, $187,574; refractories, fire clay, etc., $380,934; sewer pipe, $1,061,010; terra cotta, $2,861; tile drain, $607,792; lime, $2,268,432; sand-lime brick, $377,040; sand and gravel, $1,687,991; slate, square, $10,853; granite, $968,111; limestone, $2,708,625; marble, $213,982; sandstone, $78,327; stone, $3,969,045.

1,000 ENGINEERS TO MEET

Montreal.—One thousand of the big engineers of Canada and the United States, especially those engaged as managers and superintendents of waterworks, consulting engineers, etc., will meet in Montreal in the week commencing June 21 at the convention of the American Waterworks Association.

LONDON BY-LAW REVISIONS GO TO BOARD OF WORKS

Continued from page 15

be no fees nor inspection in connection with this.

Any person convicted of a breach of any of the provisions of this by-law shall incur such penalty as is provided in section 33, schedule "B," of the Public Health Act.

Clothes on Line Across the Sidewalk Secures Attention and Sells Washers

Novel Scheme Adopted by Cowans, Brantford, Brings Better Results in One Week Than in Previous Campaigns of Two or Three Weeks—Wash Dirty Clothes and Hang Them on Line Before Customers' Eyes

IF originality is the inspiration of good advertising, then Cowans, of Brantford (plumbing and electrical dealers), are entitled to a fair share of the laurels for the manner in which they conducted a recent sale of electric washing machines.

clothes hung over a down-town business street naturally caused quite a sensation and attracted no little attention from passers-by and indeed from almost everyone who traversed any part of the street, for the unusual occurrence encouraged investigation.

Unique display of electric washing machines by T. A. Cowan, Brantford, brought better results in one week than in previous campaigns lasting two or three weeks. Dirty clothes were washed right in the store and then strung on the clothes line across the sidewalk. Two machines were placed on the sidewalk and acted as distributors of literature. The underlying idea was to do something novel in order to attract attention and then secure interest by the actual operation of the machine in the window and showroom.

In order to make sure that as many of the citizens as possible would know about the sale, a clothes line was strung from the outside of the store-front across the sidewalk to a street post. On this line were hung the first lot of clothes washed with the machine. The appearance of

In the photograph shown herewith it will also be noted that a clothes line was hung in the store window, close to the glass. On this line were hung four towels, each towel bearing a letter and in combination spelling the name of the particular washing machine handled.

Washing Machines on the Sidewalk

On the sidewalk in front of the store two new washing machines were placed with booklets and other literature on them dealing with the use of electric washing machines in the home. The underlying idea of this plan was to reach those who might be "afraid to come into the store for fear we might sell them a machine before they got out," as Mr. W. B. Hutton, sales manager, explained it.

In the store window one of the machines was shown in operation with water, soap and clothes in it. Attractive window cards explaining the distinctive features of the machine and others extending a welcome to all to further investigate the advantages and facilities of an electric washer, were placed in prominent locations behind the glass store front. Other cards illustrative of the advantages of electrical appliances were displayed on the window casement.

In the showroom a machine actually washing the clothes was on display and a demonstrator was on hand to show how the machine washed the clothes, how dry they were wrung and how clean they were after being washed. A goodly supply of dirty clothes were kept and these were kept on the floor so that there would be no question about their being really dirty when put into the machine.

The washing machine campaign was carried on for one week only, but by keeping it alive and interesting, Mr. Hutton states that better results were obtained than during previous campaigns lasting two and three weeks.

"The idea was to make the people act quickly and not have a chance to think of the price of the machine for two or three weeks. We realize that every machine sold will sell another in its vicinity. Our sales were over double those made in any previous campaigns," said Mr. Hutton.

A series of good, live letters were sent out to all the prospects for the purchase of a machine and telephone calls were extended to all of the better grade of prospects. It was demonstrated that the idea was not merely to sell machines, but to show how well and how easy washing could be done by the use of electric washers. Advertisements in large space were carried in the local newspapers to give publicity to the campaign and indicate why people should come to see the operation of the machines.

There are a number of points bearing special significance in the campaign as conducted by Cowans. Firstly, in order to make any such campaign a success it is necessary to adopt something original, as was done in this case. When once the interest has been secured, it is necessary to hold the attention so that there will be an opportunity of imparting the desired information. After that it is a question of appeal. Cowans used a clothes line strung across the street to attract the first attention, in conjunction with newspaper advertisements. A machine in running order in the window was the next step, and upon answering the welcome extended through the medium of window cards, the visitor proceeded to the showroom where a machine was actually washing the dirty clothes and turning them out spotlessly clean.

Cowans is known as "The Blue Front Store" in Brantford and a substantial business in electrical goods is conducted. In the sale of electric washing machines it has been the experience that an appeal from the standpoint of labor-saving and in dealing with prices to talk of the cost to operate per hour in cents, are effective in purchasing this or any electrical appliance where the first cost appears high.

Novel Work Record Used by Hamilton Plumber

Work Slip Covering Workmen's Instructions Has Sections for Remarks on Other Fixtures—Plan Brings Business, Says W. J. Walsh

A REPRODUCTION of a work slip as used by W. J. Walsh, sanitary engineer, Hamilton, Ont., appears herewith. Mr. Walsh has adopted this form in connection with his business and in a recent interview pointed out to the representative of SANITARY ENGINEER that the workman goes out with his instructions on the slip. It will be noted that along the sides of the section "Work to be Done" appear columns for remarks, headed: Bath, Basin, Closet, Boiler, Gas Heater, Toilet Trimmings, Faucets, Sink. The workman must report on all of these. A short time later the inspector goes around to look over the job and he then makes recommendations re the other matters. Mr. Walsh says this plan pleases the householder and results in good business.

NIAGARA FALLS CARRIES $250,000 SEWERAGE BY-LAW.

Niagara Falls, Ont.—The by-law to raise $250,000 for the construction of a trunk sewer, was carried by nearly five to one.

Form Plumbing and Drainage Inspectors' Association in Ontario

To Standardize Materials and Working Conditions—Only Bona-fide Inspectors Allowed Membership — To Exchange Practical and Theoretical Knowledge

A NEW association has been formed by the Plumbing and Drainage Inspectors of Ontario. This new association will be known as The Plumbing and Drainage Inspectors of Ontario and has been formed with the object of standardizing and improving working conditions as well as materials, etc., throughout the trade in the Province of Ontario.

The first meeting was of a preliminary nature and was devoted to drawing up rules and regulations, appointing and electing officers, etc., G. W. Broomfield, Brantford, Ont., was elected president; W. H. Meadows, Toronto, secretary; S. Daughtry, Ottawa, Ont., treasurer. An executive committee was also appointed which consists of five members as well as the above mentioned officers.

The vice-president has not as yet been appointed. The election for this office will be made to complete the organization at the next meeting of the association which will be held in Toronto during the Exhibition in September.

Many prominent men were present at the first meeting. F. A. Dallyn, C.E., gave a very interesting address and thoroughly discussed the new proposed plumbing regulations. J. W. Bruce and T. J. Burke also spoke and described various interesting conditions of plumbing they had seen throughout the Province, and pointed out the necessity for forming a society such as that proposed which would have the welfare and uplift work of the plumbing and drainage systems of the Province at heart, and which would work out to the benefit of all concerned incidentally putting all work in the different municipalities on a more equal footing.

In discussing the new association with the Secretary, W. H. Meadows, chief plumbing inspector for the city of Toronto, SANITARY ENGINEER was informed that the plumbing and drainage inspectors generally throughout the Province of Ontario were of the opinion that standardization in working conditions and materials should be more universally adopted and that while some municipalities were using the most modern and up to date methods, there were some that were not abreast of the times. Then again in the case of jobs that were somewhat out of the ordinary there were cases where opinions and rules were somewhat conflicting. It will now be possible to refer cases of this nature as well as other problems to the new association which, as a representative body, would be able to adopt standard methods and specifications, and when put into force these would act as a precedent in other cases and in this way eliminate the many other methods which they believe would eventually become confusing and leave room for disagreement.

Only Bona Fide Inspectors Allowed Membership

Another advantage, pointed out by Mr. Meadows, was the fact that in order to belong to the association it is necessary for the members to be bona fide inspectors, in this way insuring competent and practical men who would have a thorough and practical knowledge of the trade. This being the case, it is his belief that any suggestions regarding plumbing or drainage regulations or the design and installation of plumbing or drainage systems would have a greater value coming from a body of efficient experts in the trade and would naturally carry more weight with the Government, municipality or trade as a whole.

Mr. Meadows is very optimistic for the future value of the new association and believes that with proper co-operation all classes of work pertaining to the trade will be raised to higher standards, especially as all members would be in a position to suggest plumbing regulations that would govern the design and installation of plumbing systems with a view of being universally adopted, giving the cities and towns and all municipalities the bentfit of up-to-date and advanced methods.

Another commendation would be that the standardization of methods, materials and plumbing regulations would have a tendency to conserve materials and commodities and eventually prove a benefit to all concerned.

The following schedule of aims and objects of the new association and membership regulations were drawn up:

AIMS AND OBJECTS

(A) To suggest plumbing regulations which shall govern the design and installation of plumbing systems and to encourage the adoption of such regulations.

(B) To advance the standard of plumbing and drainage by the reading and discussion of papers and interchange of practical and theoretical knowledge and experience.

(C) To encourage and promote governmental legislation requiring the appointment of inspectors of plumbing and drainage.

CONSTITUTION

The officers shall consist of President, Vice-President, Secretary-Treasurer and also an executive committee which shall consist of the above-named offices and five other members to be elected at the annual meeting.

Qualifications for Membership

Any bona fide Government or municipal inspector of plumbing or drainage shall be eligible.

(a) This shall mean an officer appointed, either by the Government or any municipality in the Province of Ontario, for the purpose of inspecting the plumbing or drainage of any house, factory or other building wherever within its jurisdiction.

(b) A drainage inspector shall mean an officer appointed as described in preceding paragraph, whose duties are supplementary to those of plumbing inspectors.

The term "Inspector of Drainage" shall not include inspectors employed on drains on public thoroughfares.

AMERICAN WATERWORKS ASSOCIATION CONVENTION IN MONTREAL

Montreal, Que.—It is announced that the American Water Works Association will hold its 40th annual convention in this city the week of June 21. The headquarters of the convention will be at the Windsor Hotel, and the Windsor Hall will be used as an exhibition hall in which American and Canadian manufacturers of all kinds of water works equipment will have exbibits. Papers will be read on matters of particular interest to water works men. Professional meetings will be held every day of the convention.

The convention will bring together some of the most prominent hydraulic engineers of the United States and Canada. It is announced that some important papers on water supply problems and conditions will be submitted. Mr. F. A. Barber of Boston, will read a paper on the St. John, N. B., water works system, and it is understood that Mr. T. W. Lesage, former Superintendent of the Montreal water works, will contribute a paper on the local aqueduct sysem.

The membership of the American Waters Works Association consists of managers and superintendents of water works, also consulting engineers and chemists.

WATERWORKS SYSTEM FOR ALMONTE

ALMONTE, Ont.—It is very probable that a waterworks and sewerage system will shortly be contemplate for this town. A definite proposal is expected to come before the Town Council within the next few months. No fixed policy for permanent street paving is being entered upon, pending developments regarding waterworks.

Much Vancouver Plumbing Said to be Menace to Public Health

Vancouver Association of Sanitary Engineers Submits Recommendations for Licensing and Registration of All Plumbers

VANCOUVER, B. C.—Claiming that a large proportion of the plumbing work in the city was not done according to the city health by-laws and thus constituted a menace to the health of the city, a delegation comprising Messers C. W. Murray and Jesse Anderson, representing the Vancouver Association of Sanitary and Heating Engineers, waited on the Civic Health Committee and submitted recommendations that all plumbers in the city should be either registered or licensed. They claimed that even the registering of plumbers would greatly obviate the menace to public health of work done in a slipshod and dangerous manner by so-called "handy men" and save the citizens much annoyance and expense.

Their contentions in regard to unsanitary plumbing jobs were corroberated by Chief Inspector Jos. Hynes, who said he had found many cases where Japanese and Chinese were doing work that did not only not comply with the by-laws, but was a positive menace to the health of occupants of such and nearby houses. He mentioned several cases of this nature which he had discovered. At present there was no penalty provided for a man doing plumbing work without a permit. Neither was there any official examination of plumbers as there has been in previous years.

On motion of Ald. Rogers the request of the Sanitary Engineers' Association was referred to the building inspector, plumbing inspector and city solicitor to report to the City Council on the city's legal powers. It was intimated that the Council would formulate a policy in regard to this question.

More Activity in Building

WITH the return of weather conditions favorable to outside construction work building throughout the Dominion has opened up on a scale which far exceeds the corresponding period a year ago. New totals for building permits have been piled up, and last year's record to date is far surpassed. This in spite of the fact that the ascending prices for building materials and labor continue. The higher costs must be considered, however, as a factor in this year's higher total.

The total value of building permits issued during the month of March was $7,850,460 as against $3,303,440 for the corresponding period a year ago. The returns for the first three months of the year reveal a very large increase over last year and indicate a revival of building activity in Canada on a scale not experienced since the years before the war. For the first three months building permits totalled $16,138,556 as against $6,383,973 a year ago, or an increase of $9,754,583. Practically all important municipalities have contributed to this increase. The twenty-four cities of the Eastern Provinces record a total of $5,588,644 in building permits and the fourteen cities of the West, $2,261,816.

Building has been resumed on an extensive scale in Toronto, and the total for the month of $2,062,747 is far in excess of the records of her nearest rival and constitutes a record for building in Toronto this year. Montreal shows a revival also with permits issued to the value of $945,496 as against $228,208 for March a year ago. Other Eastern cities which have piled up substantial totals are Halifax with $226,435; Quebec, $392,524; Hamilton, $311,225; Kitchener, $319,690; and Windsor, $288,395. In the West Edmonton displays a marked recovery. In March, 1919, building in that city was practically at a standstill, the value of the permits issued being $2,200. This year the total is $600,650. Values for Winnipeg for March of the present year are $559,900 as against $42,700 a year ago. Regina's total is $263,750, an in-

Continued on page 26

Some Afterthoughts of the Convention

* * * * *

ON THEIR return trip to their home across the lake, two sanitary engineers who had attended the recent convention of the Ontario Society, Domestic Sanitary and Heating Engineers were overheard discussing various matters pertaining to the trade. The Convention had served the purpose, encouraging some thought as to ways and means of improving conditions. An interesting point brought out was the advisability of teaching the plumber cleaner methods in the dispatch of his work. This applied to his tool kit and to his method of procedure when on a job. It was thought if the plumber would throw away all the old ends of carving knives, etc., from his kit that he would present a more businesslike appearance.

A controversy arose over the question of a plumber's cleanliness in handling the job. The opinion was expressed by one of those engaged in the discussion that if a plumber took a little extra time to clean up and make sure that no grease marks were left on walls or woodwork from his hands or overalls that he would be advised by the customer that his time was too expensive to be used for that purpose. The other replied that this was part of the educational work which the plumbers would have to undertake, that it was the plumber's duty to clean up after completing a job and that he was entitled to charge for time used for this purpose. More may be heard about this question at the Canadian Convention.

* * * * *

Mr. John Wright, Chairman of the Sanitation and Legislation Committee of the Ontario Society, believes that it would pay each plumber to have his own smoke test machine in order to save much time when a job has been completed. The idea is that when a job is completed the plumber could summon the inspector on short notice and facilitate the inspection by using his own machine instead of having the inspector to bring one.

* * * * *

While no official meeting between the committees appointed by the manufacturers and supply houses and the plumbers have as yet been held, there have been a number of individual discussions as a preliminary and steady progress is being made toward the desired end as expressed by both sides at the recent convention. Mr. John Wright states that evidence of the value of co-operation between manufacturers, plumbers and labor is everywhere apparent. Plans will be formulated along the line of co-operation, educational and publicity work.

* * * * *

Looking back over his many years of activity in the plumbing trade, Mr. John Wright, whose firm is one of the oldest established in Toronto, pointed out the significance of the honesty displayed by the trade during those years. "While the average plumber is very strongly tempted to confiscate private property while carrying on his work in the homes of his customers, the reputation of the Craft for honesty stands very high," says Mr. Wright, adding that this is perhaps partly due to the strict apprenticeship rules of the last generation of master plumbers who insisted on the utmost honesty from their employees.

* * * * *

As chairman of the Committee of Sanitation and Legislation Mr. Wright is in receipt of many complaints and questions and is acting between the trade and the Government in the settlement of difficulties. He will have a number of these questions prepared for discussion at the Canadian Convention.

Arguments Favoring the Main Trap and Fresh Air Inlet

Ventilation of Drains Necessary to Free Corroding Gases and Protect Pipes—Use of Intercepting Trap Facilitates Tests, Eliminates Gas and Sewer Rats—Roof Vents Freeze From Vapor, Causing Syphoning of Traps—Illuminating Gas in Sewers

IN discussing both sides of the question in regard to the main trap and fresh air inlet, the following paper as read at a debate in a recent general session of the Ontario Society Domestic Sanitary and Heating Engineers, is of interest. The author of the paper is Mr. John Wright, chairman of the Sanitation and Legislation Committee of the Ontario Society, and the views expressed therein have been framed as result of Mr. Wright's long experience in sanitary engineering.

Mr. Wright's Paper

"I take this opportunity to add a few thoughts to the discussion in favor of the main trap and fresh air inlet. This has to do with the present theory of ventilation called the "Up-Draft System."

"The proper ventilation of house drainage systems is recognized by some sanitary authorities as one of the most essential features in up-to-date plumbing, and no one can scientifically show why the ventilating section of a drainage system should be omitted.

"There are two prime reasons why house drains should be ventilated. The first is to allow gases generated within the system by the decomposition of organic matter, to freely flow to the atmosphere and be replaced by fresh air, which in turn becomes vitiated.

"The second reason is that the pressure within the system at any point should at all times be neither greater nor less than that of the atmosphere.

"The effect of sewer gas upon lead waste pipes is to corrode them freely, being very disastrous. Lead pipes are rapidly corroded by the continued action of sewer gas; the corrosion takes place usually in the form of small holes or "fittings," the metal being converted into a whitish or grey powder.

"It will be seen that the reason first mentioned for ventilating the drains is really to protect the pipes from rapid corrosion and thus prolong their term of usefulness. The second reason will become more evident on further consideration of the subject of trap syphonage.

Why We Should Use the Intercepting Trap

1st. Because it reduces the cost of plumbing for the reason that valuable time is saved on both water and smoke testing jobs.

2nd. Also that in cases too numerous to mention it has been found that where no intercepting trap was on main drain, clean-out plugs had been removed for the washing of cellar floors and plugs had never been put back in place, and in many cases they had been lost and houses were infested with both sewer gas and rats that had come from the main sewer on the street.

3rd. Where you have a plumbing system properly water and smoke tested and where the climate is as severe as we often have it in Canada, I find the vents on roofs freeze from the vapor carried in the air from the main sewer, with the result that when a closet, bath, basin, sink, etc., are used, the discharge water will form a vacuum in the pipes and cause a trap or two to syphon, allowing the sewer gas to contaminate the air of the house, and I have found it unbearable to remain in a bathroom where these conditions existed and in many cases where they were next to or in sleeping apartments.

LET INTERCEPTING TRAP BE FIRST OBSTRUCTION TO DISEASE GERMS

"We often hear the cry of sewer gas being blown out of fresh air inlets into people's faces, by opponents of the intercepting trap, and these same opponents will in many cases lead you to believe that sewer air is not dangerous and that disease germs are not carried for any distance through a sewer but will stop at the first obstruction.

"If such is the case," states Mr. Wright, "let the first obstruction be the intercepting trap. My idea of modern sanitation is to keep the air of the house as pure as possible and that the first thing expected of plumbing system is that it shall not leak sewerage or sewer gas to the house or near it."

4th. Another important reason why the intercepting trap should be insisted on is the carelessness of some owners, tenants and some who call themselves plumbers, who dig holes in such position in soil and waste pipes for clearing same when choked—that when the water is allowed to run through pipes after they are cleared that they do not leak water but allow the sewer gas to enter the house, as they are seldom closed up properly.

"In looking through numerous plumbing by-laws it will be found that sewer vent pipes are allowed on a level from ten to twenty feet from windows, doors and other openings into the building they go through or adjoining buildings, and often when smoke testing I have seen the smoke carried from the top of vent stack clearly thirty feet and in winter you can see the sewer air and vapor from same carried as far. You can easily see how sewer gas from main sewer can be carried into a building within from twenty to thirty feet where there is no intercepting trap on main drain.

"Again, I have often seen when syphon closets were used as slop sinks that they syphoned themselves almost when a pail of water was thrown into them, also that inspecting plumbing I find that the after flush pipe in low down tanks is stopped up or from other causes will not refill the closet trap when same has been flushed; often leaving only a seal of a ¼ inch of water in the trap, and in those cases if vent on roof is partly or fully frozen up the back pressure will easily force sewer gas through trap of closet, etc., when there is no intercepting trap on main drain.

Gas is Dangerous

"I have gone into occupied houses where plumbers have been working for days and find the openings on sewer open to the atmosphere of houses and occupants forced to breathe such contaminated air while sleeping as well as in daytime. Some will tell you that disease, germs, etc., are not carried into houses by sewer gas and that it is not very dangerous to breathe. I can recall some cases where both plumbers and drain men have been overcome by breathing the air from sewers, and in these cases there were no factories, mills, etc., discharging into the main sewer in the vicinity that they were working in. Again I have often been called to inspect plumbing on account of the bad smell in the house and found that illuminating gas from gas main on the street had entered the main and house street sewer through defective joints on same and then entered the house through defective plumbing. In those cases I am of the opinion that intercepting traps placed on main drain would have been a blessing and would have possibly been the means of preventing much sickness and misery to those compelled to live under such conditions for the reason that no matter how good the plumbing system is done to-day or at any time, it will not always stay perfect. Another reason why we should recommend the intercepting trap is that at any time a plumbing system can be tested where a trap is on the main drain at very small expense compared to the cost of testing

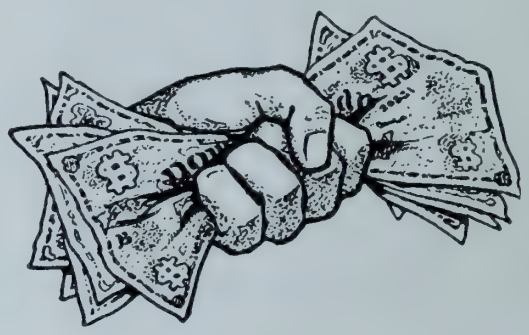
Suggest Excise Tax on Protected Manufacturers to Raise Revenue

Will It be Income, Profits, Turnover or Excise Tax?—Finance Minister Faces Deficit of $160,000,000 This Year Unless Revenue is Increased—Suggest Excise Tax of 10 Per Cent. on Manufactures Protected by the Tariff

THREE forms of taxation are now before Minister of Finance Sir Henry Drayton for the raising of that part of the country's revenue which cannot be obtained from customs duties and income taxation. The Excess Profits Tax, against which there has been much protest, might be continued. A Turnover Tax similar in application to that outlined in the last two issues of SANITARY ENGINEER might be substituted, or thirdly the Finance Minister might levy an Excise Tax on all domestic products which benefit by the handicaps placed upon the importation of similar goods from foreign countries, by the protective tariff. Government members who are against high protective tariffs are naturally favoring the latter form of taxation, because manufacturers who are receiving the maximum protection will be called upon to pay the bulk of the revenue raised in this manner.



Opinions from various parts of the country indicate that a Turnover Tax will be paid by the consumer in every case in the form of increased prices, whereas the tax on excess profits is paid by firms who have profited above a set standard and the payment of such a tax would not directly affect the consumer, providing such firms are content with reasonable profits.

Excise Tax Would Not Facilitate Importations

The suggested tax on products benefiting under the tariff works out in a still different manner. This tax would not facilitate the importation of foreign goods, but would repay the Government for its protection of industry. While still protecting the Canadian manufacturer, it has been suggested that the Government might take as much as 10 per cent. of the profits accrued by the manufacturer enjoying the protection, and for which he has not paid anything in the past.

Making a brief survey of the situation, a Western daily in a recent editorial says: "How can the manufacturer be accorded the protection he desires without at the same time giving him the lever of the tariff to boost prices and indulge in profiteering."

The editorial goes on to suggest that certain Government members would figure on leaving the tariff as it is with the possible reduction of duties on certain raw materials, and then clapping on a domestic tax on home manufacturers equal or nearly equal to the amount of the tariff on such goods when imported. Thus, although protected by the tariff from foreign competition, the manufacturer would not be able to collect the amount of that tariff in profits, but would be compelled to pay it to the Government in excise. While not liking the prospect, it is suggested that the manufacturers would prefer it to tariff reduction and stiff foreign competition.

How Will Farmer be Affected?

Surveying the three forms of taxation there are one or two significant points. One of these is as to how the farmer is going to be affected, for it is felt that he has not borne his share of taxation. In this connection it is interesting to note the recent statement by T. B. Patton in the House of Commons to the effect that income tax collected from Canadian farmers amounted to $389,011 in four years, while for the same period the total amount collected from all other sources reached $83,768,110.

Face Deficit of $160,000,000

Details of what the Government has in mind in regard to taxation will not be known until the budget is presented during the first or second week in May. The Minister of Finance is faced with a difficult situation. Ordinary expenditures for the coming fiscal year are estimated at $440,000,000, which with other expenditures, brings the total up to $540,000,000. This is without taking into account probable supplementary estimates. The total revenues for the past fiscal year amounted to $380,000,-

Upholds Use of Concrete Sewer Pipes

Concrete Pipes in Excellent Condition After Twenty Years' Use, Says H. P. Heywood, Addressing Canadian Institute of Engineers —Standardizing Specifications and Methods of Manufacture

THAT engineers have within the past few years developed a higher appreciation of the value of concrete as a material for sewer pipe, and have put forth every effort for the standardization of specifications and methods of manufacture, was the statement of H. P. Heywood in a recent addres to the Toronto Branch of the Canadian Institute of Engineers.

"Instances are known where concrete sewer pipe have been in use for over twenty years, and wherever occasion has arisen to take up the pipes they have been found to be in excellent condition."

Contrasting steel and cast iron pipes with concrete, the speaker said that the former were subject to attack by corrosion. the metal becoming covered with nodules of iron rust, silt and other impurities, which often completely choked up the pipe through time. This did not happen with concrete pipes. In concrete pipe work, he said, the co-efficient of fric was equal, and very often superior, to that generally used for vitrified clay pipes; besides, concrete was less fragile and brittle. He also claimed that concrete pipe is smoother and cheaper than double-ringed brick sewer.

THE McCRACKEN PIPE

A type of concrete sewer pipe referred to by the speaker was one called the McCracken pipe, the outer edges of which are corrugated, giving an extra crushing strength. This class of pipe has been used in the Toronto Harbor Commission work and in various cities throughout Canada. The requirements of the American Society for testing materials were said to have been more than complied with, according to recent tests made of these cement pipes. Mr. Heywood was of opinion that the inspection of concrete sewer pipes was a long stride towards overcoming the prejudice that engineers had against the use of concrete products in general.

The speaker said that practically all cities have adopted the use of concrete in the construction of the larger diameter sewers.

Lock Joint Pipes.

Dealing with different types of pipes, Mr. Heywood referred to the lock joint pipe, which was originally designed in four-foot lengths. It was found that the work proceeded more rapidly, and that the excavation cost was considerably reduced as the pipe could be laid right up to the excavation, which meant that a large proportion of the lower and more expensively handled dirt could be thrown back on the pipe without damaging its joints. "Engineering contingencies" were also consideradly reduced. The pipes are modeled vertically in well oiled steel forms, spigot end up; the reinforcement protrudes about two inches from each end of the pipe, and when the pipes are laid in position this reinforcement overlaps in a recess formed in the interior of the joint, which is V-shaped, and formed by the spigot and bell ends of the pipe, after which a sealing form is placed inside the pipe over this recess and 1 x 1 grout is poured through a hole broken in the crown of the bell. The steel and the grout form the lock.

The lecturer then proceeded to discuss two kinds of pressure pipe, the larger of which, ordinarily eight inches long, a copper expansion joint, with a bead rolled into it, is used. Here the triangular mesh reinforcement projects from the bell, and only half the width of the strip being previously molded into the pipe, with the result that the mesh and copper opens or closes without causing an opening in the joint. This class of pipe, said the speaker, when a test was made in 10 miles of 66-inch diameter pipe, the head varying from 45 feet to 95 feet, and on a leakage allowance of 118,000 g.p.d., it did not exceed 43,000 g.p.d.

Rigid and Non-rigid.

The speaker also said good results were obtained from a type of subaqueous pipe, rigid and non-rigid, a modified type of the rigid pipe being very suitable for high class caisson work, and male a C. I. cutting edge at the bottom of the caisson. Sections 20 feet long and joined together with C. I. flanges bolted on the inside of the caisson are used. Leakage tests for this class of pipe, made in 1913, gave an actual leakage of 13,000 g.p.d., against an allowable leakage of 36,000 g.p.d.

The speaker next gave some particulars of the Bonna system of R. C. pipes. which, he said, particularly withstood higher pressures and was very popular in England. Its chief feature, he said, consisted of a mile steel tube 1 mm. thick, but built up from sheets of steel, which were rolled to the required diameter in lengths from 9 to 12 feet. The longitudinal joint is butt-welded by oxy-acetylene or electric processes. After various processes the pipe is moulded vertically, using steel fromes. The joints in this pipe require jointing holes in the trench.

TO INVESTIGATE VENTILATION OF BRANTFORD PUBLIC BUILDINGS

Brantford, Ont.—A special committee of three of the Chamber of Commerce has been appointed to consider the question of ventilation, with a view to securing the necessary legislation requiring proper ventilation of all public and semi-public buildings. This committee consists of Mr. Henry White, secretary of the local branch of the Sanitary Engineers' Association, Dr. Hutton, and one member of the Women's Patriotic League to be appointed by them.

THE SARNIA INTAKE

Following Mr. Heywoods address F. W. Thorold, consulting engineer, showed a number of lantern slides appertaining to the building of the Sarnia intake pipe which conveys water to the city from a point two miles distant. He briefly explained the difficulties under which the work was accomplished, having to combat a tide running at five miles per hour, while the pipe had to be laid at a depth of 40 feet, with the aid of divers, and so as not to interfere with the many vessels which plied over the water area. There was also precautions to be taken to guard against dangers to be expected from ice gatherings. The work, now completed, had given every satisfaction.

NEW SCHOOLS AND HOTEL FOR LONDON

LONDON, Ont.—Tenders for the erection of a branch Collegiate and Public School entensions totalling about $450,000 will be called for by the Board of Education before the end of the month. Announcement is made that plans are now being matured and that it is proposed to have the building ready for service before the commencement of the next scholasitc year in September. The Chamber of Commerce also announces that $100,000 has been subscribed locally toward the hotel scheme and that construction of a bulding eight to ten stories in height, and having 500 rooms will be commenced before midsummer. Locations being considered are in the vicinity of Dundas and Wellington streets and on Richmond street near Victoria Park.

TO INFORCE PROPER HEATING.

A Bill introduced in the Ontario Legislature would compel owners of apartment houses to keep the temperature of flats up to 68 degrees, on the contention that when people signed leases they expected proper heating.

Follow the lead

The introduction of Hydro Pow

Signal for the Plumb

THE march of progress in the rural districts of Ontario is seen most along the line of "Hydro" service.

Everyday news of Hydro progress appears in the daily papers until to-day a large portion of rural Ontario enjoys the same service as the towns and cities.

With the introduction of Hydro power come the possibilities of such home comforts as electric labor-saving devices, electric lighting, a continual supply of water and not the least, plumbing and sanitary comforts.

PORT HOPE ENAMEL

The plumber who recognizes the exceptional possibilities of developing the rural plumbing trade will reap a harvest of benefits for himself, and at the same time give a service to his community which cannot be estimated in dollars and cents. He will make rural life more attractive to the younger generation—a real necessity to Canada's existence.

of the "Hydro"

a District is the Starting
secure Rural Trade

EVEN if "Hydro" service is not available in your district there are new possibilities opening up in all parts of Canada in the form of small power plants, water systems, etc., which you should not overlook.

The first essential is power, for with power, whether developed with wind, gasoline or electricity, running water is made possible, and running water precedes sanitary equipment.

ANITARY
WARE

Why not encourage the sale of power plants in your vicinity and follow with home equipment such as complete plumbing and sanitary outfits?

Port Hope Sanitary Enamel Plumbing Ware is made in every style and quality to meet the needs of all classes of trade, from the finest mansion to the smallest and most unpretentious cottage.

Tax Returns Make No Provision for Stock Depreciation

Tax Officials Say There is No Loss Until Transaction is Made—Otherwise a Capital Charge

AN enquiry has been received by SANITARY ENGINEER from a large Western wholesale and retail hardware company, asking whether any allowance is made for depreciation on stock, in connection with income tax statements. The firm making the enquiry writes that if no depreciation is allowed they consider it most unfair, as there are in all stocks goods which are unsaleable. The instance was cited of old sliding parlor door locks, which today in many districts cannot be sold at all. In this case these were taken in stock and a fair depreciation made, which however was disallowed.

Officials of the Taxation Office advise SANITARY ENGINEER that no allowance for depreciation is made because there is really no depreciation until a sale is made. In the event of a transaction taking place the loss then figures in the usual profit and loss account. If it is impossible to sell the articles in question there is no selling transaction on the part of the retailer and the charge then becomes one against capital. The merchant is taxed only on profits of goods sold and profits actually made in trading. Income tax officials say that experience shows that inventory reserves for declines in prices or values are arbitrary and suppository. It is contended that the more reserves are built in this way a greater amount of taxation will fall on the merchants later on in subsequent periods and returns; in other words, the department, it says, is really protecting the taxpayer in refusing to allow an inventory reserve.

SUGGEST EXCISE TAX

(Continued from page 22)

000. On the same basis of revenue, therefore, the Minister is faced with a deficit of $60,000,000 on ordinary expenditures and a total deficit of $160,000,000. The floating of another loan is said to be out of the question, and it is therefore evident that new sources of taxation must be found. Meanwhile, there is much speculation as to the probable new sources of revenue. Rumors are everywhere to be found that the Excess Profits Tax is to be dropped and the Income Tax, though we understand there is to be some tightening up, has so far proved unwieldy and not as productive as was expected.

Speculation is being indulged in as to the merits of the three forms of taxation outlined for raising the additional revenue required, and a full discussion is encouraged. SANITARY ENGINEER has been giving much prominence to opinions on the subject and will welcome the views of the trade from all parts of Canada.

WHY HE COULDN'T PAY HIS BILL

The following letter, which a certain customer wrote upon receipt of a request to send a cheque to cover his bill, was read at the annual convention of the Ontario Society Domestic Sanitary and Heating Engineers by G. Grinyer in connection with his brief address on the subject of collections:

"For the following reasons, I am unable to send you the cheque asked for:

"I have been held up, held down, sandbagged, walked on, sat on, flattened out and squeezed, first by the Government for Federal War Tax, Excess Profits Tax, Victory Loan Bonds, Thrift Stamps, Capital Stock Tax, Merchants' License and Auto Tax, and by every society and organization that the inventive mind of men can invent to extract what I may, or may not, possess.

"I have been solicited by the Society of John the Baptist, the G.A.R., the Woman's Relief, the Navy League, the Red Cross, the Double Cross, the Children's Home, the Dorcas Society, the Y.M.C.A., the Y.W.C.A., the Boy Scouts, the Jewish Relief, and every hospital in town; then, on top of it all, came the Associated Charities and Salvation Army.

"The Government has so governed my business that I don't know who owns it. I am inspected, suspected, examined and re-examined, informed, required and commanded, so I don't know who I am, where I am, or why I am here. All I know is I am supposed to be an inexhaustible supply of money for every known need, desire, or hope of the human race, and because I will not sell all I have and go out and beg, borrow, or steal money to give away, I have been cussed, discussed, boycotted, talked to, talked about, lied about, held up, hung up, robbed, and nearly ruined, and the only reason I am clinging to life is to see what in h—— is coming next."

Building in Montreal Uncertain

Although Montreal is entitled to a loan of $3,000,000 from the Government, by way of assisting in the workman's home plan, no acceptance of the amount has yet been announced. The matter will be decided, very probably, within a short time.

One of the difficulties in the way of early action is that of the slowness with which such matters usually move. After consideration of the by-law, once is it approved by the Administrative Commission, the matter must be given the attenton of the Aldermanic Board. At this time, there is an added delay, usually of one month at least, this to conform with the city by-laws. Following this, an application to the Provincial Government would entail another delay, probably for several weeks, and it would very likely be midsummer before arrangements were completed.

It is possible that, in view of the difficulties that are presenting themselves, there may be no borrowing of money this year. One of the main reasons for this lies in the extremely high prices that obtain for all materials entering into building construction.

Another delay has been occasioned owing to the fact that the personnel of the Housing Commission has not been completed. Several members have been selected, but with no salary attached to the position, suitable material for completing the board has not been easy to find. It has been stated that even the most modest of dwellings, if erected under this plan, would cost in the neighborhood of $5,000—a price greater than that usually considered as "carryable" by many workmen.

CRANE COMPANY IS EXPANDING

Crane Limited are extending their operations throughout Canada with the erection of several warehouses and the establishment of branches at various points. SANITARY ENGINEER is informed that among the important developments which are about to be carried out are the erection at Calgary and Halifax of warehouses and the establishing of branches at Regina and Ottawa. The new buildings will be of mill construction and with warehouses established at these various points it will give Crane Limited a chain of branch warehouses from coast to coast. A sales office is being opened at Quebec.

NEW BUILDINGS AUTHORIZED.

Ottawa, Ont.—A Bill is being drafted covering the erection of a $500,000 laboratory for scientific research.

MORE ACTIVITY IN BUILDING

Continued from page 20

crease of $223,050 over March, 1919. For the most part, however, the Western cities are feeling the pinch of the market for materials and are curtailing construction accordingly. The result is apparent in the returns.

Hints on Seasonable Advertising

The reproduction of some sample advertisements herewith will give some idea of the lines being advertised by others in the trade in all parts of Canada, and will impart some ideas or suggestions which others may incorporate in their local advertising.

"SKILLFUL PLUMBING WORK" is the bold heading on the advertisement by D. N. Flander, Ingersoll, Ont. "The installation of all kinds of piping is our particular specialty. We are completely equipped with most modern appliances and expert plumbers and are capable of executing the most difficult kind of work. Consult with us about your job or submit your plans." This is the data which appears alongside a catchy illustration as shown.

* * *

W. H. Dunstan makes a seasonable appeal. The spring and early summer season is when changes in house fittings are under consideration and his ad. is, therefore, timely. "Are You Making a Change?" is the heading which makes a personal matter of the appeal. It continues: "If you are considering changing or remodelling your bath room, installing modern fixtures; a new sink in the kitchen; laundry tubs in the cellar; you will find our prices most attractive."

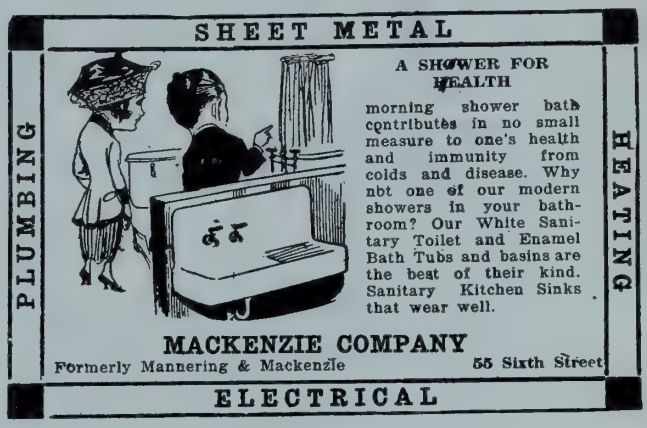
* * *

The ad. by Mackenzie Company, New Westminster, B.C., makes the best use of available space by utilizing illustrations, a heavy border and by devoting the data in the ad. to one particular article. In this case it is a shower bath, and the ad reads:

Skillful Plumbing Work
and the installation of all kinds of piping is our particular specialty. We are completely equipped with most modern appliances and expert plumbers and are capable of executing the most difficult kind of work. Consult with us about your job or submit your plans.
D. N. FLANDER
Ing. Phone 12
INGERSOLL
We will Accept Bonds in Payment of Purchases at this Store

"A Shower For Health." "A morning shower bath contributes in no small measure to one's health and immunity from colds and disease. Why not have one of our modern showers in your bathroom?" This advertisement gives information and appeals to a person's natural desire for cleanliness and health.

"Do not experiment with YOUR HEATING AND PLUMBING PROBLEMS" is the heading of an advertisement by McGrattan's, Assiniboia, Sask. "Have your work done by practical men. It pays. Come in and inspect our furnaces, hot water and steam boilers. Also let us talk over your PLUMBING requirements. All work done in a practical manner by practical men."



SHEET METAL
PLUMBING
HEATING
A SHOWER FOR HEALTH
morning shower bath contributes in no small measure to one's health and immunity from colds and disease. Why not one of our modern showers in your bathroom? Our White Sanitary Toilet and Enamel Bath Tubs and basins are the best of their kind. Sanitary Kitchen Sinks that wear well.
MACKENZIE COMPANY
Formerly Mannering & Mackenzie
55 Sixth Street
ELECTRICAL

This advertisement makes a point of the fact that there are plumbers and plumbers. There are those that know their business, and there are others who are merely experimenters. Having some definite point such as this and giving the information to the prospective customer is the surest way to bring results from local newspaper advertising.

* * *

"A Good Plumbing and Heating Job is the Cheapest," is the heading in bold type on the ad. by Vagg, Wilson & Company, Regina, Sask. "A poor one is expensive no matter how small the first cost may be. When we do your work you are assured of the best job it is possible to get, and our prices are right, too. We can handle your work whether you live in the city or the country."

The definite point involved in this ad. is the fact that without respect to how small the initial cost is the job will be cheap or expensive according as to how it stands up under use. Appealing for both city and country work where the facilities are available for handling both, should always be made.

* * *

"TAKE A TIP FROM TORCHY. GOOD PLUMBING IS A NECESSITY, NOT A LUXURY," is the subject of an illustration in an ad. by E. Cardwell. "You can see old Ill-health coming if you haven't proper plumbing. The science of sanitation is the art of prevention. The proper

plumbing in a home is of more prime importance than anything else that serves a family's daily needs. Plumbing should be inspected from time to time as it gets out of order, the same as any machinery. Perfect plumbing is a health measure."

This paragraph is well worded and is the kind of educational matter which it is necessary to impress. The prevention of disease by the careful guarding of plumbing work is more effective than all the doctoring in the world, once the damage has been done.

We Point With Pride

to the many handsome sanitary bathrooms we have equipped. And the owners of them are just as proud as we are. Not one of them but is glad he made the change from the old unsanitary, unattractive kind to the modern kind. Want us to figure on one for you?

W. F. MARTIN
Plumber and Steamfitter

* * *

A little divergence is made in the ad. by J. McKinnon, Kamloops, by advertising for repair work on tinware. The ad. contains a clean-cut illustration of workmen engaged in repairing tinware, and the data reads as follows: "We repair tinware as well as make all kinds of tin and sheet metal work. If your boiler needs a new copper bottom, your scale scoop needs renewing, your stove pipes want replacing, come right here where you can have exactly what you want done in the least time for the least money which good work and good materials will permit."

This paragraph makes an appeal for business of certain kinds. It gets away from the generalizing which spoils the effect of so many advertisements.

* * *

The W. F. Martin, Gananoque, Ont., ad. makes good use of a small space, single column, by the use of a catchy illustration pointing to the installation of a complete bathroom outfit. "We point with pride to the many handsome sanitary bathrooms we have equipped. And the owners of them are just as proud as we are. Not one of them but is glad he made the change from the old, unsanitary, unattractive kind to the modern kind. Want us to figure on one for you?"

This ad., instead of appealing direct for business, tells of the experiences of others who have installed up-to-date equipment. Naturally, everyone who is in the class appealed to are desirous of enjoying the same pleasures as those mentioned, and very often a veiled appeal couched in such language as is used is very effective.

We Repair Tinware

as well as make all kinds of tin and sheet metal work. If your boiler needs a new copper bottom, your scale scoop needs renewing, your stove pipes want replacing come right here where you can have exactly what you want done in the least time for the least money good work and good materials will permit.

J. McKINNON
Heating and Plumbing.
P. O. Box 185 Phone 36 121 Victoria St

"Plumbing That Stands Up" is the effective heading of an ad. by Barr & Anderson, Ltd., Vancouver, B.C. "The plumbing job that 'stands up' under the severest tests is the only safe plumbing for any home. To experiment with so-called low tenders is to invite trouble. Our work has stood out pre-eminently for over 20 years. We will not do an inferior job."

This ad. again directs an appeal to do away with the experimenter who puts in the low bid on a tender because he is often not fully acquainted with the costs of his own business, and later finds he has to skimp the job.

PLUMBER BADGES FOR BOY SCOUTS

St. John, N. B.—An important announcement by District Headquarters of the Boy Scouts has to do with the Plumber Badge issued to Scouts with the following qualifications:

(1). Be able to use a soldering iron to repair a copper ball or similar job; to repair leaky taps and stopcocks and ball cocks.

(2). Know how to hammer up a burst pipe, and know the address of his local turnkey.

(3). Understand the ordinary hot and cold water system of a house; how to thaw out a frozen pipe and to protect pipes from frost.

(4). Understand the use of stock and dies and be able to cut a thread upon 1-Inch pipe.

NEW SCHOOLS FOR BELLEVILLE

Belleville.—The City Council has passed a requisition of the Board of Education for $100,000 for the erection of a new eleven-roomed public school, and for $250,000 for a combined Collegiate Institute and Technical High School. Work on the public school starts this summer, and on the Collegiate possibly in 1921.

DEATH OF BRANTFORD CITY ENGINEER.

Major I. H. Jones, who for 37 years, has been chief of the Engineering Department of the city of Brantford, Ont., is dead. He held front rank in his profession, being frequently called upon by municipalities in convention and by engineering bodies to give papers on technical metters.

Sell the "Idea" of Electrical Appliances, Not the Article

Selling Appliances in Groups Has Proved Successful Method—Ten Commandments for Selling Electrical Goods—Tags on Each Article Should Show Cost in Cents Per Hour to Operate—Display Best Grade First—Do Not Talk "Over the Customer's Head" About Voltage, Amperes, etc.

THE need for selling the idea (the service performed by the appliance) instead of the appliance itself, is emphasized in the following article from the "American Artisan and Hardware Record":

"When you undertake to sell an electric iron to a prospective customer, what is your first step? Do you proceed to describe the many benefits made possible by the use of the electric iron? Or do you begin by telling her how it is made—materials, construction, workmanship, and so forth. If you do that latter you are not selling the idea. You are instead supplying the data which the customer may perhaps require later in order to decide which one of several makes of irons to select. But there is a step that must be taken prior to that. The customer must first be led to want the iron for the service its use affords; a description of its materials, construction and workmanship will not arouse that desire. What the customer wants to be told is wherein and how the use of the electric iron affords service not possible with the old sad-iron. To describe these things is to sell the idea.

"Here are the reasons why the housewife purchases an electric iron:

(1) The facilities for doing the ironing without having to light the kitchen or laundry stove.

(2) Escape from the necessity from having to carry heavy sad-irons from the stove to the ironing board and back again.

(3) The ability to do the ironing where it is coolest and most pleasant—wherever facilities for using electric current are available.

(4) The advantages made possible by the use of the electric iron while travelling.

(5) The saving of time through not having to change irons.

(6) The advantages of working with an iron that maintains a constant heat.

Service is Important Factor

"To explain these things is to sell the idea. It is because of the desire for the comforts which those ideas express that the customer wants and buys the iron. Of every electric appliance there are things to be said that will sell the customer on the idea of its service. And when the customer has been sold on the idea of service made possible by this or that appliance, there is then no necessity for selling the appliance itself—the customer gladly and willingly buys it. Analyze your own experiences, Mr. Hardware Merchant, and you will see that that is true. Nobody need urge you to buy the things whose service you already crave and desire. You are concerned merely with selecting the best particular make of that thing for your purpose; and there is where a reference to construction, workmanship, design, operation, etc. fits in properly. It is wise and necessary to refer to those things at that point. But never do so until you have sold the idea and aroused the prospect's desire to buy.

The Ten Commandments of Electric Appliance Selling

"For the benefit of its merchandising members, The Society for Electrical Development some time ago reduced the 'how-to's' of appliance selling to a series of rules or commandments. The hardware merchant who sells electrical appliances needs identically that same sort of help, and a summary of those rules is given here:

"Rule 1.—Know Your Appliances—what they will do and how they will do it. When explaining the Electric Grill, don't stop with saying 'This compartment is for broiling, this section is for frying and that one for stewing.' That's too indefinite. It does not properly lead the customer to think of the services of the appliance. It's the need for the services of the appliance that has aroused the prospect's desire to possess it, rather than any interest in its constructional features.

"When discussing the broiling section of the grill, for illustration, state in definite terms that it will broil steaks,

chops, ham, fish, oysters, pressed meats, and, if desired, vegetables such as eggplant and parsnips. That is to say, the way to bring the prospect to think of and desire the services of the appliances is to explain in detail the scope and advantages of these services. Failing to do that, you can not hope to effect a sale.

"Be able also, to give, and make a point of giving reasonably accurate figures as to the cost in cents per hour for each and every service and operation performed by the appliance you are selling. Put stress also upon the saving in time made possible by "doing it electrically." Above all else, be able to demonstrate, not merely tell, just how the appliance should be operated to insure the best results. There's a heap of difference between just merely stating what particular function an appliance performs, and explaining and demonstrating how and how well it performs that function.

"Rule 2.—Know Your Customer. Old hands at the selling business classify all prospective customers as either 'lookers' or 'listeners.' By the first term they mean those who trust entirely to their own judgment and buy only those things which pass their close and critical scrutiny. They are the ones who must be shown, who demand that every little phase and feature of the thing to be bought be submitted to examination of hand and eye. They place little or no confidence in the words of the salesman —they insist upon being shown.

"The second class much prefer to be guided by the suggestions and statements of the salesman and they will do so always, provided he can inspire them with confidence. They will listen attentively to what is told them, and they will get the general sense of it all. But their first concern is to decide if they may safely trust to the judgment and sincerity of the salesman. They don't particularly desire to be shown—they want to be told, as it is only by getting the salesman to talk and analyzing his statements that they can decide whether he knows his business and is to be trusted. Once they have decided that point in his favor, they then will revert to this, that or the other feature of the appliance as explained by the salesman up to that time and desire further enlightenment or instruction regarding points they appeared to understand in the first instance but did not, because at that time they were more concerned in judging the salesman than in deciding the merits of the appliance.

"Your own intelligent study of your customers will be your guide in classifying them properly. The listeners desire to be told and the lookers must be shown. If you are not conducting your selling talk in harmony with their preferences you will, if you are actually alive to your opportunities, recognize your mistake very quickly and can then change over.

"Rule 3.—Aim to Discover and Cater to the Prime Desire That Prompts the Customer to Buy an Appliance.

"The need behind the need, so to speak, is the one that should be catered to in effecting a sale.

"Man has certain basic instincts. They constitute the source of all desire. All actions, efforts and thinking are to the end of satisfying or appeasing desires occasioned by the persistence or momentary urge of one or the other of those basic instincts.

ADVERTISE, DISPLAY AND SELL ELECTRICAL APPLIANCES IN GROUPS

"What is meant by selling appliances in groups is this: The toaster, percolator and grill make the housewife completely independent of the kitchen range at breakfast time. The use of but two of these appliances leaves still the necessity of going to the kitchen range for the service that otherwise would be performed by the third appliance. For instance, Mrs. Housewife has on her table a toaster and grill, and so far as making toast, broiling chops, frying bacon, preparing hot cakes and whatnot else, she is completely independent of the kitchen range. She can sit right at table and enjoy the conversation with Friend Husband and family. The foodstuffs are prepared right at table but no breakfast is complete without coffee, and lacking a percolator, the service of the other appliances is discounted. The kitchen range must be lighted and divers trips made from the range to the table for and with coffee.

"When Mrs. Housewife comes in and asks for a toaster, or a percolator, or a grill, she perhaps does not think of how the service of all three exalts the services of each one and makes her completely independent of the kitchen range. But it is up to you to think of those things and to explain the advantages and service made possible through the use of the three appliances, which can not be enjoyed in the same measure with but two of them. That's what is meant by selling appliances in groups.

"When you sell a six-pound iron, explain also the advantages and many benefits made possible through the use also of the lighter iron. When you sell an electric washer, picture how its service is enhanced when supplemented by that of the ironer and the iron. Thus it goes. Sell appliances in groups. It means bigger sales and greater satisfaction to the customer."

"If the prospect's desire is strong enough, and his belief in the thing offered for sale is well grounded, the matter of closing the sale simmers down to the operation of inciting the prospect to satisfy that desire by the action of buying and possessing that thing. An illustration will make that principle plain: Mrs. A., for instance, is a woman in whom the desire for comfort and ease is paramount. She abominates having to arise and prepare breakfast for her husband who departs for business at a very early hour. Her object is: 'How to provide breakfast for her husband without having to sacrifice her own love of ease.'

"An invalid friend explains how her husband prepares his own breakfast by the aid of electrical table appliances.

"Mrs. A. immediately develops a desire for electrical table appliances, and calls upon you that she may learn more about them.

"Eventually, of course, she will come to appreciate their fuel, food, time, and labor-saving qualities. But for the moment her chief interest is in how they will enable her husband to prepare his own simple breakfast of eggs, toast and coffee. The arguments regarding the appliances, that will work best in this instance, are those relating to the ease, simplicity and reliability of there use and operation.

"These are the factors that cater to her desire for ease and luxury, by enabling her to lie comfortably abed while her husband prepared his own breakfast.

"Aim to discover the controlling desire which prompts the need for the appliance. There is such a basic desire in every instance. A little study of your prospect will enable you to discover it. Then conduct your selling talk accordingly.

"Rule 4.—Keep From Talking Watts, Amperes, Voltage, and so on. Every item brought into a sales talk about appliances, which the prospect does not understand, adds just one thing more, one other doubtful point, which must be explained before the sale can be consummated.

"Such terms as watts, amperes, voltage, are not understood by the average woman; and women buy most of the appliances.

"Confine your talk to plain, everyday terms that all will understand. If you must employ technical terms make a point always of explaining them.

"Rule 5.—Don't Refer to Electrical Appliances as 'Current-Consuming' Devices. That electrical table appliances consume current is true. Nevertheless that is merely incidental to the service their use affords. They should be referred to in terms suggesting their services.

"One expects to have to feed a cow—but when one discusses cows it is in terms of milk or beef.

"That same principle holds good for electrical table appliances. They are fuel, food, time, labor and money-saving devices. Refer to them accordingly.

"Rule 6.—Always Refer to Operating Cost of Appliances in Terms of Cents per Hour. Or state the cost on a monthly or yearly basis.

"To refer to operating cost in terms of current is confusing to all but the technically-informed. Besides it's a lazy man's way of convincing the facts. Because when the operating cost is given in terms of current the prospect then is

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

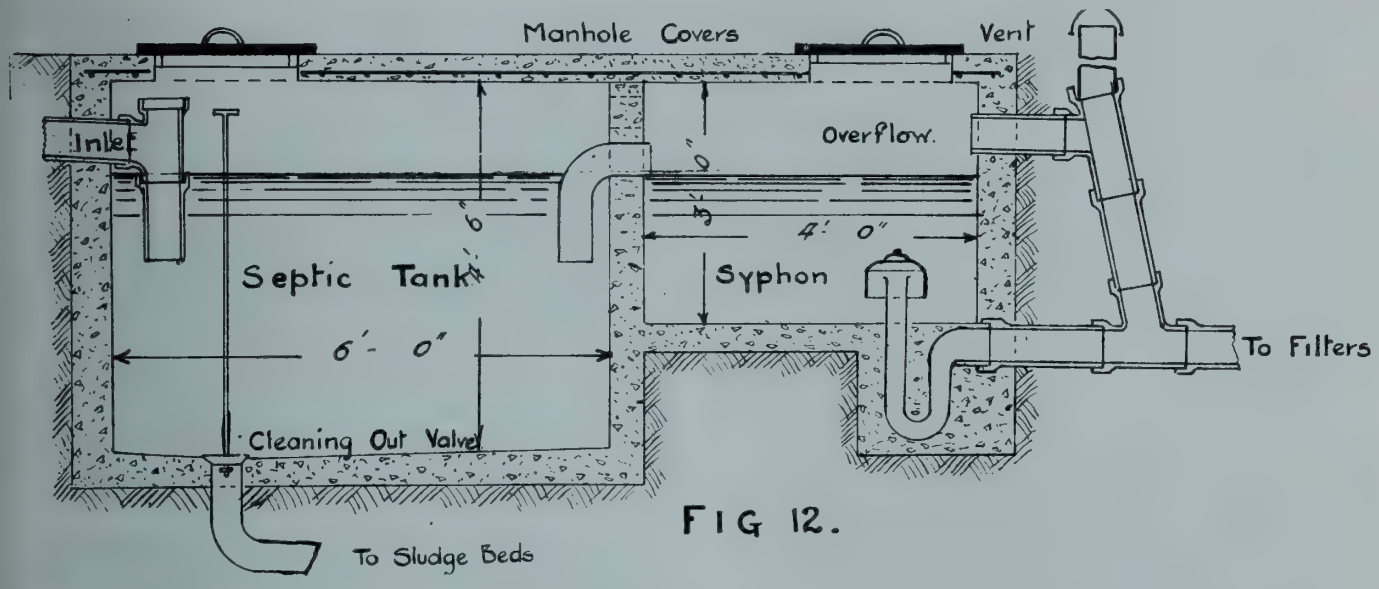

FIG 12.

Article No. 7 of the Series

(Continued from last issue)

FIG. 12 shows a good example of this form of tank designing and the illustration fully describes the method of construction.

The only additional feature is the cleaning-out valve in the liquefying chamber, which can always be installed in any septic tank installation provided the ground will permit of the sludge running by gravitation to a given, selected area for sludge, drying operations. The grade on the sludge pipes for liquid sludge should not be less than 1 in 30, otherwise they are liable to become choked, and it is always advisable to have many holes constructed on this sludge pipe line so that any stoppage can be easily removed by rodding or flushing.

ARGUMENTS FAVORING THE MAIN TRAP

Continued from page 21

plumbing systems without traps on main drains.

"I have never yet seen an intercepting trap freeeze when the fresh air inlet was properly connected to the horizontal house drain on the house side of the trap, and I have never seen an intercepting trap choked where modern plumbing fixtures were installed.

"The best system of water carriage sewerage is at all times liable to an accumulation of foul air, and it is simply preposterous to admit this volume of infected air into the house by leaving a free passage for it through the soil pipe.

"The danger from the refuse that passes daily through the soil pipe from a house into the sewer is as nothing compared with the elements of decomposition contained in the length and breadth of sewer systems. The enemy is without the gates, not within, and common sense teaches that he should be kept there."

RESULT OF HOUSING LEGISLATION

OTTAWA,.—A return tabled in the House of Commons, showed that construction of 1,600 houses had been commenced in 1919 under the Federal Housing Legislation. Of this number, 1,354 had been completed.

RECOMMEND RETURNED SOLDIER FOR SANITARY INSPECTOR

Winnipeg, Man.—W. F. Thornley, the returned soldier, who has been recommended for the position of chief sanitary and smoke inspector of the local health department, is at present deputy smoke and sanitary inspector of Winnipeg, where he has been employed many years. His recommendation is in line with the health department's policy of appointing the best qualified men that can be secured.

EDITORIAL COMMENT

"GET TOGETHER" SPIRIT WANTED IN COMING CONVENTION OF CANADIAN SOCIETY

PLANS are well under way for drawing a large and enthusiastic gathering to the twenty-third annual convention of the Canadian Society of Domestic Sanitary and Heating Engineers, which is to be held in Toronto on Tuesday, Wednesday and Thursday (June 8, 9 and 10). Many interesting subjects of great importance to sanitary and heating engineers throughout the country will be considered. A number of these have suggested themselves as result of the recent convention of the Ontario Association. The question of closer co-operation with manufacturers and labor are of great importance at the present time and undoubtedly more will be heard at the coming gathering. An exhibition of plumbing and heating products will be displayed during the convention by manufacturers and wholesalers. The officials of the Canadian society are extending a welcome to members of the craft from all parts of the Dominion, as it is realized that a representative gathering can be most influential in dealing effectively with the problems of the present day.

WHAT HAS THE FEDERAL BUDGET IN STORE?

THERE is much apprehension among those engaged in all branches of the trade as to what the Federal budget has in store. Manufacturers, wholesalers and retailers are very much incensed over the continued delay in presenting the budget statement in the House of Commons owing to the fact that while they are kept in the dark as to what the Government has in mind they are unable to proceed with their business plans. It is felt that it would have been much more in the business interests of the country to have speeded up the presentation of the statement in order that the trade could provide early for their responsibilities and get down to business with a good start. The session of the Federal Government has been dragging along and the budget left to the last minute. It is expected to be brought down during the week of May 2, according to latest reports.

The trade has even more than usual interest in the budget this year on account of the indefiniteness which has surrounded the proposals in mind for raising increased revenue over last year. The Minister of Finance admittedly has a difficult situation to face, as ordinary expenditures for the coming fiscal year are estimated at $440,000,000, which with other expenditures, brings the total to $540,000,000. When compared to the figure of $380,000,000 as the total amount of revenue collected last year, it is evident that a deficit of $160,000,000 will be faced unless more sources of revenue are found or higher taxation imposed.

To raise the additional revenue suggestions have been made for a tax on turnover, an excise tax or a modification of the present business profits tax to render it more productive. The feeling of the trade is that the obligations of the country must be met and that payment should be expedited. Everyone is therefore in an expectant mood as to what the Government has found it necessary to do to raise the revenue.

INCREASE IN BUILDING REFLECTS CONFIDENCE

MANY predictions were made from time to time during the slump in building operations as to what change was likely to take place in the near future. Despite continued high costs, it is shown by statistics that building construction during 1920 promises to be substantially greater in volume than during last year. This applies to practically all parts of Canada. February figures of permits issued in fifty-four Canadian cities for 1920 show an increase of 124.32 per cent. over the record for that month last year. Figures from each of the larger centres in Canada indicate that this percentage of increase is being made in each community. The condition is therefore a healthy one and reflects confidence in business conditions for some time ahead. Actual figures from the various parts of Canada are reproduced elsewhere in this issue.

CONTINUE POSTAL WAR TAX

OWING to large increases in the cost of postal services, any return this year to pre-war rates are said to be out of the question. The tax of one cent on all letters as imposed by the War Revenue Act of 1915 last year yielded a return of six million dollars.

The stamp tax on commercial paper, such as cheques, yielded a further ten million dollars. In the United States the postal war tax has been removed; in Canada similar action will likely be impossible because of the increased expenditure of the Post Office Department.

Further increases in expenses are threatened. The railways have notified the Post Office Department that they propose to increase the cost of carrying the mails by charging 37¾ cents a mile for cars which have cost 17 cents a mile. This will entail an additional outlay by the country of about $4,000,000 a year. Increases in the salaries of postal employees will cost the country nearly two millions more than heretofore. Rural mail carriers, having organized and become affiliated with the Dominion Trades and Labor Congress, recently sent a delegation to Ottawa to demand that their rates be standardized on a basis which will practically double them. Acceptance of this proposition would add about two million dollars to the cost of carrying mails in rural districts. Street car companies have also been asking for increases in rates for carrying letter carriers. The Postmaster-General fears, therefore, that even if the postal war tax is retained, increased cost may cause a deficit in the business of his department. He is said to be contemplating cutting down the list of persons entitled to exercise the franking privilege so as to leave practically only the members of Parliament with the right to mail letters free of postage. This plan may be criticized as simply taking money out of one Governmental pocket and putting it in another. It will, however, tend to distribute costs which are now borne only through the Post Office Department and tend to keep down or prevent a deficit in that department's operations.

"UNITED STATES STEEL TRUST WILL NOT PROFITEER"

AT the annual meeting of the United States Steel Corporation held this week, Judge Elbert H. Gary, chairman of the board, declared that the Steel Trust had not and would not profiteer. He stated that the Corporation was still holding to the selling price for its output fixed by agreement with the Industrial Board on March 21, 1919.

"We think there is a moral obligation on the part of everyone to use all reasonable efforts to check this carnival of greed and imposition, even at some sacrifice," he said, after speaking of "the increasing tendency to insist upon payment of unreasonable sums for every commodity.

"It should be the effort of all to establish and maintain a reasonable basis of prices, certainly to prevent further increases, otherwise the Government, from the standpoint of protection of a part of the public, must interfere," he added.

Judge Gary declared that labor should be subjected to Governmental control and regulation. He reiterated the intention of the company to maintain an open shop. Referring to the strike of last Fall, he said: "A small percentage of employees were members of labor unions. When they were called out they responded and as a result of threats and intimidations others temporarily quit work so that altogether about 26 per cent. of the men were out for a short time. The majority were steadfast and loyal."

RETAIN PROFITS TAX IN BRITAIN

IN view of the discussion which has been promoted in Canada with reference to the suggested substitution of a tax on turnover for the present tax levied on excess profits, the action of the British Chancellor of the Exchequer in retaining and even increasing the tax on excess profits to 60 per cent. is noteworthy. It had been the opinion in England that some substitute form of taxation would be adopted and the Chancellor's stand came as a distinct surprise. Various forms of taxation are receiving a great deal of attention at the present time, France having recently embarked on a policy of taxing each individual turnover 1 per cent. whether the amount of currency involved was small or great.

The budget speech of the British Chancellor indicates that the British Government is making successful strides towards the liquidation of its war debts.

The whole of the Anglo-French loan in the United States is expected to be paid off by next Autumn. This year there will be a substantial reduction in the national debt and the Chancellor promises that there will be no more borrowing to meet the floating debt.

It is evident that the British people will have to bear stiff taxation, but the ability to make substantial payments each year, in reduction of debts, will prove an incentive for greater production, and enable the development of foreign trade.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS NOTES

Galt, Ont.—Galt Brass Co. is enlarging its plant by two additions costing $50,000.

NEW BUSINESS

Otterville, Ont.—A. M. Roberts is commencing the plumbing and tinsmithing business.

PLUMBING ON CASH BASIS

Plumbers of Goderich, Ont., have decided to do business in future on a strictly cash basis.

BUSINESS CHANGES.

Maple Creek, Sask.—Geo. S. Lynch has taken over the shop of the A. A. Meneley & Co.

CONTRACTS AWARDED

Guelph, Ont.—The Guelph Housing Commission have accepted the tender of J. W. Oakes for the erection of 25 six roomed brick houses.

TENDERS

Sarnia, Ont. — Tenders will be received until May 5, 1920, for heating, ventilating and plumbing on Sarnia Collegiate and Technical School.

London, Ont. — Tenders will be called before the end of the month for the construction and equipment of a branch collegiate and public school. A five hundred room hotel is also planned.

PERSONAL.

W. W. Marshall has assumed the duties of Waterworks Engineer of Orangeville, Ont.

C. W. Wray, plumber, has accepted a position with the Steel Trough Co., Tweed, Ont.

Thomas Douglas, a returned soldier, is acting sanitary engineer for Weyburn, Sask.

MOSSE JAW PLUMBERS MAKE AGREEMENT RE WAGES AND HOURS.

Moose Jaw, Sask.—Plumbers in this city will receive $1 per hour for an eight-hour day during the coming year, according to the agreement reached between the men and their employers. The schedule was finally ratified by the employers after several conferences with the men.

WORK TO COMMENCE ON MILLION DOLLAR THEATRE

Hamilton, Ont. — Announcement is made by George Stroud, manager of the Savoy Theatre, that work on the new Pantages Theatre, which, when completed, will cost in the neighborhood of $1,000,000, exclusive of the money paid for the site on East King Street, will be proceeded with at once.

BUILD HOUSES ONLY.

London, England.—A crisis in the London building trades has been caused by the action of the London County Council in stopping all building, except residences, under powers granted by the Health Ministry to overcome the housing shortage.

Leading business men allege no more than 40 per cent. of the men displaced by this stoppage can be used in house building. It is declared unsafe to start any building costing more than $4,000.

WEYBURN FIRM RECOMMENCES BUSINESS

Weyburn, Sask.—Gallagher & Lythgoe, plumbers and steamfitters, have resumed business again after an absence of four years. Geo. Lythgoe, one of the firm, went overseas in 1915 and since returning has held two important positions with the Department of Soldiers' Civil Re-establishment and the Saskatchewan Returned Soldiers' Employment Commission. Mr. Gallagher, during the interval, was fire chief of Weyburn. Their place of business is on Souris Avenue, opposite Post Office.

To be No Deluge of Cheap German Goods on Canadian Market

German Iron and Steel Industry Threatened With Extinction—Germany No Longer a Force in International Commerce

"Germany's iron and steel industry is threatened with temporary extinction," according to a special dispatch from Berlin to The Iron Trade Review. "The recent tremendous political upheavals in Germany, with bolshevism for the moment rampant in Westphalia, Germany's Pittsburgh district, can have no good results, but they may serve at least to paint in clear outlines an important fact which has been known to close students of European industrial affairs for a year but which the average business man in Canada or the United States does not seem to have grasped—namely, that central Europe, including the once mighty Prussian empire, is a spent force in international commerce. As an iron and steel producer, in the international sense, Germany no longer counts.

"Those who have looked for a deluge of cheap German goods in American and British markets may safely lay aside their fears.

"The airtight blockade of the British navy during the war inflicted incalculable damage in the industrial sphere and forced the country to exhaust its supplies of finished and raw materials; the existing economic blockade resulting from the virtual extinction of the purchasing power of the mark is almost equally disastrous. Except vitally necessary food, much of which is sent by relief organizations, very few imports are coming into the country. The trade of the great port of Hamburg has dwindled to a tenth of its pre-war volume.

"German iron and steel production has been reduced to less than a third of its pre-war output. Pig iron production has diminished more or less steadily during the past seven years from 19,300,000 metric tons in 1913 to 6,290,000 metric tons in 1919. The output of steel ingots likewise fell from 18,940,000 tons in 1913 to 7,770,000 tons in the year recently closed. Dutch shipbuilders at Rotterdam are obliged to import American plates at high prices despite the fact that the centre of the once great German iron and steel industry is only 120 miles away, with a water haul down the Rhine thrown in. As a result of the war, Germany has been reduced from second to third place among the iron producing nations of the world, being supplanted in second position by Great Britain, the United States being first."

For More Effective Trade Advertising

Important Recommendations by Better Business Bureaus of the Associated Advertising Clubs of the World, to Encourage Cleaner and More Effective Advertising

The decidedly constructive character of the work of the Better Business Bureaus (local vigilance committees) of the Associated Advertising Clubs of the World is strikingly illustrated by some recommendations to advertisers issued by the Better Business Commission of Cleveland, which is affiliated with the Associated Advertising Clubs.

This matter has been prepared out of the experience of the best stores in that city, it is announced, and on the title page is the following: "Recommendations offered as a guide to advertisers to assist them in avoiding advertising statements and practices that have a tendency to reduce consumers' confidence in all advertising."

The text of the "recommendations" is as follows:

1. It is recommended that care be taken to substantiate definitely any fact or assertion made in an advertisement prior to the time the advertisement comes before the public.

Unintentional misrepresentations cause just as much criticism as intentional ones and the reader does not stop to consider that it may have been unintentional, the result being that the advertiser is criticized to an unjust extent and ensuing advertisements do not inspire the confidence they might deserve.

The wrong impression can be derived from an advertisement in which there is statement of one fact which is not well grounded.

2. It is recommended that the use of superlative statements be refrained from unless the advertiser can, and will, submit proof of such statements to the Better Business Commission if requested.

The force of superlatives in advertising has been considerably weakened through misuse. The public has a right to take superlative statements literally. The advertiser has a right to expect them to be taken literally when he has proof to substantiate them.

The repeated use of superlative statements which can not be substantiated, whether made by the same or different advertisers, destroys the confidence of the public in superlative statements which may be 100% truthful.

3. It is recommended that where comparative prices are being quoted, values be based on the average quotations for the same class of merchandise in other stores in the city.

The public determines value in this way and a statement of value means to the reader the average value as found in other stores.

4. It is recommended where comparative prices are being quoted that a definite distinction be made between "early season" values and "current" values based on the average quotation for the same class of merchandise in other stores in the city.

The wrong impression is created in the mind of the public when former or "early season" values are referred to and the reader interprets the statement to mean "current" values.

5. It is recommended where comparative prices are being quoted that when merchandise of different values has been grouped for sale at one price, the advertisement state the minimum value in the group as well as the maximum value.

The reader generally gets the wrong impression of the entire lot of merchandise when the highest values in the group are quoted and the advertisement does not state the lowest values. Where the lowest as well as the highest values are quoted the reader gets a better impression of the group and will not be subject to disappointment.

Greater confidence in the advertiser is inspired when the complete price range is clearly stated.

6. It is recommended where comparative prices are being quoted and merchandise of different values has been grouped together for sale at one price that each article bear a ticket indicating to which of the advertised values that article belongs.

The public should have no difficulty in ascertaining which articles of merchandise are of the various values stated in the advertisement.

7. It is recommended that extreme care be taken in advertising to avoid making statements which might be misconstrued.

Statements which can be misconstrued cause criticism of the advertiser to an extent which may be unjust.

Equivocal statements destroy confidence and invite suspicion.

8. It is recommended that when merchandise is being advertised which is soiled, of second quality, or for any reason whatever not perfect in every respect from the standpoint of the manufacturer, the advertisement state clearly and explicitly the facts as they are.

Unless such facts are clearly stated customers are disappointed when they come to the store in response to the advertisement, and confidence in advertising is lessened.

Not to state such facts clearly is judged by the Federal Trade Commission to be a violation of Special Provisions to Regulate Interstate Commerce.

9. It is recommended that when merchandise is being advertised which is an imitation of merchandise of higher quality or value, great care be taken that the advertisement does not convey the impression that the merchandise is the genuine quality.

There is danger of misrepresentation to the extent of fraud.

Even if from the sale price quoted it is obvious that the merchandise is not genuine, or even if the advertiser is under the impression that the public is informed generally that such merchandise is imitation, greater confidence is inspired in the advertising if care is taken to point out the facts clearly.

Demand Prepayment of Freight in United States Currency

United States Railways Impose Drastic Regulations — No Transhipment to be Allowed at Border Points

AN announcement which may have far-reaching effect on prices of commodities imported, either in the raw or finished state, from the United States, is that just made by United States railways, to the effect that on all freight shipments coming into Canada it will be required that freight be prepaid through to the destination in United States currency. This regulation has been hinted at for some time but definite action is now to be taken and the new arrangement will be in effect on and after May 1. No provision is made on the basis of comparative mileages which the freight is carried in Canada or the United States.

Some U. S. railways have also given notice that they will not only demand this prepayment but will also refuse any transhipment at border points. Canadian importers are therefore prevented from securing freight at the border by prepayment to border points and then paying the Canadian haul in Canadian currency.

On the basis of the present value of Canadian currency in New York, it is evident that the impost will be heavy on certain lines. On first glance it appears to mean an increase of $11.50 to $12 for each hundred dollars of freight charges.

Coal is one commodity which will be seriously affected by this action, and this being a basic requirement the effect will probably be felt through many other channels, apart from the direct increase in freight charges on other commodities themselves. Thus the effect of the new regulation will be reflected in many ways and increase either directly or indirectly costs of production.

SELL THE IDEA OF ELECTRIC APPLIANCES

Continued on page 30

compelled to translate the statement into terms of cents per hour to operate. And—

"If the translation is not made, the statement only serves to confuse. It fails to further the customer's understanding. Attention which should be devoted to following the salesman's talk is distracted by the effort to understand the technical phraseology.

"Rule 7.—Show Appliances in Actual Operation.

"The power of demonstration is too well recognized to require emphasis here.

"Telling the customer that a toaster, say, will, within two minutes, generate ample heat for toasting is a poor substitute for allowing the customer to place a hand near the appliance and discover by actual experience the heat radiating therefrom.

"If your display room is not equipped with Convenient Service Outlets, have some installed at once. The added sales effected through demonstrating the appliance will quickly pay for this slight expense incurred through installing outlets.

"Rule 8.—Don't Invite Consideration of Too Many Appliances.

"Attention must be concentrated upon one appliance before a purchase is made.

"The greater the number of appliances suggested the greater the number which must be eliminated from consideration before attention can be centred upon the one particular appliance it is held in mind to buy. Decide as quickly as may be possible in your own mind, which appliance will best suit the needs of the customer. Then concentrate your efforts upon selling that appliance. Make every reasonable effort to sell it before suggesting another one.

"That method becomes particularly desirable when you are dealing with a 'listener.'

"Rule 9.—Aim Always to Display the Best Make of Appliances First.

"In selling it is always easier to come down in the scale of quality and price than to start at the bottom and work up to the most costly. Also, a customer is always secretly flattered by being shown the most expensive article of a class first, even though it is in mind to purchase something less costly.

Frequently, too, such tactics lead to the sale of a better article than otherwise would have been sold. Besides—

"First impressions are apt to be lasting. So aim to have that first impression truly representative of the best in quality and service possible with the class of appliances in question. Display the best make of appliances first.

"Rule 10.—Attach to Appliance Tags Showing Price and Cost in Cents per Hour to Operate.

"Such tags are effective silent salesmen.

"Many of those who visit your store have used electrical appliances and are thoroughly sold on their manifold advantages. Frequently they come in with minds made up to purchase a certain type of appliance and require only to be told the price. In such instances the tag makes the sale, while you perhaps are busy with other customers. There are many occasions in even the best equipped and regulated stores when customers cannot be given attention immediately they have entered. At such times, the tags will prove helpful in occupying the customer's attention.

"Best of all is the service the tags perform in connection with the very generally observed human characterisitic. Many folks incline to place more confidence in what they read than they do in what is told them. And the tags serve to support the salesman's statement regarding the operating cost of the appliances.

"Note: Advise your customers to have current taps (Convenience Service Outlets) installed. It is bad practice to connect electrical appliances to lamp sockets, doubly bad when more than one is used. The wiring, on lighting fixtures, is not generally designed to carry the current needed by several appliances.

Pleads For Better Co-operation in East

National Development Possible Only by Co-operation

MONTREAL.— M. A. Brown, mayor of Medicine Hat, Alta., made an interesting address before the Canadian Manufacturers' Association at a luncheon held in Montreal this week. Mr. Brown contended that it was only through co-operation of business men in all parts of Canada that the national development of Canada's resources could become united. This was particularly the case as between the East and the West.

Mayor Brown is taking an interest in matters of this kind and he is at present the president of the Alberta Industrial Development Association. This is a non-political association and its function is that of co-operating with the Government of various Western provinces regarding the natural resources of the country.

"One of the greatest problems Canada has is your East and West problem," said Mr. Brown. "Failing the national development of our resources by the united efforts of the West and East it will become a real menace to our national developments."

Many local manufacturers and business men were present at the luncheon at which the above address was given and other interesting addresses were delivered by a number of men accompanying a delegation which came from the Western Provinces. Among these were Brig.-General H. J. McDonald, Col. W. J. Sadler, and others.

Among the important things pointed out by members of the delegation was the advantage of more frequent conferences between Eastern and Western interests. As a result of these addresses local business men have already agreed to give the Association above mentioned and the Industrial Congress, which is to be held in the West this year, their undivided and cordial support.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

THE MARKETS AT A GLANCE

WHILE the price changes have not been so numerous of late some important situations have developed since last issue and many lines, although showing no advances, are on the verge of higher prices. Soil pipe prices have been withdrawn as mentioned in last issue and the new prices have as yet not been announced. This also applies to range boilers. The enamelware situation is firm and higher tendencies are noted.

Higher prices have been made of pipe fittings, both cast and malleable iron. Some lines of valves are also higher. Files are also revised upwards.

Business throughout the trade is very brisk, regardless of the cool weather, and spring work is going ahead rapidly, which necessarily creates a heavy demand for material.

The time is fast approaching the proposed strike in the metal trades and many rumors are current. The tie-up of the United States railroads is causing great inconvenience to all and may be the means of holding up contracts later on for want of supplies.

Collections are very satisfactory and manufacturers and jobbers are advising the collecting of any outstanding accounts while times are good, so as to be assured should such a thing as the tightening up process in the money markets occur.

TORONTO, April 30. — Higher prices are not so numerous this issue, although some lines have been changed, while the tendency in all lines is for higher prices. Pipe fittings have been revised upward about 5 per cent. to 10 per cent. over former quotations; plumbers' compression work has also had a slightly higher revision. Soil pipe and range boiler prices are still withdrawn; file prices are also higher. Enamelware prices are very firm, with upward tendencies.

The cool weather has not seemed to have affected business and nearly all in the trade are enjoying a busy season, and considerable material is being handled. The tie-up of the United States railroad has been the cause of making the shortage of the already inadequate supplies of raw material more acute, and if the situation is not soon relieved many will be unable to continue operations, it is stated.

Collections are coming satisfactorily and manufacturers and jobbers are advising the collecting of outstanding accounts, while all are prosperous in order to be assured that should money tighten up or business become dull.

Some Makes of Valves Have Been Marked Higher

PLUMBERS COMPRESSION WORK.—Higher prices have recently been made on some lines of globe, angle and check valves. Although this is an advance over former quotations it is said to have been made with the view of bringing the prices on the brands affected more in line with kindred brands. The present demand for all lines of compression work is said to be a heavy one and a good volume of business has already been handled. Despite the fluctuations of the basic metals on the primary market nearly all prices are very firm with a strong tendency to advance. This may be due to the general condition of the markets on nearly all commodities as the ever-increasing prices in all lines are bound to have a reaction. The following list includes the new quotations:

Compression work, standard	25%
Fuller work, standard	30%
Bath cocks, compression	25%
Bath cocks, Fuller	28-30%
Flatway stop and waste cocks, standard	25%
Roundaway stop and waste cocks, standard	25%
Brass steam cocks, standard	add 10%
Globe, angle and check valves, standard	add 5%
J.M.T.	plus 10%
J.M.T. C	less Net
Radiator valves, standard	23%
Do., removable disc	38%
Basin Cocks—	
No. 1 and 1, Fuller pattern	30%
Compression	16%
Quick opening	28%

New Soil Pipe Prices Not Yet Available

SOIL PIPE.—No new prices have as yet been anounced to replace the former quotations on soil pipe which have been withdrawn. This is entirely due to the situation which has developed in the production of the raw material at the mills. The situation, it is stated, was none too favorable before the recent tie-up of the United States railroads, which seems to have paralyzed manufacturers and others so far as producing the finished commodity is concerned, and if condition is not soon overcome manufacturers in nearly all lines will be considerably handicapped. With the brisk opening of nearly all outside activities the present demand is a heavy one, and if the material comes to hand a record season is looked for throughout the trade. The following quotations are merely for use as a guide.

Medium and extra heavy soil pipe, 2, 3 5 and 6 in.	10%
Medium and extra heavy soil pipe, 4 in.	15%
Medium and extra heavy soil pipe fittings, 2 in. to 6 in.	25%
8 in. extra heavy pipe and fittings	5%

Range Boilers Scarce; Prices Still Withdrawn

RANGE BOILERS.—The prices on this commodity which were withdrawn have not as yet been announced, and there is little indication that the new prices will be immediately issued, although the majority in the trade are looking for the new schedule which is expected will be higher during the next week or ten days. The manufacturers state that owing to the uncertainty of the present markets they find it hard to make a schedule that they can rely on for any length of time as deliveries are uncertain, raw material scarce, and labor high and unsettled. It is hard to state what the future will show for commodities manufactured from iron or steel. The present unsatisfactory condition of begging the mills for even small tonnages does not seem popular with the manufacturer who states that owing to such conditions they are unable to make any price schedule that would hold for any reasonable length of time.

Range Boilers—	Standard	Ex. Heavy
30-gallon	$12 00	$14 00
35-gallon	14 00	16 00
40-gallon	16 00	18 00
52-gallon	22 00	25 00
66-gallon	35 00	38 00
82-gallon	40 00	47 00
100-gallon	50 00	58 00
120-gallon	60 00	67 00

Prices on Cotton Waste Firm; Good Demand

COTTON WASTE.—Although the present quotations on cotton waste are very firm no change in prices have been made and no immediate changes are looked for. It is hard to state, however, what the future will show. The raw materials on the primary markets have gradually been advancing and many lines manufactured from cotton have recently attained higher prices. This is attributed

to the European situation and the fact that the world's markets are bare may be significant. Jobbers and dealers generally express satisfaction with the present demand and state that so far the season's turnover has been a large one. It is believed that warehouses have fair stocks and all indications point to a heavy turnover during the year. The present quotations are held firmly at the following prices:

WASTE

Above lines subject to trade discount for quantity.

Prices on Lead and Zinc Products Hold Firm

LEAD AND ZINC PRODUCTS.—The demand for this commodity continues to be heavy, and a good volume of business is being handled. Solder is holding at a very firm figure, and although no immediate change is expected it is believed that no lower prices will be made for some time. Lead pipe and lead waste pipe are beginning to move very freely and the demand is continually growing heavier. This also includes lead traps and bends, lead roll, lead sheets, etc. The following are the present quotations:

Lead pipe, list, per lb.	0 17½
Lead waste pipe, list, per lb.	0 18½
Do., over 8 inches, list, per lb.	0 19½
Above subject to discount of 10 per cent.

Solder, strictly, lb.	0 43
Solder, commercial, lb.	0 40
Zinc sheets, per lb.	0 19
Solder, guaranteed, lb.	0 43¾
Solder, wiping, lb.	0 40

Corrugated Sheets Scarce; No Raw Material Coming

CORRUGATED SHEETS.—The difficulty in securing flat sheets continues to be the chief worry of the manufacturers at present and not a few are wondering what the future outcome will be if sheets do not come along in better and larger quantities. One manufacturer stated that some are commencing to feel the results of the clogged-up machinery caused by the United States railroad strike, and stated that many mills in the States were clogged up with the raw materials and others with the finished product and yet no one was able to ship any commodities that were turned out and manufacturers found it was necessary to store them in the yards and around the building, whereas they should be put directly on the cars and shipped. It may be that sheets will come better after the strike is settled but the majority seem to doubt it as they believe that the mills are seriously held up with their production and it will be hard for them to catch up with their orders. The following are the present quotataions on corrugated sheets.

CORRUGATED SHEETS—	Per 100 sq. feet Galv'd	Painted
No. 28-gauge	$ 9 25	$ 7 75
No. 26-gauge	10 00	8 75
No. 24-gauge	15 00	11 00
No. 22-gauge	17 50	13 75
No. 20-gauge	21 00	17 50
No. 18-gauge	26 50	21 50

On shipments of 300 lbs. and over, freight is allowed south and east of and including North Bay; also several western counties in Quebec Province. Places north and west of North Bay, the freight is equalized on North Bay. For Quebec and Maritime Provinces, freight is equalized on Montreal.

Ad 5% to above list.

Boiler Tube Stocks; Fair Price Unchanged

BOILER TUBES.—A fairly heavy demand has been noted for boiler tubes although the season is a little off and is approaching a seasonable slackness, it is stated. Jobbers state they are fairly well caught up with their orders and have fair stocks in their warehouses and are preparing for a good volume of business which usually starts in around the season of the year when fires are let out. The tying up of the United States railroads, it is stated, has not caused any shortage or famine in this line as jobbers state they have been fortunate enough to receive fairly heavy shipments just previous to when the strike took effect. It may be, however, that certain few sizes are short, mostly pertaining to the most popular. Some are of the opinion that boiler tubes may be scarce when the heavy demand starts in as the present situation of skelp is not at all satisfactory, being very hard to procure. The mills are said to be rushed to capacity and still the demand is greater than the supply. However, some state that the skelp mills have in some cases been forced to shut down owing to the tie-up of raw material and other commodities used in the manufacture of skelp. The following are the present quotations on boiler tubes.

BOILER TUBES—	Per 100 feet Seamless	Lapweld
1 inch	$28 00	$.....
1¼ inch	30 00	.....
1½ inch	31 50	.....
1¾ inch	33 50	30 00

4 inch	96 00	62 50
3 inch	53 00	45 75
3¼ inch	.....	52 50

Scarcity of Sheets and Plates Not Relieved

SHEETS AND PLATES.—Local stocks of sheets and plates continue to be very low. Although the situation is said to have improved somewhat, jobbers state there is no sufficient sheets to anywhere near supply the present demand, which is becoming daily more heavy and persistent. With the approach of warmer weather many projects are beginning to open out, and building is rapidly extending operations. Some jobbers stated that they expected that their stocks would be in much better condition at this season of the year had it not been for the strike on the United States railroads which tied up shipments in transit and incidentally kept them back several weeks although they stated they had received some shipments, but the demand is so great that most of the stock came direct from the car without ever entering the warehouse. Many are looking forward to the announcement by the mills of their second period business. The following quotations are being quoted by some, although they are more or less nominal owing the great scarcity. It is believed that very few have complete list of sizes in stock at present.

BLACK SHEETS		
14 gauge	....	8 00
16 gauge	....	8 10
18-20 gauge	....	7 95
22-24 gauge	....	8 00

22 and 24	9 75	11 25	9 90	11 00
18 and 20	9 60	11 10	9 75	10 85
16	9 45	10 95	9 60	10 70
12 and 14	8 70	10 20	9 45	10 55

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

Weak Tendency Shown on Waste Materials

SCRAP AND WASTE MATERIALS.—The prices on nearly all lines of scrap and waste products remain practically unchanged, although the present situation is a peculiar one, and dealers state there is not the demand that they had expected this season of the year. This may be due to the recent tie-up of the American railroads, which have caused a number of the mills to either shut down of else slacken up in their operation for want of raw materials, etc., which could not be moved owing to the freight embargo. The present position of metals composed of iron or steel is very firm, while those of copper and brass, etc., show a tendency for weaker prices. Stove scrap and cast iron is still very hard to procure and price quotations are generally nominal. The following are the present quotations:

DEALERS' BUYING PRICES		
Pipe scrap	....	11 00

ANNOUNCEMENT

The

H. Mueller Mfg. Company

Limited

has arranged with the patentee for the exclusive rights to manufacture in Canada

Niedecken Mixing Valves

for showers

Niedecken Mixing Valves are recognized as the most efficient on the market. They are specified by the leading architects in Canada and United States. Full particulars with illustrated printed matter furnished on request.

H. Mueller Mfg. Company

Limited

SARNIA, CANADA

Wrought Pipe Scarce; No Improvement Shown

WROUGHT PIPE prices are very firm and the tendency is for higher quotations. Stocks generally are said to be very light, the present outlook for wrought pipe, both iron and steel, does not look very promising according to the opinions of manufacturers and jobbers locally. Manufacturers state they have been practically tied up in the manufacture since the strike on the American railroads. It is stated that one manufacturer was practically closed down for several days and that others are working on broken time as a result of the coal shortage, and in other instances some mills have sufficient steel and no coal, while other mills have sufficient coal with no steel or iron as the case may be, and owing to the tie-up are unable to remedy the situation. Jobbers say they have great difficulty in securing the larger sizes. The present price is holding very firm, and although the price is not changed it is hard to say just what the future will show owing to the disrupted conditions of the markets generally. The following are the list of prices in effect at present:

PIPE—WROUGHT

Price List No. 44—April 8, 1920.

Terms—2% cash discount if paid within 30 days. Approved credit.

Black Diamond Files, Also Nicholson Advance 5%

FILES are in line with other commodities whose basic material is iron or steel. Some makes of files have been revised to higher price levels. The Black Diamond are now quoted at 25 per cent. discount. Nicholson are also quoted at a discount of 25 per cent. in place of a former 30 per cent.

Advances of 5% to 10% Made on Pipe Fittings

PIPE FITTINGS.—The firm price which has held on pipe fittings for some time has been revised upwards, and the new quotations are approximately from 5 per cent. to 10 per cent. higher. The new prices, it is stated, are the result of continued shortage and higher prices of raw material, labor and other factors. Business continues very brisk and the difficulty of supplying the demand, especially of some sizes, continues to be experienced by the manufacturer and jobber. Especially is this true of some of the most popular sizes. The following are the present quotations.

PIPE FITTINGS

Cast iron fittings	Plus 10%
Plugs	7½%
Bushings	10%
Unions, ¼-in. to 2½-in.	30%
Do., ⅛-in. to 3-in. and larger	25%

Do., 2½-in. and larger	9¼%
Nipples, up to 4-in.	60%
Do., 4½-in. and larger	50%
Do., running thread, 4-in. and under	30%
Couplings, 4-in. and under	30%

MALLEABLE FITTINGS

Class A	0 70	0 85
Class B	0 30	0 40
Class C	0 20	0 30

Firm Prices on Conductor Pipe and Eavestrough

EAVESTROUGH AND CONDUCTOR PIPE.—Notwithstanding the great shortage which has prevailed in the sheet market, manufacturers of eavestrough conductor pipe and kindred lines state they have been fairly successful in securing material for making a fair quantity of the above-mentioned commodity. No change has recently been made in prices although the present quotations are very firm. The spring demand has started in full swing regardless of the cool weather which has prevailed, and all in the trade are looking for a good year's turnover. The following are the present quotations:

PIPE (Conductor)
Plain

2 in., in 10-ft. lengths, list	8 00
3 in., in 10 ft. lengths, list	9 70
4 in., in 10-ft. lengths, list	12 80

10-in.	7 70	18-in.	16 00
12-in.	9 10		

F.O.B. Toronto, Oshawa, Ottawa.
Add 5% to the above list.

Enamel Ware Prices Firm; Situation Unchanged

ENAMELWARE.—Prices on nearly all lines of enamelware are very firm and higher quotations in the near future would not surprise many of the better informed. The present situation which has developed in the securing of raw material is said to be a big factor for advanced prices. The higher cost of material, labor and nearly all commodities connected with the manufacture of this commodity are also said to have the effect of strengthening the market considerably. The present quotations are as follows:

Bath tubs, roll rim, 4. 4½, 5 feet, 24 to 30 in. wide			$37 05
Bath tubs, 5½ ft.			41 20
Lavatories—			
17x10" Apron F139 or P4345			11 05
18x24" Apron F154 or P3845 or P3847			17 00
18x21" Apron F169 or P4205			12 70
18x21" Roll rim F197, F199 or P4655-6			11 10
17x19" Roll rim F241 or P4345			9.05
Sinks, roll rim, 18 x 30 in.			16 60
Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$5 40	$5 35	$5 30
18 x 30	6 20	6 50	6 10
20 x 30	7 10	7 05	7 00

Metal Prices Unchanged; Some Fluctuations

INGOT METALS.—Although there has been considerable fluctuations on nearly all these metals listed, prices show no change over former quotations. Buying is said to be very light as the market seems to be in an erratic condition, losing one day and recovering the next. Stocks are still very light and a fair demand continues.

LEAD has fluctuated considerably but continued to quote at unchanged prices. The present price being 11½ cents per pound.

SPELTER has also fluctuated to some extent but remains at the non-changed price of 11½ cents per pound.

ANTIMONY.—The market conditions on this metal are unchanged and stocks are considered rather light. The selling price continues around 15 cents per pound.

COPPER.—Little change has been made in the price of copper, the present demand being rather light. The present quotation is 24 cents a pound.

ALUMINUM prices remain unchanged with little demand showing, the present quotations being 36 to 37 cents per pound.

TIN prices have fluctuated considerably during the week although the present quotations show no change over last week's quotations and is still holding at 74 cents per pound.

Mention This Paper When Writing Advertisers.

Sells As Well As It Operates

Morrison

High Pressure Injectors operate successfully on 20 lbs. low to 220 lbs. high steam pressure from 4 to 300 horsepower, and are made in sizes from 3/8 inch to 2 inch. These injectors can be depended upon, and are backed with a splendid reputation for efficiency. They offer a powerful argument to the dealer who wishes to increase his profits and customers, with a line of products that are supreme in the mechanical field. Watch for the name Morrison, a guarantee of quality.

The James Morrison Brass Mfg. Co., Limited
93-97 Adelaide Street West, Toronto, Ontario

The Great Popularity Of

ANTHES SYPHONS

is founded on sheer merit made known to the public more rapidly by skilful, modern advertising.

The Anthes is made seamless in one piece without joints, with no moving parts to get out of order. It operates entirely on natural laws and gives great satisfaction in service. Anthes is the very heart of modern sewage systems.

We will furnish you with Sewage Disposal Blueprints on request.

Jenkins Valves

JENKINS BRASS "WHISTLE" VALVES

STOP WATER WASTE

At bakeries, in the departments where fruits are washed and prepared, Jenkins Brass "Whistle" Valves are installed on hot and cold water supply lines to stop water waste.

A pull of the lever instantly permits a free full flow of water which is automatically shut off by means of a spring as soon as the lever is released.

Jenkins Brass "Whistle" Valves are extensively used in bath houses, garages, restaurants and factories, and, doubtless, numerous other uses will occur to you for these substantial, quick opening valves.

Know Jenkins Valves by the Jenkins "Diamond Mark"

Address all communications to Garrett F. Frankland, Secretary-Treasurer, Room 303, 22 College Street, Toronto, Ontario.

Our Twenty-Third Annual Convention

will be held in

Toronto, Ontario

on

Tuesday, Wednesday and Thursday

JUNE 8th, 9th and 10th. 1920

The officers extend to every sanitary and heating engineer, throughout the Dominion of Canada, a hearty invitation to attend this Convention for the consideration of progressive ideas, methods, regulations and systems for the welfare and improvement of the plumbing and heating industry in Canada.

Everyone engaged in our calling should be on hand, or represented by delegates from their local or provincial society.

Appoint Your Delegates at Once

The officers of the society are busy preparing for the largest Convention in the history of the Canadian society, and the members of the Toronto society are making arrangements to entertain you as only sanitary and heating engineers know how.

Every manufacturer and wholesaler extends a welcome to one and all, and promises everyone a time they will never forget.

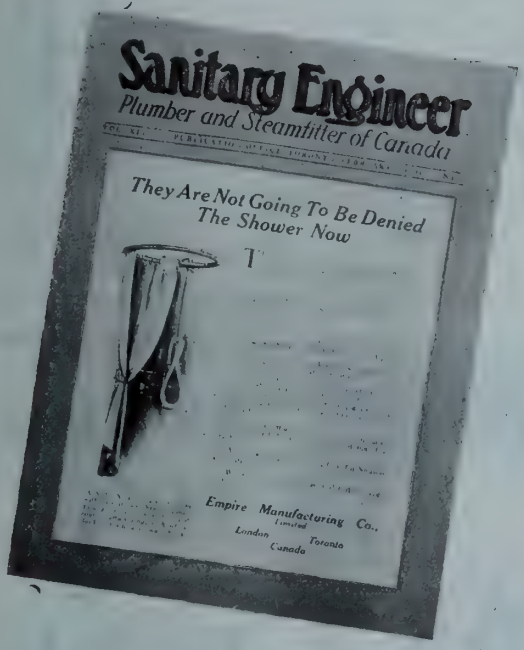
Everyone, now, altogether,

ONE FOR ALL AND ALL FOR ONE.

Yours for co-operation,

FRANK R. MAXWELL,
President

Do You Conduct A Plumbing And Heating Department?



Sanitary Engineer
Plumber and Steamfitter of Canada
They Are Not Going To Be Denied The Shower Now
Empire Manufacturing Co. Limited
London Toronto Canada

The livest, up-to-date sanitary plumbing and heating engineers in Canada are subscribers to SANITARY ENGINEER, **Plumber and Steamfitter of Canada.** This live, breezy paper coming out twice monthly with a large volume of practical and interesting information for its readers is available at the cost of $1.00 per year, or less than 5c per issue. For the small sum of $1.00 you receive 26 issues filled with interesting editorial information and bright, newsy advertising pages giving news and information regarding new goods and the latest developments in plumbing and heating goods.

If you conduct a plumbing and heating department and you are not yet a subscriber to SANITARY ENGINEER, you are overlooking one of the best investments you could possibly make.

Read This Interesting List

Read the following, giving a brief summary of editorial information in the April 1 issue:

"PLUMBING REPAIRS WILL BE CASH." A story telling how 10 Brantford plumbing firms have placed their businesses on a cash basis.

"RIGHT ON THE JOB—GET BUSINESS." An illustrated story telling how Brousseau and Frere, Quebec, Que., have built up a big business on a small beginning. Their methods are described in this issue.

"SASKATCHEWAN CONVENTION REPORT." A detailed report of the convention of the Saskatchewan Society of Sanitary and Heating Engineers held at Saskatoon.

"CONTRACTS AND CREDITS." An address delivered by Neal Beaton, of Beaton & Brady, Saskatoon, before the Saskatchewan Convention.

"SEWAGE DISPOSAL FOR SMALL COMMUNITIES." Fourth article of a splendid series of articles by B. T. Ellis for which SANITARY ENGINEER has the exclusive publication rights for Canada.

"VENTILATION AND EXHAUST SYSTEMS." An address delivered by C. W. Keniston at a recent convention held in Milwaukee.

"TEST YOURSELF WITH THESE QUESTIONS." A test which you can apply to yourself. It consists of 65 questions and will enable you to check up the results of your personal effort and also of your business.

"RUMOR OF A TAX ON SALES IN CANADA." Details regarding the proposed turnover tax and how it will work out.

"MONTREAL CRAFT SEES ENCOURAGEMENT." A page of interesting information regarding the activities of the Montreal organization.

"THOUGHTS." By Napolean Hill—a page of inspirational reading matter.

"BUILDING ACTIVE DURING FEBRUARY." Complete Details regarding the building permits issued in Eastern and Western Canada cities.

"EDITORIAL." Success and Profiteering—Under Production and Over Production—Increasing Sales—Turnover Tax—Causes of Inflation—Are You Insured?

"NEWS FROM HERE AND THERE." A bright breezy page giving news gathered from various sources.

"MARKET CONDITIONS AND TENDENCIES." Two pages of bright accurate market information giving actual prices quoted on goods used by the plumbing and heating trade.

The above is a partial list of the editorial contents of the April 1 issue.

The April 15th issue contained, among other features, a complete report of the Ontario Society of Domestic Sanitary and Heating Engineers' Convention, held at Toronto.

Pin $1.00 to the coupon below, mail it to the address given below, and you will immediately start receiving twice monthly a paper that is easily worth more than the subscription for any one single issue. SANITARY ENGINEER is one of the sixteen papers published by the Mac Lean Publishing Company. It has been published twice monthly since 1907. Most good plumbing and heating engineers are now subscribers. If you are one of the few not subscribing, **ACT NOW.**

This is a "Q" Foot Valve

And it Just *CAN'T* Leak

There are more pump troubles caused by "leaky" valves than from all the wear and tear which occurs in the average life of a pump.

The "Q" valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that JUST CAN'T LEAK.

Made in sizes from 1 to 8-inch.

R. McDOUGALL CO., LTD.
GALT., CANADA

Wrought Pipe

The coming spring will see a big spurt in the building trade, road construction, etc. Contractors, are you ready? Our C.T. Brand of wrought pipe has been

Thoroughly Inspected

by practical, experienced men. It is tested to 600 lbs. hydraulic pressure, and branded with our trade-mark. We carry this line of reliable pipe in sizes ⅛ in. to 4 in. Black or galvanized. We also manufacture nipples and couplings, black and galvanized, in all sizes.

Ask your jobber for C.T. Brand of Wrought Pipe.

Nearly Half-a-Million Now In Use

There Must Be a Reason

THE feature that sells the VitrO is a simple one. It is as perfect a tank as it is possible to make.

Its mechanical perfection, yet ideal simplicity makes it the "Last Word" in tanks.

We stand behind each VitrO Tank because we know that every fitting is tested, and a tank passed by the plant inspector has never yet been known to give dissatisfaction.

It's an all-one-piece tank—no metal linings to leak.

VOL. XIV. PUBLICATION OFFICE, TORONTO, MAY 15, 1920 No. 10

Empire Quick Pression Basin and Shampoo Cock

Here is an Empire sanitary fixture which for attractive design and simplicity of operation is a valued asset in a barber's shop.

It is designed to fit any size lavatory, and water can be run from the shampoo outlet or for the basin without the necessity of turning on or off two or more taps.

All the cocks are on the quick pression principle, insuring absolute shut-off and durability.

It is a time-saver especially constructed to meet every requirement for barber shops.

It is efficient, durable and sanitary as all Empire fixtures must be before they leave the factory backed by the Empire guarantee.

Tell the World!

A Little "Straight Talk" to the Canadian Plumbing Trade

The merchant of to-day who does not advertise loses the power of a great force which is placed at his disposal. It has been said that to stop advertising is like taking down one's sign. Every sanitary engineer has in his Canadian town or city the opportunity for using his local newspaper to give the people of his community a vital message.

There should be no lack of important matter for such advertising. So much remains to be urged upon householders in the way of advising them to use better sanitary arrangements, to replace antiquated fixtures, to instal fittings of the best quality and type, that the advertisement-writer need not suffer embarrassment. He should give a straight-from-the-shoulder message and use his newspaper space for snappy, newsy announcements week by week. The old-fashioned statement, "Wm. Smith, Plumber. Best Work at Lowest Prices," is an easy way of spending money for practically no result.

George Cohan, the well-known actor-manager, says: "Caesar was an advertiser on a big scale, and all the early Greeks weren't ashamed of themselves. Anybody who ever did anything, advertised, or was advertised." Elbert Hubbard remarked: "The only man who should not advertise is the one who has nothing to offer in the way of service or who cannot make good." Zimmie says: "An advertisement does more business for its size than anything else, except, perhaps, a black ant up a fellow's trouser-leg."

If any man in our particular line feels the need of assistance in preparing advertisements, he should write to us direct or to the publishers of this paper. In either case he will be given quick and effective aid. There should be no reason for failure to "tell the world" of our ability and readiness to be of service. To quote Hubbard again: "Advertising is the advance agent of prosperity."

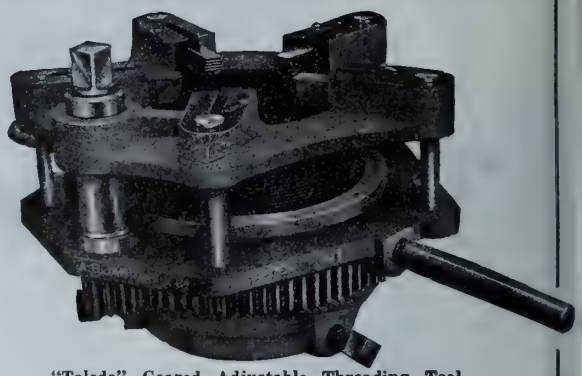
JARDINE and TOLEDO PIPE THREADING TOOLS



"Toledo" Geared Adjustable Threading Tool, No. 2½. Capacity 2½ to ½ in. inclusive. Weight 120 lbs.

THE ratchet feature of Jardine and Toledo Tools permits their being used to thread pipe which is already in place, no matter how awkward it may be to reach. The Jardine and Toledo has no cams or jim cracks to get out of order; and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

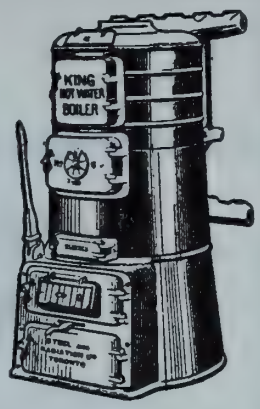
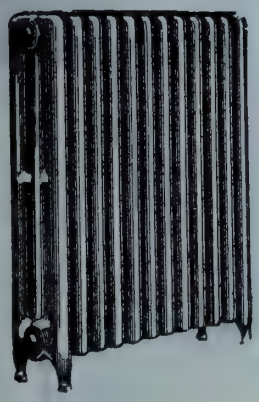
Recommend an Efficient Heating System To Your Customers

Character in a Heating System, like character in a man, is not fixed by any one quality. It is an aggregate of many qualities, and the value of the final product depends upon how well each and every one of these varying factors is assembled in the finished product.





KING HOT WATER BOILERS AND IMPERIAL RADIATORS

Considered as a whole, King Hot Water Boilers possess these attributes to the highest degree, and are backed by a policy of manufacture which has developed and maintained this character for every product bearing our name. The result is "Built-in" quality. Your customers will be perfectly satisfied with a King Hot Water System.

Our Twenty-Third Annual Convention

will be held in

Toronto, Ontario

on

Tuesday, Wednesday and Thursday

JUNE 8th, 9th and 10th, 1920

The officers extend to every sanitary and heating engineer, throughout the Dominion of Canada, a hearty invitation to attend this Convention for the consideration of progressive ideas, methods, regulations and systems for the welfare and improvement of the plumbing and heating industry in Canada.

Everyone engaged in our calling should be on hand, or represented by delegates from their local or provincial society.

Appoint Your Delegates at Once

The officers of the society are busy preparing for the largest Convention in the history of the Canadian society, and the members of the Toronto society are making arrangements to entertain you as only sanitary and heating engineers know how.

Every manufacturer and wholesaler extends a welcome to one and all, and promises everyone a time they will never forget.

Everyone, now, altogether,

ONE FOR ALL AND ALL FOR ONE.

Yours for co-operation,
FRANK R. MAXWELL,
President

Plumbers' Supplies

Quality and Service

Our plant is always at your disposal. We stand supreme in quality and service. We carry the largest and most complete stock of plumbing goods in Canada. Cast iron enamelware, porcelain ware, brass goods and other sanitary specialties. We handle cast iron soil pipe and fittings and septic tank syphons for country sewage disposal systems. And we can make prompt deliveries to any part of the Dominion. You cannot procure a better and more dependable line of sheet lead on the continent than we make. Even in thickness and quality, and in any size or weights. Ask us about our flashing lead; it works up easily and will not crack. Our lead waste pipe, too is one of the best recommendations we have. With such a plant at your disposal and with such an efficient staff, we feel sure that you will agree with us that we can give the trade of the best in material, and the very best in service.

How To Put a Crimp Into That Auxiliary Bunk

By Booster Binx

Yes, bunk; that's what it is—just bunk. Sit down here while I tell you about what I ran into yesterday.

A neighbor of mine has a certain boiler, that is so hungry for coal, that he asked me to drop over and see if I couldn't do something to kill its appetite.

What do you think I found sitting side by side that boiler, but a big barrel like pipeless heater. He said "it was for auxiliary purposes."

"What do you mean by "auxiliary purposes?" says I. "For Spring and Fall use," he says, "when it's not cold enough to need the boiler."

"What's the matter with this old tea kettle of yours," says I, "can't you throttle it down?"

"Got to keep her running 20 miles an hour, or she stalls," says he.

"Come close," says I, "while I tell you something that will make you want to wrap your head up in a hot towel.

If you had brought one square sectional Burnham Boiler, you would have had **two** boilers in one.

A small one for Spring and Fall; and a large one for Winter.

The **two** boilers wouldn't have cost you a cent more than **this one** old tea kettle of yours.

You see, with a Burnham, you can run half of it at a time; or all of it, just as you like. You can do it, because the grates shake half at a time.

You can run your fire on the front half only, and have all the benefit of all that 3 times back and forth fire travel just the same as if you were running the whole boiler.

In a jiffy you can dump the dead ashes from the dead half, push over some live coals and start the entire thing going.

Why, man dear, you just blew in about $150. for that "auxiliary purpose," with which you could just as well have brought oal."

Of course, being my neighbor, I didn't rub it in—but by heck, sure did want to.

And while I think of it, drop around soon again; want to tell you about "The Sad Tale of a Flue Brush." It's so sad, it's funny.

Power Machinery Helps Build Business

O. Picard & Fils, John Street, Quebec, Keep Pace With Big Contracts by Using Modern Equipment—Sales Are Helped Through Display

O. PICARD AND FILS, John St., Quebec, have kept abreast of the times, and, by anticipating the needs of their customers and the opportunities of the day, have built up an extensive plumbing business through the adoption of modern equipment. In addition to this they have so altered their premises from time to time as to afford them an excellent display room, where every type of fixture carried, including baths, basins, closets, shelves, etc., may be viewed by the customer. This has paid them well, in real money, for the customer who can see what he is buying, while being told the merits of a given piece of plumbing or a fixture, is more likely to say: "I'll take that," than if the whole of the "cards" are not laid on the table. It has worked well, this plan of display.

Use a Special Room

In arranging the displays, J. M. Gaudry, the manager of the firm, finds that the use of a generously-sized room at the rear of the store entrance has worked out well. There is a big advantage in this. When buying a new bathtub, a basin, or a closet it may be, the customer is away from the disturbances that would present themselves when the door is constantly being opened at the entrance, and new customers entering, and others departing. Mr. Jones comes in.

"I would like to see a pedestal lavatory basin for my new barber shop."

"Yes, this way, please. We have just received a new pattern which will be worth your while to see. It is set up here where you may see it, and I will outline the advantages, particularly as it looks good to me as a fixture that will not only grace your shop but give you little trouble with its new style trap."

And thus, once begun, the sale of that fixture is developed, and not only has a profit been made that is well worth while, but the customer has been so well pleased that he will, in future, place his order here for both fixtures and repairs, or any accessories that he may need. Indeed, he has probably already been

The generously-sized display room for bathroom fittings, located at the rear of the store, where the customer is away from the disturbances caused by the constant opening and closing of the door at the entrance. The "setting" for the display has been carefully planned, comprising a color scheme of dark blue and sky blue, these colors blending nicely with the white enamel fixtures.

Shelving sections accommodate a large variety of gas fixtures, fittings, etc. A cabinet is shown in the picture. This contains screws, nuts, bolts, etc. Special drawers are provided for each article, and the work of salesmen or workmen is therefore facilitated, while the appearance of the store is greatly improved.

shown and sold some "extras" which he had no intention of buying, and all because he had the uninterrupted attention of the salesman.

Daintily Decorated

It is imperative that the "setting" for display of fixtures be carefully planned. The Pickard Company has chosen, as its color scheme, dark blue and sky blue. These shades blend nicely, and the setting for the pure white enameled fixtures is a good one. With a hard maple floor, and with ample display space—the showroom being 20 by 40 feet, all fixtures are shown to the best advantage, and sales are the more readily made

That the customer may be assured of a close scrutiny of the fixtures displayed, eight electric lamps afford a flood of bright electric lights. On a dull day, or toward dusk, these lights make the whole arrangement an attractive and pleasing one. All through, this show room is carefully kept, and displays are maintained with a minimum amount of care. It is a simple matter to replace a removed fixture that may have just been sold; a simple, matter, too, to keep all fixtures dusted from day to day. A little care, frequently, ensures a well-kept show-room all the time.

Fine Fixtures

Those who run away with the idea that plumbing does not require to be well displayed will be ready to think the matter over when viewing the displays of this firm as embodied in the accompanying photographs.

In the front section of the store sections of shelving accommodate a large variety of gas fixtures, fittings, and other small fixtures. Right in the centre of the store and to the front of the main office (located right in the centre of the store to the rear of the first division) is a small cabinet for containing screws, nuts, bolts, etc. In this location it is handy, and the workmen or the salesmen can readily secure the desired article. It makes for neatness in arrangements. Then, too, it serves to care for stock that might otherwise become very untidy, resulting in loss and confusion. Mr. Gaudry said that these arrangements were excellent and that all the fixtures were a great satisfaction.

In some of the sections electrical fittings are stocked. There are so many of these fittings that some such system is essential if one is to conserve stock and keep it in orderly manner. The effect of such a fine showing of fixtures on the prospective customer will be obvious to the reader.

Use Power Machinery

The Picard business has been conducted for many years, and with the demands made upon it has grown greatly. With changing conditions has come a demand for power machinery, and this has been installed as the demands required.

A Hall single pipe-cutting and threading machine has been in use for some time, this being capable of taking pipe up to eight inch diameter. In addition, a separate cutter of the same make for pipe up to 2 inch is used. A Duplex Nipple machine, also, is used, and this will make nipples up to two inch.

All this machinery is run through the adoption of electric power, and manual work is thus reduced to a minimum. The adoption of power machinery has enabled the firm to tackle any contract no matter what the size may be, and the results are highly satisfactory.

The shop is located in the warehouse to the rear of the store on the second floor. This is very satisfactory in that the men are away from any disturbing influences and may pursue their work uninterruptedly. It makes for better work and speedier completion of a given job to be so located.

How to Get Results

"We pay our men as much as possible," said Mr. Gaudry, to SANITARY ENGINEER, "and we have no trouble. It is all in having good men. The man who has caused any trouble is the man who has wasted time, and when there is pipe to be lifted, water to be shut off, etc., a helper can do this quite as well as a plumber. It pays to have a good helper and people do not mind paying for this."

In all from twenty-five to thirty men are employed, and Mr. Gaudry stated that he had been fortunate in getting a good foreman. "Our man is excellent."

(Continued on page 34)

Revisions in London Plumbing By-Law

Revised Schedule of By-laws as They Will Likely be Presented for Ratification—Number of Important Changes in Connection With Venting—London By-law Will Stand Even if New Ontario Regulations Are Passed

LONDON, Ont.—After having considered the plumbing by-laws for month, the special committee has submitted the following clauses to the council. A comparison between the original by-laws which appeared in the issue of SANITARY ENGINEER with the revised by-laws shows a number of important changes, especially in connection with the question of venting. There seems little doubt that the revised by-laws will be acceptable and will be passed. In this case, even if the proposed Ontario regulations receive the signature of the Lieutenant-Governor, and go into effect, they will not supersede the by-laws given below, as the statutes provide that where there are existing by-laws, they are to stand. The original City of London by-laws conformed very closely to the proposed Ontario regulations. The revised by-laws, as may be seen by comparison, differ considerably.

The new London by-laws are as follows:

BY-LAW TO SECURE THE SANITARY CONDITION OF BUILDINGS

Be it enacted by the Council of the Corporation of the City of London as follows:

Plumbing and Drains for Buildings

1. It shall be unlawful for any person or persons to do any work in connection with plumbing or drainage of any building within the City of London, unles sthe same shall conform with the following requirements:

Permits for Construction of Drainage, and Plumbing

2. Before proceeding to construct, reconstruct, alter or relay any portion of the drainage, ventilation of any hotel, warehouse, dwelling house or other building, the owner or his agent (in the case of agent his authority from owner must be produced in writing), desiring to construct the same shall file in the office of the Medical Officer of Health an application for a permit therefor, and such application shall be accompanied with a specification or abstract thereof in a blank form prescribed and supplied for this purpose, stating the nature of the work to be done, and giving the size, kind and weight of all pipes, traps and fittings, and a description of all closets and other fixtures, and also a plan thereof, showing the street and street numbers marked thereon and the drainage system, provided however, that necessary minor reports may be made to prevent loss or damage.

Scale of Plans

3. All plans must be legibly drawn in ink on heavy white paper or tracing linen or satisfactory blue prints, and on a scale of eight feet or four feet to an inch, and such scale plainly marked on plan.

Refusal of Permits When Plans Do Not Conform With City Requirements

4. If the Medical Officer of Health finds that the plan and specifications do not conform with this By-law, he shall not issue any permit, and it shall be unlawful to proceed with the work referred to in the application.

Granting Permits

5. A permit shall be granted or refused within two days from the time of filing the application, and (if granted), shall be valid for six months from the date of issue.

Alteration of Plan

6. After a plan or specification has once been approved no alteration or deviation from the same shall be allowed, except on a written application of the owner, or agent of the owner, and with the approval of the Medical Officer of Health, and excepting further that it be in conformity with the provisions of this by-law and shall not permit of additional fixtures.

Plumber, Etc., Not to Do Work Until Permit Obtained

7. No master plumber, plumber or tile drain layer, engaged by the owner of any building to construct, reconstruct, alter or relay any portion of the drainage, or ventilation thereof, shall do any work in connection with such construction, reconstruction alteration or relaying at or upon any such building until such master plumber, plumber or tile drain layer has satisfied himself that the owner has filed his application for a permit for such work, as required by this section, and has obtained a permit therefor as required by section 2 of this By-law, and the production of such permit from the Medical Officer of Health shall be sufficient evidence to the said master plumber, plumber or tile drain layer, of the application at the Department of Health having been properly made.

Hand-Hole Cleaning Trap

8. Between the building and the public sewer or drain there shall be placed a ventilation hand-hole cleaning-trap of approved description and make, placed inside the building or outside thereof.

9. Between the said trap, or from top of same, and the foot of the soil pipe there shall be connected with main house drain an inlet pipe, for the admission of fresh air, four inches in diameter, to be situated as far as possible from any opening into the house, and not less than 12 inches above finished grade, the mouth of which shall have a return bend or a cap giving an area of one-fourth more than the diameter of the inlet pipe.

Should cellar window or other opening be within, or adjoin verandah, the air inlet must be situated as remote as possible from the same, it must not terminate under closed verandah or under steps, but be brought out and finished in the open.

Septic Tanks

10. In case of a building or buildings to be built on a street which is not sewered, septic tanks or cesspools may be installed upon receiving a special permit from the Medical Officer of Health, and they shall be subject to conditions imposed by him from time to time.

Tile Pipes Underground

11. Tile pipe in underground drainage shall be of the best material and workmanship, and free from all blisters, cracks, flaws, or defects of any description.

Junctions

12. All changes in direction shall be made with "Y" junctions and curved bends; no right angle junctions will be allowed; all joints must be put together with the best portland cement, properly mixed and tempered, caulked with okum or stranded yarn, and finished flush with the edge of the pipe; the joints on the inside of the drain to be in all cases properly cleaned and finished so as to be perfectly free from all burrs; no drain shall be laid with a less grade than the following:

Drains 4 inches in diameter, a minimum grade of 1 foot in 40 feet.
Drains 6 inches in diameter, a minimum grade of 1 foot in 60 feet.
Drains 8 inches in diameter, a minimum grade of 1 foot in 80 feet.
Drains 10 inches in diameter, a minimum grade of 1 foot in 110 feet.
Drains 12 inches in diameter, a minimum grade of 1 foot in 140 feet.
Drains 15 inches in diameter, a minimum grade of 1 foot in 200 feet.
Drains 18 inches in diameter, a minimum grade of 1 foot in 250 feet.
Drains 24 inches in diameter, a minimum grade of 1 foot in 330 feet.

Tile Drain Pipes

13. Vitrified salt glazed earthenware drain pipe shall be equal in quality to those used for the private drain connection, as specified from time to time by the City Engineer for private drain connections. The pipe used for weeping or sub-soil drainage tiles shall be connected to a rain water leader drain on house side of trap; surface and floor drains must be trapped and have screwed brass plug.

Not to Connect With Weeping Tile

Waste pipes from sinks or a plumbing fixture of any size whatsoever shall, under no consideration, be connected to weeping tile under any building.

Must Connect on Sewer Side of Main Trap

14. All drains used for weeping and sub-soil drainage of any building must connect to main drain of building on sewer side of main trap and be so arranged that sewage will not pass or back into their trap.

Prepared Foundation

15. All earthenware drain outside a building laid on newly-made ground or very wet soil, shall be laid on a prepared foundation of 2-in. pine plank or 4-in. concrete. No built trap or mason's traps shall be used inside of any building. All traps on earthenware drains shall be vitrified salt glazed earthenware, and all traps to have hand-holes, and said hand-holes extended to the surface. No inverted joints of any kind will be allowed below any fixture.

Private Drains Laid by the Corporation

16. All private drains laid by the Corpora-

MAY BE LATER SET-BACK FOR NEW LONDON BY-LAW

London, Ont.—Chairman J. H. Saunders, of the Board of Health, states that the amended and to-be-amended plumbing by-law would probably receive its worst set-back at the hands of the Provincial Board of Health, to which it must be submitted before being made law in London.

"As chairman of the Board of Health," he stated, "I am bound to uphold the provincial plumbing by-law. I will not break that law."

At the same time Mr. Saunders feels that the responsibility of the measure will have to be left on the City Council and the provincial board.

He intimated that the local Board of Health would not presume to dictate to the Council, nor to disapprove of what they had approved of. If the amended measure is accepted by the Provincial Board of Health, the local health body would acquiesce.

Mr. Saunders pointed out that the provincial body was not prone to press absolute obedience to their by-laws so long as the public health was not menaced.

"For instance," Mr. Saunders pointed out, "the laws of the province forbid city sewage being discharged into rivers or streams. Yet we all know that this is being done in a small way here. The Provincial Board of Health could protest against this practice in London and there would be nothing to do but immediately install other methods of sewage disposal. However, the public health has not been affected to any appreciable extent, so nothing has been done."

Rain Water Leaders

17. All rain water leaders shall be trapped when connected with the drainage system of any building.

(a) Rainwater leaders shall not be used for soil or waste pipes, nor shall soil or waste pipes be used for rainwater leaders.

(b) When the conductors or roof leaders connect to drain inside of the main trap they shall be of the same material as a soil drain, and when passing up to roof within a building they shall be tested the same as the soil system with the water test.

(c) Where roof area of any building is greater than 1,500 square feet, plans showing proposed drainage thereof shall be submitted for approval to the Medical Officer of Health and the City Engineer.

All Drains of Cast-Iron

18. All drains used for sewage or waste water under any building shall be of cast iron, and of the kind and weight specified by this By-law.

Cleaning Out Screws on All Cast-Iron Drains

19. All cast-iron soil and waste pipe shall be rendered impervious to gas or liquid, by the joints being caulked with oakum and run with molten lead.

Alterations in a Building

20. When alterations are made in a building already drained by a tile drain, same may be re-used (provided they are satisfactory to the Medical Officer of Health).

If necessary to relay, it shall be relaid as provided in clause 18 of this By-law.

Fixtures Trapped and Connected

21. All plumbing fixtures put in for use in any building shall be properly trapped, vented and connected to a sewage drain, soil or waste pipe. Wooden laundry tubs and wooden sinks connected with house drains are permitted.

Refrigerator Wastes

22. Refrigerator wastes, if drained, shall terminate and discharge into an open sink, which is supplied with City water, or other method approved by the Medical Officer of Health.

Safe Waste, Etc., Not to Connect With Drain

23. No safe waste, range boiler, heating boiler, or cistern overflow shall be allowed to connect to any drain, except where a cistern is in clay land. Wherever safes are placed under fixtures the safe waste shall be run separately to a tapped sink or basin in the basement or cellar and be closed by a hinged brass flap valve of approved device, to prevent cellar air from rising through the pipe. Urinal platforms shall not be provided with safe wastes.

Drinking Fountains

24. Drinking fountains, manufactured for this purpose only, placed on wall or pedestal, and used for drinking only, may be connected to a rain water leader drain on building side of its trap, having a separate trap without vent; but if connected to a sewage drain they will be considered a plumbing fixture, and shall have a trap properly ventilated.

25. Each house or building must have its own separate soil pipe, four inches or larger, and drain, and such soil pipe shall be so placed as to enable it to be readily inspected without destruction to walls; and the plumber shall be responsible for the proper connection of his work with the system of drainage; and no two or more buildings shall have any drain in common until after the drain has reached the external wall of the building which it serves, except where there are two buildings on the one lot, one in rear of the other; if in that case there is no sewer or drain in the lane or alley to which the rear building can connect, and the rear building is not used as a dwelling-house or for human habitation, the drain of the front building may be extended to serve such rear building.

All Soil Pipes of Cast-Iron or Wrought Iron Galvanized

26. All soil pipes within the walls of any building shall be of cast-iron or wrought iron galvanized, and shall be continued at least three feet above any opening in the roof, which may be within fifteen feet of the same, and three feet above any opening into any adjoining building or extension when such building or extension is within fifteen feet of such pipe, and be left open so that the whole of the inside drainage may be thoroughly and constantly ventilated. All soil or vent pipes, when they pass through the roof, must be properly flashed and made water tight. That portion of metal resting on roof must be at least 20 inches square, and that portion extending up pipe, if used, must be 10 inches high.

Soil Pipes Must Be Increased One Size

27. No soil pipe of 4 inches in size shall receive or have connected to it the discharge of more than four floors of any apartments or flats building; each floor must not contain more than two W.C.'s four baths, two basins, two sinks, and two sets of laundry tubs. Main vent pipe for this or similar cases must be increased one size below roof, and pass out separately through roof.

Cast-Iron Pipes

28. No cast iron pipe used for soil pipe shall weigh less than the following per length of five feet:

2-inch	inside diameter	20 lbs.
3-inch	"	30 "
4-inch	"	45 "
5-inch	"	65 "
6-inch	"	75 "
7-inch	"	135 "
8-inch	"	167½ "
10-inch	"	225 "
12-inch	"	270 "

Pipes, Traps, Bends, Fittings of Good Quality

29. All pipes, traps, bends or fittings of cast iron shall be of good quality, and shall be free from flaws or defects, and shall be of uniform thickness.

Traps and Fittings to be Same Quality as Pipe

30. All traps and fittings shall be equal in quality and thickness to the pipe to which they are attached.

Garage Drains

31. Public garage drains must be of the same material as that required for house sewers when underground; and for soil and waste pipes, when above ground.

Drain in Garage

In public garages or other buildings where petroleum oils are used, all drains coming in contact with the same, including bell traps, sink and lavatory wastes, must pass to sewer separately from other drainage, and shall pass through a sump made according to the instructions of the Board of Health. The diameter of this sump shall be eighteen (18) inches if one or two machines are provided for; twenty-four (24) inches if there are more than two machines.

The material for vent pipe must be the same as required for house drains when below ground, and for soil and waste vents when above ground.

Galvanized Wrought Iron Pipe

32. No wrought iron pipe galvanized shall weigh less than the following per lineal foot:

1¼	in.	inside diameter	2.24	lbs.	per lineal ft.
1½	"	"	2.68	"	"
2	"	"	3.61	"	"
2½	"	"	5.74	"	"
3	"	"	7.54	"	"
3½	"	"	9.00	"	"
4	"	"	10.66	"	"
4½	"	"	12.34	"	"
5	"	"	14.50	"	"
6	"	"	18.76	"	"
7	"	"	23.27	"	"
8	"	"	28.18	"	"
9	"	"	33.70	"	"
10	"	"	40.00	"	"

Recessed and Threaded Drainage Fittings

All fittings used for soil or waste pipes in connection with wrought iron shall be extra heavy galvanized cast iron or malleable iron recessed and threaded drainage fittings. The burr formed by cutting the wrought iron pipe shall be carefully reamed out, and pipes left full bore.

Prohibited Fittings

33. No double hubs, straight crosses, double "T-Y's" shall be used in any soil or waste pipe below any fixture; no branch fitting other than a full "Y" or "Y" and 1-8 bend shall be used on any soil or waste pipe running in a horizontal direction.

34. When a system is to be installed for soil and waste pipe, any material in conformity with the by-law may be used.

Bath, Etc., Waste Not to Connect to Closet Bend

35. Waste pipes from bath and basin or other fixture will not be allowed to connect to water closet bend, but must have a separate fitting to receive the same.

Waste Pipe Sizes

36. No waste pipe from any plumbing fixture shall be less than inside diameter of its trap.

37. The size of traps for a given fixture shall never be less than the following inside diameter:

	Inches
Water closets	3
Slop sink	2
Pedestal urinal	2
Urinals	1½
Laundry tubs, 1 to 3 considered 1 fixture	1½
Kitchen sink	1½
Pantry	1½
Wash basin	1¼
Bath tubs	1½
Shower baths	2
Sitz bath	1½
Drinking fountain	1¼
Dental cuspidor	1¼

Traps and Vents

38. All drains and plumbing fixtures of every house or other buildings shall be provided with sufficient traps and vents to prevent gas from the sewer, drain, or waste pipes from escaping into any apartment; and each such fixture shall have its own trap with sufficient vent, said trap to be placed directly under, and as close as possible to fixture, excepting as provided in section 47 hereof.

One Trap to Fixture

39. No fixture shall drain through more than one trap (main trap excepted), the vent to be not less than one size smaller than trap, and no vent of less than one and one-quarter inches in diameter.

Vents to Increase at Roof

40. No trap vent pipe shall be less than three inches inside diameter where it passes through the roof or outside wall, and all vent pipes must continue to rise after leaving the trap, and pass out through the roof or connect with soil pipe, above the highest fixture. Traps for basins and sinks, when ½ "S" or "P" traps are used, may be vented by a continuous vent if centre of waste opening is not more than 12 inches from face of finished plaster or wall which they pass through or along measured, at right angles from face of wall—in all other cases location of trap vent will be governed by paragraph (c) of this clause.

Branch Vent Pipes

(a) No trap vent will be allowed to connect to another vent below a point level with top of fixture for which it is used.

Off a Trap or Lead Bend Under a Floor the Shortest Way

(b) A vent taken off a trap shall be extended in the shortest way to nearest suitable wall or partition, and then extended vertically as high as required above floor line.

Slip or Washer Joint Shall Be Allowed

(c) No slip or washer joint shall be allowed on sewer side of any trap or on any vent pipe. Trap vents in all cases (W.C.'s excepted), must be taken off discharge side of trap or waste pipe, as shown in diagram—crown venting will not be permitted. No wrought iron vents will be allowed below top of cellar floor, or to be buried under any earth.

Terminus

41. The rule for soil pipe terminus, as hereinbefore mentioned, shall govern said vent pipe.

Brass Pipe

42. No brass pipe used for waste or vent pipes shall be less than No. 19 Imperial gauge in thickness, and all brass pipe and fittings must be properly tapped and threaded.

Size of Closet Vents

43. Vents for water closet traps shall be 2 inches for a length of 25 feet, and for a greater length, 6 inches, provided, however, in buildings of not more than two stories in height it shall not be compulsory to ventilate the lead bend of a water closet. However, when two or more closets in a battery are connected to the one branch of the soil pipe, the loop system of ventilation shall be installed. In no case shall the two top storey water closets be required to be ventilated.

Vent Pipe Stacks Must Be Increased

44. Vent pipe stacks must be increased one size after passing through four stories, and keep on increasing one size for each succeeding four stories.

Of Brass, Lead, Cast-Iron, Etc.

45. Trap vents must be of brass, lead, cast-iron or galvanized wrought iron, with brass, galvanized, cast, malleable iron or brass fittings.

Size of Closet Vents

46. Closet vents, into which other vents are connected, shall be three inches in diameter. When the vent pipes combine, they must be increased in size.

Hints on Seasonable Advertising

The reproduction of some sample advertisements herewith will give some idea of the lines being advertised by others in the trade in all parts of Canada, and will impart some ideas or suggestions which others may incorporate in their local advertising.

A CLEAN-UP week was recently held in the city of Brantford, Ont., and the local plumbers made best use of the occasion to stir up enthusiasm for their line of business. Instead of the usual advertisements in small space, a half-page was taken in a local newspaper. Half of the space was used to announce in bold type the fact that it was clean-up week. An illustration showing a number of miniature persons pulling and shoving on a rake was used. Under the caption the following paragraph appeared:—

"Get out the rake and the shovel and look after the lawns and the backyard. Put out the accumulated rubbish of winter for removal by the garbage men. Paint and varnish and repair, adding to your home the new touch which spring demands. Then, when you're tired out, figure how much easier it would be for your wife if you bought her some electrical equipment which would enable her to have more time to enjoy life by ridding her work of drudgery. It's clean-up week. Get busy. Brantford can be made a beautiful city only if everybody sets out to have a prettier and cosier place than his neighbor. The town is what the people are. Do your share in making it Brantford the Beautiful."

The lower half of the space was occupied by advertisements of local plumbers, among which was the one reproduced herewith by Wm. Tipper & Son. This announcement makes "Seasonable Reminders" indicating that "an additional bathroom in the home is not a luxury but a necessity." It continues: "A lavatory supplied with hot and cold water installed in the sleeping room is a great convenience. A one-piece white enamelled sink is a necessity in the up-to-date sanitary kitchen. A good set of laundry tubs and an electric washer certainly will reduce the cares of home management." These are a number of well-constructed sentences, very much to the point, and such construction features advertisements that "have a punch."

No Excuse for an Untidy Kitchen...

when you have our sanitar plumbing and up-to-date kitche equipment, we would recommen the installation of an

Porcelain or Enamel Kitchen Sink . .

A thing of beauty and usefulnes and a joy forever to the cook o housewife.

Let us show you this Model Equipment at our Store

W. ADAIR

The Plumber

QUEEN ST., KINCARDINE

* * *

"NO EXCUSE FOR AN UNTIDY KITCHEN," says an advertisement by W. Adair, Kincardine, Ont., as shown herewith. This ad. makes best use of its space by the use of an illustration and of bold type in upper and lower case, to emphasize three lines which tell the story. Following the heading it continues: "When you have our sanitary plumbing and up-to-date equipment. We would recommend the installation of a porcelain or enamel kitchen sink. A thing of beauty and usefulness and a joy forever to the cook or housewife. Let us show you this model equipment at our store."

WHAT TO DO

when you have trouble with your plumbing, just telephone No. 203 You will get prompt service by the best workmen in the city, you will be satisfied with the way we work. Others have been.

Plumbers, Phone 531, Barrie

* * *

"WE DON'T PUT UP JOBS" is the introduction on an ad. by Yorkton Plumbing and Heating,

Seasonable Reminders:

An additional bathroom in the home is not a luxury; it is a necessity.

A lavatory supplied with hot and cold water installed in the sleeping room is a great convenience.

A one-piece white enamelled sink is a necessity in the up-to-date sanitary kitchen.

A good set of laundry tubs and a "Time Saver" Electric Washer certainly will reduce the cares of home management.

Let us consult with you and quote prices on any alterations or additions to your plumbing equipment. We can give you first class service.

Wm. Tipper & Son

PLUMBING HEATING LIGHTING

Dealers in Electric Chandeliers, Ranges, Heaters and Supplies of All Kinds.

45 DALHOUSIE STREET PHONE 281 NIGHT 1804

of Yorkton, Sask. Much the same style as in the Adair announcement is used in this ad. from the West. Continuing after the heading it says: "For future work when called upon to fix your roof, eavetrough, conductor pipe and water tanks or any kind of iron work, plumbing, etc.

"We are kept busy doing honest work and don't have to scheme for more. By the way, do you know that the rains will soon be here? Better have us look after your work and water tanks now before they arrive. We always carry an assortment of water tanks in stock. Yours for service and satisfaction."

This announcement seeks to discourage the too popular idea that the plumber seeks to make as much work out of a job as possible. Its second strong point is that it makes a definite suggestion that the rainy season will soon commence and that there is repair work to be done in advance. The giving of such suggestions makes the appeal more personal and invariably brings better results from local advertising than when generalities are indulged in.

* * *

"WE ARE RIGHT THERE," says the ad. of Moffatt & Parr, Barrie, Ont., as shown herewith. "When it comes to anything in the way of tin and sheet metal work," it continues. "We are equipped to give quick and lasting satisfaction. It makes no difference whether it is a large job or small, new work or repairing old, it will be done as it should be done, if we do the work."

This is a two-column advertisement which occupies slightly less space than the longer one-column ad. as shown by W. Adair.

* * *

"DO NOT EXPERIMENT WITH YOUR HEATING AND PLUMBING PROBLEMS," warns an announcement by McGrattan's, Assiniboia, Sask. No illustration is used in this ad., but the best use is made of good-sized space by employing bold face type of different sizes. The ad. makes much of an important point, namely, that there are few householders who have not had experience with plumbing jobs which were experimented with by the householder himself or an inexperienced mechanic and which, therefore, cost more finally than if the job had been done right in the first place. The ad. continues: "Have your work done by practical men. It pays. Come in and inspect our furnaces, boilers, etc. Also let us talk over your plumbing requirements."

* * *

"YOUR HEATING SYSTEM—HOW DOES IT BEHAVE?" asks J. C. Stewart, Weyburn, Sask., in a recent announcement. The name of the firm follows the introduction, and then continues as follows: "We offer you the benefit of —— heating service. It means scientific and systematic application of proved methods in the solution of heating problems. Have us look over your heating system and give you an estimate on one which will give lasting satisfaction."

Change Sewer Pipe Values for Customs

Bulletin Just Issued Quotes New Rates of Discount From List Prices for East and West on Sewer Pipe and Flue Lining

A NEW bulletin in regard to fixed values for duty on sewer pipe and flue linings imported from points in the United States, has been issued by the Department of Customs. The bulletin cancels order-in-council dated April 22, 1919, and substitutes bulletin No. 2101, quoting the following rates of discount to be deducted from the list prices shown on sewer pipe and flue lining.

Discounts From Price List "A" (Eastern)

Sizes	Standard Pipe	Standard Seconds
3 in. to 24 in.	67%	70%
27 in. and 30 in.	63%	68%

OIL MAY BE USED FOR FUEL IN ONTARIO PUBLIC BUILDINGS

Oil may become the fuel for heating all Ontario public buildings. The figures in the estimates of the Government show that the use of oil compares favorably with coal. Hon. Mr. Biggs states that the saving in favor of oil in one Government building had been equivalent to the firemen's salaries. He thought that record would improve when the attendants thoroughly understood oil-burning. Hon. Mr. Biggs said that he intended to have a competent engineer investigate the heating conditions at the Parliament Buildings.

	Outside Measure	Price per ft.

CANCEL PREPAYMENT CLAUSE

Steps were about to be taken in protest of the action of United States railways in demanding the prepayment of freight to Canadian destinations in U. S. currency, when that clause was withdrawn. This section has now been rescinded and U. S. railways will allow reconsignment at the border to Canadian points, thus permitting payment being made for the Canadian haul in Canadian currency. This announcement precluded action on the part of Canadian coal dealers from raising the price of coal 50 cents a ton, the effect of which would have been felt in many other departments of the trade as well.

SPECIALS

Gutter, split or channel pipe, per foot 75% of one foot of sewer pipe, same size and thickness.

Cistern tops, same price as two feet of sewer pipe, same size and thickness.

Slop hopper strainers, same price as 3 feet of sewer pipe.

Increasers have socket on small end.

Decreasers have socket on large end.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Montreal, Que.—M. A. Dube & Co. have sold out their plumbing business.

BUSINESS NOTES

Orillia, Ont.—A by-law granting certain concessions to the Glasscoat Sewer Pipe Co. was carried by a large majority.

OBITUARY

Moose Jaw, Sask.—George Brown, an employee of the City Waterworks Department, died recently. He was a veteran of the war.

Montreal. — Friends of Herbert A. Matley, of the Montreal staff of the Thos. Robertson Company, will learn with regret of the death of his father, W. A. Matley.

PERSONALS

Halifax, N. S.—John W. Bruce, of Toronto, organizer of the United Association of Journeymen Plumbers and Steam Fitters, was in Halifax recently, in regard to labor matters.

FIRE LOSSES

Walter H. Benson, plumber, Toronto, suffered loss by fire. The damage was largely covered by insurance.

NEW FIRMS

Cornwall, Ont. — Messrs. Bergeron Bros., who recently purchased the block formerly occupied by the late G. M. Smith, Marlborough Street, from Mr. Fabien Martell, will open a plumbing, tin-smithing and steamfitting business. George Bergeron was on the staff of Messrs. Hermiston & Comrie for twenty years. He is also well-known as a citizen, having represented the East Ward at the Town Council Board for six years and also sat one year as Deputy Reeve and was, as such, a member of the Counties' Council.

His brother, Mr. Joseph Bergeron, who will be associated with him, was also in the employ of Messrs. Hermiston & Comrie for some time but latterly has been employed as a steamfitter at the Canada Mill.

PROVIDES $1,500,000 FOR HOUSE BUILDERS

Windsor.—The city council has adopted the 1920 Housing Act of the Provincial Government, thereby releasing $1,000,000 for the construction of workingmen's homes in Windsor. It is expected the money will permit of the immediate construction of at least 300 houses.

OPEN MONTREAL OFFICE

Geo. W. Cole, Ltd., Toronto, have opened a new office in Montreal, P.Q., at 76 St. Gabriel Street, under the management of Louis H. Bacque, in order to be in closer touch with Montreal business.

George A. Young, with offices at 203 Scott block, Winnipeg, Man., has been appointed representative for the Prairie Provinces.

G. W. BLOOMFIELD,
Of Brantford, Ont., elected President of the newly formed Plumbing and Drainage Inspectors' Assn. of Ontario, at their recent inaugural meeting.

TENDERS

Toronto, Ont.—Tenders will be received till noon June 1st for plumbing and heating work in connection with the erection of a fire hall in Earlscourt. Plans are on file at the City Architect's Department.

Tenders are being called by the Board of Control of the City of Toronto for the installation of sanitary conveniences in a number of dwellings. Plans and information can be secured from the Medical Health Department.

CONTRACT AWARDED

Milton, Ont.—The Town Council has granted $48,000 for the erection of a new High School.

St. John, N.B.—The contract for the construction of the Fraser Memorial Hospital at Fredericton has been let to the George A. Fuller Company, of Montreal.

INCORPORATION

Brigden Brick & Tile Co., Ltd., has been incorporated with head office, in Brigden, Ont., to engage in the manufacturer of drain and sewer pipe, tiles, etc.

PRESIDENT BETHUNE HONORED

MONTREAL.—At the annual meeting of the St. Andrew's Curling Club, held at Montreal, Capt. Dan. A. Bethune, president of the Montreal Master Plumbers' Association, was chosen as president for the ensuing year. This mark of esteem is naturally appreciated by the genial president of the Master Plumbers, the St. Andrew's Curling Club having added, during the past year, no fewer than forty new members. With so enthusiastic a chief officer as is Capt. Bethune, himself an ardent thrower of the "stanes," there will doubtless be some "Trophy Avalanche" next winter, directed the way of St. Andrew's Curling Club.

GUELPH COUNCIL RATIFIES AGREEMENT

Guelph, Ont.—Following the reading of a report by City Engineer McArthur in regard to construction work at the local sewage disposal plant, the city council passed a by-law to execute the agreement between the city and the construction company. The engineers' report was very complete, outlining the whole situation, and indicating that the work of constructing tritus tanks and settling tanks at the sewage disposal plant would cost from $19,000 to $21,000.

BIG HOTEL PLANNED FOR VANCOUVER

Vancouver, B.C.—Another hotel is proposed for Vancouver. It will be a modern nine-storey structure, to be erected shortly by a Forth Worth, Texas, syndicate.

The structure will cover an area of 75 by 120 feet, will be nine storeys high, and will contain 166 bedrooms.

The cost of the structure will be in the neighborhood of $500,000. Architects for the building are Mr. Richard T. Perry of this city, and Mr. Raphael A. Nicolais of Fort Worth, Tex.

DAYLIGHT SAVING—YES AND NO

Brockville.—Brockville has adopted daylight saving for three months, commencing the first of June.

Chatham.—The city council has decided to dispense with the daylight saving by-law for the present season.

Cobourg.—The town council decided to introduce daylight saving time on May 17, to remain in effect until September 6, 1920.

Editorial Comment from Other Papers

Get Information at Peterboro's Expense

DEALING with the recommendation that the city engineer of Peterboro go to New Orleans to investigate a sewage pump of special design, the Peterboro "Review" comments as follows:

"The city's board of works will recommend that council agrees to the city engineer's going to New Orleans and Texas to learn all he can of the merits of a sewage pump in operation down there. The idea is that from such a visit the engineer may bring back information for guidance in the installation of this city's sewage disposal plant. In the past Mr. Parsons has usually been accompanied by the chairman of the Board of Works when on trips in this connection, and that such chairman, whoever he may be, or some other alderman shall do so on this occasion is the intention. It is contended that though the trip will be costly, the city will be repaid in the saving of thousands of dollars through efficiency and economy in the operation of our sewage disposal system. Of course, there is sound argument in that and it would be a pity, now that a commencement on the construction of this system is at last in sight, should its operation be found wanting in any detail for the sake of saving a few hundred dollars in gleaning information.

"But the peculiar feature of this proposed trip away down South is that the suggestion comes from Provincial Sanitary Engineer Dallyn, who as a rider to his letter, says that the type of pump used down in New Orleans has had no publicity in Canada, and we wonder if his object as Provincial Sanitary Inspector, is to assure that publicity at this city's expense. The Provincial Health Department has been pretty arbitrary with this city in regard to the sewage disposal system they would allow us to install, on the grounds that it must be such as they could endorse as quite up-to-date and lacking nothing in sanitary qualities. And one would think that if cognizant of this unique type of pump in operation so strongly recommended by Sanitary Inspector Dallyn that in the interest of sanitation in the Province under the supreme care of the Provincial Health Board they themselves would take such measures as would give them first hand all data connected with these southern plants for guidance in dealing with Ontario municipalities on the question of sewage disposal."

Questions Authority of Board of Health

J. Cooper, Liberal member for Welland, Ont., has filed the following questions in the legislature:

1. Has the Government, or any member of the Government instructed or authorized the Provincial Board of Health to make an investigation and report on the question of water supply from the Niagara river to municipalities on or adjacent to the Welland Canal?

2. Is the Government or any member of the Government aware that the Provincial Board of Health is making an effort to force or induce municipalities on and adjacent to the Welland Canal, to take water for domestic and other purposes from the Niagara river by a waterworks systems to be established under their supervision and in control?

3. On what instructions or by what authority is the Provincial Board of Health endeavoring to force or induce municipalities on and adjacent to the Welland Canal to take water from the Niagara river by a waterworks system to be established by them?

Suggests Licenses For Janitor Engineers

The following letter was submitted to the Toronto Globe and appeared in a recent issue:

Apropos of the bill before the Legislature to penalize the landlords of apartment houses for permitting the temperature of a tenanted room to fall below 68 F., the writer begs to raise the question whether education should not precede or at least accompany compulsion and punishment. He has had some recent experience in interviewing applicants for the position of Janitor-engineer, and in consequence is of the opinion that there are men carrying the certificate of a stationary engineer who have very limited expert knowledge of the heating problems that confront a janitor-engineer.

Some of them cannot give an inquirer much satisfaction on such questions as the advantages of the aspiration, plenum and exhaust methods of heating rooms, the variation in the thermal units radiated under different pressures of steam, the humidity requirements of living rooms or the quantity of water that should be evaporated into a given quantity of air at a given temperature, and humidity to obtain optimum sanitary conditions.

Problems continually arising in the living rooms are as technical and important as those of the boiler room. Courses of instruction should be provided for janitor-engineers, and in due time they should be required to prove their knowledge and skill if they are to be put or to remain in charge of the heating of large schools or large apartment houses.

HUNTING THE PROFITEER

EDITORIAL COMMENT

SAYS CONDITIONS ARE NORMAL FOR BUSY TIMES

THE importance of using sound judgment and keeping in full view conditions as they exist is outlined in an article by H. C. Atkins, president E. C. Atkins & Company, who points out that present conditions as to supply and demand and prices are really normal for busy times. He expresses himself further, as follows:

> "Similar conditions as to supply and demand in 1914 and 1915 would have been welcomed with open arms by everybody. Business in every line at present is good. The demand for goods is insistent. The market resembles the prosperous days of 1906 and 1907 without the danger of financial panic which followed over-extension of credits at that time.
>
> "Concerning present high prices: we have learned to regard that situation as normal for the times. Many chronic diseases are far from fatal. High prices are traceable to legitimate causes and are logical and necessary at the present time. They are no longer speculative but what one might term chronic. The further logic of the situation is that these high prices are going to stay high. The 'Wall Street Journal,' March 17, 1920, says:
>
> " 'The Industrial Outlook of the current year is encouraging. Nearly all branches of business have well-filled order books and are operating at as near capacity as physical conditions will permit. Industry as a whole is in a very strong position to go through a period of business expansion without seeking financial assistance from the outside.'
>
> "With the financial situation sound and the demand insistent we should go ahead in a business-like normal state of mind, with an abiding faith that the present conditions are sound fundamentally and will not change for the worse to endanger the prudent and careful business man. Carry your usual stock of goods firm in the belief that there are just as many people living, breathing and carrying on the ordinary pursuits as ever."

RAPID DEVELOPMENT OF CANADA'S EXPORT TRADE

DESPITE difficulties produced by an insufficiency of raw materials, labor troubles and other disturbances in Canadian industry directly connected with the readjustment to peace-time conditions, Canadian manufacturers have not only provided for the home market, but have kept enough in reserve to enable them to put up a stiff fight for the world's trade, now that export conditions have returned to a more normal state.

This issue of SANITARY ENGINEER contains editorial data indicating the strides Canada is making as an export country. Elsewhere it is shown that for the fiscal year ending March 31, Canada's trade has increased $165,980,266, with an increase in exports for the year of $23,048,292 as compared with the same period one year ago.

It is reported that a large number of firms, fully representative of the various branches of Canadian industry, are planning to reserve space at the Canadian Industries Exhibition to be held in London, England, next June. This exhibition will serve to put Canadian products before buyers from all parts of the world and will give the widest publicity to the lines which Canada is in position to develop for export.

WILL BE A FORMIDABLE COMPETITOR OF U.S. STEEL CORPORATION

MUCH interesting comment is appearing in United States papers concerning the formation of the British Empire Steel Corporation, merging as it does a number of the leading Canadian industries. The fact that the new corporation presents a potential competitive factor of the United States Steel Corporation does not seem to be comprehended by people of the United States, according to opinion expressed through their papers, though some there are which give full credit to the possibilities lying before such an enterprise in securing a large portion of the world's steel business. Those expressing this opinion are cognizant of the fact that the Canadian project is backed by the interests of both Canada as a colony and also those of the British Empire. It is thought to be significant that while the United States Department of Justice is taking action against the United States Steel Corporation on the grounds of it being a combine, Canadian and British

interests are inviting the utmost co-operation among steel, coal and iron ore interests to stimulate production. Securing, as it will, preferential treatment in the British markets of the world, the enterprise should soon be a formidable competitor of the United States Steel Corporation.

THE OUTLOOK FOR IRON AND STEEL

SPEAKING of the outlook for iron and steel, John A. Topping, chairman of Republic Iron & Steel Co., told the convention of the American Iron and Steel and Heavy Hardware Association that high prices are likely to remain while the present condition of demand exceeding supply exists. In view of expected growth in the shipbuilding industry, in the production of motor vehicles, and in the construction of buildings, railway equipment, etc., Mr. Topping sees justification for his opinion that prices cannot decline. He agrees that high prices may somewhat curtail buying, but states that this will not be the case to the same extent as if iron and steel stood alone on the peak of high prices or if the character of the demand was of a less necessitous character. By comparison, he states iron and steel prices are not high when thus considered.

CANADA'S COAL PROBLEM

RECURRING frequently of late have been veiled threats by American business men and politicians that coal supplies to Canada may be shut off should awaken this country to the need of developing home production. Canada is not deficient in coal. In fact, we have quantities estimated at one-sixth of the world's supply. But our known coal is nearly all bituminous, and it is located chiefly at the two extremities. Coal may be found in large quantities in the Hudson's Bay region.

Last year Canada bought $70,000,000 worth of coal from the United States, which is a considerable increase. At the same time, domestic production decreased from 14,435,000 tons in 1917 to 13,714,000 tons. The tonnage imported from the United States, 21,000,000, was approximately 61 per cent. of our consumption. This dependence seems unnecessary. Premier Stewart, of Alberta, declared recently his Government would try to get special rates on coal to Ontario. Last year 308 tons of Alberta coal were sold in this province, but the movement is practically impossible under present conditions. Yet the Alberta mines are closed six or seven months of the year, owing to lack of demand. Why should not the Government adopt the suggestion of buying an immense quantity of coal in the summer, and storing it for resale, thus keeping the mines equally busy throughout the year? It is useless, under the present cost of living, to expect the mass of consumers always to lay in coal in hot weather. Heads of families, earning a moderate wage, simply cannot do it. The management of the larger aspect of coal movement is becoming a Government problem. It is expected that briquettes of Alberta and Saskatchewan coal will be available in Winnipeg next winter at a price of about $9 a ton. The briquetting plant on which the Government is spending $400,000 will have a capacity of about 30,000 tons per annum, and 300 such plants would be required to satisfy full Western requirements. But if the demand for coal were sufficient, and the rates cut down—the railways being allowed an equivalent increase on luxuries, for instance—private capital might assist in the development.

The quantity of anthracite shipped from the East to Manitoba each year is a large addition to our import coal bill. Anthracite has qualities for domestic heating that perhaps cannot be found in lignite briquettes, but Alberta and Saskatchewan buildings heated with home coal are kept warm, and the problem is one of adapting heating apparatus for the use of soft coal. In any circumstances, the present anthracite fields in the United States will be exhausted in another generation or two, and then this country's immense supplies of soft coal will give it equal footing with the United States. We may as well take time now to have this coal production business set right.

REGISTERED SUPERIORITY PURITY DURABLE AS THE PYRAMIDS TRADE MARK

Plumbers who use the System Make Satisfied

"Yes, Mr. Plumber! We are perfectly satisfied with the job you did for us. Thanks for your interest in calling to look over the work."

Follow-up Inspection and Permanent Customers

It is always a source of satisfaction to the man who has paid for a plumbing installation to know that his plumber really has his interest at heart enough to take time to step in or phone to find out if the work done is giving perfect satisfaction.

In these days of big business there may be a tendency to overlook these little courtesies, but plumbers who adopt the policy of "follow-up inspection" of plumbing installations later cash in on the good-will gained thereby.

Some plumbers, when business is too pressing to afford a personal call, make use of the telephone, finding it a valuable temporary substitute. Personal contact carries more weight and is, therefore, preferable.

Plumbers Out for Membership Increase

Interest Centres Around Drive in Montreal for New Blood and Results Very Encouraging—Hope to Reach Century Mark

MONTREAL.—Out for new members with a will and with a real determination to "go over the top," the Montreal Master Plumbers are hoping to reach their objective in piling up a membership—a real active membership at that, of at least one hundred. That they will succeed in this is almost certain, that is, if the efforts already put forth speak for much. At the last regular meeting there were "thirteen luckies" brought into the fold, and there they will receive, at each subsequent meeting, a warm welcome, that real friendly kind which only members of the craft can extend.

One of the features of this drive—and a mighty important and unique one at that—is that there are both French-speaking and English-speaking recruits, and they are coming along with a new interest in the very important work which must, of necessity, command the attention of sanitary and heating engineers to-day. There is an excellent spirit all around, and under the wise and solid guidance of President Dan A. Bethune there is nothing that the boys cannot do.

Is a Great Benefit

The advantages of association work are many. They are vital. It is felt that in only such ways the best good can accrue to members of the craft. It was felt that it is the men who are, to-day, giving of themselves to the betterment of the craft, that are getting along well themselves.

Matters of vital and decided interest are now engaging the attention of the Montreal master plumbers, and there is an excellent spirit within and without the association.

Merger of Pipe Machinery Manufacturers

BRANTFORD.—The John Hall & Sons, Limited, pipe manufacturers, of this city, have merged with the Williams Tool Corporation of Erie, the largest manufacturers of pipe machinery in the United States, with a capital of one million dollars. John R. Hall & Sons, Limited, are the largest manufacturers of pipe machines in Canada.

The local plant will be known as the Hall Plant of the Williams Tool Corporation. No radical change will be made in the management.

Leslie S. Hall, president and general manager, will be vice-president of the American company, taking an executive position between the two plants. A. R. Hall will be manager of the local plant, and E. L. Williams in charge of the office. E. W .Hall is retiring as secretary, and treasurer of the company, and E. L. Hall will no doubt continue with the new corporation on his return from England.

A large factory is under consideration, but it is too early to give definite plans.

Compensation Act Amendments

A number of important amendments to the Ontario Workmen's Compensation Act, as formerly outlined in SANITARY ENGINEER, have now been made ready for presentation to the Ontario Legislature.

Some of the more radical proposals are:

1. An increase from 55 per cent to 75 per cent. in the compensation rate.

2. A minimum rate of $12.50 per week.

3. Increased allowances for widows and children.

4. Making all increases retroactive to 1st January, 1915.

These amendments will mean a direct increase of 36.3 per cent. in the present compensation, and will necessitate a great increase in the rate of levy on the industries now in operation, which will be obliged under the retroactive feature of the bill to provide not merely for their own pensions but for the trail of pensions left behind by munition works and other industries which have done business from time to time since 1915, but have now been wound up.

Housing Scarcity Endangers Health

Moose Jaw, Sask.—The seriousness of the housing problem in Moose Jaw, not merely in regard to the excess of the demand over the available supply, but also in regard to the relation of the problem to the public health, was the subject of a large proportion of the last report of the Medical Health Officer.

The report points out that housing conditions in the city are among the causes of the increasing death rate of tuberculosis in the city. The demand is increasing and many buildings have been put into partial repair and used after several years of neglect. During the year 1919, the report points out, only forty-one new dwellings were erected in the city, and one house converted into a tenement block of eighteen apartments, making a total of fifty-nine new dwellings throughout the year, whereas the city's marriage rate alone would demand at least a hundred and fifty new dwellings.

The medical health officer adds that tuberculosis continues to record a higher mortality in the city than the aggregate of all other infectious diseases, and that there can be little hope for the improvement of this condition while housing conditions in Moose Jaw remain as they are.

Another Industrial Congress

Calgary, Alta.—Continuing the work commenced at the Industrial Congress held in Alberta last year, a similar congress is to be held this year on a more comprehensive scale in conjunction with the Province of British Columbia. The congress will be attended this year by members of the Canadian Manufacturers' Association, whose annual meeting will be held in the West immediately following the congress sessions. Delegates to the congress will assemble at Medicine Hat on June 2 and will proceed to Lethbridge, Calgary, Edmonton, Vancouver and Victoria between June 2 and 11. At each stop visits will be paid to local industries; addresses and exhibits will also be a feature at the larger centres. The aim of the congress is to assist in the development of the great natural resources of the Western Provinces and to assist in creating a better understanding of the country's problems, as between the East and the West.

St. John Firms in Merger

St. John, N. B.—Some local concerns are to be effected in the steel merger proposed under the name of the British Empire Steel Corporation. A meeting of the directors of the Maritime Nail Co. was held last week, at which it was decided to recommend to the stockholders the acceptance of the terms. The James Pender Co. will be included in the merger also. It is likely that S. E. Elkin, M.P., will head the local end of the organization. Speaking of the merger yesterday, Mr. Elkin said: "The promoters of the merger have big plans and the working of those plans will be very beneficial to St. John."

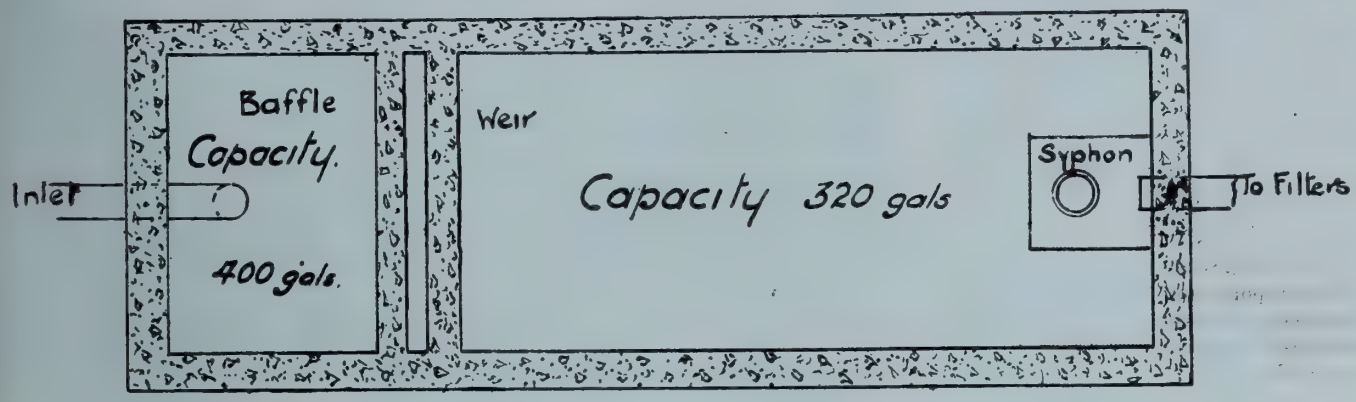
American Tinplate in Europe

Dealing with the offers of American tinplates on British and European markets "The Ironmonger" states that such offers have upset the merchant trade in England even though the terms asked are not such as to render them serious competitors of the Welsh manufacturers. American demands of irrevocable credit have been considerably modified. Continuing it states: "With the exception of a few large contracts the American tinplates have been sold in small quantities. Our merchants have not bought to the same extent as Continental houses owing to doubts regarding delivery and to a dislike of selling terms."

PORT PERRY, Ont.—A. M. Roberts of the Carnegie Hardware has gone to Otterville to start business as a tinsmith and plumber.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied



Plan. Fig. 13.

Article No. 8 of the Series—Illustration No. 13

FIG. 13 shows plan, longitudinal section and cross-section of a double chamber septic tank designed for six persons, in flat ground, where the outlet is difficult to obtain.

The submerged sewage inlet enters the first chamber which is constructed much deeper than usual, the water sealed connection between the two tanks is obtained by constructing a concrete baffle wall connected to the sides and roof of the tank and running the full width of same as shown in Fig. 12, which appeared in May 1 issue.

The sewage passes over the division wall and is carried up to the height required, by calculation, for the storage capacity of both tanks and acts as a weir running the full width of the tank as shown in the plan.

The overflow, automatic syphon and ventilator are constructed as previously described and inspection covers for easy access should be provided in the reinforced concrete roof.

ACTIVE BUILDING IN OTTAWA

Ottawa, Ont.—Well over half a million dollars worth of building is going on in Ottawa at the present time, or will come under the course of construction in the very near future. This amount of building is reflected by the building permits issued for the first four months of 1920, which to date had an estimated valuation of $568,395.

The month of April alone produced in estimated valuations, a greater total than for the first three months of the year combined. In April, permits to the value of $329,110 were issued, as against $239,285 for the first three months of this year.

SANITARY INSPECTORS HOLD ANNUAL DINNER

Winnipeg, Man.—The annual dinner of the Manitoba branch of the Sanitary Inspectors' Association of Canada was held recently. Dr. A. J. Douglas, medical health officer, presided in the absence of Ald. E. Robinson, chairman of the civic health committee. Interesting speeches were made in the course of a lengthy toast list, which included the following: "The Army and Navy," proposed by Major Paull, quartermaster at Tuxedo, and acknowledged by Dr. J. H. Leeming, city bacteriologist, and H. B. Weston; "The Sanitary Inspectors' Association," proposed by R. Buckingham, and acknowledged by E. W. J. Hague; and "The City of Winnipeg," proposed by J. H. Pearson, and acknowledged by Ald. George Fisher.

QUESTIONS AND ANSWERS

Question.—Would you please advise me as to the best covering to use in order to keep water pipes from freezing in the extreme weather. Is there a covering used instead of hair felt as this, to my mind, is very bulky when wrapped around water pipes?

Answer.—The best covering to keep pipes from freezing is that made of cork. Air cell covering may also be used if it is covered in turn with a painted canvas jacket.

We are assuming that it is water supply pipes that you wish to cover. The principal difficulty with covering upon such pipes is that the condensation of the moisture contained in the air causes the covering upon the pipe to rot. Cork covering is not so subject to destruction by moisture.

Montreal Masters Adopt Wage Agreement

Schedule Agreed Upon at Special Meeting Held to Consider Report of Committee—Wages Paid Will Depend Upon Proficiency

MONTREAL. — Montreal Master Plumbers have been working for some time on a plan to solve the wage problem as it applies to the employee. Many conferences were held from time to time and the work of selecting data was left in the hands of a committee comprised of James Ballantyne, chairman; P. C. Ogilvie; D. A. Bethune, president of the Montreal Master Plumbers' Association; H. Lavigueur; Alex. Charette; Telesphore Latourelle and J. E. Walsh, secretary.

A meeting was held on April 23rd, at which a report was brought in by this committee, and after due consideration its adoption was recommended, and the same unanimously approved.

Three Wage Rates

President Dan. A. Bethune occupied the chair for this special meeting and a large number of plumbers were present, representing both the English and French sections. While this meeting was called for the afternoon, the attendance was very representative and the interest taken in the proceedings of the meeting were decidedly satisfactory.

After due consideration of the report presented, it was moved by Alex. Charette, and seconded by James Griffin, that the agreement with the National Catholic Workers' Syndicate be approved, and ratified, same to be signed by accredited representatives.

In the simplest terms, the new agreement recognizes the open shop and is not in favor of sympathetic strike. A strike, as a matter of fact, will be the very last resort of members of the National Catholic Workers' Syndicate. Wages, according to the employee's proficiency, are graded, the maximum rate being 75 cents per hour.

What This Union Is

A word of explanation regarding the working of this union is in order. As the name implies the active membership is taken out by Roman Catholics and they are banded together in this union to observe fair working schedules with their employers. While the active members are under the direction of their accredited leader, Protestants may join, and in speaking with a member of the committee on the working of the newly-formed syndicate, he informed SANITARY ENGINEER that they would welcome a union formed with a Protestant membership, to be formed for co-operative betterment of working and other conditions.

There are four distinct features to the objects of the new union and these are as follows:

1. Recognition of the open shop.
2. Lockouts and strikes positively prohibited.
3. Classification of employees or men, the maximum wage per hour being 75 cents.
4. Hours—From November to May, 49-50 hours per week; from May to November, 44 hours per wek.

With the exception of a limited amount of objection to the new proposal, a large percentage of the membership agreed to the finding of the committee and this finding was eventually adopted unanimously.

Steel Merger is Completed

New Corporation Stands Second Only to U.S. Steel Corporation—Capitalized at Five Hundred Million Dollars—Number of Important Companies Merged

Montreal.—The new British Empire Steel Corporation, the largest consolidation in the British Empire, and second only to the United States Steel Corporation, has now come into definite existence, as an imperial organization. Capitalized at $500,000,000, this Canadian consolidation of steel, coal and transportation companies, associating the iron and coal deposits of the Atlantic seaboard of the Dominion with the steel-making experience and financial resources of Great Britain, is now an accomplished fact, according to Colonel W. Grant Morden.

Included in the consolidation are the following: Dominion Steel Corporation and its subsidiaries; Nova Scotia Steel and Coal Co., Ltd., and its subsidiaries; Canada Steamship Line, Ltd., and its subsidiaries; Canada Foundries and Forgings, Ltd., and its subsidiaries; Maritime Nail Co. and its subsidiaries; Collingwood Shipbuilding Company, Ltd.; Port Arthur Shipbuilding Company, Ltd.; Halifax Shipyards, Ltd.; Davies Shipbuilding and Repairing Company, Ltd.

RECORD IN TORONTO BUILDING FOR APRIL

Another month's record in building permits, issued in Toronto, was reached for April, the total value of these amounting to $2,138,025, as compared with $1,620,966 last year. This is a higher figure than in any previous April. Judged by value, dwellings stand first in the various classes of buildings, with an approximate value of $1,000,000 for 255 houses.

BONUS SCHEME FOR PLUMBERS

A recent issue of the Monthly Service Bulletin of the National Trade Extension Bureau contains, among other things, an "Outline of Profit-Sharing or Bonus Scheme for Plumbing and Heating Business." The plan, in brief, involves setting aside a general fund not to exceed 10 per cent. of the total net profits on each job, contract or sale, to be distributed in the proper proportions at yearly periods. A portion of this fund would go towards a sick fund which would be apportioned annually, prorated according to the total amount of the fund and sick time of the employee, not to exceed full time. If the fund is sufficiently large full time might be paid the employee for his time lost owing to illness.

FUTURE PLANS OF TRADE EXTENSION BUREAU

As the result of action taken at a recent meeting of the board of directors of the U. S. National Trade Extension Bureau, the bureau will undertake the work of the Bureau of Standardization, heretofore conducted by the National Association of Master Plumbers and a number of other organizations. In order to finance the bureau during the coming year it is proposed to divide the country into zones and appoint a leading manufacturer in each zone to assume the responsibility of getting in touch with every manufacturer and jobber located in that zone. The actual work of soliciting subscriptions will be in the hands of committee made up equally of master steam fitters, master plumbers and jobbers.

The work of the bureau is of interest to the craft in Canada insofar as steps are being taken to extend the work of the bureau into this country.

KINGSTON PLUMBERS BUSY

Kingston, Ont.—Local plumbers will be busy for some time in consequence of the vigilance of the sanitary inspector.

In a recent report submitted to the Board of Health by Sanitary Inspector Carson, a number of shops were shown to be improperly equipped with sanitary conveniences. Out of 140 places inspected, 104 were not right and the owners and proprietors were notified to comply with the by-law governing such cases. A question that arose for further consideration was what action, if any, should be taken where stores and shops in which persons were employed had no conveniences. In some of the best property there was evidence of neglect because the owners were well able to comply with the health laws.

New Form Protects Contractor

Saskatchewan Association Adopts New Form of Contract, Making Installations the Contractor's Property Until All Payments Are Made—Plumbers Have Lost Heavily From Indefinite Contracts and Experience With Lien Laws

MENTION was made in a recent address delivered by Neil Beaton, of Beaton & Brady, heating and sanitary engineers, of Saskatoon, Sask., before the Saskatchewan Association Convention, of a contract form which has been adopted by the organization for use by the craft in contracting work. In a recent issue of SANITARY ENGINEER. the address given by Mr. Beaton was quoted. It was pointed out that the practice of entering into agreements without taking the precaution of first ascertaining the financial status of the other party, was very prevalent and that therefore many bills were uncollected. He pointed out that practically every plumber had experience with the lien laws or the experience of being unable to collect the last payment which is really the profit.

Herewith is reproduced a copy of the first sheet of the agreement as drawn up and endorsed by the association for use as a contract form covering any plumbing work. Referring to the form, Mr. Beaton states: "I may say that the chief and outstanding feature is the fact that it leaves title and ownership of plumbing fixtures, pipes, radiators, boilers, etc., in the possession of the contractor until paid for, with the right to possess and remove same, to sell same, either at auction or private sale, to satisfy his claim in whole or in part, and this agreement constitutes a claim in the nature of a lien note which may be registered as Schedule A."

In Schedule B, the agreement takes care of the labor at a stated sum, for which a lien may be filed under the Mechanics Lien Act. We believe that with this agreement the difficulty of collecting the last payment will be overcome.

Following the first sheet as shown herewith is a Schedule A, being a list of the goods and chattels referred to in the agreement. A column is provided for the number of articles or measurements thereof; the usual name of article; and a more exact description such as any special trade name, manufacturers' name, size, finish, nature of metal, etc. Under the columns set aside for these points on the second page is a section for description of "The Premises referred to in the agreement." A space for signature for identification by the owner and the contractor is provided.

Page three is Schedule B, being any special terms and specifications of work referred to in the contract with a space for signature for identification by the owner and contractor. The fourth page provides space for the affidavit with a statement that the agrement was entered into not for the purpose of protecting the goods and chattels mentioned therein against creditors of the buyer. The form is as follows:

SASKATOON, SASKATCHEWAN, ... 19....

Memorandum of Agreement made in duplicate on the above date

BETWEEN:

....

of Saskatoon, in the Province of Saskatchewan, hereinafter called the "Contractor,"

—and—

....

of ..... in the Province of .....
hereinafter called the "Owner,"

WITNESSETH that in consideration of the respective covenants herein contained, it is agreed between the parties hereto as follows:—

1. The Contractor agrees to sell to the Owner the goods and chattels more particularly set forth in Schedule "A" hereto (signed by the parties hereto for identification) and to deliver same to the premises set forth in said Schedule "A" at and for the total price or sum for all said goods and chattels of

....Dollars, ($.....) payable as follows, namely,

it being further agreed that all payments overdue are to bear interest at the rate of ..... per cent. per annum until paid.

2. The Owner agrees to buy and pay for said goods and chat-tels from the Contractor at the aforesaid price and terms.

3. It is also agreed that the title, ownership, and right to possession of said goods and chattels shall remain at the Owner's risk as to fire or other destruction or damages in the Contractor until the said purchase price or any note given relative thereto or any order given relative to payment thereof, or any judgment recovered for same or any part thereof, is fully paid, with interest; also that should the Owner make default in payment of any instalment of the purchase price hereinbefore provided (should the purchase price be payable in instalments) then any succeeding instalments shall forthwith at once become due and payable without any declaration to that effect by the Contractor notwithstanding any deferred dates of payment above provided and the total amount of said purchase price unpaid shall forthwith bear interest at aforesaid rate from the date of such default; also that in the case of such default and before or after judgment or execution may have been obtained by the Contractor relative to such purchase price, the Contractor may take possession of the said goods and chattels or any of same and may at the Contractor's sole and absolute discretion either hold same or any of same until said purchase price and interest and costs herein provided for be paid in full or may sell said goods and chattels or any of same at public or private sale; also that in the event of such holding, the Owner will further pay all the Contractor's or his agent's costs of taking possession and of removal and of storing said goods and chattels before Owner shall have right to possession of any of said goods and chattels; also that in event of such sale Owner shall pay all Contractor's or his agent's costs of taking possession and of removal and of storing and of sale and of commission at the rate of ten per cent. of the sale price and said costs shall be deducted from the sale price as a first charge thereon and the net balance, if any, shall be applied in reduction of said purchase price; also that notwithstanding such taking possession, or holding, or sale, the Contractor shall during same or thereafter have the right to proceed against the Owner by way of suit, judgment or otherwise and recover, and the Owner hereby agrees to pay the balance then still unpaid hereunder; also that the entering of suit or the recovering of judgment by the Contractor against the Owner relative to said purchase price or any part thereof shall not merge or waive the rights of the ownership or the rights of possession of the Contractor in said goods and chattels as created hereby; also that for the purpose of such taking possession or removal the Contractor may enter upon asid premises or elsewhere wherever said goods and chattels may be found without any notice and without hindrance from the Owner and without being in any way liable for any damage that may be caused to said premises or to said goods and cha ttels in such taking possession or removal and shall be under no obligation to repair or rebuild any damaged property and for the p urposes aforesaid the Contractor may use force if necessary in

entering or leaving said premises and may sever and disconnect said goods and chattels or any of same from anything to which they may be affixed or connected and may use any force necessary for that purpose, but the contractor agrees to cause a minimum of damage in such taking possession and removal; also that in effecting or attempting to effect such sale the Contractor shall be under no obligation to realize the full value of said goods and chattels and shall be under obligation only to accept the best bid offered according to the terms of sale and the Contractor may at the Contractor's discretion bid at such sale or fix an upset price and may sell said goods and chattels or any of same either en bloc, or in lots or as separate pieces in the Contractor's discretion; also the Owner hereby specifically waives all statutory requirements relative to such taking possession or holding or sale as contained in the Lien Notes Act or otherwise; also it is hereby distinctly agreed and declared by the Owner and by the Contractor that notwithstanding that said goods and chattels may hereafter become affixed to any land, or realty or building, that same are intended to and shall remain chattels so long as any of said purchase price, interest or costs remain unpaid but that immediately said purchase price, interest and costs be paid, said goods and chattels, if so affixed, shall be deemed to be part of the realty to which they are affixed.

4. It is agreed that should any unpaid vendor of said goods and chattels or any of them to the Contractor, cause any Mechanics' Lien relative thereto to be registered against said premises that the Owner may withhold payment of any instalment or part of said purchase price, sufficient to cover said lien pending removal thereof—but may so do only in the event of the Owner not being in default according to the above terms.

4a. It is agreed that said goods and chattels shall be delivered to the Owner or to anyone nominated by him at or on Lot in Block in the City of Saskatoon in the Province of Saskatchewan, according to registered plan number as the work relative to which said goods and chattels are ordered progresses on said property, and that where less than the whole amount of said goods and chattels is delivered at any one time the registration of this lien agreement shall be deemed to cover only the portion of said goods and chattels actually delivered up to the date of such registration and that the value of said goods and chattels so actually delivered shall be deemed to be the proper proportion of the total purchase price, and that any subsequent registration of this agreement shall be deemed to cover only the goods and chattels actually delivered from the date of the last prior registration to the time of such subsequent registration, and that the value of such goods covered by said subsequent registration shall be calculated as aforesaid.

5. It is further agreed between the parties hereto as follows:—

A. The Owner hereby employs the Contractor either by himself or by his servants or agents and the Contractor agrees to install and erect the said goods and chattels in said premises in a good and workmanlike manner on the following terms as to price and payment for such work; namely,

(a) At and for the sum of $.....payable as follows:—

B. It is agreed that the Owner may in the event of any Mechanics' Liens being registered against said premises by persons employed by the Contractor exercise the usual statutory rights as to withholding payment to cover said liens.

6. It is agreed that the terms and specifications (if any) as to said work relative to said installation and erection set forth in Schedule B hereto (signed by the parties hereto for identification), shall be deemed part of this contract as to said work and shall be read and construed as forming part hereof.

7. It is further agreed that throughout this contract if same be signed by more than one person as Owner that all covenants herein contained shall be deemed to be joint as well as several on the part of the Owner and that the singular or plural or masculine or feminine shall be deemed to be its correlative as the context or the parties hereto may require.

8. And it is further agreed that any cause of action arising relative to either the purchase price of said goods and chattels or relative to said work shall be deemed to have arisen in the City of Saskatoon in the Province of Saskatchewan and may be entered and tried accordingly, subject, however, to any statutory provisions to the contrary.

IN WITNESS WHEREOF the parties hereto have hereunto executed this agreement by their respective hands and seals, the day and year first above written.

WITNESS as to the signature of the Contractor

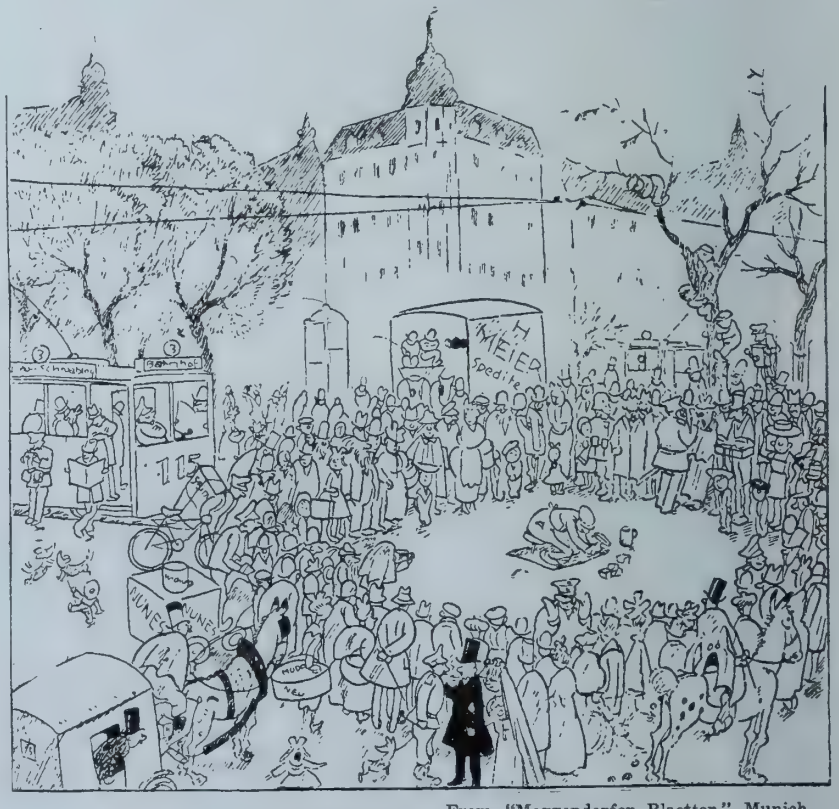
WITNESS as to the signature of the Owner.

German Steel in Britain

The fact that German steel manufacturers are in the British market and have actually made deliveries, has created quite a stir in the trade according to a report in "The Ironmonger." Continuing, it states that it had been believed that disturbed conditions in Germany would put German manufacturers out of the market for some time, but now a quantity of German steel, not less than 10,000 tons, has been sold for delivery by May. "Despite revolutionary conditions in Germany manufacturers have kept to their contracts. The business has been confined to relatively few firms in this country, the material being purchased largely for export, although limited quantities are for consumption in Britain."

New Suit Against U.S. Steel Corporation

A despatch from Washington says that a new suit against the United States Steel Corporation will be instituted by the Government, it is expected, in an effort to have new evidence presented bearing upon the charge of the Government that the United States Steel Corporation is an illegal combination in restraint of trade.



From "Meggendorfer Blaetter," Munich.

Somebody At Work

Large Increase in April Building Totals

Extensive Revival of Activity in Construction Throughout the Dominion—Winnipeg Leads—Montreal, Toronto and Sherbrooke Also Over the Million Mark

BUILDING on a broad scale has opened up in Canadian cities, and this condition is reflected in the reports of building permits for the month of April. The value of permits issued for the forty-one cities throughout the Dominion during the past month is $16,085,649, an increase of more than $9,000,000 over the total for the corresponding month a year ago. While the high costs of materials tend to swell the totals it is quite evident that there has been an extensive revival. Permits issued to date during the present year far surpass in value the totals for the first four months of the year 1919, standing at $32,380,718 as compared with $13,160,440 for the corresponding period a year ago, or an increase of $19,220,278. The unfavorable conditions in regard to materials have, it is understood, held up many building programmes, otherwise this total would have been much larger.

The Western cities have been particularly active during the past month, the value of permits being $4,806,895 as compared with $1,307,715 last year. The totals of the twenty-five Eastern cities stood at $11,278,754 as against $5,411,862 a year ago. In the majority of cases the totals for each individual city exceed the returns for last year, the exceptions to this rule being a few of the smaller cities. Montreal is the outstanding city of the East and leads with permits totalling $2,858,165 as compared with $446,470 a year ago. Sherbrooke is also in the throes of a building revival, permits for this city reaching beyond the million mark at $1,242,350. This report is the more gratifying when it is considered that permits for April of last year totalled only $131,300. While Toronto has given over the first place in the East to Montreal, she reports permits to the value of $2,137,908 as against $1,620,996 a year ago. Toronto's total for the year to date stands at $7,132,753, as against Montreal's $4,417,651. The cities of Halifax, St. John, Hamilton, Ottawa, Windsor and London also report satisfactory increases for the month.

In the West Winnipeg reports permits to the value of $2,901,300, placing that city at the top of the list for the month. This was largely made up by the T. Eaton mail-order building of the estimated value of $2,500,000

Among the more important constructions undertaken during the past month are the following: St. John, General Public Hospital, Nurses' Home, $173,000; Standard Bank, St. John's Branch, $25,000; Montreal, C.P.R. Railway Shops, $520,700; Allen's Palace Theatre, $235,000; United American Co., theatre, $125,000; Congoleum Co., factory, $105,000; Sherbrooke, Connecticut Cotton Mills Co., $1,110,000; J H. Bryant, bottler, $30,000; Sherbrooke Machinery Co., $26,000, Three Rivers, thirty-five new buildings averaging $3,000, $105,000; Westmount, church extension, $100,000; Chatham, Ont., mercantile building, $45,000; Hamilton, Canadian Cottons Ltd., $375,000; Kingston, Allen's theatre, $115,000; Sunday school hall, $30,000; London, Bank of Montreal, $15,000; H. J. Jones Sons, Ltd., factory, $15,000; St. Catharines, Dominion Macaroni factory, $45,000; L. E. McKinnon, residence and greenhouse, $23,000; Windsor, Loew's Theatre, $200,000; Calgary, warehouse, $130,000; Edmonton, telephone exchange, $125,000; stores, $10,000; St. Boniface, battery warehouse, $20,000; Winnipeg, mail-order building, T. Eaton & Co., $2,500,000; Prince Albert, extension to penitentiary, $200,000; Regina, Wood, Vallance Co., warehouse, $210,000; Fairbanks-Morse, warehouse, $80,000; New Westminster, Imperial Oil construction, $24,000; Vancouver, club stores, $60,000; talc plant for B.C. Silica and Talc Co., $20,000; Almonds Ltd., ice cream factory, $20,000.

Says Good Ventilation Makes for Efficiency

Dr. G. S. Nasmith Says Proper Temperature and Ventilation Increase Workers' Efficiency

PROPER attention to temperature and ventilation in factories and business houses as a means of securing greater efficiency among those employed in such places was advocated by Dr. George S. Nasmith, C.M.G., D.Sc., in a recent address on "Industrial Physiology." Dr. Nasmith pointed out that while many employers were taking an interest in this subject from altruistic motives, it was worthy of careful investigation if only as a purely business proposition. With proper temperature and ventilation, production was materially increased and the general efficiency of the worker greatly enhanced. As an instance he cited the result of one experiment in which it was found that in a certain factory a reduction of the temperature from 75 to 68 degrees, added 15 per cent. to the output.

The speaker explained that industrial physology went even deeper than industrial hygiene. The latter, he said, concerned chiefly the health of the workers, while industrial physiology sought to go beyond that and to eliminate all agencies tending to impair health. He remarked that in America there were 670 odd industries in which poisonous gases were prevalent, while in 70 or more industries the manufacturing processes caused large quantities of dust, which was an active agency in producing tuberculosis or other pulmonary diseases.

Proper Ventilation

The comparatively new subject of "Industrial Physiology," Dr. Nasmith stated owed its origin largely to the investigations carried on by the British Munitions Scientific Research Board. During the war, when the demand for munitions was urgent, it was found, he said, that lengthening the worker's hours and working seven days a week instead of increasing the output actually brought a reduction.

Dr. Nasmith reviewed experiments, which, he said, had revolutionized the existing conceptions of right methods of ventilation. Heat and humidity had been found to be chief factors affecting health. The ideal system of ventilation, he believed, was one in which fresh, dry air, cooled to a proper temperature was admitted at a number of points in the ceiling of a room and that the foul air drawn off at several points in the floor.

By this plan there was produced a blanket of air continuously descending and carry away from the breathing lines all bacteria.

Insurance Should Increase With Higher Stock Values

Stock Values Have Increased 50% to 100% in Past Five Years—Protection Should be Equally Increased—As Important as Self-Protection

IF A fire should break out in your store to-day and your stock were ruined either by flames or water, how would you be fixed for insurance? No doubt you have insurance placed on your stock; perhaps you have carried the same insurance for years and feel smug with contentment, so far as the possibility of fire with its ruinous consequences are concerned. Premiums have been paid promptly on the $5,000, $10,000, or $20,000, or more, worth of insurance that you have been carrying; the rest you leave in the hands of a merciful Providence.

But—

Providence, however, usually helps those who help themselves. Have you overlooked the fact that, during the last four or five years, your stock has increased in value from 50 to 100 per cent.? Did you ever sit down to figure out what it would cost to replace the stock you are carrying to-day, and then to compare that figure with the amount of insurance you are carrying on that stock? It might be time very well spent and it might, in addition, bring you very sharply to time with regard to insurance. Many merchants may have forgotten that their protection against fire has stood still while the value of their stock has been going up by leaps and bounds.

Stock Protection as Important as Self Protection

It is just as important to the welfare of your business that your stock be protected as that you, yourself, should be protected both by life insurance and a salary from your business. Many of the leading financial men in big firms, or the heads of big concerns are increasing their business life assurance to protect their business against the possibility of shock should they suddenly die. Such a shock is inevitable when the directing head of a great institution is suddenly taken off. Every merchant should give his own business the same protection. All good merchants do. Every merchant knows that his stock to-day is almost twice as valuable as it was before the war and that it would cost him that much more to replace it. You always figure, of course, the fire will never come nearer you than next door. But it may. How are you fixed for such an eventuality? This is a reminder to the man who has not attended to insurance matters.

U. S. STEEL CORP. HAS LARGE UNFILLED TONNAGE

New York.—The United States Steel Corporation announces that unfilled orders for the month ending April 30 totalled 10,359,747 tons, a gain of 467,672 tons over the pervious month.

Unfilled orders for the month ending March 31 aggregated 9,892,075 tons.

The total of unfilled orders was brought up to the highest point since August, 1917, when the unfilled tonnage was slightly more than 10,400,000.

EDMONTON PARALYZED BY REMOVAL OF INTAKE CAP

Edmonton.—Through the removal of a cap on the intake pipe at the waterworks pumphouse without first seeing that the intake valves at the river were shut off, the pump-house pit was flooded recently to a depth of more than fifteen feet. As a result the city of Edmonton was paralyzed. There were no street cars, lights or water, and, in addition, all utilities were without power and water. The authorities used the fire department pump engines to fill the sedimentation station, and with this completed water was supplied the powerhouse to get the engines there running."

K. N. FORBES GOES TO WINNIPEG

St. John, N. B.—Kenneth N. Forbes, who has been local manager for the Canadian Fairbanks-Morse Co. for the past five years, has been transferred to Winnipeg, where he will manage the office of his company. Mr. Forbes has been held in high esteem by his associates here and by the citizens in general. His successor is Watson J. Hill, who has been with the Fairbanks-Morse for sixteen years.

WINNIPEG APPROPRIATION FOR WATERWORKS EXTENSION

Winnipeg.—Indicating the extent of capital expenditures for 1920, Ald. F. O. Fowler, chairman of the Civic Finance Committee, states that the city will borrow funds to complete the following works:

Sewers, $50,000; water works extensions, $330,000; water services and meters, $45,000.

Favor Chlorination of Hull System

Expert Gives Figures of Mortality Reduction by Chlorination of Water—Over 1,100 Plants in United States Use Chlorination Alone

OTTAWA.—In the case of the Quebec Board of Health vs. City of Hull, recent evidence submitted by Wm. J. Orchard, of New York, favored the chlorination of the water. Mr. Orchard gave some interesting information concerning the results of chlorination of water systems in the United States.

In the course of his evidence Mr. Orchard said he had been connected with water questions for over ten years, both as regards laboratory work and installation of plants. Chlorination is his specialty, and he said he is also competent to give an opinion on filtration.

Chlorination of water had been the leading factor in reducing the death rate from typhoid fever from 25 per 100,000 to 12 per 100,000. Chlorine in connection with water supplies originated in England in 1905, when the Metropolitan Board of Works, on the recommendation of Prof. A. C. Hueston, their chief chemist, adopted the method.

"Chlorine in sufficient quantities, properly used, absolutely kills all bacilli; filtration only gets rid of approximately 95 per cent," he said. Over 1,100 plants in the United States use chlorination alone, and 350 use both filtration and chlorination. None use filtration only. The operating expenses of chlorination is from 50 cents to $3 per million gallons, and filtration costs from $15 to $25 for the same amount of water.

Mr. James O. Meadows, consulting engineer, Montreal Water Company, in his evidence, said he was in favor of filtration, but owned that chlorination was a necessary adjunct to the process. "I believe one cannot be too careful, and that all water should be chlorinated and filtrated," he said.

In answer to a question, witness said: "I do not think chlorination is a complete treatment in itself for impurities."

"Most authorities," said witness, "believe in filtration and chlorination combined, and advise the double treatment in preference to chlorination alone."

In reply to Mr. Foran, K.C., Mr. Meadows said: "I do not know any plants in big cities, which trust to filtration alone." In connection with the Aylmer filtration plant Mr. Meadows said chlorine was used to make "assurance doubly sure."

DELEGATES TO CONVENTION

Montreal.—At the monthly meeting of the Montreal Master Plumbers, held in the Builders' Exchange, Drummond Building, appointments were made of delegates to attend the forthcoming convention of Domestic Sanitary and Heating Engineers, being held in Toronto on June 8, 9, 10. The delegataes are: President, D. A. Bethune; H. Lavigueur, provincial vice-president; J. E. Walsh, chairman of price list committee; Telesphore Latourelle, past president of the Montreal Association: John Watson, chairman audit committee; L. Charette, chairman of the board of trustee and a past president.

It will be seen that Montreal representation is to be a very strong one. Without question they will be able to carry to the Toronto convention a great deal of support in connection with important questions which will arise for discussion. Last year's convention in Montreal served to make an important point in the history of the trade throughout Canada. The discussions at that time were very interesting and were closely followed by numbers of the craft from various parts of Canada. With the various efforts that have been put forth under the direction of Dominion President Frank R. Maxwell, of Toronto, and with the better spirit developed, there is no doubt that the Montreal delegates will be warmly received and well looked after. That they will carry with them to Toronto a great many helpful and constructive ideas is a foregone conclusion. In all members of the delegation just appointed the Dominion officers will find material on which they can count for executive work during the progress of the convention, and, what is more important still, after the session has closed. And with a good representation from both French and English speaking sections of the Montreal Association there is an opportunity for development of that co-operative spirit so desirable, and which has worked so splendidly of late in the Montreal association.

MONTREAL CITY BUYS NEW FLUSHERS

Montreal.—Motor flushers and cleaners for the city of Montreal have been purchased by the Administrative Commission. These were purchased from the Maple Leaf Mfg. Co. in Montreal at a price of $8,790 each. Contract for these flushers is expected to be completed by the end of June.

Montreal.—The Serbian Consul at Montreal has moved offices from 35 St. Nicholas Street to 395 Mountain Street Capt. V. Seferavitch, the consul-general for the kingdom of the Serbs. Croats, and Slovenes, intends making a visit to Belgrade on official business.

THE BUSINESS OUTLOOK

Writing of the Business Outlook, THE FINANCIAL POST of recent date said:

"There has been no time since the outbreak of the war in the Summer of 1914 that the business outlook has been more uncertain or more puzzling than it is to-day, although, of course, the apprehension regarding national safety has been removed. The situation is absolutely unprecedented. The upward movement of prices was in the first place the result of demand for commodities to be destroyed and reduced man-power to produce them and it was accompanied by financial inflation by practically all important world nations. It has been continued since the signing of the armistice by a demand for luxuries and comforts, encouraged by relief felt at the end of the war and sustained by accumulated savings, while production has declined under the general relaxation and temporary impotency of the usual incentives. The peace celebration, in fact, has taken on the semblance to a protracted spree, but there are indications that the effects of the armistice joy draught are wearing off and that the public ear is becoming less attentive to the jazz of pleasure and extravagance.

"Some time ago, prior to the recent definite action, the banks sounded a note of warning when they advised their customers to curtail their borrowings as far as possible, so as to be prepared for developments that might otherwise find them in an awkward position. Conservative wholesale houses have been giving similar advice to the trade in suggesting that stocks be kept low and collections checked up. That these warnings and the conditions which justify them are not unappreciated is indicated by the reports that in the commercial community there is now a tendency to reduce stocks to a minimum. This can only be interpreted to indicate that business is sensing a situation in which further advances are not confidently expected.

"Altogether there does not appear to be any need for serious apprehension if conditions are faced in a serious way. There is not that over-production which has always accompanied great financial panics in the past. For this reason it would seem that if there is a period of depression as an accompaniment of the process of deflation it will be short-lived because of the needs at home and abroad for food-stuffs and clothing and other necessities of life."

Justifies Freight Rates Increase

Information Supplied "Sanitary Engineer" by D. B. Hanna, President of Canadian National Railways, Shows Relation Between Operating Costs and Revenue Which Justifies Higher Rates on Freight

AS a result of endeavors to secure definite information as to the facts which justify increased freight rates, SANITARY ENGINEER has been provided with the following information dealing with operating costs, revenue, etc., by D. B. Hanna, president of the Canadian National Railways.

"In trying to establish when the high cost of living began to affect the operation of Canadian railways," says Mr. Hanna, "I came across the interesting fact that away back in 1875 the railways of Canada on the average got more for each ton of freight transported than they have received in any year since then, up to and including the year ended June 30, 1918, which is the last year for which the Government statistics for all Canadian lines are available.

"Beyond any doubt, the average distance the freight was hauled in 1875 was less than in 1918, as in 1875 there was no transcontinental line. Canada in all had 4,804 miles in 1875. The cost of running a train one mile was about 90 cents. We find that in 1875, on the average, a locomotive moved only 5,786 tons of freight and 5,296 passengers, whereas in 1906 the average locomotive moved 19,773 tons and 9,549 passengers. When this information is coupled with the facts that the average earnings per ton carried showed a decline, whereas the earnings per freight train mile showed a steady move upwards, a pretty good indication is obtained that the advances in methods of operating were also being carried on during this period.

"By 1907 the cost of running a train one mile had advanced to $1.249, or an increase of 57 per cent. over the average cost for the years 1890 to 1899 inclusive.

"From 1907 to 1918, in the face of the increases in the cost of labor and every known commodity the railways year by year, up to and including 1917, were able to practically offset increases in expenses by economies of operation, and with an average revenue per ton per mile that declined, were able to generally increase the net earnings per mile.

"A table showing the very low average return the railways got for moving a ton of freight one mile during the period from 1907 to 1918 indicates a decline from .815 in 1907 to .736 in 1918.

"During this period (1907 to 1918) the freight density, which is the term used for the number of tons hauled one mile per mile of line, increased from 518,485 tons in 1907 to 798,093 tons in 1918.

"A general idea of the magnitude of the railway development may be obtained from noting that the operating expenses of the railways increased from a total of $146,738,214 in 1907 to a total of $273,955,436 in 1918.

"Total operating expenses per mile of line increased by $2,425, viz.: from $4.621 to $7.046, or 52½ per cent. during that period.

"The average compensation of the individual railway employee increased from $473.50 in 1907 to $1,061.46 in 1918, or 124 per cent.

"The cost of fuel, which is the largest single item of material, increased from $2.69 to $5.17 per ton, or 92 per cent.

"It should here be pointed out that these increases in expenses do not include the very much heavier expenses which were laid on the railways in Canada in the latter half of 1918, and in the year 1919 by reason of adopting the McAdoo scale of wage increases.

"From 1907 to 1917 Canadian railways collectively were able generally to increase their net earnings per mile of line even though absorbing 14,982 miles of railway, but expenses mounted too rapidly to enable this to be done in 1918. For the year ended June 30, 1918, the total net earnings as compared with the previous year fell from $87,880,842 to $56,264,714, decreasing the net per mile from $2,276.46 to $1,447.17, due to an increase in operating expenses over 1917 of more than $51,000,000. Had the estimated value of the first freight (and passenger) increase for an entire year been added to the gross of 1917, it would have produced an increase of only about $28,000,000, showing how inadequate was the relief granted to the railways at that time. The estimates of the McAdoo Award increases and attendant expenses are in the neighborhood of $77,000,000 and against this the railways have been allowed the additional freight increase which was estimated to produce approximately $43,000,000, so that the two increases together fall short by about $57,000,000 of re-establishing the relation between gross and expenses that existed in the year ended June 30, 1917, and it must be remembered that, due to the falling off in traffic, the increased rates have not produced as much additional revenue as was estimated."

Variation in Metal Prices During The Past 20 Years

London, Eng.—An interesting and instructive chart has been compiled showing the prices on the first day of each month during the past 20 years (1900 to 1919, inclusive) of spelter, standard copper G. M. tin, soft lead without silver, and Scotch and Cleveland iron.

In 1914 spelter prices ranged from $180.06 to $104.02; in 1915 they touched $559.65, but were also as low as $136.26; in 1916 they ranged from $535.32 to $194.66; in 1917, from $284.69 to $206.83; in 1918, from $272.52 to $243.33, and in 1919, from $284.69 to $167.89—all per ton of 2,240 pounds. For standard copper, the highest price per ton occurred in 1916, namely, $744.57; in 1917 the maximum was $683.74; in 1918, $596.15, and in 1919, $581.55. In 1906 the highest price was $532.88, and in 1907, $545.05; the lowest maximum price, $277.39, as well as the lowest minimum, $219.60, occurred in 1902.

G. M. tin touched $1,941.73 per ton in 1918, and $1,677.72 in 1919, and was lowest at $474.48 in 1901. Soft lead reached its highest, $222.64 in 1919, and its lowest, $48.67, in 1902. Scotch iron prices are given in the chart from 1900 to 1903 and Cleveland iron thereafter; taking the two together the highest price per ton was recorded in 1919 at $38.93, and the lowest, $10.14 in 1904.

POWER MACHINERY HELPS BUILD BUSINESS

(Continued from page 14)

Work is figured on a percentage basis. It costs 15 per cent. to do business, Mr. Gaudry, and 20 per cent. is usually added to the cost of work. People say: "I want a good job;" we go ahead and do it, charge them what it is worth, and often save them money.

Electrical Work, Too

Considerable electrical work is done, much electrical wiring being required. This is really "confidence work" as Mr. Gaudry puts it. That is to say, parties wanting such work carried out for them have learned that the work done by the firm is dependable. As a consequence the contract for a piece of wiring is given and the work executed. This means that the several men engaged are supposed to go ahead and do their best work, seeing that connections and all wiring is carefully executed.

In arrangements for the caring of stock, care is taken to have this grouped where it will be readily available. Fittings, as already described, are in the front, that is, in the store. Back of the show room heavy fittings have a cosy and convenient location. In the shop, on the second floor, sheet metals, plates, wire, tubes, and many kinds of heavy fittings are stocked, and in all, two stories are mostly devoted to a heavy and comprehensive stock of cast iron pipe, fittings, traps, bends, etc. Nipples are carried up to 12 inches.

The office arrangements are excellent, and system is carried out here, there being a general and a private office. Among these arrangements is an excellent one for indexing catalogs, a glass-fronted case being used, and which has proven very satisfactory.

In entering contracts, small books with double columns are employed to enter all time and material used on a given job. All material returned is also credited in these small books, so that reference to this, at any time, reveals where the particular contract stands.

Formidable Competitor of U.S. Steel Corp.

Thus Say U. S. Papers of the British Empire Steel Corporation—Significance of Merger Not Appreciated by U.S. Manufacturers—Will Have Leading Position in Race for World's Business

COMMENTING on the formation of the British Empire Steel Corporation and its effect on business in the United States, the "Daily Metal Reporter" says as follows:

"While considerable publicity attended the announcement of the formation of the giant steel, shipping and coal combine in Canada, it is doubtful if the significance of the merger is generally comprehended and that it presents a potential competitive factor to be considered by the manufacturers in this country. Although many months will elapse before this new combination will make itself felt in the steel markets of the world, it starts out with all the essential advantages to place it in a leading position in the race for world business."

"Amalgamation of the principal steel companies of Canada and allied metallurgical interests into a single corporation, with the open backing of both the Dominion and the Imperial Governments, calls attention to the difference of view of industrial combinations taken by the British Empire and the United States, assuming each to be truly expressed by their administrative policy," says the "Wall Street Journal."

"The Department of Justice invites the Supreme Court to stultify itself on the United States Steel decision. The British Government invites the steel, coal and iron ore interests of the empire to get together and stimulate production for all they are worth, to their own advantage and that of the empire.

"The Canadian project will go through, backed as it is by the political and financial interests of both the colony and the empire. It will possess vast natural resources of coal and iron ore advantageously placed at tidewater. The corporation will get preferential treatment in the vast British world markets. It will be a formidable competitor even of the great United States Steel Corporation. It may well be the greatest industrial organization in the British Empire. Besides raw materials, rail and water transportation, a nucleus of iron and steel manufacturing units and abundance of British capital, it will have British brains and British banking behind it, and they are making an impressive showing just now while Washington is merely talking.

"Great British ironmasters have no prejudices, and if they can manufacture to better advantage in Canada, producing slabs and billets cheaper from access to raw materials, they can look at the proposition with a vision as wide as this continent or the world itself. They are not afraid of $500,000,000 capital stock, nor of question-begging epithets like that of 'water' which may be, as it was in the case of the United States Steel Corporation, on the proved book value of its stocks, merely intelligently anticipated growth. The British bankers and manufacturers know that the stock exchange will attend to squeezing out the water if there is any. Under the excellent British corporation laws the investor will know exactly what he is buying, and will be trusted thereafter to blow his own nose."

Many U.S. Manufacturers to Establish in Canada

Quite an extensive influx of United States manufacturers is developing at the present time throughout Canada. Many manufacturers have definitely decided to locate in Canada, while others have this important matter under advisement and they may arrive at a decision in the near future. It appears that better labor conditions are responsible somewhat for these decisions.

Manufacturers are much interested in the general labor situation and it applies in Quebec province, where strikes are less numerous than they are in many parts of the American Union. Under the changing conditions in many parts of the world to-day the manufacturer must, of necessity, have as much assurance as possible that he will be able to operate his plants uninterrupted.

Of course, these firms desire, primarily, to establish in Canada in order to avoid paying heavy duty on manufactured goods coming into Canada, and in addition to this they desire to secure the benefit of the British trade preference on export to the British Empire.

Among the companies which are interested in establishing plants in Canada is that of the Thomas Edison Company of Orange, New Jersey. This firm may establish a branch in or near Montreal in the near future. If they do establish it is understood that their plant will be an extensive one.

Decline in Output of Canadian Minerals

The preliminary report on the mineral production of Canada for 1919 shows the total estimated value of the metal and mineral production in 1919 was $173,075,913, which is less than the total value reached during any of the three preceding years. The production in 1918 was valued at $211,301,897.

The output and also the value of nickel shows heavy declines, 1919 production being 44,452,953 pounds, against 92,507,293 pounds in 1918.

Zinc showed little change, production for 1919 being 15,869 tons, against 17,541 tons in 1918. Both imports and exports of zinc showed a decline.

The 1918 production of copper was the highest recorded in Canada. That of 1919 is the lowest since 1911. Compared with 1918, copper production shows a decline of 36.7 per cent. in quantity and 52 per cent. in value.

Trade Notes from Montreal

Montreal.—John Watson & Company, master plumbers, for so long located on St. Catherine Street West, Westmount, have moved to a splendid location on Green Avenue. The new premises of the firm are well situated to serve the high-class trade of the Westmount district, and John Watson's usual disposition will doubtless bring new faces to the firm as well as a continuation of the business which he has labored so long to build up.

Some criticism has taken place of the action of the Montreal Master Plumbers in adopting the agreement of the National Catholic Syndicate. This was rather to be expected, but the Master Plumbers feel confident that the agreement with the National Catholic Syndicate will work out satisfactorily. There is assurance that the strikes will be eliminated by members of this syndicate, and if a good day's work is given by the journeymen there will be no difficulty. If all parties to the agreement do this there will be no question that matters will work out satisfactorily.

Z. St. Aubin has moved his plumbing shop from Bleury Street to Craig Street.

New Members Secured

Montreal.—At the last annual monthly meeting of the Montreal Master Plumbers held on Wednesday afternoon, three new members were added to the membership. These being Messrs. Hickey, Aubut and W. G. Egge. If the good work already begun continues the membership should reach the century mark for a great while. The members of the canvassing committee are to be congratulated on the success of their recent activities in this regard.

Exhibits Have Gone Forward

Montreal.—Two definite shipments of exhibits for the Canadian Industries Exhibition, which is to take place at the Royal Agricultural Hall, London, England, on June 3 to 17, left this week on two C.P.O.S. steamers. The exhibits comprise nearly every branch of trade. Pulp and paper, boots and shoes, leather goods, steel products, aluminumware, hardware, textiles, pianos, organs, and a great many other lines will find their way to London, where it is confidently expected by those in charge of this work, Canadian manufacturers will be very much better known to the people of the British Isles. The exhibits are expected to be in charge of competent representatives who will follow a little later.

LONDON PLUMBING BY-LAW
Continued from Page 16

Gas Heater

Local Ventilation

47. In dwellings and buildings of two or less stories, back venting shall not be required under the provisions of this by-law, except as hereinafter provided in this clause:

(a) All fixtures shall be vented when centre of waste is 8 feet or more from soil stack, to which it is connected. Sinks in all cases shall be vented. Fixtures within 8 feet of soil stack may not be vented.

(b). No form of anti-syhon trap shall be used unless it has first been approved by the Medical Officer of Health.

(c). No waste line under the building or basement floor from an unvented fixture shall be less than three inches inside diameter.

(d). A horizontal waste pipe receiving the waste from two or more fixtures, which are not vented, shall not be less than 2 inches inside diameter, and single fixtures not less than one and half inches, except the trap and connection to the fixture, which may be 1¼ in.

(e). Where batteries of four or more fixtures, other than water closets, are installed and the waste pipes combine and enter the stack through the one branch opening, they shall, in all cases, be vented.

Gas Heater

49. No lead waste or vent pipes shall weigh shall be installed without having a vent pipe, which shall be connected to a flue or carried into any unoccupied attic. All gas water heaters, jacket heaters, or coils in furnaces connected to range boilers shall be provided with safety valves.

Lead Pipes, Waste or Vent

52. No lead waste or vent pipes shall weigh less than the following, when used in any building:

1¼-inches	inside	diameter	 7	lbs. per yd.
1½	"	"	 8	"
2	"	"	....10½	"
2½	"	"	....13½	"
3	"	"	....16½	"
4	"	"	24	"

50. In all cases where water pipes are placed under ground they shall be of lead or galvanized iron, and of the weight as specified in this By-law.

Wiped Joints

51. All lead pipes shall have proper wipe joints.

Connection Between Lead and Iron Pipes

52. Every connection between lead and iron pipes shall be made with brass thimbles, ferrules, solder nipples, or ground-in unions, having properly wiped joints, and the ferrules shall be properly gasketted, leaded and caulked into the said pipe.

Ferrules

53. Brass thimbles, ferrules or solder nipples must not be wiped into closet bend or pipe or trap when used for venting same. All brass thimbles shall be increased in size at the top so that the lead pipe will enter full size.

Ferrules Shall Weigh

54. Ferrules for four-inch pipe shall weigh not less than 2½ lbs., for three-inch pipe not less than 1¾ lbs., and for two-inch not less than 1½ lbs., each ferrule must not be less than four inches in length.

Brass Flange for Closet Connection

55. Where the trap to closets is above the floor, the connection of the same with the soil pipe shall be made with lead bend or lead pipe and cast brass floor flange with gasket or rubber or asbestos, said brass flange to be not less than three-sixteenths of an inch thick.

Range Closets or Latrines Not Allowed

56. No closet or other convenience which allows the escape into the house of air or gas from any part of it, or from the drain or soil pipe connected with it, or which allows any accumulation of filth in or about it, shall be fitted up or used. Range closets or latrines will not be allowed.

Self-Closing Cocks to be Used in Water Closets

57. No arrangement shall be made for supplying water closets or urinals except by self-closing cocks, and no arrangement shall be made for cleaning water closets or privy vaults by waste pipes from wash basins or sinks or other improper means; but they shall be fitted up with the proper fixtures and appurtenances belonging to them respectively. No copper lining of tank for a water closet shall be lighter than 10 ounces to the square foot and weight must be stamped on lining in conspicuous and accessible position. Sheet galvanized iron shall not be allowed.

Water Closet in Direct Communication With the External Air

58. No person shall locate or cause to be located any water closet in any sleeping room, or in any room, apartment or vault which is not in direct communication with the external air by means of a window or air space having an area of at least two (2) square feet, or vertical air shaft having an area of two (2) square feet for the first storey and increased ten per centum for each storey it passes through.

Inspections

59. Sec. 1.—All piping, traps and fixtures of a house drainage or plumbing system shall be inspected by the Inspector to ascertain if all the requirements of this By-law have been complied with.

Covering of Work

Sec. 2.—No plumbing system or part thereof shall be covered until it has been inspected or tested and approved as herein prescribed.

Uncovering of Work

Sec. 3.—If any plumbing system or part thereof is covered in before being regularly inspected or tested and approved as herein prescribed, it shall be uncovered upon the directions of the Health Officer.

Defective Work

Sec. 4.—If inspection or test shows defects, the defective work or materials shall be replaced within three (3) days and the inspection or test made again.

Inspection and Tests

Sec. 5.—(a) It shall be the duty of the plumber to notify the Medical Officer of Health, in writing when the work is ready to be inspected or tested. Inspection will be made the following day on all notifications received before 12 a.m.

Notification

(b) It shall be the duty of the plumber to make sure that the work will pass the inspection or stand the test prescribed, before giving the above notification.

(c) If the inspector finds that the work will not pass inspection or stand the test, the plumber shall be required to re-notify as above.

Inspection and Test

Sec. 6.—(a) The material and labor for the inspection and test shall be furnished by the plumber or drainlayer.

(b) All piping, traps and fixtures of a plumbing system, shall be tested by the plumber first, the roughin in shall be tested with water.

Water Tests

(c) The water test shall be applied by closing the opening at the outlet end of the house drain and all other openings in the piping with proper testing plugs and the system filled with water to the top of stack above the roof when the entire system is tested; the water column to be left standing at least fifteen (15) minutes. If the water level remains constant during such time, the system shall have been acceptably tested.

Smoke Air Tests
